## snmp-server enable traps (MPLS)

To enable a label switch router (LSR) to send Simple Network Management Protocol (SNMP) notifications or informs to an SNMP host, use the **snmp-server enable traps** command in global configuration mode. To disable notifications or informs, use the **no** form of this command.

```
snmp-server enable traps [ notification-type ] [ notification-option ]
```

```
no snmp-server enable traps [ notification-type ] [ notification-option ]
```

**Syntax Description**

<i>notification-type</i>	
--------------------------	--

(Optional) Specifies the particular type of SNMP notification(s) to be enabled on the LSR. If a notification type is not specified, all SNMP notifications applicable to the LSR are enabled and sent to the SNMP host. Any one or all of the following keywords can be specified in any combination as the *notification-type* (family name) in the **snmp-server enable traps** command:

- **bgp** --Sends Border Gateway Protocol (BGP) state change notifications.
- **config** --Sends configuration notifications.
- **entity** --Sends entity MIB modification notifications.
- **envmon** --Sends Cisco enterprise-specific environmental monitor notifications whenever certain environmental thresholds are exceeded. *Notification-option* arguments (below) can be specified in combination with this keyword.
- **frame-relay** --Sends Frame Relay notifications.
- **hsrp** --Sends Hot Standby Routing Protocol (HSRP) notifications.
- **isdn** --Sends ISDN notifications. *Notification-option* arguments (see examples below) can be specified in combination with this keyword.
- **repeater** --Sends Ethernet repeater (hub) notifications. *Notification-option* arguments (see examples below) can be specified in combination with this keyword.
- **rsvp** --Sends Resource Reservation Protocol (RSVP) notifications.
- **rtr** --Sends Service Assurance Agent/Response Time Reporter (RTR) notifications.
- **snmp [authentication]** --Sends RFC 1157 SNMP notifications. Using the **authentication** keyword produces the same effect as not using it. Both the **snmp-server enable traps snmp** and the **snmp-server enable traps snmp authentication** forms of this command globally enable the following SNMP notifications (or, if you are using the **no** form of the command, disables such notifications): **authenticationFailure**, **linkUp**, **linkDown**, and **warmstart**.

	<ul style="list-style-type: none"> <li>• <b>syslog</b> --Sends system error message (syslog) notifications. You can specify the level of messages to be sent using the <b>logging history level</b> command.</li> </ul>
<p><i>notification-type</i> (continued)</p>	<ul style="list-style-type: none"> <li>• <b>mpls ldp</b> --Sends notifications about status changes in LDP sessions. Note that this keyword is specified as <i>mpls ldp</i> . This syntax, which the CLI interprets as a two-word construct, has been implemented in this manner to maintain consistency with other MPLS commands. <i>Notification-option</i> arguments (below) can be specified in combination with this keyword.</li> <li>• <b>mpls traffic-eng</b> --Sends notifications about status changes in MPLS label distribution tunnels. This keyword is specified as <i>mpls traffic-eng</i> . This syntax, which the CLI interprets as a two-word construct, has been implemented in this manner to maintain consistency with other MPLS commands. <i>Notification-option</i> arguments (below) can be specified in combination with this keyword.</li> </ul>

<i>notification-option</i>	
----------------------------	--

(Optional) Defines the particular options associated with the specified *notification-type* that are to be enabled on the LSR.

- **envmon** [**voltage** | **shutdown** | **supply** | **fan** | **temperature**]

When you specify the **envmon** keyword, you can enable any one or all of the following environmental notifications in any combination: **voltage**, **shutdown**, **supply**, **fan**, or **temperature**. If you do not specify an argument with the **envmon** keyword, all types of system environmental notifications are enabled on the LSR.

- **isdn** [**call-information** | **isdn u-interface**]

When you specify the **isdn** keyword, you can use either the **call-information** argument (to enable an SNMP ISDN call information option for the ISDN MIB subsystem) or the **isdn u-interface** argument (to enable an SNMP ISDN U interface option for the ISDN U Interfaces MIB subsystem), or both. If you do not specify an argument with the **isdn** keyword, both types of isdn notifications are enabled on the LSR.

- **repeater** [**health** | **reset**]

When you specify the **repeater** keyword, you can use either the **health** argument or the **reset** argument, or both (to enable the IETF Repeater Hub MIB [ RFC 1516] notification). If you do not specify an argument with the **repeater** keyword, both types of notifications are enabled on the LSR.

- **mpls ldp** [**session-up** | **session-down** | **pv-limit** | **threshold**]

When you specify the **mpls ldp** keyword, you can use any one or all of the following arguments in any combination to indicate status changes in LDP sessions: **session-up**, **session-down**, **pv-limit**, or **threshold**. If you do not specify an argument with the **mpls ldp** keyword, all four types of LDP session notifications are enabled on the LSR.

- **mpls traffic-eng** [**up** | **down** | **reroute**]

When you specify the **mpls traffic-eng** keyword, you can use any one or all of the following arguments in any combination to enable the sending of notifications regarding status changes in MPLS label distribution

tunnels: **up**, **down**, or **reroute**. If you do not specify an argument with the **mpls traffic-eng** keyword, all three types of tunnel notifications are enabled on the LSR.

**Command Default**

If you issue this command on an LSR without specifying any *notification-type* keywords, the default behavior of the LSR is to enable all notification types controlled by the command (some notification types cannot be controlled by means of this command).

**Command Modes**

Global configuration

**Command History**

Release	Modification
11.1	This command was introduced.
11.3	The <b>snmp-server enable traps snmp authentication</b> form of this command was introduced to replace the <b>snmp-server trap-authentication</b> command.
12.0(17)ST	The <b>mpls traffic-eng</b> keyword was added to define a class or family of specific SNMP notifications for use with the <i>notification-type</i> and <i>notification-option</i> parameters of the <b>snmp-server enable traps</b> command.
12.0(21)ST	The <b>mpls ldp</b> keyword was added to define a class or family of specific SNMP notifications for use with the <i>notification-type</i> and <i>notification-option</i> parameters of the <b>snmp-server enable traps</b> command.
12.0(22)S	This command was integrated into Cisco IOS Release 12.0(22)S.
12.2(18)S	This command was integrated into Cisco IOS Release 12.2(18)S.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.4(11)T	This command was integrated into Cisco IOS Release 12.4(11)T.
12.2(31)SB2	This command was integrated into Cisco IOS Release 12.2(31)SB2.
12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.

**Usage Guidelines**

To configure an LSR to send SNMP LDP notifications, you must issue at least one **snmp-server enable traps** command on the router.

To configure an LSR to send either notifications (traps) or informs to a designated network management station (NMS), you must issue the **snmp-server host** command on that device, using the keyword (**traps** or **informs**) that suits your purposes.

If you issue the **snmp-server enable traps** command without keywords, all SNMP notification types are enabled on the LSR. If you issue this command with specific keywords, only the notification types associated with those particular keywords are enabled on the LSR.

The **snmp-server enable traps** command is used in conjunction with the **snmp-server host** command. You use the latter command to specify the NMS host (or hosts) targeted as the recipient(s) of the SNMP notifications generated by SNMP-enabled LSRs in the network. To enable an LSR to send such notifications, you must issue at least one **snmp-server host** command on the LSR.

## Examples

In the following example, the router is enabled to send all notifications to the host specified as myhost.cisco.com. The community string is defined as public.

```
Router(config)# snmp-server enable traps
Router(config)# snmp-server host myhost.cisco.com public
```

In the following example, the router is enabled to send Frame Relay and environmental monitor notifications to the host specified as myhost.cisco.com. The community string is defined as public:

```
Router(config)# snmp-server enable traps frame-relay
Router(config)# snmp-server enable traps envmon temperature
Router(config)# snmp-server host myhost.cisco.com public
```

In the following example, notifications are not sent to any host. BGP notifications are enabled for all hosts, but the only notifications enabled to be sent to a host are ISDN notifications (which are not enabled in this example).

```
Router(config)# snmp-server enable traps bgp
Router(config)# snmp-server host host1 public isdn
```

In the following example, the router is enabled to send all inform requests to the host specified as myhost.cisco.com. The community string is defined as public.

```
Router(config)# snmp-server enable traps
Router(config)# snmp-server host myhost.cisco.com informs version 2c public
```

In the following example, HSRP MIB notifications are sent to the host specified as myhost.cisco.com. The community string is defined as public.

```
Router(config)# snmp-server enable hsrp
Router(config)# snmp-server host myhost.cisco.com traps version 2c public hsrp
```

## Related Commands

Command	Description
<b>snmp-server host</b>	Specifies the intended recipient of an SNMP notification (that is, the designated NMS workstation in the network).

## snmp-server enable traps aaa\_server

To enable authentication, authorization, and accounting (AAA) server state-change Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps aaa\_server** command in global configuration mode. To disable AAA server state-change SNMP notifications, use the **no** form of this command.

**snmp-server enable traps aaa\_server**

**no snmp-server enable traps aaa\_server**

**Syntax Description** This command has no arguments or keywords.

**Command Default** SNMP notifications are disabled by default.

**Command Modes** Global configuration

### Command History

Release	Modification
12.1(3)T	This command was introduced for the Cisco AS5300 and Cisco AS5800.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.

### Usage Guidelines

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

This command controls (enables or disables) AAA Server state change (casServerStateChange) notifications. ServerStateChange notifications, when enabled, will be sent when the server moves from an “up” to “dead” state or when a server moves from a “dead” to “up” state.

The Cisco AAA Server State is defined by the casState object in the Cisco AAA Server MIB. The possible values are as follows:

- up(1)--Server is responding to requests.
- dead(2)--Server failed to respond to requests.

A server is marked "dead" if it does not respond after maximum retransmissions. A server is marked "up" again either after a waiting period or if some response is received from it. The initial value of casState is "up(1)" at system startup. This will only transition to "dead(2)" if an attempt to communicate fails.

For a complete description of this notification and additional MIB functions, see the CISCO-AAA-SERVER-MIB.my file, available on Cisco.com at <http://www.cisco.com/public/mibs/v2/>.

The **snmp-server enable traps aaa\_server** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

### Examples

The following example enables the router to send AAA server up/down informs to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps aaa_server
Router(config)# snmp-server host myhost.cisco.com informs version 2c public
```

### Related Commands

Command	Description
<b>aaa session-mib disconnect</b>	Allows a remote network management system to perform Set operations and disconnect users on the configured device using SNMP.
<b>show caller</b>	Displays caller information for async, dialer, and serial interfaces.
<b>show radius statistics</b>	Displays AAA server MIB statistics for AAA functions.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface that an SNMP trap should originate from.

## snmp-server enable traps atm pvc

To enable the sending of ATM permanent virtual circuit (PVC) Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps atm pvc** command in global configuration mode. To disable ATM PVC-specific SNMP notifications, use the **no** form of this command.

**snmp-server enable traps atm pvc** [*interval seconds*] [*fail-interval seconds*]

**no snmp-server enable traps atm pvc** [*interval seconds*] [*fail-interval seconds*]

### Syntax Description

<b>interval</b> <i>seconds</i>	(Optional) Specifies a minimum period between successive traps. Generation of PVC traps is dampened by the notification interval to prevent trap storms. No traps are sent until the interval lapses.  The <i>seconds</i> argument is an integer in the range from 1 to 3600. The default is 30.
<b>fail-interval</b> <i>seconds</i>	(Optional) Specifies a minimum period for storing the failed time stamp.  The <i>seconds</i> argument is an integer in the range from 0 to 3600. The default is 0.

### Command Default

SNMP notifications are disabled.

### Command Modes

Global configuration

### Command History

Release	Modification
12.0(1)T	This command was introduced for the platforms that support ATM PVC Management.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.
Cisco IOS XE Release 2.3	This command was integrated into Cisco IOS XE Software Release 2.3 and implemented on the Cisco ASR 1000 series routers.

**Usage Guidelines**

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests for the specified notification types. ATM notifications are defined in the CISCO-IETF-ATM2-PVCTRAP-MIB.my file, available from the Cisco FTP site at <ftp://ftp.cisco.com/pub/mibs/v2/>

ATM PVC failure notifications are sent when a PVC on an ATM interface fails or leaves the UP operational state. Only one trap is generated per hardware interface, within the specified interval defined by the **interval** keyword (stored as the atmIntfPvcNotificationInterval in the MIB). If other PVCs on the same interface go DOWN during this interval, traps are generated and held until the fail interval has elapsed. When the interval has elapsed, the traps are sent if the PVCs are still DOWN.

No notifications are generated when a PVC returns to the UP state after having been in the DOWN state. If you need to detect the recovery of PVCs, you must use the SNMP management application to regularly poll your router.

The **snmp-server enable traps atm pvc** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send notifications, you must configure at least one **snmp-server host** command.

**Examples**

The following example shows the enabling of ATM PVC traps on a router, so that if PVC 0/1 goes down, host 172.16.61.90 will receive the notifications:

```
!For ATM PVC Trap Support to work on your router, you must first have SNMP support and
!an IP routing protocol configured on your router:
Router(config)# snmp-server community public ro

Router(config)# snmp-server host 172.16.61.90 public

Router(config)# ip routing

Router(config)# router igrp 109

Router(config-router)# network 172.16.0.0

!
!Enable ATM PVC Trap Support and OAM management:
Router(config)# snmp-server enable traps atm pvc interval 40 fail-interval 10

Router(config)# interface atm 1/0.1

Router(config-if)# pvc 0/1

Router(config-if-atm-vc)# oam-pvc manage
```

**Related Commands**

Command	Description
<b>show atm pvc</b>	Displays all ATM PVCs and traffic information.
<b>snmp-server enable traps</b>	Enables all available SNMP notifications on your system.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.

Command	Description
<b>snmp-server trap-source</b>	Specifies the interface from which an SNMP trap should originate.

## snmp-server enable traps atm pvc extension

To enable the sending of extended ATM permanent virtual circuit (PVC) SNMP notifications and SNMP notifications for ATM Operation, Administration, and Maintenance (OAM) F5 continuity check (CC), ATM OAM F5 alarm indication signals/remote defect indications (AIS/RDI), and loopback failures, use the **snmp-server enable traps atm pvc extension** command in global configuration mode. To disable these SNMP notifications, use the **no** form of this command.

**snmp-server enable traps atm pvc extension** {up|down|oam failure [aisrdi|endCC|loopback|segmentCC]}

**no snmp-server enable traps atm pvc extension** {up|down|oam failure [aisrdi|endCC|loopback|segmentCC]}

### Syntax Description

<b>up</b>	Enables ATM PVC up traps. These notifications are generated when a PVC changes from the DOWN to the UP state.
<b>down</b>	Enables ATM PVC failure traps. These notifications are generated when a PVC changes from the UP to the DOWN state.
<b>oam failure</b>	Enables ATM PVC OAM failure traps. These notifications are generated when any type of OAM failure occurs on the PVC.
<b>aisrdi</b>	(Optional) Enables AIS/RDI OAM failure traps. These notifications are generated when AIS/RDI OAM failure occurs on the PVC.
<b>endCC</b>	(Optional) Enables end-to-end OAM CC failure traps. These notifications are generated when end-to-end CC failures occur on the PVC.
<b>loopback</b>	(Optional) Enables OAM failure loopback traps. These notifications are generated when OAM loopback failure occurs on the PVC.
<b>segmentCC</b>	(Optional) Enables segment OAM CC failure traps. These notifications are generated when segment CC failures occur on the PVC.

### Command Default

SNMP notifications are disabled. The interval between successive traps is 30 seconds.

### Command Modes

Global configuration (config)

**Command History**

Release	Modification
12.2(4)T	This command was introduced for those platforms that support ATM PVC management.
12.2(13)T	This command was modified to configure SNMP notification support for ATM OAM F5 CC and ATM OAM F5 AIS/RDI failures.
12.2(28)SB	This command was integrated into Cisco IOS Release 12.2(28)SB.
Cisco IOS XE Release 2.3	This command was integrated into Cisco IOS XE Software Release 2.3 and implemented on the Cisco ASR 1000 series routers.
12.2(33)SRE	This command was integrated into Cisco IOS Release 12.2(33)SRE.

**Usage Guidelines**

For PVCs that are not part of a range, extended ATM PVC traps include virtual path identifier/virtual channel identifier (VPI/ VCI) information, the number of state transitions a PVC goes through in an interval, and the timestamp for the start and end of the transitions. For PVCs that are part of a range, extended ATM PVC traps include the first and last VPI/VCI of the range and the timestamp for the first failure and the last failure within the same range.

Extended ATM PVC and ATM OAM F5 CC traps cannot be used at the same time as the legacy ATM PVC trap. The legacy ATM PVC trap must be disabled by using the **no snmp-server enable traps atm pvc** command before extended ATM PVC traps can be configured.

The extended ATM PVC failure trap (which is enabled by the **snmp-server enable traps atm pvc extension down** command) is the same trap as the legacy ATM PVC failure trap (which is enabled by the **snmp-server enable traps atm pvc** command), but with the following differences:

- The extended ATM PVC failure trap contains information in the form of VPI/VCI ranges.
- The extended ATM PVC failure trap contains timestamps for when PVCs go down.
- The legacy ATM PVC failure trap contains only one VPI/VCI per trap.

**Note**

You must configure the **snmp-server enable traps atm pvc extension mibversion 2** command before you can enable the ATM OAM F5 AIS/RDI failure traps, the end-to-end ATM OAM F5 CC failure traps, the OAM failure loopback traps, and the segment ATM OAM F5 CC failure traps. This command enables the MIB that supports these traps.

OAM management must be enabled on the PVC before you can use ATM PVC traps. To generate F5 loopback failure traps, enable OAM management using the **oam-pvc manage** command. To generate segment F5 CC failure traps, enable segment OAM CC management by using the **oam-pvc manage cc segment** command. To generate end-to-end F5 CC failure traps, enable end-to-end OAM CC management by using the **oam-pvc manage cc end** command. To generate OAM F5 AIS/RDI failure traps, enable any of the three types of OAM management listed above.

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests for the specified notification types. The interval between successive traps is 30 seconds.

The extended ATM PVC notifications for MIB version 1 are defined in the CISCO-IETF-ATM2-PVCTRAP-MIB.my file. The extended ATM PVC notifications for MIB version 2 are defined in the CISCO-ATM-PVCTRAP-EXTN-MIB.my file. Both of these MIB files are available from the Cisco FTP site at <ftp://ftp.cisco.com/pub/mibs/v2/>.

ATM PVC traps are generated at the end of the notification interval. It is possible to generate all three types of ATM PVC traps (the ATM PVC failure trap, ATM PVC up trap, and ATM PVC OAM failure trap) at the end of the same notification interval; however, only one type of trap will be generated for each PVC.

The **snmp-server enable traps atm pvc extension** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. In order to send notifications, you must configure at least one **snmp-server host** command.

When the ATM OAM F5 loopback, AIS/RDI, or CC failure trap is enabled, the PVC remains in the UP state when an OAM loopback, AIS/RDI, or CC failure is detected, so that the flow of data will still be possible. If one of these traps is not enabled, the PVC will be placed in the DOWN state when an OAM loopback, AIS/RDI, or CC failure is detected.

## Examples

### Examples

The following example shows all three of the extended ATM PVC traps enabled on a router. If PVC 0/1 leaves the UP state, leaves the DOWN state, or has an OAM loopback failure, host 172.16.61.90 will receive the SNMP notifications:

```
! Configure SNMP support and an IP routing protocol on your router:
Router(config)# snmp-server community public ro
Router(config)# snmp-server host 172.16.61.90 public
Router(config)# ip routing
Router(config)# router igrp 109
Router(config-router)# network 172.16.0.0
!
! Enable extended ATM PVC trap support and OAM management:
Router(config)# snmp-server enable traps atm pvc extension down
Router(config)# snmp-server enable traps atm pvc extension up
Router(config)# snmp-server enable traps atm pvc extension oam failure loopback
Router(config)# interface atm 1/0.1
Router(config-if)# pvc 0/1
Router(config-if-atm-vc)# oam-pvc manage
```

### Examples

The following example shows output for extended ATM PVC failure trap for PVCs 1/100, 1/102, and 1/103. Note that only one trap is generated for all the PVCs associated with the same interface or subinterface (in contrast to the legacy ATM PVC failure trap, which generates a separate trap for each PVC). The VPI/VCI information and timing information are located in the objects associated with the trap.

```
00:23:56:SNMP:Queuing packet to 10.1.1.1
00:23:56:SNMP:V2 Trap, reqid 2, errstat 0, erridx 0
sysUpTime.0 = 143636
snmpTrapOID.0 = atmIntfPvcFailuresTrap
ifEntry.1.19 = 19
atmIntfPvcFailures.2 = 7
atmIntfCurrentlyFailingPVcls.2 = 3
atmPVclLowerRangeValue.19.1.2 = 102
atmPVclHigherRangeValue.19.1.2 = 103
atmPVclRangeStatusChangeStart.19.1.2 = 140643
atmPVclRangeStatusChangeEnd.19.1.2 = 140698
atmPVclStatusTransition.19.1.100 = 1
```

```
atmPVclStatusChangeStart.19.1.100 = 140636
atmPVclStatusChangeEnd.19.1.100 = 140636
00:23:56:SNMP:Packet sent via UDP to 10.1.1.1
```

**Examples**

The following example shows output for the extended ATM PVC up trap for PVCs 1/100, 1/102, and 1/103:

```
00:31:29:SNMP:Queuing packet to 10.1.1.1
00:31:29:SNMP:V2 Trap, reqid 2, errstat 0, erridx 0
sysUpTime.0 = 188990
snmpTrapOID.0 = atmIntfPvcUpTrap
ifEntry.1.19 = 19
atmIntfCurrentlyDownToUpPVcls.2 = 3
atmPVclLowerRangeValue.19.1.2 = 102
atmPVclHigherRangeValue.19.1.2 = 103
atmPVclRangeStatusChangeStart.19.1.2 = 186005
atmPVclRangeStatusChangeEnd.19.1.2 = 186053
atmPVclStatusTransition.19.1.100 = 1
atmPVclStatusChangeStart.19.1.100 = 185990
atmPVclStatusChangeEnd.19.1.100 = 185990
00:31:30:SNMP:Packet sent via UDP to 10.1.1.1
```

**Examples**

In the following example, the ATM OAM CC notifications and an extended ATM PVC notification are enabled. If connectivity failures are detected on PVC 0/1, host 172.16.61.90 will receive the SNMP notifications:

```
! Configure SNMP support and an IP routing protocol on your router:
Router(config)# snmp-server community public ro
Router(config)# snmp-server host 172.16.61.90 public
Router(config)# ip routing
Router(config)# router igrp 109
Router(config-router)# network 172.16.0.0
!
! Enable extended ATM PVC trap support and OAM management:
Router(config)# snmp-server enable traps atm pvc extension mibversion 2
Router(config)# snmp-server enable traps atm pvc extension oam failure aisrdi
Router(config)# snmp-server enable traps atm pvc extension oam failure endcc
Router(config)# snmp-server enable traps atm pvc extension oam failure segmentcc
Router(config)# snmp-server enable traps atm pvc extension oam failure loopback
Router(config)# snmp-server enable traps atm pvc extension up
Router(config)# interface atm 0
Router(config-if)# pvc 0/1
Router(config-if-atm-vc)# oam-pvc manage cc end
```

**Related Commands**

Command	Description
<b>oam-pvc manage</b>	Enables end-to-end F5 OAM loopback cell generation and OAM management.
<b>oam-pvc manage cc</b>	Configures ATM OAM F5 CC management.
<b>show atm pvc</b>	Displays all ATM PVCs and traffic information.
<b>snmp-server enable traps</b>	Enables all available SNMP notifications on your system.
<b>snmp-server enable traps atm pvc</b>	Enables the sending of legacy ATM PVC failure traps.

Command	Description
<b>snmp-server enable traps atm pvc extension mibversion</b>	Specifies the MIB that supports extended ATM PVC SNMP notifications or the MIB that supports SNMP notifications for ATM OAM F5 CC, F5 AIS/RDI, and F5 loopback failures.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface from which an SNMP trap should originate.

# snmp-server enable traps atm pvc extension mibversion

To specify the MIB that supports extended ATM permanent virtual circuit (PVC) Simple Network Management Protocol (SNMP) notifications or the MIB that supports SNMP notifications for ATM Operation, Administration, and Maintenance (OAM) F5 continuity check (CC) management, ATM OAM F5 AIS/RDI management, and F5 loopback failure management, use the **snmp-server enable traps atm pvc extension mibversion** command in global configuration mode. To remove the MIB specification, use the **no** form of this command.

**snmp-server enable traps atm pvc extension mibversion {1|2}**

**no snmp-server enable traps atm pvc extension mibversion {1|2}**

## Syntax Description

1	Specifies the MIB that supports the extended ATM permanent virtual circuit (PVC) SNMP notifications. This is the default.
2	Specifies the MIB that supports ATM OAM F5 CC and ATM OAM F5 AIS/RDI SNMP notifications, in addition to the notifications supported by MIB version 1.

## Command Default

SNMP notifications are disabled.

## Command Modes

Global configuration

## Command History

Release	Modification
12.2(15)T	This command was introduced.
12.2(28)SB	This command was integrated into Cisco IOS Release 12.2(28)SB.

## Usage Guidelines

MIB version 1 specifies the MIB that supports legacy extended ATM PVC traps and is defined in the file CISCO-IETF-ATM2-PVCTRAP-MIB-EXTN.my. MIB version 1 is implemented by default. Use the **snmp-server enable traps atm pvc extension mibversion 1** command or the **no snmp-server enable traps atm pvc extension mibversion 2** command to reenabte this MIB if it was previously disabled with the **snmp-server enable traps atm pvc extension mibversion 2** command.

Use the **snmp-server enable traps atm pvc extension mibversion 2** command to specify the MIB that supports ATM OAM F5 CC and ATM OAM AID/RDI failure notifications. This MIB is defined in the file CISCO-ATM-PVCTRAP-EXTN-MIB.my.

To enable the SNMP notifications that support ATM OAM F5 continuity checking, use the **snmp-server enable traps atm pvc extension** command in global configuration mode. These SNMP notifications are defined in the file CISCO-ATM-PVCTRAP-EXTN-MIB.my, available from the Cisco FTP site at <ftp://ftp.cisco.com/pub/mibs/v2/>

OAM management and support for OAM F5 continuity checking must be enabled on the PVC by using the **oam-pvc manage cc** command before you can use the ATM OAM continuity check SNMP notifications.

## Examples

In the following example, the MIB that supports the SNMP notifications for ATM OAM continuity checking is implemented, and the ATM OAM continuity checking notifications are enabled. Support for end-to-end OAM F5 continuity checking is enabled on PVC 0/1:

```
Router(config)# snmp-server enable traps atm pvc extension mibversion 2
Router(config)# snmp-server enable traps atm pvc extension oam failure aisrdi
Router(config)# snmp-server enable traps atm pvc extension oam failure endcc
Router(config)# snmp-server enable traps atm pvc extension oam failure segmentcc
Router(config)# snmp-server enable traps atm pvc extension oam failure loopback
Router(config)# snmp-server enable traps atm pvc extension up
Router(config)# interface atm 0
Router(config-if)# pvc 0/40
Router(config-if-atm-vc)# oam-pvc manage cc end
```

## Related Commands

Command	Description
<b>debug atm oam cc</b>	Displays ATM OAM F5 CC management activity.
<b>oam-pvc manage cc</b>	Configures ATM OAM F5 CC management.
<b>snmp-server enable traps</b>	Enables all available SNMP notifications on your system.
<b>snmp-server enable traps atm pvc</b>	Enables the sending of legacy ATM PVC DOWN traps.
<b>snmp-server enable traps atm pvc extension</b>	Enables the sending of extended ATM PVC SNMP notifications and SNMP notifications for ATM OAM F5 CC, ATM OAM F5 AIS/RDI, and loopback failures.

## snmp-server enable traps atm subif

To enable Simple Network Management Protocol (SNMP) traps (notifications) for ATM subinterfaces, use the **snmp-server enable traps atm subif** command in global configuration mode. To disable ATM subinterface-specific SNMP traps, use the **no** form of this command.

**snmp-server enable traps atm subif** [*count max-traps*] [*interval seconds*]

**no snmp-server enable traps atm subif** [*count max-traps*] [*interval seconds*]

### Syntax Description

<b>count</b>	(Optional) Specifies the maximum number of traps that will be sent in the specified interval.
<i>max-traps</i>	(Optional) Number of traps. The range is from 1 to 1000. The default is 10.
<b>interval</b>	(Optional) Specifies the minimum period between successive traps.
<i>seconds</i>	(Optional) Interval, in seconds. The range is from 0 to 3600. The default is 10.

### Command Default

ATM subinterface SNMP traps are disabled.

### Command Modes

Global configuration (config)

### Command History

Release	Modification
12.2(13)T	This command was introduced.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.
12.2(33)SRE6	This command was modified. To enable the sending of ATM subinterface SNMP notifications, after this command is configured in global configuration mode, the <b>snmp trap link-status</b> command must be configured on each ATM subinterface.
15.1(3)S3	This command was integrated in Cisco IOS Release 15.1(3)S3.

## Usage Guidelines

The **snmp-server trap link ietf** command must be configured in order to use the **snmp-server enable traps atm subif** command. The **snmp-server trap link ietf** command is used to configure a router to use the RFC 2233 IETF standards-based implementation of linkUp/linkDown traps. The default Cisco object definitions do not generate linkUp/linkDown traps correctly for subinterfaces.

In order to enable SNMP notifications for ATM subinterfaces, after the **snmp-server enable traps atm subif** command has been configured in global configuration mode, the **snmp trap link-status** command must be configured on each ATM subinterface for which you want to enable SNMP notifications.

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests for the specified notification types.

ATM subinterface traps are sent to the network management system (NMS) when a subinterface enters or leaves the down state.

To prevent trap storms, the **count** and **interval** keywords can be configured to limit the number of traps and the frequency at which they are sent. Configuring an interval of 0 seconds causes all ATM subinterface traps to be sent.

You can disable ATM subinterface traps by using the **no snmp-server enable traps atm subif** command. When traps are disabled, you can use the SNMP management application to poll your router for subinterface status information.

The **snmp-server enable traps atm subif** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send notifications, you must configure at least one **snmp-server host** command.

By default (when the **snmp-server enable traps atm subif** command is not configured), the `ifLinkUpDownTrapEnable` object returns `disabled(2)`, and no traps are generated for the subinterfaces.

When the **snmp-server enable traps atm subif** command is configured, the `ifLinkUpDownTrapEnable` object is set to `enabled(1)` for all the ATM AAL5 layers of the subinterfaces. To verify that the traps are generated (with the **debug snmp packets** command enabled), enter the **shutdown** or **no shutdown** commands to display the traps.

Configuring the **snmp trap link-status** command on a subinterface generates the traps and sets the `ifLinkUpDownTrapEnable` object to `enabled(1)`. If the **snmp trap link-status** command is not configured on the subinterface, the `ifLinkUpDownTrapEnable` object is set to `disabled(2)` for that subinterface, and the **shutdown** or **no shutdown** commands no longer generate traps for that subinterface.

## Examples

The following example shows how to enable ATM subinterface traps on a device. If an ATM subinterface on this device changes state, host 172.16.61.90 will receive the notifications.

```
! For ATM subinterface trap to work on your router, you must first have SNMP support and
! an IP routing protocol configured on your router.
Device(config)# snmp-server community public ro

Device(config)# snmp-server host 172.16.61.90 public
Device(config)# snmp-server trap link ietf
Device(config)# snmp-server enable traps snmp
Device(config)# ip routing

Device(config)# router igmp 109

Device(config-router)# network 172.16.0.0

! Enable ATM subinterface trap support.
Device(config)# snmp-server enable traps atm subif count 5 interval 60
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>snmp-server enable traps</b>	Enables all available SNMP traps on your system.
<b>snmp-server enable traps atm pvc</b>	Enables the sending of ATM PVC SNMP notifications.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap link ietf</b>	Enables linkUp/linkDown SNMP traps that are compliant with RFC 2233.
<b>snmp-server trap-source</b>	Specifies the interface from which an SNMP trap should originate.
<b>snmp trap link-status</b>	Enables SNMP link trap generation.

## snmp-server enable traps bfd

To enable the sending of Bidirectional Forwarding Detection (BFD) Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps bfd** command in global configuration mode. To disable the sending of BFD notifications, use the **no** form of this command.

**snmp-server enable traps bfd [session-down] [session-up]**

**no snmp-server enable traps bfd [session-down] [session-up]**

### Syntax Description

<b>session-down</b>	(Optional) Enables or disables BFD session down notifications (bfdSessDown).
<b>session-up</b>	(Optional) Enables or disables BFD session up notifications (bfdSessUp).

### Command Default

The sending of SNMP notifications is disabled. If you do not specify an optional keyword, all types of BFD notifications are enabled.

### Command Modes

Global configuration (config)

### Command History

Release	Modification
12.2(33)SRE	This command was introduced.
15.1(1)SG	This command was integrated into Cisco IOS Release 15.1(1)SG.
15.1(1)SY	This command was integrated into Cisco IOS Release 15.1(1)SY.

### Usage Guidelines

The **snmp-server enable traps bfd** command is used with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

If the **session-down** keyword is used with the **snmp-server enable traps bfd** command, a session-down message is generated when a BFD session between the router and its adjacent peer is terminated.

If the **session-up** keyword is used with the **snmp-server enable traps bfd** command, a message is generated when the router establishes a BFD session.

## Examples

In the following example, BFD-specific informs are enabled and will be sent to the host myhost.cisco.com through use of community string defined as public:

```
Router(config)# snmp-server enable traps bfd
```

```
Router(config)# snmp-server host myhost.cisco.com informs version 2c public bfd
```

## Related Commands

Command	Description
<b>snmp-server host</b>	Specifies whether you want the SNMP notifications sent as traps or informs, the version of SNMP to use, the security level of the notifications (for SNMPv3), and the recipient (host) of the notifications.

## snmp-server enable traps bgp

To enable Border Gateway Protocol (BGP) support for Simple Network Management Protocol (SNMP) operations on a router, use the **snmp-server enable traps bgp** command in global configuration mode. To disable BGP support for SNMP operations, use the **no** form of this command.

**snmp-server enable traps bgp [cbgp2] [state-changes [all] [backward-trans] [limited]] threshold prefix**  
**no snmp-server enable traps bgp [cbgp2][state-changes [all] [backward-trans] [limited]] threshold prefix]**

### Syntax Description

<b>cbgp2</b>	(Optional) Enables generation of the CISCO-BGP-MIBv8.1 traps.
<b>state-changes</b>	(Optional) Enables traps for finite state machine (FSM) state changes.
<b>all</b>	(Optional) Enables Cisco specific traps for all FSM state changes
<b>backward-trans</b>	(Optional) Enables Cisco specific traps for backward transition events.
<b>limited</b>	(Optional) Enables traps for standard backward transition and established events.
<b>threshold prefix</b>	(Optional) Enables Cisco-specific trap for prefix threshold events.

### Command Default

SNMP notifications are disabled by default.

### Command Modes

Global configuration (config)

### Command History

Release	Modification
12.1(3)T	This command was introduced for the Cisco AS5300 and Cisco AS5800.
12.0(26)S	This command was modified. The <b>state-changes</b> , <b>all</b> , <b>backward-trans</b> , <b>limited</b> , and <b>threshold prefix</b> keywords were added.
12.3(7)T	This command was integrated into Cisco IOS Release 12.3(7)T.
12.2(25)S	This command was integrated into Cisco IOS Release 12.2(25)S.

Release	Modification
12.2(27)SBC	This command was implemented on the Cisco 7304.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2(31)SB2	This command was implemented on the following platforms: Cisco 7301, Cisco 7200 series, and Cisco 10000 series.
15.2(3)T	This command was modified. The <b>cbgp2</b> keyword was added.
15.2(4)S	This command was integrated into Cisco IOS Release 15.2(4)S.

### Usage Guidelines

SNMP notifications can be sent as traps or inform requests and this command enables both notification types. If this command is entered with no keywords specified, support for all configurable options is enabled.

Use this command to enable or disable BGP server state change notifications for the BGP4-MIB (enterprise 1.3.6.1.2.1.15.7). The notifications types are:

- bgpEstablished
- bgpBackwardsTransition

For a complete description of BGP notifications and additional MIB functions, see the BGP4-MIB.my file, available through the Cisco FTP site at <ftp://ftp.cisco.com/pub/mibs/v2/>.

#### Note

You may notice incorrect BGP trap object ID (OID) output when using the SNMP version 1 BGP4-MIB that is available for download at <ftp://ftp.cisco.com/pub/mibs/v1/BGP4-MIB-V1SML.my>. When a router sends out BGP traps (notifications) about state changes on an SNMP version 1 monitored BGP peer, the enterprise OID is incorrectly displayed as .1.3.6.1.2.1.15 (bgp) instead of .1.3.6.1.2.1.15.7 (bgpTraps). This problem occurs because the BGP4-MIB does not follow RFC 1908 rules for version 1 and version 2 trap compliance. The problem is not due to an error in Cisco IOS software. This MIB is controlled by IANA under the guidance of the IETF, and work is currently in progress by the IETF to replace this MIB with a new version that represents the current state of the BGP protocol. In the meantime, we recommend that you use the SNMP version 2 BGP4-MIB or the CISCO-BGP4-MIB to avoid an incorrect trap OID.

The **snmp-server enable traps bgp** command also can be enabled to control BGP server state change notifications for the CISCO-BGP4-MIB. This MIB contains support the following SNMP operations:

- Notification for all BGP FSM transition changes.
- Notifications to query for total number of routes received by a BGP peer.
- Notifications for the maximum prefix-limit threshold on a BGP peer.
- GET operations for VPNv4 unicast routes.

For a complete description of BGP notifications and additional MIB functions, see the CISCO-BGP4-MIB.my file, available through the Cisco FTP site at <ftp://www.cisco.com/public/mibs/v2/>.

The **snmp-server enable traps bgp** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

You may enable or disable the **snmp-server enable traps bgp** command and the **snmp-server enable traps bgp cbgp2** command independently of each other. If both commands are enabled, both traps are generated. If only one of the two commands is enabled, only that version of traps is generated.

### Examples

The following example shows how to enable the router to send BGP state change informs to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps bgp
Router(config)# snmp-server host myhost.cisco.com informs version 2c public
```

The following example shows how to enable generation of the CISCO-BGP-MIBv8.1 traps:

```
Router(config)# snmp-server enable traps bgp cbgp2
```

### Related Commands

Command	Description
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface from which an SNMP trap should originate.

## snmp-server enable traps bulkstat

To enable the sending of Simple Network Management Protocol (SNMP) bulk statistics collection and transfer SNMP notifications, use the **snmp-server enable traps bulkstat** command in global configuration mode. To disable bulk statistics SNMP notifications, use the **no** form of this command.

**snmp-server enable traps bulkstat [collection] [transfer]**

**no snmp-server enable traps bulkstat [collection] [transfer]**

### Syntax Description

<b>collection</b>	(Optional) Controls bulk statistics collection notifications, which are sent when data collection cannot be carried out successfully. (Defined as cdcVFileCollectionError in the CISCO-DATA-COLLECTION-MIB.)
<b>transfer</b>	(Optional) Controls bulk statistics transfer notifications, which are sent when a transfer attempt is successful or when a transfer attempt fails. (Defined as cdcFileXferComplete in the CISCO-DATA-COLLECTION-MIB. The varbind cdcFilXferStatus object in the trap indicates if the transfer is successful or not.)

### Command Default

SNMP notifications are disabled.

### Command Modes

Global configuration (config)

### Command History

Release	Modification
12.0(24)S	This command was introduced.
12.3(2)T	This command was integrated into Cisco IOS Release 12.3(2)T.
12.2(25)S	This command was integrated into Cisco IOS Release 12.2(25)S.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.
12.2(33)SB	This command was integrated into Cisco IOS Release 12.2(33)SB.
Cisco IOS XE Release 2.1	This command was integrated into Cisco IOS Release XE 2.1.

**Usage Guidelines**

SNMP notifications can be sent as traps or inform requests. The **snmp-server enable traps bulkstat** command enables both traps and inform requests for the specified notification types. Use this command with the **snmp-server host [bulkstat]** command.

The optional **collection** keyword controls bulk statistics collection notifications that are sent when data collection cannot be carried out successfully. One possible reason for this condition is insufficient memory on the device.

If the optional keywords are not used, all bulk statistics notification types are enabled (or disabled, if the **no** form of the command is used).

**Examples**

In the following example, bulk statistics collection and transfer notifications are configured to be sent to the host myhost.cisco.com using the community string public:

```
Router(config)# snmp-server enable traps bulkstat
Router(config)# snmp-server host myhost.cisco.com traps version 2c public bulkstat
```

**Related Commands**

Command	Description
<b>snmp mib bulkstat transfer</b>	Names a bulk statistics transfer configuration and enters Bulk Statistics Transfer configuration mode.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface from which an SNMP trap should originate.

## snmp-server enable traps c6kxbar

To enable CISCO-CAT6K-CROSSBAR-MIB Simple Network Management Protocol (SNMP) notifications (traps and informs), use the **snmp-server enable traps c6kxbar** command in global configuration mode. To disable cc6kxbar notifications, use the **no** form of this command.

**snmp-server enable traps c6kxbar** [flowctrl-bus| intbus-crcvrd| intbus-crcexcd| swbus| tm-channel| tm-swbus]

**no snmp-server enable traps c6kxbar** [flowctrl-bus| intbus-crcexcd| intbus-crcvrd| swbus| tm-channel| tm-swbus]

### Syntax Description

<b>flowctrl-bus</b>	(Optional) Enables SNMP cc6kxbarFlowCtrlBusThrExcdNotif notifications.
<b>intbus-crcvrd</b>	(Optional) Enables SNMP cc6kxbarIntBusCRCErrRcvrdNotif notifications.
<b>intbus-crcexcd</b>	(Optional) Enables SNMP cc6kxbarIntBusCRCErrExcdNotif notifications.
<b>swbus</b>	(Optional) Enables SNMP cc6kxbarSwBusStatusChangeNotif notifications.
<b>tm-channel</b>	(Optional) Enables cc6kxbarTMChUtilAboveNotif and cc6kxbarTMChUtilBelowNotif notifications.
<b>tm-swbus</b>	(Optional) Enables cc6kxbarTMSwBusUtilAboveNotif and cc6kxbarTMSwBusUtilBelowNotif notifications.

**Command Default** SNMP notifications are disabled.

**Command Modes** Global configuration

### Command History

Release	Modification
12.2(14)SX	This command was introduced on the Supervisor Engine 720.
12.2(18)SXF	Added <b>intbus-crcexce</b> and <b>intbus-crcvrd</b> keywords.
12.2(33)SXH	Added <b>flowctrl-bus</b> keyword for Supervisor Engine 32 only.

Release	Modification
12.2(33)SX14	Added <b>tm-channel</b> for Supervisor Engine 720 only and <b>tm-swbus</b> keywords.

### Usage Guidelines

The **flowctrl-bus** keyword is supported on the Supervisor Engine 32 only.

The **tm-channel** keyword is not supported on the Supervisor Engine 32.

### Examples

This example shows how to enable SNMP cc6kxbarFlowCtrlBusThrExcdNotif notifications:

```
Router(config)# snmp-server enable traps c6kxbar flowctrl-bus
Router(config)#
```

This example shows how to enable SNMP cc6kxbarIntBusCRCErrExcdNotif notifications:

```
Router(config)# snmp-server enable traps c6kxbar intbus-crcexcd
Router(config)#
```

This example shows how to enable SNMP cc6kxbarIntBusCRCErrRcvrdNotif notifications:

```
Router(config)# snmp-server enable traps c6kxbar intbus-crcvrd
Router(config)#
```

This example shows how to enable SNMP cc6kxbarSwBusStatusChangeNotif notifications:

```
Router(config)# snmp-server enable traps c6kxbar swbus
Router(config)#
```

This example shows how to enable SNMP cc6kxbarTMChUtilAboveNotif and cc6kxbarTMChUtilBelowNotif notifications:

```
Router(config)# snmp-server enable traps c6kxbar tm-channel
Router(config)#
```

This example shows how to enable SNMP cc6kxbarTMSwBusUtilAboveNotif and cc6kxbarTMSwBusUtilBelowNotif notifications:

```
Router(config)# snmp-server enable traps c6kxbar tm-swbus
Router(config)#
```

### Related Commands

Command	Description
<b>test snmp trap c6kxbar</b>	Tests the SNMP c6kxbar notification traps.

# snmp-server enable traps calltracker

To enable Call Tracker CallSetup and Call Terminate Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps calltracker** command in global configuration mode. To disable Call Tracker SNMP notifications, use the **no** form of this command.

**snmp-server enable traps calltracker**

**no snmp-server enable traps calltracker**

**Syntax Description** This command has no arguments or keywords.

**Command Default** SNMP notifications are disabled.

**Command Modes** Global configuration

Command History	Release	Modification
	12.1(3)T	This command was introduced for the Cisco AS5300 and Cisco AS580 access servers.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.

**Usage Guidelines** SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

This command controls (enables or disables) Call Tracker CallSetup and CallTerminate notifications. CallSetup notifications are generated at the start of each call, when an entry is created in the active table (cctActiveTable), and CallTerminate notifications are generated at the end of each call, when an entry is created in the history table (cctHistoryTable).

For a complete description of these notifications and additional MIB functions, refer to the CISCO-CALL-TRACKER-MIB.my file, available on Cisco.com at <http://www.cisco.com/public/mibs/v2/>.

The **snmp-server enable traps calltracker** command is used in conjunction with the **snmp-server host** global configuration command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

**Examples**

The following example enables the router to send call-start and call-stop informs to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps calltracker
Router(config)# snmp-server host myhost.cisco.com informs version 2c public calltracker
```

**Related Commands**

Command	Description
<b>calltracker call-record</b>	Enables call record SYSLOG generation for the purpose of debugging, monitoring, or externally saving detailed call record information.
<b>calltracker enable</b>	Enables the Call Tracker feature on an access server.
<b>isdn snmp busyout b-channel</b>	Enables PRI B channels to be busied out via SNMP.
<b>show call calltracker</b>	Displays Call Tracker activity and configuration information such as the number of active calls and the history table attributes.
<b>show modem calltracker</b>	Displays all of the information stored within the Call Tracker Active or History Database for the latest call assigned to specified modem.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface that an SNMP trap should originate from.

## snmp-server enable traps cnpd

To enable Cisco Network-Based Application Recognition (NBAR) Protocol Discovery (CNPD) MIB notifications, use the **snmp-server enable traps cnpd** command in global configuration mode. To disable CNPD MIB notifications, use the **no** form of this command.

**snmp-server enable traps cnpd**

**no snmp-server enable traps cnpd**

**Syntax Description** This command has no arguments or keywords.

**Command Default** CNPD MIB notifications are disabled.

**Command Modes** Global configuration (config)

Command History	Release	Modification
	12.2(15)T	This command was introduced.

**Usage Guidelines** CNPD notifications are used with the CNPD MIB to provide information related to protocol discovery. The **snmp-server enable traps cnpd** command enables these notifications. It also enables SNMP notifications as either traps or inform requests.

The **snmp-server enable traps cnpd** command is used in conjunction with the **snmp-server host** command, which specifies the host or hosts that will receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command. The default action is to send notifications to the default port, but you can specify a port by configuring the **udp-port** option of the **snmp-server host** command.

**Examples** The following example shows how to enable CNPD notifications:

```
Router(config)# snmp-server enable traps cnpd
```

### Related Commands

Command	Description
<b>snmp-server host</b>	Specifies the recipient of SNMP notifications.

## snmp-server enable traps cpu

To enable a device to send CPU thresholding violation notifications, use the **snmp-server enable traps cpu** command in global configuration mode. To stop a device from sending CPU thresholding notifications, use the **no** form of this command.

**snmp-server enable traps cpu threshold**

**no snmp-server enable traps cpu**

### Syntax Description

<b>threshold</b>	Enables notifications of CPU threshold violations.
------------------	--

### Command Default

SNMP notifications are disabled.

### Command Modes

Global configuration

### Command History

Release	Modification
12.0(26)S	This command was introduced.
12.3(4)T	This command was integrated into Cisco IOS Release 12.3(4)T.
12.2(25)S	This command was integrated into Cisco IOS Release 12.2(25)S.

### Usage Guidelines

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests and controls CPU thresholding notifications, as defined in the Process MIB (CISCO-PROCESS-MIB).

This command enables the following notifications:

- **cpmCPURisingThreshold**--Indicates that CPU usage has risen and remains above the configured CPU threshold settings.
- **cpmCPUFallingThreshold**--Indicates that CPU usage has fallen and remains below the configured CPU threshold settings.

For a complete description of these notification types, and for information about the other MIB functions, see the CISCO-PROCESS-MIB.my file available from Cisco.com at <http://www.cisco.com/go/mibs> .

The **snmp-server enable traps cpu** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

**Examples**

The following example shows how to enable the router to send CPU threshold related informs to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps cpu threshold
```

```
Router(config)# snmp-server host myhost.cisco.com informs version 2c public cpu
```

**Related Commands**

Command	Description
<b>snmp-server host</b>	Specifies the destination NMS and transfer parameters for SNMP notifications.
<b>snmp-server trap-source</b>	Specifies the interface from which an SNMP trap should originate.

## snmp-server enable traps dhcp

To enable DHCP Simple Network Management Protocol (SNMP) trap notifications, use the **snmp-server enable traps dhcp** command in global configuration mode. To disable DHCP trap notifications, use the **no** form of this command.

**snmp-server enable traps dhcp** [duplicate] [interface] [pool] [subnet] [time]

**no snmp-server enable traps dhcp** [duplicate] [interface] [pool] [subnet] [time]

### Syntax Description

<b>duplicate</b>	(Optional) Sends notification about duplicate IP addresses.
<b>interface</b>	(Optional) Sends notification that a per interface lease limit is exceeded.
<b>pool</b>	(Optional) Sends notification when address utilization for an address pool has risen above or fallen below a configurable threshold.
<b>subnet</b>	(Optional) Sends notification when address utilization for a subnet has risen above or fallen below a configurable threshold.
<b>time</b>	(Optional) Sends notification that the DHCP server has started or stopped.

### Command Default

DHCP trap notifications are not sent.

### Command Modes

Global configuration (config)

### Command History

Release	Modification
12.2(33)SRC	This command was introduced.

### Usage Guidelines

If you do not specify any of the optional keywords, all DHCP trap notifications are enabled.

### Examples

The following example shows how to send SNMP trap notifications to the SNMP manager when the secondary subnet utilization falls below or exceeds the configured threshold:

```
Router(config)# ip dhcp pool pool2
```

```
Router(dhcp-config)# utilization mark high 80 log
Router(dhcp-config)# utilization mark low 70 log
Router(dhcp-config)# network 192.0.2.0 255.255.255.0
Router(dhcp-config)# network 192.0.4.0 255.255.255.252 secondary
Router(config-dhcp-subnet-secondary)# override utilization high 40
Router(config-dhcp-subnet-secondary)# override utilization low 30
!
```

```
Router(config)# snmp-server enable traps dhcp subnet
```

In the following example, all DHCP trap notifications will be sent to the SNMP manager in response to DHCP server events:

```
Router(config)# snmp-server enable traps dhcp
```

## snmp-server enable traps dhcp-snooping bindings

To enable DHCP-snooping bindings Simple Network Management Protocol (SNMP) notifications (traps and informs), use the **snmp-server enable traps dhcp-snooping bindings** command in global configuration mode. To disable DHCP-snooping bindings notifications, use the **no** form of this command.

**snmp-server enable traps dhcp-snooping bindings**

**no snmp-server enable traps dhcp-snooping bindings**

**Syntax Description** This command has no keywords or arguments.

**Command Default** SNMP notifications are disabled.

**Command Modes** Global configuration

Command History	Release	Modification
	12.2(33)SX14	This command was introduced on the Supervisor Engine 720.

**Usage Guidelines** This command controls (enables or disables) SNMP notifications for DHCP-snooping binding activity.

**Examples** This example shows how to enable DHCP-snooping bindings SNMP notifications:

```
Router(config)# snmp-server enable traps dhcp-snooping bindings
Router(config)#
```

# snmp-server enable traps director

**Note** Effective with Cisco IOS Release 12.4(24)T, the **snmp-server enable traps director** command is not available in Cisco IOS software.

To enable DistributedDirector Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps director** command in global configuration mode. To disable DistributedDirector SNMP notifications, use the **no** form of this command.

**snmp-server enable traps director** [server-up| server-down]

**no snmp-server enable traps director** [server-up| server-down]

## Syntax Description

<b>server-up</b>	(Optional) Enables the DistributedDirector notification that the server has changed to the “up” state.
<b>server-down</b>	(Optional) Enables the DistributedDirector notification that the server has changed to the “down” state.

**Command Default** SNMP notifications are disabled.

**Command Modes** Global configuration

## Command History

Release	Modification
12.2(8)T	This command was introduced.
12.4(24)T	This command was removed.

## Usage Guidelines

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

This command controls (enables or disables) DistributedDirector status notifications for systems. If none of the optional keywords is specified, all available environmental notifications are enabled.

**Examples**

In the following example, both ciscoDistDirEventServerUp and ciscoDistDirEventServerDown notifications are enabled:

```
Router(config)# snmp-server enable traps director
Router# show running-config
ip host myhost 172.20.2.10 172.20.2.20 172.20.2.30
.
.
.
ip director host myhost
ip dns primary myhost soa myhost myhost@com
ip director host myhost priority boomerang 1
no ip director drp synchronized
snmp-server enable traps director server-up server-down
```

**Related Commands**

Command	Description
<b>snmp-server enable traps</b>	Enables the router to send SNMP traps.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification.
<b>snmp-server informs</b>	Specifies inform request options.
<b>snmp-server trap-source</b>	Specifies the interface (and hence the corresponding IP address) from which an SNMP trap should originate.
<b>snmp-server trap-timeout</b>	Defines how often to try resending trap messages on the retransmission queue.
<b>snmp trap link-status</b>	Enables SNMP trap notifications to be generated when a specific port is brought up or down.

## snmp-server enable traps dlsw

To enable the sending of Data Link Switch (DLSw) circuit and peer connection Simple Network Management Protocol (SNMP) notifications (traps and informs), use the **snmp-server enable traps dlsw** command in global configuration mode. To disable DLSw notifications, use the **no** form of this command.

**snmp-server enable traps dlsw [circuit| tconn]**

**no snmp-server enable traps dlsw [circuit| tconn]**

### Syntax Description

<b>circuit</b>	(Optional) Enables DLSw circuit traps: <ul style="list-style-type: none"> <li>• (5) ciscoDlswTrapCircuitUp</li> <li>• (6) ciscoDlswTrapCircuitDown</li> </ul>
<b>tconn</b>	(Optional) Enables DLSw peer transport connection traps: <ul style="list-style-type: none"> <li>• (1) ciscoDlswTrapTConnPartnerReject</li> <li>• (2) ciscoDlswTrapTConnProtViolation</li> <li>• (3) ciscoDlswTrapTConnUp</li> <li>• (4) ciscoDlswTrapTConnDown</li> </ul>

### Command Default

SNMP notifications are disabled.

If the optional keywords are not used, all DLSw notification types are enabled (or disabled, if the **no** form of the command is used).

### Command Modes

Global configuration

### Command History

Release	Modification
12.1	This command was introduced.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.

**Usage Guidelines**

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests. Use this command in conjunction with the **snmp-server host** command.

This command controls (enables or disables) SNMP notifications for Data Link Switch (DLSw) circuit and connection activity. DLSw objects are defined in the Cisco DLSw MIB module (CISCO-DLSW-MIB.my) and the DLSw+ (Cisco Specific Features) MIB module (CISCO-DLSW-EXT-MIB.my), available through Cisco.com at <http://www.cisco.com/public/sw-center/netmgmt/cmtk/mibs.shtml>.

**Examples**

In the following example the device is configured to send DLSw circuit state change informs to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps dls w circuit
Router(config)# snmp-server host myhost.cisco.com informs version 2c public
```

**Related Commands**

Command	Description
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface that an SNMP trap should originate from.

## snmp-server enable traps eigrp

To enable support for Enhanced Interior Gateway Routing Protocol (EIGRP) notifications on a Cisco router, use the `snmp-server enable traps eigrp` command in global configuration mode. To disable EIGRP notification support, use the **no** form of this command.

**snmp-server enable traps eigrp**

**no snmp-server enable traps eigrp**

**Syntax Description** This command has no keywords or arguments.

**Command Default** EIGRP notification support is not enabled.

**Command Modes** Global configuration (config)

Command History	Release	Modification
	12.3(14)T	This command was introduced.
	12.2(33)SRB	This command was integrated into Cisco IOS Release 12.2(33)SRB.
	15.0(1)M	This command was integrated into Cisco IOS Release 15.0(1)M.
	12.2(33)XNE	This command was integrated into Cisco IOS Release 12.2(33)XNE.
	IOS XE Release 2.6	This command was integrated into Cisco IOS XE Release 2.6.
	12.2(33)SX14	This command was integrated into Cisco IOS Release 12.2(33)SX14.

**Usage Guidelines** The `snmp-server enable traps eigrp` command is used to enable notifications (traps) for stuck-in-active (SIA) and neighbor authentication failure events. Support for trap events is not activated until a trap destination is configured with the `snmp-server host` command and until a community string is defined with the `snmp-server community` command.

**Examples** In the following example, an SNMP server host is specified, a community string is configured, and support for EIGRP notifications is enabled:

```
Router(config)# snmp-server host 10.0.0.1 traps version 2c NETMANAGER eigrp
Router(config)# snmp-server community EIGRP1NET1A
Router(config)# snmp-server enable traps eigrp
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>snmp-server community</b>	Configures a community access string to permit SNMP access to the local router by the remote SNMP software client.
<b>snmp-server host</b>	Specifies the destination host or address for SNMP notifications.

## snmp-server enable traps envmon

To enable environmental monitor Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps envmon** command in global configuration mode. To disable environmental monitor SNMP notifications, use the **no** form of this command.

**snmp-server enable traps envmon [shutdown] [voltage] [temperature] [fan] [supply]**

**no snmp-server enable traps envmon [shutdown] [voltage] [temperature] [fan] [supply]**

### Syntax Description

<b>shutdown</b>	(Optional) Controls shutdown notifications.
<b>voltage</b>	(Optional) Controls voltage notifications.
<b>temperature</b>	(Optional) Controls temperature notifications.
<b>fan</b>	(Optional) Controls fan failure notifications.
<b>supply</b>	(Optional) Controls redundant power supply (RPS) failure notifications.

### Command Default

SNMP notifications are disabled by default.

### Command Modes

Global configuration (config)

### Command History

Release	Modification
10.3	This command was introduced.
11.3(6)AA	This command is supported on the Cisco AS5300 access server.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.
15.0(1)SE	This command was modified. The following notifications were added: ciscoEnvMonVoltStatusChangeNotif, ciscoEnvMonTempStatusChangeNotif, ciscoEnvMonFanStatusChangeNotif, and ciscoEnvMonSuppStatusChangeNotif.

**Usage Guidelines**

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

This command enables or disables Environmental Monitor (EnvMon) status notifications for supported systems. The Cisco enterprise EnvMon notifications that are listed in the table below are triggered when an environmental threshold is exceeded. If none of the optional keywords are specified, all available environmental notifications are enabled.

<b>Keyword Enabled</b>	<b>EnvMon Notification Sent</b>	<b>Trigger</b>
<b>shutdown</b>	ciscoEnvMonShutdownNotification (enterprise MIB OID 1.3.6.1.4.1.9.9.13.3.1)	The environmental monitor detects a testpoint that is reaching a critical state and is about to initiate a shutdown.
<b>voltage</b>	ciscoEnvMonVoltageNotification (enterprise MIB OID 1.3.6.1.4.1.9.9.13.3.2)	The voltage measured at a given testpoint is outside the normal range for the testpoint (that is, the voltage is at the warning, critical, or shutdown stage). For access servers, this notification is defined as caemVoltageNotification (enterprise MIB OID 1.3.6.1.4.1.9.9.61.2.2).
<b>temperature</b>	ciscoEnvMonTemperatureNotification (enterprise MIB OID 1.3.6.1.4.1.9.9.13.3.3)	The temperature measured at a given testpoint is outside the normal range for the testpoint (that is, the temperature is at the warning, critical, or shutdown stage). For access servers, this notification is defined as caemTemperatureNotification (enterprise MIB OID 1.3.6.1.4.1.9.9.61.2.1).
<b>fan</b>	ciscoEnvMonFanNotification (enterprise MIB OID 1.3.6.1.4.1.9.9.13.3.4)	A fan in a fan array fails.
<b>supply</b>	ciscoEnvMonRedundantSupplyNotification (enterprise MIB OID 1.3.6.1.4.1.9.9.13.2.5)	A redundant power supply fails.

The Cisco enterprise EnvMon notifications that are listed in the table below are triggered when there is a change in the state of a device being monitored. If none of the optional keywords are specified, all available environmental notifications are enabled.

Keyword Enabled	EnvMon Notification Sent	Trigger
<b>voltage</b>	ciscoEnvMonVoltStatusChangeNotif (enterprise MIB OID 1.3.6.1.4.1.9.9.13.3.0.6)	There is a change in the state of a device being monitored by ciscoEnvMonVoltageState.
<b>temperature</b>	ciscoEnvMonTempStatusChangeNotif (enterprise MIB OID 1.3.6.1.4.1.9.9.13.3.0.7)	There is a change in the state of a device being monitored by ciscoEnvMonTemperatureState.
<b>fan</b>	ciscoEnvMonFanStatusChangeNotif (enterprise MIB OID 1.3.6.1.4.1.9.9.13.3.0.8)	There is a change in the state of a device being monitored by ciscoEnvMonFanState.
<b>supply</b>	ciscoEnvMonSuppStatusChangeNotif (enterprise MIB OID 1.3.6.1.4.1.9.9.13.3.0.9)	There is a change in the state of a device being monitored by ciscoEnvMonSupplyState.

For a complete description of these notifications and additional MIB functions, see the CISCO-ENVMON-MIB.my and CISCO-ACCESS-ENVMON-MIB.my files available on Cisco.com at <http://www.cisco.com/public/mibs/v2/>.

You can view the status of EnvMon by using the **show environment** command.

The **snmp-server enable traps envmon** command is used in combination with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

### Examples

The following example shows how to enable a Cisco 12000 Gigabit Switch Router (GSR) to send environmental failure informs to the host at the address myhost.cisco.com by using the community string defined as public:

```
Device# configure terminal
Device(config)# snmp-server enable traps envmon
Device(config)# snmp-server host myhost.cisco.com informs version 2c public envmon
```

### Related Commands

Command	Description
<b>show environment</b>	Displays environmental conditions on the system.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface that an SNMP trap should originate from.

## snmp-server enable traps errdisable

To enable the CISCO-ERR-DISABLE-MIB Simple Network Management Protocol (SNMP) notification for traps and informs, use the **snmp-server enable traps errdisable** command in global configuration mode. To disable errdisable notifications, use the **no** form of this command.

**snmp-server enable traps errdisable** [**notification-rate** *rate*]

**no snmp-server enable traps** [**notification-rate** *rate*]

### Syntax Description

<b>notification-rate</b> <i>rate</i>	(Optional) Sets the number of notifications per minute.
--------------------------------------	---

### Command Default

SNMP notifications are disabled.

### Command Modes

Global configuration

### Command History

Release	Modification
12.2(33)SX14	This command was introduced on the Supervisor Engine 720 and Supervisor Engine 32.

### Examples

This example shows how to enable the SNMP errdisable notifications:

```
Router(config)# snmp-server enable traps errdisable
Router(config)#
```

This example shows how to set the SNMP errdisable notification rate to 500 per minute:

```
Router(config)# snmp-server enable traps errdisable notification-rate 500
Router(config)#
```

### Related Commands

Command	Description
<b>test snmp trap errdisable ifevent</b>	Tests the cErrDisableInterfaceEventRev1 trap.

## snmp-server enable traps firewall

To enable the router to send firewall Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps firewall** command in global configuration mode. To disable firewall SNMP notifications, use the **no** form of this command.

**snmp-server enable traps firewall serverstatus**

**no snmp-server enable traps firewall serverstatus**

### Syntax Description

<b>serverstatus</b>	Displays the status of configured servers.
---------------------	--

### Command Default

SNMP notifications are disabled by default.

### Command Modes

Global configuration

### Command History

Release	Modification
12.4(6)T	This command was introduced.

### Usage Guidelines

SNMP notifications are sent as traps by the agent. Currently, only one URL filtering trap is generated.

For a complete description of the notification types and additional MIB functions, refer to the CISCO-UNIFIED-FIREWALL-MIB.my and CISCO-FIREWALL-TC.my files, available on Cisco.com through:

<http://www.cisco.com/public/sw-center/netmgmt/cmtk/mibs.shtml>

The **snmp-server enable traps firewall** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

### Examples

In the following example, the router is configured to send firewall MIB inform notifications to the host nms.cisco.com using the community string named “public”:

```
snmp-server enable traps firewall serverstatus
snmp-server host nms.cisco.com informs public firewall
```

### Related Commands

Command	Description
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.

## snmp-server enable traps flash

To enable Flash device insertion and removal Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps flash** command in global configuration mode. To disable Flash device SNMP notifications, use the **no** form of this command.

**snmp-server enable traps flash [insertion] [removal]**

**no snmp-server enable traps flash [insertion] [removal]**

### Syntax Description

<b>insertion</b>	(Optional) Controls Flash card insertion notifications.
<b>removal</b>	(Optional) Controls Flash card removal notifications.

### Command Default

SNMP notifications are disabled by default.

### Command Modes

Global configuration

### Command History

Release	Modification
12.3(2)T	This command was introduced.
12.0(23)S	This command was integrated in Cisco IOS Release 12.0 S.
12.1(13)E4	This command was implemented on the Cisco Catalyst 6000 Series.

### Usage Guidelines

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

This command enables or disables Flash card insertion and removal notifications, as defined by the `ciscoFlashDeviceInsertedNotif` and `ciscoFlashDeviceRemovedNotif` objects in the Cisco Flash MIB.

When the **insertion** keyword is used, a `ciscoFlashDeviceInsertedNotif` (OID 1.3.6.1.4.1.9.9.10.1.3.0.5) is sent whenever a removable Flash device is inserted.

When the **removal** keyword is used, a `ciscoFlashDeviceRemovedNotif` (OID 1.3.6.1.4.1.9.9.10.1.3.0.6) notification is sent whenever a removable Flash device is removed.

For a complete description of these notifications and additional MIB functions, see the `CISCO-FLASH-MIB.mib` file, available on Cisco.com at <http://www.cisco.com/go/mibs>.

The **snmp-server enable traps flash** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

**Examples**

The following example shows how to enable the router to send Flash card insertion and removal informs to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps flash insertion removal
Router(config)# snmp-server host myhost.cisco.com informs version 2c public flash
```

**Related Commands**

Command	Description
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface that an SNMP trap should originate from.

## snmp-server enable traps flowmon

To enable flow monitoring SNMP trap notifications, use the **snmp-server enable traps flowmon** command in global configuration mode. To disable flow monitoring trap notifications, use the **no** form of this command.

**snmp-server enable traps flowmon**

**no snmp-server enable traps flowmon**

**Syntax Description** This command has no arguments or keywords.

**Command Default** Flow monitoring trap notifications are disabled.

**Command Modes** Global configuration (config)

Command History	Release	Modification
	15.0(1)S	This command was introduced.

**Usage Guidelines** SNMP notifications can be sent as traps or informs. This command enables trap notification requests only. By default all notifications (traps) are disabled. You must explicitly enable any notifications that you need in your system. The **snmp-server enable traps flowmon** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

**Note** For a complete description of the MIB tables for flow monitoring, see the appropriate CISCO\_MIB.my file, available on Cisco.com at <http://www.cisco.com/go/mibs>.

**Examples** The following example shows how to enable flow monitoring traps:

```
Router(config)# snmp-server enable traps flowmon
```

### Related Commands

Command	Description
<b>snmp -server community</b>	Enables SNMP and sets the community string and access privileges.
<b>snmp -server host</b>	Specifies the recipient of an SNMP notification operation.

## snmp-server enable traps frame-relay

To enable Frame Relay Data Link Connection Identifier (DLCI) and subinterface Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps frame-relay** command in global configuration mode. To disable Frame Relay DLCI and subinterface SNMP notifications, use the **no** form of this command.

**snmp-server enable traps frame-relay**

**no snmp-server enable traps frame-relay**

**Syntax Description** This command has no arguments or keywords.

**Command Default** SNMP notifications are disabled.

**Command Modes** Global configuration

Command History	Release	Modification
	10.3	This command was introduced.
	12.2(13)T	This command was modified to enable Frame Relay subinterface traps in addition to DLCI traps.
	12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
	12.2SX	This command is supported in the Cisco IOS Release 12.2SX train. Support in a specific 12.2SX release of this train depends on your feature set, platform, and platform hardware.

**Usage Guidelines** SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

This command controls (enables or disables) DLCI Frame Relay notifications, as defined in the RFC1315-MIB (enterprise 1.3.6.1.2.1.10.32).

This trap indicates that the indicated virtual circuit (VC) or subinterface has changed state, meaning that the VC or subinterface has either been created or invalidated, or has toggled between the active and inactive states.

To enable only Frame Relay subinterface traps, use the **snmp-server enable traps frame-relay subif** command.

**Note**

For large scale configurations (systems containing hundreds of Frame Relay point-to-point subinterfaces), note that having Frame Relay notifications enabled could potentially have a negative impact on network performance when there are line status changes.

For a complete description of this notification and additional MIB functions, see the RFC1315-MIB.my file and the CISCO-FRAME-RELAY-MIB.my file, available in the “v1” and “v2” directories, respectively, at the Cisco.com MIB web site at <http://www.cisco.com/public/sw-center/netmgmt/cmtk/mibs.shtml>.

The **snmp-server enable traps frame-relay** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

**Examples**

In the following example, the router is configured to send Frame Relay DLCI and subinterface state change informs to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps frame-relay
Router(config)# snmp-server host myhost.cisco.com informs version 2c public
```

**Related Commands**

Command	Description
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface that an SNMP trap should originate from.

# snmp-server enable traps frame-relay multilink bundle-mismatch

To enable multilink Frame Relay Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps frame-relay multilink bundle-mismatch** command in global configuration mode. To disable these notifications, use the **no** form of this command.

**snmp-server enable traps frame-relay multilink bundle-mismatch**

**no snmp-server enable traps frame-relay multilink bundle-mismatch**

**Syntax Description** This command has no arguments or keywords.

**Command Default** SNMP notifications are disabled.

**Command Modes** Global configuration (config)

Command History	Release	Modification
	12.4(9)T	This command was introduced.
	12.2(33)SRB	This command was integrated into Cisco IOS Release 12.2(33)SRB.
	12.2(33)SB	This command was integrated into Cisco IOS Release 12.2(33)SB.

**Usage Guidelines** Use the multilink Frame Relay MIB to manage devices that are configured with multilink Frame Relay. SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

Although the bundle-mismatch trap is one of five traps defined in RFC 3020, Cisco IOS supports only the bundle-mismatch trap.

For a complete description of MIB functions, see the CISCO-FRAME-RELAY-MIB.my file, which is available in the “SNMP v2 MIBs” directory found at the following URL:

<http://www.cisco.com/public/sw-center/netmgmt/cmtk/mibs.shtml>

**Examples** In the following example, multilink Frame Relay is configured on the host router with one bundle, and the peer router is configured with zero bundle links.

On the host router:

```
Router(config)# interface MFR1
Router(config)# ip address 209.165.200.225 255.255.255.224
```

```

Router(config)# frame-relay multilink bid UUT_BUNDLE_ONE
Router(config)# frame-relay interface-dlci 100
!
Router(config)# snmp-server community public RW
Router(config)# snmp-server enable traps frame-relay multilink bundle-mismatch
Router(config)# snmp-server host 10.0.47.4 public

```

On the peer router:

```

Router(config)# interface MFR1
Router(config)# ip address 209.165.200.226 255.255.255.224
Router(config)# frame-relay multilink bid PEER_BUNDLE_ONE
Router(config)# frame-relay interface-dlci 100
Router(config)# frame-relay intf-type dce
Router(config)# snmp-server enable traps frame-relay multilink bundle-mismatch
Router(config)# snmp-server host myhost.cisco.com informs version 2c public

```

## Related Commands

Command	Description
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap-source</b>	Specifies the interface from which an SNMP trap should originate.

## snmp-server enable traps frame-relay subif

To enable Frame Relay subinterface Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps frame-relay subif** command in global configuration mode. To disable Frame Relay subinterface SNMP notifications, use the **no** form of this command.

**snmp-server enable traps frame-relay subif** *[[interval seconds] count number-of-traps]*

**no snmp-server enable traps frame-relay subif** *[[interval seconds] count number-of-traps]*

### Syntax Description

<b>interval</b>	(Optional) Specifies a minimum period between successive traps,
<i>seconds</i>	(Optional) Integer in the range from 0 to 3600. The default is 10.
<b>count</b>	(Optional) Specifies a maximum number of traps that will be sent in the specified interval.
<i>number-of-traps</i>	(Optional) Integer in the range from 1 to 1000. The default is 10.

### Command Default

Frame Relay subinterface SNMP notifications are disabled.

### Command Modes

Global configuration

### Command History

Release	Modification
12.2(13)T	This command was introduced.

### Usage Guidelines

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

Frame Relay subinterface traps are sent to the network management system (NMS) when a subinterface enters or leaves the down state.

To prevent trap storms, the **count** and **interval** keywords can be configured to limit the number of traps and the frequency at which they are sent. Configuring an interval of 0 seconds causes all Frame Relay subinterface traps to be sent.

**Note**

The **snmp-server enable traps frame-relay** command enables both Frame Relay data-link connection identifier (DLCI) and subinterface traps. The **snmp-server enable traps frame-relay subif** command enables only Frame Relay subinterface traps.

You can disable Frame Relay subinterface traps by using the **no snmp-server enable traps frame-relay subif** command. When traps are disabled, you can use the SNMP management application to poll your router for subinterface status information.

The **snmp-server enable traps frame-relay subif** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. In order to send notifications, you must configure at least one **snmp-server host** command.

The **snmp-server trap link ietf** command must be configured in order to use the **snmp-server enable traps frame-relay subif** command. The **snmp-server trap link ietf** command is used to configure your router to use the RFC 2233 IETF standards-based implementation of linkUp/linkDown traps. The default Cisco object definitions do not generate linkUp/linkDown traps correctly for subinterfaces.

**Examples**

The following example shows how to enable Frame Relay subinterface traps on a router. If a Frame Relay subinterface on this router changes state, host 172.16.61.90 will receive the notifications:

```
! For Frame Relay subinterface traps to work on your router, you must first have SNMP !
support and an IP routing protocol configured on your router:
```

```
Router(config)# snmp-server community public ro
```

```
Router(config)# snmp-server host 172.16.61.90 public
```

```
Router(config)# snmp-server trap link ietf
```

```
Router(config)# snmp-server enable traps snmp
```

```
Router(config)# ip routing
```

```
Router(config)# router igrp 109
```

```
Router(config-router)# network 172.16.0.0
```

```
!Enable Frame Relay subinterface trap support:
```

```
Router(config)# snmp-server enable traps frame-relay subif interval 60 count 5
```

**Related Commands**

Command	Description
<b>snmp-server enable traps frame-relay</b>	Enables Frame Relay DLCI link status SNMP notifications.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server trap link ietf</b>	Enables linkUp/linkDown SNMP traps that are compliant with RFC 2233.
<b>snmp-server trap-source</b>	Specifies the interface from which an SNMP trap should originate.

## snmp-server enable traps if-monitor

To globally enable if-monitor traps, use the **snmp-server enable traps if-monitor** command in global configuration mode. To disable if-monitor traps, use the **no** form of this command.

**snmp-server enable traps if-monitor**

**no snmp-server enable traps if-monitor**

**Syntax Description** This command has no arguments or keywords.

**Command Default** Traps are not generated.

**Command Modes** Global configuration (config)

Command History	Release	Modification
	12.3(1)	This command was introduced.

**Usage Guidelines** The **snmp-server enable traps if-monitor** command enables the if-monitor threshold traps for link monitoring. To enable traps for a particular interface, you must enable them globally using the **snmp-server enable traps if-monitor** command and then explicitly on that interface using the **snmp trap if-monitor** command.

A high threshold limit is the highest value for a parameter on a specific link. If that value is reached or exceeded in the configured major monitoring interval, a trap is sent and a message is logged. The link is brought down if the restart mechanism is enabled.

A low threshold limit is the lowest value for a parameter on a specified link. If that value is reached or exceeded in the major monitoring interval, a trap is sent and a message is logged.

**Examples** The following example shows how to enable if-monitor traps on all interfaces:

```
Router(config)# snmp-server enable traps if-monitor
```

### Related Commands

Command	Description
<b>snmp trap if-monitor</b>	Enables if-monitor traps for a particular interface.

## snmp-server enable traps ip local pool

To enable the sending of local IP pool Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps ip local pool** command in global configuration mode. To disable local IP pool notifications, use the **no** form of this command.

**snmp-server enable traps ip local pool**

**no snmp-server enable traps ip local pool**

**Syntax Description** This command has no arguments or keywords.

**Command Default** This command is disabled; no notifications are sent.

**Command Modes** Global configuration

### Command History

Release	Modification
12.3(8)T	This command was introduced.

### Examples

The following example shows how to enable the sending of local IP SNMP notifications:

```
Router(config)# snmp-server enable traps ip local pool
```

### Related Commands

Command	Description
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.

## snmp-server enable traps isdn

To enable the sending of Integrated Services Digital Network (ISDN)-specific Simple Network Management Protocol (SNMP) notifications, use the **snmp-server enable traps isdn** command in global configuration mode. To disable ISDN-specific SNMP notifications, use the **no** form of this command.

**snmp-server enable traps isdn [call-information] [chan-not-avail] [ietf] [isdnu-interface] [layer2]**

**no snmp-server enable traps isdn [call-information] [chan-not-avail] [ietf] [isdnu-interface] [layer2]**

### Syntax Description

<b>call-information</b>	(Optional) Controls SNMP ISDN call information notifications, as defined in the CISCO-ISDN-MIB (enterprise 1.3.6.1.4.1.9.9.26.2). Notification types are: <ul style="list-style-type: none"> <li>• demandNbrCallInformation (1) This notification is sent to the manager whenever a successful call clears, or a failed call attempt is determined to have ultimately failed. In the event that call retry is active, then this is after all retry attempts have failed. However, only one such notification is sent in between successful call attempts; subsequent call attempts do not generate notifications of this type.</li> <li>• demandNbrCallDetails (2) This notification is sent to the manager whenever a call connects, or clears, or a failed call attempt is determined to have ultimately failed. In the event that call retry is active, then this is after all retry attempts have failed. However, only one such notification is sent in between successful call attempts; subsequent call attempts do not generate notifications of this type.</li> </ul>
<b>chan-not-avail</b>	(Optional) Controls SNMP ISDN channel-not-available notifications. ISDN PRI channel-not-available traps are generated when a requested DS-0 channel is not available, or when there is no modem available to take the incoming call. These notifications are available only for ISDN PRI interfaces.
<b>ietf</b>	(Optional) Controls the SNMP ISDN IETF traps.
<b>isdnu-interface</b>	(Optional) Controls SNMP ISDN U interface notifications.

<b>layer2</b>	(Optional) Controls SNMP ISDN Layer 2 transition notifications.
---------------	---

**Command Default**

SNMP notifications are disabled by default.

If you enter this command with none of the optional keywords, all available notifications are enabled.

**Command Modes**

Global configuration (config)

**Command History**

Release	Modification
10.3	This command was introduced.
11.3	This command was modified. The <b>call-information</b> and <b>isdnu-interface</b> keywords were added for the Cisco 1600 series router.
12.0	This command was modified. Support for the <b>call-information</b> and <b>isdnu-interface</b> keywords was introduced for most voice platforms.
12.1(5)T	This command was modified. Support for the <b>chan-not-available</b> keyword was added for the Cisco AS5300, Cisco AS5400, and Cisco AS5800 access servers only.

**Usage Guidelines**

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests for the specified notification types. ISDN notifications are defined in the CISCO-ISDN-MIB.my and CISCO-ISDNU-IF-MIB.my files, available on Cisco.com at <http://www.cisco.com/public/mibs/v2/>.

Availability of notifications will depend on your platform. To see what notifications are available, use the **snmp-server enable traps isdn ?** command.

If you do not enter an **snmp-server enable traps isdn** command, no notifications controlled by this command are sent. In order to configure the router to send these SNMP notifications, you must enter at least one **snmp-server enable traps isdn** command. If you enter the command with no keywords, all notification types are enabled. If you enter the command with a keyword, only the notification type related to that keyword is enabled.

The **snmp-server enable traps snmp** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

**Examples**

The following example shows how to determine what notification types are available on a Cisco AS5300 and then shows how to enable channel-not-available and Layer 2 informs:

```
NAS(config)# snmp-server enable traps isdn ?
call-information  Enable SNMP isdn call information traps
chan-not-avail   Enable SNMP isdn channel not avail traps
ietf             Enable SNMP isdn ietf traps
layer2          Enable SNMP isdn layer2 transition traps
```

```
<cr>
NAS(config)# snmp-server enable traps isdn chan-not-avail layer2
NAS(config)# snmp-server host myhost.cisco.com informs version 2c public isdn
```

**Related Commands**

Command	Description
<b>snmp-server enable traps</b>	Enables all available SNMP notifications on your system.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>snmp-server informs</b>	Specifies inform request options.
<b>snmp-server trap-source</b>	Specifies the interface that an SNMP trap should originate from.

## snmp-server enable traps l2tun pseudowire status

To enable the sending of Simple Network Management Protocol (SNMP) notifications when a pseudowire changes state, use the **snmp-server enable traps l2tun pseudowire status** command in global configuration mode. To disable SNMP notifications of pseudowire state changes, use the **no** form of this command.

**snmp-server enable traps l2tun pseudowire status**

**no snmp-server enable traps l2tun pseudowire status**

**Syntax Description** This command has no arguments or keywords.

**Command Default** SNMP notifications are disabled by default.

**Command Modes** Global configuration

Command History	Release	Modification
	12.0(31)S	This command was introduced.
	12.2(27)SBC	This command was integrated into Cisco IOS Release 12.2(27)SBC.
	Cisco IOS XE Release 2.4	This command was integrated into Cisco IOS XE Release 2.4.

**Usage Guidelines** SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

This command controls (enables or disables) notification of pseudowire state changes. For a complete description of these notification types, and for information about the other MIB functions, see the VPDN MIB, available through the Cisco Technical Assistance Center (TAC) SNMP Object Navigator tool at <http://www.cisco.com/go/mibs>.

The **snmp-server enable traps l2tun pseudowire status** command is used in conjunction with the **snmp-server host** command. Use the **snmp-server host** command to specify which host or hosts receive SNMP notifications. To send SNMP notifications, you must configure at least one **snmp-server host** command.

Use the **snmp-server enable traps** command without any additional syntax to disable all SNMP notification types supported on your system.

**Examples** The following example enables the router to send pseudowire state change informs to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps l2tun pseudowire status
Router(config)# snmp-server host myhost.cisco.com informs version 2c public
```

**Related Commands**

<b>Command</b>	<b>Description</b>
<b>snmp-server enable traps</b>	Enables all SNMP notifications (traps or informs) available on your system.
<b>snmp-server host</b>	Specifies the recipient of an SNMP notification operation.
<b>xconnect logging pseudowire status</b>	Enables syslog reporting of pseudowire status events.

## snmp-server enable traps l2tun session

To enable Simple Network Management Protocol (SNMP) notifications (traps or inform requests) for Layer 2 Tunnel Protocol Version 3 (L2TPv3) sessions, use the **snmp-server enable traps l2tun session** command in global configuration mode. To disable SNMP notifications, use the **no** form of this command.

**snmp-server enable traps l2tun session**

**no snmp-server enable traps l2tun session**

**Syntax Description** This command has no arguments or keywords.

**Command Default** No SNMP notifications for L2TPv3 sessions are sent.

**Command Modes** Global configuration

### Command History

Release	Modification
12.0(23)S	This command was introduced.
12.3(2)T	This command was integrated into Cisco IOS Release 12.3T.
12.2(25)S	This command was integrated into Cisco IOS Release 12.2(25)S.
12.2(27)SBC	Support for this command was integrated into Cisco IOS Release 12.2(27)SBC.

### Usage Guidelines

In this command **l2tun** indicates “layer 2 tunneling.” Layer 2 tunneling session notifications are defined by the `cvpdnNotifSession` object { `ciscoVpdnMgmtMIBNotifs 3` } in the Cisco VPDN Management MIB (CISCO-VPDN-MGMT-MIB.my). MIB files are available from Cisco.com at <http://www.cisco.com/go/mibs>.

SNMP notifications can be sent as traps or inform requests and this command enables both types of notifications for L2TP sessions. To specify whether the notifications should be sent as traps or informs, and to specify which host or hosts receive SNMP notifications, use the **snmp-server host [traps | informs]** command.

Use the **snmp-server enable traps** command without any additional syntax to disable all SNMP notification types supported on your system.

### Examples

The following example shows how to enable a router to send L2TP session traps to the host specified by the name `myhost.example.com`, using the community string defined as `public`:

```
Router(config)# snmp-server enable traps l2tun session
Router(config)# snmp-server host myhost.example.com public l2tun-session
```

**Related Commands**

Command	Description
<b>snmp-server enable traps</b>	Enables all SNMP notifications available on your system.
<b>snmp-server host</b>	Specifies whether you want the SNMP notifications sent as traps or informs, the version of SNMP to use, the security level of the notifications (for SNMPv3), and the recipient (host) of the notifications.

## snmp-server enable traps memory

To enable a device to send Simple Network Management Protocol (SNMP) notifications when memory pool buffer usage reaches a new peak, use the **snmp-server enable traps memory** command in global configuration mode. To stop notifications from being generated, use the **no** form of this command.

**snmp-server enable traps memory [bufferpeak]**

**no snmp-server enable traps memory [bufferpeak]**

### Syntax Description

<b>bufferpeak</b>	(Optional) Specifies memory buffer peak notifications.
-------------------	--

### Command Default

SNMP notifications in the MEMPOOL-MIB are not enabled.

### Command Modes

Global configuration

### Command History

Release	Modification
12.3(4)T	This command was introduced.
12.2(25)S	This command was integrated into Cisco IOS Release 12.2(25)S.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.

### Usage Guidelines

SNMP notifications can be sent as traps or inform requests. This command enables both traps and inform requests.

This command enables or disables memory buffer peak (cempMemBufferNotify) notifications. When they are enabled, these notifications are sent when the value of the maximum number of buffer objects changes.

In current releases of Cisco IOS software, this command has the same behavior whether you use or omit the **bufferpeak** keyword.

The cempMemBufferNotify notification type is defined as {cempMIBNotifications 1} in the CISCO-ENHANCED-MEMPOOL-MIB. For a complete description of this notification and additional MIB functions, see the CISCO-ENHANCED-MEMPOOL-MIB.my file, available on Cisco.com at <http://www.cisco.com/go/mibs/>.

## Examples

In the following example all available memory related SNMP notifications are enabled and configured to be sent as informs to the host myhost.cisco.com using the community string public:

```
Router(config)# snmp-server enable traps memory
```

```
Router(config)# snmp-server host myhost.cisco.com informs version 3 public memory
```

## Related Commands

Command	Description
<b>show buffers</b>	Displays memory buffer pool related information.
<b>show memory</b>	Displays memory pool related information.
<b>snmp-server host</b>	Specifies whether you want the SNMP notifications sent as traps or informs, the version of SNMP to use, the security level of the notifications (for SNMPv3), and the recipient (host) of the notifications.

# snmp-server enable traps ospf cisco-specific errors config-error

To enable Simple Network Management Protocol (SNMP) notifications for Open Shortest Path First (OSPF) nonvirtual interface mismatch errors, use the **snmp-server enable traps ospf cisco-specific errors config-error** command in global configuration mode. To disable OSPF nonvirtual interface mismatch error SNMP notifications, use the **no** form of this command.

**snmp-server enable traps ospf cisco-specific errors config-error**

**no snmp-server enable traps ospf cisco-specific errors config-error**

## Syntax Description

This command has no keywords or arguments.

## Command Default

This command is disabled by default; therefore, SNMP notifications for OSPF nonvirtual interface mismatch errors are not created.

## Command Modes

Global configuration

## Command History

Release	Modification
12.3(5)	This command was introduced.
12.3(4)T	This command was integrated into Cisco IOS Release 12.3(4)T.
12.0(26)S	This command was integrated into Cisco IOS Release 12.0(26)S.
12.2(25)S	This command was integrated into Cisco IOS Release 12.2(25)S.
12.2(33)SRA	This command was integrated into Cisco IOS Release 12.2(33)SRA.
12.2(31)SB2	This command was integrated into Cisco IOS Release 12.2(31)SB2.
12.2(33)SXH	This command was integrated into Cisco IOS Release 12.2(33)SXH.

## Usage Guidelines

To enable the `cospfShamLinkConfigError` trap, you must first enter the **snmp-server enable traps ospf cisco-specific errors config-error** command in global configuration mode. The **snmp-server enable traps ospf cisco-specific errors config-error** command enables the `cospfConfigError` trap, so that both traps can be generated at the same place and maintain consistency with a similar case for configuration errors across virtual links.

If you try to enable the `cospfShamLinkConfigError` trap before configuring the `cospfospfConfigError` trap you will receive an error message stating you must first configure the `cospfConfigError` trap.

## Examples

The following example enables the router to send nonvirtual interface mismatch error notifications to the host at the address myhost.cisco.com using the community string defined as public:

```
Router(config)# snmp-server enable traps ospf cisco-specific errors config-error
Router(config)# snmp-server host myhost.cisco.com informs version 2c public
```

## Related Commands

Command	Description
<b>snmp-server enable traps ospf cisco-specific errors shamlink</b>	Enables SNMP notifications for OSPF sham-link errors.
<b>snmp-server enable traps ospf cisco-specific retransmit</b>	Enables SNMP notifications for OSPF retransmission errors.
<b>snmp-server enable traps ospf cisco-specific state-change</b>	Enables SNMP notifications for OSPF transition state changes.

# snmp-server enable traps ospf cisco-specific errors shamlink

To enable Simple Network Management Protocol (SNMP) notifications for Open Shortest Path First (OSPF) sham-link errors, use the **snmp-server enable traps ospf cisco-specific errors shamlink** command in global configuration mode. To disable OSPF sham-link error SNMP notifications, use the **no** form of this command.

```
snmp-server enable traps ospf cisco-specific errors shamlink [authentication [bad-packet] [[config]
config [bad-packet]]]
```

```
no snmp-server enable traps ospf cisco-specific errors shamlink [authentication [bad-packet] [[config]
config [bad-packet]]]
```

## Syntax Description

<b>authentication</b>	(Optional) Enables SNMP notifications only for authentication failures on OSPF sham-link interfaces.
<b>bad-packet</b>	(Optional) Enables SNMP notifications only for packet parsing failures on OSPF sham-link interfaces.
<b>config</b>	(Optional) Enables SNMP notifications only for configuration mismatch errors on OSPF sham-link interfaces.

## Command Default

This command is disabled by default; therefore, SNMP notifications for OSPF sham-link errors are not created.

## Command Modes

Global configuration

## Command History

Release	Modification
12.0(30)S	This command was introduced.
12.3(14)T	This command was integrated into Cisco IOS Release 12.3(14)T.

<b>snmp-server enable traps ospf cisco-specific state-change</b>	Enables SNMP notifications for OSPF transition state changes.

## snmp-server enable traps ospf cisco-specific retransmit

To enable Simple Network Management Protocol (SNMP) notifications for Open Shortest Path First (OSPF) retransmission errors, use the **snmp-server enable traps ospf cisco-specific retransmit** command in global configuration mode. To disable OSPF sham-link error SNMP notifications, use the **no** form of this command.

**snmp-server enable traps ospf cisco-specific retransmit** [**packets** [**shamlink** | **virt-packets**]] **shamlink** [**packets** | **virt-packets**]] **virt-packets** [**shamlink**]]

**no snmp-server enable traps ospf cisco-specific retransmit** [**packets** [**shamlink** | **virt-packets**]] **shamlink** [**packets** | **virt-packets**]] **virt-packets** [**shamlink**]]

### Syntax Description

<b>packets</b>	(Optional) Enables SNMP notifications only for packet retransmissions on nonvirtual interfaces.
<b>shamlink</b>	(Optional) Enables SNMP notifications only for sham-link retransmission notifications.
<b>virt-packets</b>	(Optional) Enables SNMP notifications only for packet retransmissions on virtual interfaces.

### Command Default

This command is disabled by default; therefore, SNMP notifications for OSPF retransmission errors are not created.

### Command Modes

Global configuration

### Command History

Release	Modification
