SR-TE On Demand LSP

The SR TE On demand LSP feature provides the ability to connect Metro access rings via a static route to the destination. The static route is mapped to an explicit path and that will trigger an on demand LSP to the destination. The SR TE On demand LSP feature will be used to transport the VPN services between the Metro access rings.

- Restrictions for SR-TE On Demand LSP, on page 1
- Information About SR-TE On Demand LSP, on page 1
- How to Configure SR-TE On Demand LSP, on page 2
- Additional References for SR-TE On Demand LSP, on page 6
- Feature Information for SR-TE On Demand LSP, on page 6

Restrictions for SR-TE On Demand LSP

- Segment-Routing auto tunnel static route does not support ECMP.
- Metrics for IP explicit path andadministrive distance change for auto tunnel SRTE static route is not supported.
- MPLS Traffic Engineering (TE) Nonstop Routing (NSR) must be configured on the active route processor (RP) for Stateful Switchover (SSO). This is because, SR static auto tunnel will fail to come up after SSO, unless the static route auto tunnel configuration is removed and reconfigured.
- IP unnumbered interfaces do not support dynamic path.
- When using IP unnumbered interfaces, you cannot specify next hop address as an explicit path index. It should be a node address or a label.

Information About SR-TE On Demand LSP

The SR TE On demand LSP feature provides the ability to connect Metro access rings via a static route to the destination.
SR-TE: Setup LSP as Static Route

Agile Carrier Ethernet (ACE) solution leverages Segment Routing-based transport for consolidated VPN services. In metro rings architecture, the access rings do not share their routing topologies with each other. The SR TE On demand LSP feature provides the ability to connect Metro access rings via a static route to the destination. The static route is mapped to an explicit path and that will trigger an on demand LSP to the destination. The SR TE On demand LSP feature will be used to transport the VPN services between the Metro access rings.

Figure 1: Inter-Metro LSP in ACE Solution

Inter-Metro LSPs have the following aspects:

- The source packet may not know the IP address of the destination device.
- Existing segment routing features are applicable for LSPs.

The binding SID helps in steering the traffic in the SR-TE tunnel. In other words, ingress MPLS packet with the binding SID will be forwarded through the specific SR-TE tunnel.

Static SRTE over Unnumbered Interfaces

As explained in the previous section, you can set up LSP as static route to create an auto tunnel by specifying an IP explicit path.

The explicit path is a combination of IP addresses (or) IP address and labels. You can also configure the static SRTE tunnel over unnumbered interfaces. There are few restrictions for unnumbered interfaces against numbered interfaces.

- You must specify the node IP address, not the next hop interface address in the ip-explicit path option.
- You must not specify adjacency SID in the explicit path option. In short, the explicit path option should contain only the node IP address (/32 mask) and prefix SID labels.

How to Configure SR-TE On Demand LSP

Perform the following steps to configure SR-TE On Demand LSP.
Configuring LSP as Static Route

To avoid packet drop after RP switchover with SR TE, it is recommended to use the following command:

```bash
mpls traffic-eng nsr
```

If ISIS is configured, use the following command:

```bash
router isis
sf cisco
sf interval 0
```

Enabling Segment Routing Auto Tunnel Static Route

Perform this task to configure auto tunnel static route as follows:

- Configure IP explicit path
- Associate the auto tunnel with an IP explicit path with a static route
- Enable peer-to-peer (P2P) auto tunnel service

```bash
ip explicit-path name path1
index 1 next-label 16002
index 2 next-label 16006
exit
ip route 172.16.0.1 255.240.0.0 segment-routing mpls path name path1
mpls traffic-eng auto-tunnel p2p
mpls traffic-eng auto-tunnel p2p config unnumbered-interface loopback0
mpls traffic-eng auto-tunnel p2p tunnel-num min 10 max 100
```

Verifying Segment Routing Auto-Tunnel Static Route

The command `show mpls traffic-eng service summary` displays all registered TE service clients and statistics that use TE auto tunnel.

Device# `show mpls traffic-eng service summary`

Service Clients Summary:

Client: BGP TE
  Client ID : 0
  Total P2P tunnels : 1
  P2P add requests : 6
  P2P delete requests : 5
  P2P add fails : 0
  P2P delete fails : 0
  P2P notify fails : 0
  P2P notify succs : 12
  P2P replays : 0

Client: ipv4static
  Client ID : 1
  Total P2P tunnels : 1
  P2P add requests : 6
  P2P delete requests : 5
  P2P add fails : 0
  P2P delete fails : 0
  P2P notify fails : 0
  P2P notify succs : 85
  P2P replays : 0
The command `show mpls traffic-eng auto-tunnel p2p` displays the peer-to-peer (P2P) auto tunnel configuration and operation status.

```
Device# show mpls traffic-eng auto-tunnel p2p
```

State: Enabled
- p2p auto-tunnels: 2 (up: 2, down: 0)
- Default Tunnel ID Range: 62336 - 64335
- Config:
  - unnumbered-interface: Loopback0
  - Tunnel ID range: 1000 - 2000

The command `show mpls traffic-eng tunnel summary` displays the status of P2P auto tunnel.

```
Device# show mpls traffic-eng tunnel summary
```

Signalling Summary:
- LSP Tunnels Process: running
- Passive LSP Listener: running
- RSVP Process: running
- Forwarding: enabled
- auto-tunnel:
  - p2p Enabled (1), id-range:1000-2000
  - Periodic reoptimization: every 3600 seconds, next in 1265 seconds
  - Periodic FRR Promotion: Not Running
  - Periodic auto-bw collection: every 300 seconds, next in 66 seconds
  - SR tunnel max label push: 13 labels
- P2P:
  - Head: 11 interfaces, 5234 active signalling attempts, 1 established
  - 5440 activations, 206 deactivations
  - 1821 failed activations
  - 0 SSO recovery attempts, 0 SSO recovered
  - Midpoints: 0, Tails: 0
- P2MP:
  - Head: 0 interfaces, 0 active signalling attempts, 0 established
  - 0 sub-LSP activations, 0 sub-LSP deactivations
  - 0 LSP successful activations, 0 LSP deactivations
  - 0 SSO recovery attempts, LSP recovered: 0 full, 0 partial, 0 fail
  - Midpoints: 0, Tails: 0

Bidirectional Tunnel Summary:
- Tunnel Head: 0 total, 0 connected, 0 associated, 0 co-routed
- LSPs Head: 0 established, 0 proceeding, 0 associated, 0 standby
- LSPs Mid: 0 established, 0 proceeding, 0 associated, 0 standby
- LSPs Tail: 0 established, 0 proceeding, 0 associated, 0 standby

AutoTunnel P2P Summary:
- ipv4static:
  - Tunnels: 1 created, 1 up, 0 down
- Total:
  - Tunnels: 1 created, 1 up, 0 down

The command `show mpls traffic-eng tunnel auto-tunnel` only displays TE service auto tunnel.

```
Device# show mpls traffic-eng tunnel auto-tunnel detail
```

P2P TUNNELS/LSPs:
- Name: R1_t1000 (Tunnel1000) Destination: 0.0.0.0 Ifhandle: 0x17
  (auto-tunnel for ipv4static)
- Status:
  - Admin: up  Oper: up  Path: valid  Signalling: connected
  - path option 1, (SEGMENT-ROUTING) type explicit (verbatim) path202 (Basis for Setup)
Config Parameters:
- Bandwidth: 0 kbps (Global) Priority: 7 7 Affinity: 0x0/0xFFFF
- Metric Type: TE (default)
- Path Selection:
  - Protection: any (default)
- Path-selection Tiebreaker:
  - Global: not set Tunnel Specific: not set Effective: min-fill (default)
  - Hop Limit: disabled [ignore: Verbatim Path Option]
  - Cost Limit: disabled
  - Path-invalidation timeout: 10000 msec (default), Action: Tear
  - AutoRoute: disabled LockDown: disabled Loadshare: 0 [0] bw-based
  - auto-bw: disabled
  - Fault-OAM: disabled, Wrap-Protection: disabled, Wrap-Capable: No
- Active Path Option Parameters:
  - State: explicit path option 1 is active
  - BandwidthOverride: disabled LockDown: disabled Verbatim: enabled

History:
- Tunnel:
  - Time since created: 33 days, 20 hours, 29 minutes
  - Time since path change: 10 days, 19 hours, 45 minutes
  - Number of LSP IDs (Tun_Instances) used: 1646
  - Current LSP: [ID: 1646]
    - Uptime: 10 days, 19 hours, 45 minutes
    - Prior LSP: [ID: 1645]
      - ID: path option unknown
      - Removal Trigger: signalling shutdown
  - Tun_Instance: 1646
- Segments-Routing Path Info (IGP information is not used)
  - Segment0[First Hop]: 0.0.0.0, Label: 16002
  - Segment1[ - ]: Label: 16006

The command `show mpls traffic-eng tunnel brief` displays auto tunnel information.

Device# `show mpls traffic-eng tunnel brief`

Signalling Summary:
- LSP Tunnels Process: running
- Passive LSP Listener: running
- RSVP Process: running
- Forwarding: enabled
- auto-tunnel:
  - p2p Enabled (2), id-range:1000-2000

Periodic reoptimization: every 3600 seconds, next in 406 seconds
Periodic FRR Promotion: Not Running
Periodic auto-bw collection: every 300 seconds, next in 107 seconds
SR tunnel max label push: 13 labels

Feature Information for SR-TE On Demand LSP

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.
