

SNMP Manager

The Simple Network Management Protocol (SNMP) Manager feature allows a device to serve as an SNMP manager. As an SNMP manager, the device can send SNMP requests to agents and receive SNMP responses and notifications from agents. When the SNMP manager process is enabled, the device can query other SNMP agents and process incoming SNMP traps.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information about SNMP Manager

Overview

The SNMP manager is a system that controls and monitors the activities of network hosts using SNMP. The most common managing system is a network management system (NMS). The term NMS can be applied either to a dedicated device used for network management or to the applications used on such a device. Several network management applications are available for use with SNMP and range from simple command-line applications to applications that use GUIs, such as the CiscoWorks2000 products.

The SNMP manager feature allows a device to act as a network management station--an SNMP client. As an SNMP manager, the device can send SNMP requests to agents and receive SNMP responses and notifications from agents. When the SNMP manager process is enabled, the device can query other SNMP agents and process incoming SNMP traps.

Most network security policies assume that devices will accept SNMP requests, send SNMP responses, and send SNMP notifications.

With the SNMP manager functionality enabled, the device may also send SNMP requests, receive SNMP responses, and receive SNMP notifications. Your security policy implementation may need to be updated prior to enabling this feature.

SNMP requests typically are sent to UDP port 161. SNMP responses are typically sent from UDP port 161. SNMP notifications are typically sent to UDP port 162.

Sessions are created when the SNMP manager in the device sends SNMP requests, such as informs, to a host or receives SNMP notifications from a host. One session is created for each destination host. If there is no further communication between the device and host within the session timeout period, the session will be deleted.

The device tracks statistics, such as the average round-trip time required to reach the host, for each session. Using the statistics for a session, the SNMP manager in the device can set reasonable timeout periods for future requests, such as informs, for that host. If the session is deleted, all statistics are lost. If another session with the same host is later created, the request timeout value for replies will return to the default value.

Sessions consume memory. A reasonable session timeout value should be large enough that regularly used sessions are not prematurely deleted, yet small enough such that irregularly used or one-time sessions are purged expeditiously.

Security Considerations

Most network security policies assume that the devices will be accepting SNMP requests, sending SNMP responses, and sending SNMP notifications.

With the SNMP manager functionality enabled, the device may also be sending SNMP requests, receiving SNMP responses, and receiving SNMP notifications. Your security policy implementation may need to be updated prior to enabling this feature.

SNMP requests are typically sent to UDP port 161. SNMP responses are typically sent from UDP port 161. SNMP notifications are typically sent to UDP port 162.

How to Configure SNMP Manager

Configuring a Device as an SNMP Manager

Perform this task to enable the SNMP manager process and to set the session timeout value.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **snmp-server manager**
4. **snmp-server manager session-timeout** *seconds*
5. **end**
6. **show snmp**
7. **show snmp sessions [brief]**
8. **show snmp pending**

DETAILED STEPS

| | Command or Action | Purpose |
|--------|---|---|
| Step 1 | enable Example: Device> enable | Enables privileged EXEC mode. • Enter your password if prompted. |
| Step 2 | configure terminal Example: Device# configure terminal | Enters global configuration mode. |
| Step 3 | snmp-server manager Example: Device(config)# snmp-server manager | Enables the SNMP manager. |
| Step 4 | snmp-server manager session-timeout <i>seconds</i> Example: Device(config)# snmp-server manager session-timeout 30 | (Optional) Changes the session timeout value. |
| Step 5 | end Example: Device(config)# end | Exits global configuration mode. |
| Step 6 | show snmp Example: Device# show snmp | (Optional) Displays the status of SNMP communications. |
| Step 7 | show snmp sessions [brief] Example: Device# show snmp sessions | (Optional) Displays the status of SNMP sessions. |

| | Command or Action | Purpose |
|---------------|--|---|
| Step 8 | show snmp pending Example: Device# show snmp pending | (Optional) Displays the current set of pending SNMP requests. |

Examples

The following example shows the status of SNMP communications:

```
Device# show snmp

Chassis: 01506199
37 SNMP packets input
   0 Bad SNMP version errors
   4 Unknown community name
   0 Illegal operation for community name supplied
   0 Encoding errors
  24 Number of requested variables
   0 Number of altered variables
   0 Get-request PDUs
  28 Get-next PDUs
   0 Set-request PDUs
78 SNMP packets output
   0 Too big errors (Maximum packet size 1500)
   0 No such name errors
   0 Bad values errors
   0 General errors
  24 Response PDUs
  13 Trap PDUs
SNMP logging: enabled
  Logging to 172.17.58.33.162, 0/10, 13 sent, 0 dropped.
SNMP Manager-role output packets
   4 Get-request PDUs
   4 Get-next PDUs
   6 Get-bulk PDUs
   4 Set-request PDUs
  23 Inform-request PDUs
  30 Timeouts
   0 Drops
SNMP Manager-role input packets
   0 Inform response PDUs
   2 Trap PDUs
   7 Response PDUs
   1 Responses with errors
SNMP informs: enabled
  Informs in flight 0/25 (current/max)
  Logging to 172.17.217.141.162
    4 sent, 0 in-flight, 1 retries, 0 failed, 0 dropped
  Logging to 172.17.58.33.162
    0 sent, 0 in-flight, 0 retries, 0 failed, 0 dropped
```

The following example displays the status of SNMP sessions:

```
Device# show snmp sessions

Destination: 172.17.58.33.162, V2C community: public
Round-trip-times: 0/0/0 (min/max/last)
packets output
   0 Gets, 0 GetNexts, 0 GetBulks, 0 Sets, 4 Informs
   0 Timeouts, 0 Drops
packets input
   0 Traps, 0 Informs, 0 Responses (0 errors)
Destination: 172.17.217.141.162, V2C community: public, Expires in 575 secs
Round-trip-times: 1/1/1 (min/max/last)
```

```

packets output
  0 Gets, 0 GetNexts, 0 GetBulks, 0 Sets, 4 Informs
  0 Timeouts, 0 Drops
packets input
  0 Traps, 0 Informs, 4 Responses (0 errors)

```

The following example shows the current set of pending SNMP requests:

```
Device# show snmp pending
```

```

req id: 47, dest: 172.17.58.33.161, V2C community: public, Expires in 5 secs
req id: 49, dest: 172.17.58.33.161, V2C community: public, Expires in 6 secs
req id: 51, dest: 172.17.58.33.161, V2C community: public, Expires in 6 secs
req id: 53, dest: 172.17.58.33.161, V2C community: public, Expires in 8 secs

```

Feature Information for SNMP Manager

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [http://www.cisco.com/go/featurenavigator](#). An account on Cisco.com is not required.

Table 1: Feature Information for SNMP Manager

| Feature Name | Releases | Feature Information |
|---------------------|--|--|
| SNMP Manager | 11.3(1) 11.3(1)T 12.0(1) 15.0(1)S | The SNMP Manager feature adds a system that controls and monitors the activities of network hosts using SNMP. The most common managing system is an NMS. |
