

Configuring Conferencing and Transcoding for Voice Gateway Routers

This chapter describes the steps for enabling conferencing and transcoding support on Cisco IOS voice gateways in a Cisco Unified Communications Manager network. This feature provides enhanced multiservice support by enabling audioconference and transcode functions in voice gateway routers. Locating conference resources in the branch reduces WAN utilization and using transcoding services reduces bandwidth needs resulting in tangible cost savings.

Digital signal processor (DSP) farms provide conferencing and transcoding services using DSP resources on high-density digital voice/fax network modules.

Feature History for G.722-64 and iLBC Codec Support on Cisco Unified Communications Manager Express

| Release | Modification |
|------------|--|
| 12.4(15)XZ | This feature was introduced. |
| 15.0(1)M | This feature was integrated into Cisco IOS Release 15.0(1)M. |

Feature History for G.722-64 and iLBC Codec Support on Cisco UBEs, DSP Farms, and Voice Gateways

| Release | Modification |
|------------|--|
| 12.4(15)XY | This feature was introduced. |
| 15.0(1)M | This feature was integrated into Cisco IOS Release 15.0(1)M. |

Feature History for Universal Voice Transcoding Support for Cisco Unified Border Elements

| Release | Modification |
|------------|------------------------------|
| 12.4(11)XY | This feature was introduced. |

| Release | Modification |
|----------|--|
| 15.0(1)M | This feature was integrated into Cisco IOS Release 15.0(1)M. |

Feature History for Out-of-Band to In-Band DTMF Relay for Voice Gateway Routers

| Release | Modification |
|-----------|---|
| 12.3(8)XY | This feature was introduced. |
| 12.3(11)T | This feature was integrated into Cisco IOS Release 12.3(11)T. |
| 12.3(14)T | Support was added for the PVDM2 on the Cisco 2800 series and Cisco 3800 series voice gateway routers. |

Feature History for Enhanced Conferencing and Transcoding for Voice Gateway Routers

| Release | Modification |
|-----------|---|
| 12.3(8)T | This feature was introduced for the NM-HDV2, NM-HD-1V, NM-HD-2V, and NM-HD-2VE. |
| 12.3(11)T | Support was added for the PVDM2 on the Cisco 2800 series and Cisco 3800 series voice gateway routers. |

Feature History for Conferencing and Transcoding for Voice Gateway Routers

| Release | Modification |
|-----------|--|
| 12.1(5)YH | This feature was introduced for the NM-HDV-FARM on the Cisco VG200. |
| 12.2(13)T | This feature was integrated into Cisco IOS Release 12.2(13)T and support was added for the NM-HDV on the Cisco 2600 series, Cisco 3600 series, Cisco 3700 series, and Cisco VG200. |
| 12.3(2)XE | Support was added for the PVDM-256K on the Cisco 1751, Cisco 1751-V, and Cisco 1760. |
| 12.3(8)T | Support for the PVDM-256K on the Cisco 1751, Cisco 1751-V, and Cisco 1760 was integrated into Cisco IOS Release 12.3(8)T. |

Finding Support Information for Platforms and Cisco IOS Software Images

Use Cisco Feature Navigator to find information about platform support and Cisco IOS software image support. Access Cisco Feature Navigator at <http://www.cisco.com/go/fn> . You must have an account on Cisco.com. If you do not have an account or have forgotten your username or password, click **Cancel** at the login dialog box and follow the instructions that appear.

For more information about this and related Cisco IOS voice features, see the following:

- "Overview of Cisco Unified Communications Manager and Cisco IOS Interoperability" on page 13 .
- Entire Cisco IOS Voice Configuration Library--including library preface and glossary, other feature documents, and troubleshooting documentation--at http://www.cisco.com/univercd/cc/td/doc/product/software/ios123/123cgcr/voice_c/vcl.htm .
- [Finding Feature Information, page 3](#)
- [Prerequisites for Conferencing and Transcoding for Voice Gateway Routers, page 3](#)
- [Restrictions for Conferencing and Transcoding for Voice Gateway Routers, page 6](#)
- [Information About Conferencing and Transcoding for Voice Gateway Routers, page 6](#)
- [How to Configure Conferencing and Transcoding for Voice Gateway Routers , page 18](#)
- [Configuration Examples for Conferencing and Transcoding, page 41](#)

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see [Bug Search Tool](#) and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table at the end of this module.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for Conferencing and Transcoding for Voice Gateway Routers

DSP Resources

The router must be equipped with one or more of the following network modules or voice DSP modules to provide DSP resources for conferencing, transcoding, and hardware MTP services:

| |
|----------|
| NM-HD-1V |
|----------|

| |
|---|
| NM-HD-2V |
| NM-HD-2VE |
| NM-HDV2 |
| NM-HDV2-1T1/E1 |
| NM-HDV2-2T1/E1 |
| NM-HDV ¹ |
| NM-HDV-FARM Prerequisites for Conferencing and Transcoding for Voice Gateway Routers, on page 3 |
| PVDM-256K Prerequisites for Conferencing and Transcoding for Voice Gateway Routers, on page 3 |
| PVDM2 on Cisco 2800 series or Cisco 3800 series |

¹ Does not support hardware MTP services.

Cisco Unified Communications Manager and Cisco IOS Release

Minimum software requirements for type of network or voice module:

| Module | Cisco Unified Communications Manager version | Cisco IOS Release |
|---------------------------|---|--------------------------------------|
| NM-HDV2, NM-HD-1V/2V/2VE | Cisco Unified Communications Manager 3.3(4) (formerly known as Cisco CallManager 3.3(4)) or later for conferencing and transcoding, Cisco Unified Communications Manager 4.0(1) (formerly known as Cisco CallManager 4.0(1)) or later for MTP | Cisco IOS Release 12.3(8)T or later |
| PVDM2 (Cisco 2800 series) | Cisco Unified Communications Manager 3.3(5) (formerly known as Cisco CallManager 3.3(5)) or later for conferencing and transcoding, Cisco Unified Communications Manager 4.0(2a) (formerly known as Cisco CallManager 4.0(2a)) or later for MTP | Cisco IOS Release 12.3(8)T4 or later |

| Module | Cisco Unified Communications Manager version | Cisco IOS Release |
|---------------------------|---|--------------------------------------|
| PVDM2 (Cisco 3800 series) | Cisco Unified Communications Manager 3.3(5) (formerly known as Cisco CallManager 3.3(5)) or later for conferencing and transcoding, Cisco Unified Communications Manager 4.0(2a) (formerly known as Cisco CallManager 4.0(2a)) or later for MTP | Cisco IOS Release 12.3(11)T or later |
| NM-HDV | Cisco Unified Communications Manager 3.2(2c) (formerly known as Cisco CallManager 3.2(2c)) or later | Cisco IOS Release 12.2(13)T or later |

- Conference bridge, transcoder, and MTP services must be configured in Cisco Unified Communications Manager. See the following chapters in the Cisco Unified Communications Manager Administration Guide :

Release 4.0(1):

- ["Conference Bridge Configuration"](#)
- ["Media Termination Point Configuration"](#)
- ["Transcoder Configuration"](#)

Release 3.3(4):

- ["Conference Bridge Configuration"](#)
- ["Transcoder Configuration"](#)

Codecs

End-user devices must be equipped with one of the following codecs:

| Codec | Packetization Periods for Transcoding (ms) |
|------------------------------------|--|
| G.711 a-law, G.711 u-law, G.722-64 | 10, 20, or 30 |
| G.729, G.729A, G.729B, G.729AB | 10, 20, 30, 40, 50, or 60 |
| GSM EFR, GSM FR ² | 20 |
| iLBC | 20 or 30 |

² Supported for NM-HDV2 and NM-HD-1V/2V/2VE only

Restrictions for Conferencing and Transcoding for Voice Gateway Routers

- DSP farm services communicate with Cisco Unified Communications Manager using Skinny Client Control Protocol (SCCP); other protocols are not supported.
- DSP farm services are not supported for Cisco Survivable Remote Site Telephony (SRST) or Cisco Unified Communications Manager Express.
- DSP farm services cannot be enabled for a slot on the Cisco 1700 series so the **dsp services dspfarm** command is not supported and cannot be configured for a voice card on the Cisco 1700 series.
- Conferencing is not supported on a Cisco 3640 using the NM-HD-1V, NM-HD-2V, or NM-HD-2VE.
- Simultaneous use of DSP farm services on the NM-HDV and NM-HDV2 is not supported.
- Hardware MTPs are not supported on the NM-HDV or NM-HDV-FARM.
- Hardware MTPs support only G.711 a-law and G.711 u-law. If you configure a profile as a hardware MTP, and you want to change the codec to other than G.711, you must first remove the hardware MTP by using the **no maximum sessions hardware** command.
- Software MTPs are supported on the NM-HDV only if the **dsp services dspfarm** command is not enabled on the voice card.
- Only one codec is supported for each MTP profile. To support multiple codecs, you must define a separate MTP profile for each codec.
- If an MTP call is received but MTP is not configured, transcoding is used if resources are available.
- Dynamic conference and transcoding resource allocation is not supported.
- Fax is not supported for transcoding.

Information About Conferencing and Transcoding for Voice Gateway Routers

To configure Cisco conferencing and transcoding, you should understand the following concepts:

DSP Farms

A DSP farm is the collection of DSP resources available for conferencing, transcoding, and MTP services. DSP farms are configured on the voice gateway and managed by Cisco Unified Communications Manager through Skinny Client Control Protocol (SCCP).

The DSP farm can support a combination of transcoding sessions, MTP sessions, and conferences simultaneously. The DSP farm maintains the DSP resource details locally. Cisco Unified Communications Manager requests conferencing or transcoding services from the gateway, which either grants or denies these

requests, depending on resource availability. The details of whether DSP resources are used, and which DSP resources are used, are transparent to Cisco Unified Communications Manager.

The DSP farm uses the DSP resources in network modules on Cisco routers to provide voice-conferencing, transcoding, and hardware MTP services.

Note Hardware MTP services are not supported on the NM-HDV.

Tip To determine how many DSP resources your router supports, see the [Allocation of DSP Resources](#), on page 11.

DSP Farm Profiles

DSP-farm profiles are created to allocate DSP-farm resources. Under the profile you select the service type (conference, transcode, MTP), associate an application, and specify service-specific parameters such as codecs and maximum number of sessions. A DSP-farm profile allows you to group DSP resources based on the service type. Applications associated with the profile, such as SCCP, can use the resources allocated under the profile. You can configure multiple profiles for the same service, each of which can register with one Cisco Unified Communications Manager group. The profile ID and service type uniquely identify a profile, allowing the profile to uniquely map to a Cisco Unified Communications Manager group that contains a single pool of Cisco Unified Communications Manager servers.

Conferencing

Voice conferencing involves adding several parties to a phone conversation. In a traditional circuit-switched voice network, all voice traffic passes through a central device such as a PBX. Conference services are provided within this central device. In contrast, IP phones normally send voice signals directly between phones, without the need to go through a central device. Conference services, however, require a network-based conference bridge.

In an IP telephony network using Cisco Unified Communications Manager, the Conferencing and Transcoding for Voice Gateway Routers feature provides the conference-bridging service. Cisco Unified Communications Manager uses a DSP farm to mix voice streams from multiple participants into a single conference-call stream. The mixed stream is played out to all conference attendees, minus the voice of the receiving attendee.

The following conferencing features are supported:

- A conference can be either of the following types:
 - Ad hoc--The person controlling the conference presses the telephone conference button and adds callers one by one.
 - Meet me--Participants call in to a central number and are joined in a single conference.
- Participants whose end devices use different codec types are joined in a single conference; no additional transcoding resource is needed.

This feature provides voice conferencing at the remote site, without the need for access to the central site (see the figure below).

Figure 1: Conferencing Service

Transcoding

Transcoding compresses and decompresses voice streams to match endpoint-device capabilities. Transcoding is required when an incoming voice stream is digitized and compressed (by means of a codec) to save bandwidth, but the local device does not support that type of compression. Ideally, all IP telephony devices would support the same codecs, but this is not the case. Rather, different devices support different codecs.

Transcoding is processed by DSPs on the DSP farm; sessions are initiated and managed by Cisco Unified Communications Manager which also refers to transcoders as hardware MTPs.

This feature provides transcoding at the remote site, without the need for access to the central site (see the figure below).

Figure 2: Transcoding Service

Media Termination Point

A Media Termination Point (MTP) bridges the media streams between two connections allowing Cisco Unified Communications Manager to relay calls that are routed through SIP or H.323 endpoints.

The following MTP resources are supported for Cisco Unified Communications Manager 4.0 (formerly known as Cisco CallManager 4.0) and later releases:

- Software MTP--Software-only implementation that does not use a DSP resource for endpoints using the same codec and the same packetization time.
- Hardware MTP--Hardware-only implementation that uses a DSP resource for endpoints using the same G.711 codec but a different packetization time. The repacketization requires a DSP resource so it cannot be done by software only. Cisco Unified Communications Manager also uses the term software MTP when referring to a hardware MTP.
- Transcoder as MTP--Implementation that uses a DSP resource for endpoints using the same G.711 codec (on both legs) or a mixture of different supported codecs. This functionality is used by Cisco Unified Communications Manager to view the transcoders as usable MTP resources (if they are available in the pool) and enables Cisco Unified Communications Manager to use MTP resources more effectively when a call is deemed to use a transcoder and an MTP resource at the same time.

For MTP and transcoding, the DSP farm supports only two IP streams connected to each other at a time. If more than two streams need connecting, the streams must be connected using conferencing.

Conferencing and Transcoding Features on the NM-HDV2 and NM-HD-1V 2V 2VE

Conferencing

- Cisco Unified Communications Manager meet-me and ad-hoc conferences with up to eight participants each
- Up to 50 eight-party conferences on a single NM-HDV2, up to 24 eight-party conferences on a single NM-HD-2VE, and up to 8 eight-party conferences on a single NM-HD-1V/2V
- Participants using G.711 and G.729 codecs joined in a single conference; no additional transcoding resources are needed to include the disparate codec types
- Easy deployment of conference resources in routers across the network, reducing WAN use and improving voice-network performance

Transcoding

- Transcoding between G.711 and G.729, G.729a, G.729b, G.729ab, GSM FR, and GSM EFR codecs
- Up to 128 transcoding sessions on a single NM-HDV2

MTP

- Software-only implementation that does not use a DSP resource for endpoints with the same codec and the same packetization time.
- Hardware-only implementation using a DSP resource for endpoints with the same G.711 codec but a different packetization time.

Conferencing and Transcoding Features on the NM-HDV

Conferencing

- Cisco Unified Communications Manager meet-me and ad-hoc conferences with up to six participants each
- Up to 15 six-party conferences on a single NM-HDV
- Participants using G.711 and G.729 codecs joined in a single conference; no additional transcoding resources are needed to include the disparate codec types
- Easy deployment of conference resources in routers across the network, reducing WAN use and improving voice-network performance

Transcoding

- Transcoding between G.711 and G.729, G.729a, G.729b, and G.729ab codecs

- Up to 60 transcoding sessions on a single NM-HDV

Conferencing and Transcoding Features on the Cisco 1751 and Cisco 1760

Conferencing

- Cisco Unified Communications Manager meet-me and ad-hoc conferences with up to six participants each
- Up to 5 six-party conferences
- One conference on a single DSP
- Participants using G.711 and G.729 codecs joined in a single conference; no additional transcoding resources are needed to include the disparate codec types
- Easy deployment of conference resources in routers across the network, reducing WAN use and improving voice-network performance

Transcoding

- Transcoding between G.711 and G.729, G.729a, G.729b, and G.729ab codecs
- Up to 16 transcoding sessions on the Cisco 1751
- Up to 20 transcoding sessions on the Cisco 1760
- Two transcoding sessions on a single DSP

Allocation of DSP Resources

You must allocate DSP resources on two levels:

- Within the voice network module, between the DSP farm and your voice trunk group that handles standard voice termination
- Within the DSP farm, between transcoding and voice-conferencing services

Allocation of DSP Resources Within the Voice Network Module

You allocate DSP resources either to voice termination of the voice trunk group or to the DSP farm. Occasionally these allocations can conflict.

If you previously allocated DSP resources to voice termination and you now try to configure a DSP farm, you might find that insufficient DSP resources are available. Conversely, if you previously allocated DSP resources to a DSP farm and you now try to configure a trunk group, you might find that insufficient DSP resources are available.

If your requested configuration is rejected, you have two options:

- Insert more DSPs on the voice network module (NM-HDV or NM-HDV2)
- Allocate a different voice network module for either the DSP farm or the trunk group

Allocation of DSP Resources Within the DSP Farm

You should know the following about your system:

- Number of DSPs required to handle your anticipated number of conference calls and transcoding sessions
- Number of DSPs that your system can support

DSP resources can reside in packet-voice DSP modules (PVDMs) installed in voice network modules, for example the NM-HDV2, or directly in the network module, for example the NM-HD-2V. Cisco 2800 series and 3800 series voice gateway routers have onboard DSP resources located on PVDM2s installed directly on the motherboard. Your router supports one or more voice network modules.

The table below lists the total DSPs that are supported on a fully-loaded voice network module.

Table 1: Total DSPs Supported Per Voice Network Module

| Network Module | Maximum DSPs per PVDM2/PVDM | Maximum PVDM2s/PVDMs per Network Module | Maximum DSPs |
|----------------|-----------------------------|---|--------------|
| NM-HDV2 | 4 | 4 | 16 |
| NM-HD-1V/2V | -- | -- | 1 |
| NM-HD-2VE | -- | -- | 3 |
| NM-HDV | 3 | 5 | 15 |

The table below lists the total number of network modules that are supported per router.

Table 2: Maximum Voice Network Modules Supported Per Router

| Router | NM-HDV2 | NM-HD-1V, NM-HD-2V, NM-HD-2VE | NM-HDV |
|-------------------|---------|-------------------------------|---|
| Cisco 2600 series | -- | -- | 1 |
| Cisco 2600 XM | 1 | 1 | 1 |
| Cisco 2691 | 1 | 1 | 1 |
| Cisco 2801 | -- | -- | -- |
| Cisco 3620 | -- | -- | 1 ³ |
| Cisco 3640 | -- | -- | 3 Allocation of DSP Resources Within the DSP Farm, on page 12 |
| Cisco 3660 | -- | 6 | 6 |

| Router | NM-HDV2 | NM-HD-1V, NM-HD-2V, NM-HD-2VE | NM-HDV |
|-------------|----------------|---|--------|
| Cisco 3725 | 2 | 2 | 2 |
| Cisco 3745 | 4 ⁴ | 4 Allocation of DSP Resources Within the DSP Farm, on page 12 | 4 |
| Cisco VG200 | -- | -- | 1 |

³ Although the chassis has a slot for an additional module, it cannot operate with more than the specified number.

⁴ Provided processor resources are available.

Conferencing and Transcoding Session Capacities

Each DSP is individually configurable to support either conferencing or transcoding and standard voice termination. The total number of conferencing, transcoding, and voice termination sessions is limited by the capacity of the entire system, which includes the DSPs, hardware platform, physical voice interface, and Cisco Unified Communications Manager.

The tables below list the maximum number of conference calls and transcoding sessions that DSPs can handle, in theory. Actual capacity may be less based on the total system design.

Table 3: DSP Theoretical Session Capacities

| Application | NM-HD-1V/2V (1 DSP) | NM-HD-2VE (3 DSPs) | NM-HDV2 (16 DSPs) | 2801/2811 (2 PVDM2-64) | 2821/2851 (3 PVDM2-64) | 3825, 3845 (4 PVDM2-64) |
|--------------|---------------------------|-----------------------------|-----------------------------|-----------------------------|-----------------------------|-----------------------------|
| Conferencing | | | | | | |
| G.711 | 8 sessions (64 conferees) | 24 sessions (192 conferees) | 50 sessions (400 conferees) | 50 sessions (400 conferees) | 50 sessions (400 conferees) | 50 sessions (400 conferees) |
| G.722-64 | 2 sessions (16 conferees) | 6 sessions (48 conferees) | 32 sessions (256 conferees) | 16 sessions (128 conferees) | 24 sessions (192 conferees) | 32 sessions (256 conferees) |
| G.729 | 2 sessions (16 conferees) | 6 sessions (48 conferees) | 32 sessions (256 conferees) | 16 sessions (128 conferees) | 24 sessions (192 conferees) | 32 sessions (256 conferees) |
| GSM FR | -- | 2 sessions (16 conferees) | 14 sessions (112 conferees) | 7 sessions (56 conferees) | 10 sessions (80 conferees) | 14 sessions (112 conferees) |
| GSM EFR | -- | 1 session (8 conferees) | 10 sessions (80 conferees) | 5 sessions (40 conferees) | 8 sessions (64 conferees) | 10 sessions (80 conferees) |
| iLBC | 1 session (8 conferees) | 3 sessions (24 conferees) | 16 sessions (128 conferees) | 8 sessions (64 conferees) | 12 sessions (96 conferees) | 16 sessions (128 conferees) |
| Transcoding | | | | | | |

| Application | NM-HD-1V/2V (1 DSP) | NM-HD-2VE (3 DSPs) | NM-HDV2 (16 DSPs) | 2801/2811 (2 PVDM2-64) | 2821/2851 (3 PVDM2-64) | 3825, 3845 (4 PVDM2-64) |
|--|---------------------|--------------------|-------------------|------------------------|------------------------|-------------------------|
| G.711 a-law/u-law <-> any (with high complexity codec in dspfarm profile) | 6 sessions | 18 sessions | 96 sessions | 48 sessions | 72 sessions | 96 sessions |
| G.711 a-law/u-law <-> any (without high complexity codec in dspfarm profile) | 8 sessions | 24 sessions | 128 sessions | 64 sessions | 96 sessions | 128 sessions |
| G.711 a-law/u-law <-> G.729a/G.729ab/ GSM FR | 8 sessions | 24 sessions | 128 sessions | 64 sessions | 96 sessions | 128 sessions |
| G.711 a-law/u-law <-> G.729/G.729b/ GSM EFR | 6 sessions | 18 sessions | 96 sessions | 48 sessions | 72 sessions | 96 sessions |
| G.722-64<-> any | 4 sessions | 12 sessions | 64 sessions | 32 sessions | 48 sessions | 64 sessions |
| G.722-64 <-> G.711 | 8 sessions | 24 sessions | 128 sessions | 64 sessions | 96 sessions | 128 sessions |
| iLBC <-> any | 3 sessions | 9 sessions | 48 sessions | 24 sessions | 36 sessions | 48 sessions |
| iLBC <-> G.711 | 6 sessions | 18 sessions | 96 sessions | 48 sessions | 72 sessions | 96 sessions |
| Universal Transcoding (with high complexity codec in dspfarm profile) | 3 sessions | 9 sessions | 48 sessions | 24 sessions | 36 sessions | 48 sessions |
| Universal Transcoding (without high complexity codec in dspfarm profile) | 4 sessions | 12 sessions | 64 sessions | 32 sessions | 48 sessions | 64 sessions |

| Application | NM-HD-1V/2V (1 DSP) | NM-HD-2VE (3 DSPs) | NM-HDV2 (16 DSPs) | 2801/2811 (2 PVDM2-64) | 2821/2851 (3 PVDM2-64) | 3825, 3845 (4 PVDM2-64) |
|--|---------------------|--------------------|-------------------|------------------------|------------------------|-------------------------|
| Voice Termination | | | | | | |
| G.711 a-law/u-law | 16 sessions | 48 sessions | 256 sessions | 128 sessions | 192 sessions | 256 sessions |

Table 4: Theoretical System Capacities for One DSP

| Application | G.711 a-law/u-law | G.722-64 | G729 a/ab | G.729, G.729b | GSM FR | GSM EFR | iLBC |
|-------------------------|-----------------------------------|-----------------------------------|-----------------------------------|-----------------------------------|------------|------------|---------------------------------|
| Conferencing | 8 sessions (8 x 8 = 64 conferees) | 2 sessions (8 x 2 = 16 conferees) | 2 sessions (8 x 2 = 16 conferees) | 2 sessions (8 x 2 = 16 conferees) | -- | -- | 1 session (1 x 8 = 8 conferees) |
| Conferencing on PVDM2-8 | 4 sessions (4 x 8 = 32 conferees) | 1 session (1 x 8 = 8 conferees) | 1 session (1 x 8 = 8 conferees) | 1 session (1 x 8 = 8 conferees) | -- | -- | 1 session (1 x 8 = 8 conferees) |
| Hardware MTP | 16 sessions | -- | -- | -- | -- | -- | -- |
| Transcoding | 8 sessions | 8 sessions | 8 sessions | 6 sessions | 8 sessions | 6 sessions | 8 sessions |

NM-HDV System Capacities

The table below lists the number of transcoding sessions and conference calls supported on the NM-HDV.

Table 5: NM-HDV Theoretical System Capacities

| Device | Capacity |
|--------------|---|
| A single DSP | 4 transcoding sessions |
| | 1 conference call with up to 6 participants |

| Device | Capacity |
|---|--|
| A single PVDM (3 DSPs) | 12 transcoding sessions |
| | 3 conference calls, each with up to 6 participants, for a total of up to 18 participants |
| A fully loaded NM-HDV (5 PVDMs holding 15 DSPs) | 60 transcoding sessions |
| | 15 concurrent conference calls, each with up to 6 participants, for a total of up to 90 participants |

Use the following tables to determine the number of PVDMs required to support your DSP needs and whether your router is capable of holding enough NM-HDVs to accommodate these PVDMs:

- See the table below if you use either of the following:
 - 20-, 30-, 40-, 50-, or 60-ms packetization
 - 10-ms packetization with voice-activity detection (VAD) enabled
- See the table beneath the table below if you use 10-ms packetization with VAD disabled

**Note**

Numbers in the following table represent the number of PVDMs required within a single NM-HDV or NM-HDV-FARM to support the desired configuration. Where numbers are not given, the configuration is not possible using a single NM-HDV.

Table 6: PVDM Requirements Using 20-, 30-, 40-, 50-, or 60-ms Packetization or 10-ms Packetization with VAD Enabled

| Transcoding Sessions | Conference Calls | | | | | | | | | | | | | | | |
|----------------------|------------------|---|---|---|---|---|---|---|---|----|----|----|----|----|----|----|
| 0 | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 13 | 14 | 15 | |
| 0 | -- | 1 | 1 | 1 | 2 | 2 | 2 | 3 | 3 | 3 | 4 | 4 | 4 | 5 | 5 | 5 |

How to Configure Conferencing and Transcoding for Voice Gateway Routers

Determining DSP Resource Requirements

DSPs reside either directly on a voice network module, such as the NM-HD-2VE, on PVDM2s that are installed in a voice network module, such as the NM-HDV2, or on PVDM2s that are installed directly onto the motherboard, such as on the Cisco 2800 and 3800 series voice gateway routers. You must determine the number of PVDM2s or network modules that are required to support your conferencing and transcoding services and install the modules on your router.

SUMMARY STEPS

1. Determine the number of transcoding sessions and conference calls that your router must support.
2. Determine the number of DSPs that are required to support the transcoding sessions and conference calls. If voice termination is also required, determine the additional DSPs required.
3. Determine the maximum number of network modules that your router can support.
4. Ensure that your requirements fall within router capabilities, taking into account whether your router supports multiple network modules. If necessary, reassess performance requirements.
5. Install PVDM2s and network modules, as needed.

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|--|--|
| Step 1 | Determine the number of transcoding sessions and conference calls that your router must support. | Establishes your performance requirements. |
| Step 2 | Determine the number of DSPs that are required to support the transcoding sessions and conference calls. If voice termination is also required, determine the additional DSPs required. Example: | Establishes your hardware requirements. See Determining DSP Resource Requirements, on page 18 and Determining DSP Resource Requirements, on page 18 . For example: 8 G.711 conferences and 32 transcoding sessions require 1 PVDM2-64 (4 DSPs) on the NM-HDV2. |
| Step 3 | Determine the maximum number of network modules that your router can support. | Establishes your router capabilities. See Determining DSP Resource Requirements, on page 18 . |

| | Command or Action | Purpose |
|---------------|--|---|
| | Example: | For example: A Cisco 3745 router can support up to 4 NM-HDV2s (provided processor resources are available). |
| Step 4 | Ensure that your requirements fall within router capabilities, taking into account whether your router supports multiple network modules. If necessary, reassess performance requirements. | Verifies your proposed solution. |
| Step 5 | Install PVDM2s and network modules, as needed. | Prepares your system for DSP-farm configuration. See the "Connecting Voice Network Modules" chapter in the <i>Cisco Network Modules Hardware Installation Guide</i> , and the Cisco Network Modules and Interface Cards Regulatory Compliance and Safety Information . |

Enabling SCCP on the Cisco Unified Communications Manager Interface

Perform this task to enable SCCP on the local interface that the voice gateway uses to communicate with Cisco Unified Communications Manager.

SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `sccp ccm {ip-address | dns} identifier identifier-number [port port-number] [version version-number]`
4. `sccp local interface-type interface-number`
5. `sccp ip precedence value`
6. `sccp`
7. `exit`

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|--|---|
| Step 1 | <code>enable</code> Example: Router> enable | Enables privileged EXEC mode. • Enter your password if prompted. |

| | Command or Action | Purpose |
|---------------|--|---|
| Step 2 | configure terminal Example: Router# configure terminal | Enters global configuration mode. |
| Step 3 | sccp ccm { <i>ip-address</i> <i>dns</i> } identifier <i>identifier-number</i> [port <i>port-number</i>] [version <i>version-number</i>] Example: Example: <pre> sccp ccm {ip-address dns} priority priority [port port-number] [version version-number] </pre> Example: Router(config)# sccp ccm 10.0.0.0 identifier 1 version 4.0 Example: Router(config)# sccp ccm 10.0.0.0 priority 1 version | NM-HDV2, NM-HD-1V, NM-HD-2V, NM-HD-2VE, or PVDM2 Adds a Cisco Unified Communications Manager server to the list of available servers to which the Cisco voice gateway can register. <ul style="list-style-type: none"> Repeat this step for each Cisco Unified Communications Manager server that the gateway registers with. or NM-HDV, Cisco 1751, or Cisco 1760 Adds a Cisco Unified Communications Manager server to the list of available servers to which the Cisco voice gateway can register. <ul style="list-style-type: none"> Repeat this step for each Cisco Unified Communications Manager server that the gateway registers with. |
| Step 4 | sccp local <i>interface-type</i> <i>interface-number</i> Example: Router(config)# sccp local Ethernet 1 | Selects the local interface that SCCP applications use to register with Cisco Unified Communications Manager. |
| Step 5 | sccp ip precedence <i>value</i> Example: Router(config)# sccp ip precedence 3 | (Optional) Sets the IP precedence value for SCCP. <ul style="list-style-type: none"> This command enables you to increase the priority of voice packets over connections controlled by SCCP. <i>value</i> --Range is 1(highest) to 7 (lowest). Default is 5. |
| Step 6 | sccp Example: Router(config)# sccp | Enables SCCP and brings it up administratively. |

| | Command or Action | Purpose |
|--------|--|----------------------------------|
| Step 7 | exit Example: Router(config)# exit | Exits global configuration mode. |

Configuring Enhanced Conferencing and Transcoding

Perform the following procedures to configure enhanced conferencing and transcoding on the NM-HDV2, NM-HD-1V, NM-HD-2V, NM-HD-2VE, or PVDM2:

Configuring a DSP Farm Profile

Perform this procedure to define a DSP farm on the NM-HDV2, NM-HD-1V, NM-HD-2V, NM-HD-2VE, or PVDM2. You must configure each conferencing, transcoding, and MTP profile separately.

Note

Because a software-only MTP does not require DSP resources, you can configure a software-only MTP without a voice network module, or on the NM-HDV if you do not enable the **dsp services dspfarm** command for the voice card.

Before You Begin

Requires Cisco IOS Release 12.3(8)T or a later release. Universal transcoding requires Cisco IOS Release 12.4(11)XY or a later release.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **voice-card slot**
4. **dsp services dspfarm**
5. **exit**
6. **dspfarm profile profile-identifier {conference | mtp | transcode[universal]}**
7. **description text**
8. **codec codec-type**
9. **maximum sessions {hardware | software} number**
10. **associate application sccp**
11. **no shutdown**
12. **exit**
13. **gateway**
14. **timer receive-rtp seconds**
15. **exit**

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|--|--|
| Step 1 | enable Example: Router> enable | Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted. |
| Step 2 | configure terminal Example: Router# configure terminal | Enters global configuration mode. |
| Step 3 | voice-card slot Example: Router(config)# voice-card 1 | Enters voice-card configuration mode for the network module on which you want to enable DSP-farm services. |
| Step 4 | dsp services dspfarm Example: Router(config-voicecard)# dsp services dspfarm | Enables DSP-farm services for the voice card. |

| | Command or Action | Purpose |
|----------------|--|---|
| Step 5 | exit Example: <pre>Router(config-voicecard)# exit</pre> | Exits voice-card configuration mode. |
| Step 6 | dspfarm profile <i>profile-identifier</i> { conference mtp transcode[universal] } Example: <pre>Router(config)# dspfarm profile 20 conference</pre> | Enters DSP farm profile configuration mode to define a profile for DSP farm services. Note The <i>profile-identifier</i> and service type uniquely identifies a profile. If the service type and <i>profile-identifier</i> pair is not unique, you are prompted to choose a different <i>profile-identifier</i> . |
| Step 7 | description <i>text</i> Example: <pre>Router(config-dspfarm-profile)# description art_dept</pre> | (Optional) Includes a specific description about the Cisco DSP farm profile. |
| Step 8 | codec <i>codec-type</i> Example: <pre>Router(config-dspfarm-profile)# codec ilbc</pre> | Specifies the codecs supported by a DSP farm profile. <ul style="list-style-type: none"> Repeat this step for each codec supported by the profile. Note Hardware MTPs support only G.711 a-law and G.711 u-law. If you configure a profile as a hardware MTP, and you want to change the codec to other than G.711, you must first remove the hardware MTP by using the no maximum sessions hardware command. Note Only one codec is supported for each MTP profile. To support multiple codecs, you must define a separate MTP profile for each codec. |
| Step 9 | maximum sessions { hardware software } <i>number</i> Example: <pre>Router(config-dspfarm-profile)# maximum sessions 4</pre> | Specifies the maximum number of sessions that are supported by the profile. <ul style="list-style-type: none"> <i>number</i> --Range is determined by the available registered DSP resources. Default is 0. Note The hardware and software keywords apply only to MTP profiles. |
| Step 10 | associate application <i>sccp</i> Example: <pre>Router(config-dspfarm-profile)# associate application sccp</pre> | Associates the SCCP protocol to the DSP farm profile. |

| | Command or Action | Purpose |
|----------------|--|--|
| Step 11 | no shutdown Example: <pre>Router(config-dspfarm-profile)# no shutdown</pre> | Enables the profile, allocates DSP farm resources, and associates the application. |
| Step 12 | exit Example: <pre>Router(config-dspfarm-profile)# exit</pre> | Exits DSP farm profile configuration mode. |
| Step 13 | gateway Example: <pre>Router(config)# gateway</pre> | Enters gateway configuration mode. |
| Step 14 | timer receive-rtp <i>seconds</i> Example: <pre>Router(config-gateway)# timer receive-rtp 600</pre> | Sets the Real-Time Transport Protocol (RTP) timeout interval to clear hanging connections. <ul style="list-style-type: none"> • <i>seconds</i> --Range is 180 to 1800. Default is 1200. |
| Step 15 | exit Example: <pre>Router(config-gateway)# exit</pre> | Exits to global configuration mode. |

Associating a DSP Farm Profile to a Cisco Unified Communications Manager Group

Perform this procedure to define a Cisco Unified Communications Manager group and to associate a DSP farm profile with the Cisco Unified Communications Manager group.

Before You Begin

This procedure requires Cisco IOS Release 12.3(8)T or later release.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **scp ccm group** *group-number*
4. **associate ccm** *identifier-number* **priority** *priority-number*
5. **associate profile** *profile-identifier* **register** *device-name*
6. **bind interface** *interface-type* *interface-number*
7. **description** *text*
8. **end**

DETAILED STEPS

| | Command or Action | Purpose |
|--------|--|---|
| Step 1 | enable Example: Router> enable | Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted. |
| Step 2 | configure terminal Example: Router# configure terminal | Enters global configuration mode. |
| Step 3 | scp ccm group <i>group-number</i> Example: Router(config)# scp ccm group 48 | Creates a Cisco Unified Communications Manager group and enters SCCP Cisco Unified Communications Manager configuration mode. |
| Step 4 | associate ccm <i>identifier-number</i> priority <i>priority-number</i> Example: Router(config-sccp-ccm)# associate ccm 125 priority 2 | Adds a Cisco Unified Communications Manager server to the Cisco Unified Communications Manager group and establishes its priority within the group. <ul style="list-style-type: none"> • Repeat this step for each Cisco Unified Communications Manager server that you want to add to the group. |
| Step 5 | associate profile <i>profile-identifier</i> register <i>device-name</i> Example: Router(config-sccp-ccm)# associate profile register abgz12345 | Associates a DSP farm profile to the Cisco Unified Communications Manager group. <ul style="list-style-type: none"> • <i>device-name</i>—Must match the device name configured in Cisco Unified Communications Manager; otherwise profile is not registered to Cisco Unified Communications Manager. • Repeat this step for each DSP farm profile that you want to register with this Cisco Unified Communications Manager group. |

| | Command or Action | Purpose |
|---------------|--|---|
| Step 6 | bind interface <i>interface-type interface-number</i> Example: <pre>Router(config-sccp-ccm)# bind interface fastethernet 2:1</pre> | Binds an interface to the Cisco Unified Communications Manager group. |
| Step 7 | description <i>text</i> Example: <pre>Router(config-sccp-ccm)# description boston office</pre> | (Optional) Includes a specific description of the Cisco Unified Communications Manager group. |
| Step 8 | end Example: <pre>Router(config)# end</pre> | Exits to privileged EXEC mode. |

Modifying Default Settings for SCCP Connection to Cisco Unified Communications Manager

Perform this task to tune the performance of the SCCP connection between the DSP farm and Cisco Unified Communications Manager.

Note

The optimum settings for these commands depend on your platform and individual network characteristics. Modify the defaults to meet your performance requirements.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **scp ccm group** *group-number*
4. **connect interval** *seconds*
5. **connect retries** *number*
6. **keepalive retries** *number*
7. **keepalive timeout** *seconds*
8. **registration retries** *retry-attempts*
9. **registration timeout** *seconds*
10. **switchover method** {**graceful** | **immediate**}
11. **switchback method** {**graceful** | **guard** [*timeout value*] | **immediate** | **uptime** *uptime-value*}
12. **switchback interval** *seconds*
13. **end**

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|---|--|
| Step 1 | enable Example: Router> enable | Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted. |
| Step 2 | configure terminal Example: Router# configure terminal | Enters global configuration mode. |
| Step 3 | scp ccm group <i>group-number</i> Example: Router(config)# scp ccm group 48 | Enters SCCP Cisco Unified Communications Manager configuration mode. <ul style="list-style-type: none"> • <i>group-number</i> --Range is 1 to 50. |
| Step 4 | connect interval <i>seconds</i> Example: Router(config-sccp-ccm)# connect interval 1200 | (Optional) Specifies the amount of time that a DSP farm profile waits before attempting to connect to another Cisco Unified Communications Manager when the current Cisco Unified Communications Manager fails to connect. <ul style="list-style-type: none"> • <i>seconds</i> --Range is 1 to 3600. Default is 60. |

| | Command or Action | Purpose |
|----------------|--|--|
| Step 5 | <p>connect retries <i>number</i></p> <p>Example:</p> <pre>Router(config-sccp-ccm)# connect retries 5</pre> | <p>(Optional) Specifies the number of times that a DSP farm attempts to connect to a Cisco Unified Communications Manager when the current Cisco Unified Communications Manager connections fails.</p> <ul style="list-style-type: none"> • <i>number</i> --Range is 1 to 32. Default is 3. |
| Step 6 | <p>keepalive retries <i>number</i></p> <p>Example:</p> <pre>Router(config-sccp-ccm)# keepalive retries 7</pre> | <p>(Optional) Sets the number of keepalive retries from SCCP to the Cisco Unified Communications Manager.</p> <ul style="list-style-type: none"> • <i>number</i> --Range is 1 to 32. Default is 3. |
| Step 7 | <p>keepalive timeout <i>seconds</i></p> <p>Example:</p> <pre>Router(config-sccp-ccm)# keepalive timeout 50</pre> | <p>(Optional) Sets the number of seconds between keepalive messages from SCCP to the Cisco Unified Communications Manager.</p> <ul style="list-style-type: none"> • <i>seconds</i> --Range is 1 to 180. Default is 30. |
| Step 8 | <p>registration retries <i>retry-attempts</i></p> <p>Example:</p> <pre>Router(config-sccp-ccm)# registration retries 15</pre> | <p>(Optional) Sets the number of registration retries that SCCP tries to register with the Cisco Unified Communications Manager.</p> <ul style="list-style-type: none"> • <i>retry-attempts</i> --Range is 1 to 32. Default is 3. |
| Step 9 | <p>registration timeout <i>seconds</i></p> <p>Example:</p> <pre>Router(config-sccp-ccm)# registration timeout 8</pre> | <p>(Optional) Sets the number of seconds between registration messages sent from SCCP to the Cisco Unified Communications Manager.</p> <ul style="list-style-type: none"> • <i>seconds</i> --Range is 1 to 180. Default is 3. |
| Step 10 | <p>switchover method {<i>graceful</i> <i>immediate</i>}</p> <p>Example:</p> <pre>Router(config-sccp-ccm)# switchover method graceful</pre> | <p>(Optional) Sets the switchover method that the SCCP client uses when the communication link to the active Cisco Unified Communications Manager fails.</p> <ul style="list-style-type: none"> • Default is graceful. |
| Step 11 | <p>switchback method {<i>graceful</i> <i>guard</i> [<i>timeout value</i>] <i>immediate</i> <i>uptime</i> <i>uptime-value</i>}</p> <p>Example:</p> <pre>Router(config-sccp-ccm)# switchback method graceful</pre> | <p>(Optional) Sets the switchback method to use when the primary or higher priority Cisco Unified Communications Manager becomes available again.</p> <ul style="list-style-type: none"> • Default is guard, with a timeout value of 7200 seconds. |

| | Command or Action | Purpose |
|---------|---|--|
| Step 12 | <p>switchback interval <i>seconds</i></p> <p>Example:</p> <pre>Router(conf-sccp-ccm)# switchback interval 120</pre> | <p>(Optional) Sets the number of seconds that the DSP farm waits before polling the primary Cisco Unified Communications Manager when the current Cisco Unified Communications Manager fails to connect.</p> <ul style="list-style-type: none"> • <i>seconds</i> --Range is 1 to 3600. Default is 60. |
| Step 13 | <p>end</p> <p>Example:</p> <pre>Router(config-sccp-ccm)# end</pre> | Exits to privileged EXEC mode. |

Verifying DSP Farm Configuration

To verify conferencing, transcoding, and MTP services, perform the following steps.

SUMMARY STEPS

1. Use the **show running-config** command to display the configuration of the MTP profile, for example:
2. **show sccp ccm group** [*group-number*]
3. **show dspfarm profile** [*profile number*]
4. **show dspfarm all**
5. **show sccp**
6. **show sccp connections**
7. **show media resource status**

DETAILED STEPS

Step 1 Use the **show running-config** command to display the configuration of the MTP profile, for example:

Example:

```
Router# show running-config
...
sccp local FastEthernet0/0
sccp ccm 10.40.10.10 identifier 10 version 4.0
sccp
!
sccp ccm group 48
  associate ccm 10 priority 1
  associate profile 12 register MTP123456789
  associate profile 2 register XCODE123456
!
dspfarm profile 12 mtp
  codec g711ulaw
  maximum sessions hardware 4
  maximum sessions software 40
```

```
associate application SCCP
!
```

Step 2 `show sccp ccm group [group-number]`

Use this command to verify the configuration of the Cisco Unified Communications Manager group, for example:

Example:

```
Router# show sccp ccm group 48
CCM Group Identifier: 999
Description: None
Associated CCM Id: 10, Priority in this CCM Group: 1
Associated Profile: 2, Registration Name: XCODE1234567
Associated Profile: 12, Registration Name: MTP123456789
Registration Retries: 3, Registration Timeout: 10 sec
Keepalive Retries: 3, Keepalive Timeout: 30 sec
CCM Connect Retries: 3, CCM Connect Interval: 10 sec
Switchover Method: GRACEFUL, Switchback Method: GRACEFUL_GUARD
Switchback Interval: 10 sec, Switchback Timeout: 7200 sec
Signaling DSCP value: default, Audio DSCP value: default
```

Step 3 `show dspfarm profile [profile number]`

Use this command to verify the configured DSP farm profiles, for example:

Example:

```
Router# show dspfarm profile 12
Dspfarm Profile Configuration
Profile ID = 12, Service = MTP, Resource ID = 2
Profile Admin State : UP
Profile Operation State : ACTIVE
Application : SCCP Status : ASSOCIATED
Resource Provider : FLEX_DSPRM Status : UP
Number of Resource Configured : 14
Number of Resource Available : 14
Hardware Configured Resources 4
Hardware Available Resources 4
Software Resources 10
Codec Configuration
Codec : g711ulaw, sa
Router# show dspfarm profile 6
Dspfarm Profile Configuration
Profile ID = 6, Service = TRANSCODING, Resource ID = 1
Profile Admin State : UP
Profile Operation State : ACTIVE
Application : SCCP Status : ASSOCIATED
Resource Provider : FLEX_DSPRM Status : UP
Number of Resource Configured : 4
Number of Resource Available : 4
Codec Configuration
Codec : g711ulaw, Maximum Packetization Period : 30
Codec : g711alaw, Maximum Packetization Period : 30
Codec : g729ar8, Maximum Packetization Period : 60
Codec : g729abr8, Maximum Packetization Period : 60
Codec : gsmfr, Maximum Packetization Period : 20
Codec : g729br8, Maximum Packetization Period : 60
Codec : gsmefr, Maximum Packetization Period : 20
```

Note This command is not supported on the NM-HDV or Cisco 1700 series.

Step 4 `show dspfarm all`

Use this command to verify the status of the DSP farm, for example:

Example:

```

Router# show dspfarm all
DSPFARM Configuration Information:
Admin State: UP, Oper Status: ACTIVE - Cause code: NONE
Transcoding Sessions: 0(Avail: 0), Conferencing Sessions: 2 (Avail: 2)
Trans sessions for mixed-mode conf: 0 (Avail: 0), RTP Timeout: 600
Connection check interval 600 Codec G729 VAD: ENABLED
Total number of active session(s) 0, and connection(s) 0
SLOT  DSP    CHNL  STATUS USE   TYPE   SESS-ID  CONN-ID  PKTS-RXED  PKTS-TXED
0      0      1     UP     FREE  conf   -        -        -          -
0      0      2     UP     FREE  conf   -        -        -          -
0      0      3     UP     FREE  conf   -        -        -          -
0      0      4     UP     FREE  conf   -        -        -          -
0      0      5     UP     FREE  conf   -        -        -          -
0      0      6     UP     FREE  conf   -        -        -          -

```

Step 5**show sccp**

Use the **show sccp** command to verify that the DSP farm is registered, for example:

Example:

```

Router# show sccp
SCCP Admin State: UP
Gateway IP Address: 10.10.100.29, Port Number: 0
IP Precedence: 5
User Masked Codec list:
Call Manager: 10.10.100.51, Port Number: 2000
                Priority: N/A, Version: 4.0, Identifier: 2
Call Manager: 10.10.100.50, Port Number: 2000
                Priority: N/A, Version: 4.0, Identifier: 1

Transcoding Oper State: ACTIVE - Cause Code: NONE
Active Call Manager: 10.10.100.51, Port Number: 2000
TCP Link Status: CONNECTED, Profile Identifier: 10
Reported Max Streams: 6, Reported Max OOS Streams: 0
Supported Codec: g711ulaw, Maximum Packetization Period: 30
Supported Codec: g711alaw, Maximum Packetization Period: 30
Supported Codec: g729ar8, Maximum Packetization Period: 60
Supported Codec: g729abr8, Maximum Packetization Period: 60
Supported Codec: gsmfr, Maximum Packetization Period: 20
Supported Codec: g729br8, Maximum Packetization Period: 60
Supported Codec: rfc2833 dtmf, Maximum Packetization Period: 20

Software MTP Oper State: ACTIVE - Cause Code: NONE
Active Call Manager: 10.10.100.51, Port Number: 2000
TCP Link Status: CONNECTED, Profile Identifier: 20
Reported Max Streams: 176, Reported Max OOS Streams: 0
Supported Codec: g711ulaw, Maximum Packetization Period: 30
Supported Codec: rfc2833 dtmf, Maximum Packetization Period: 20

```

Step 6**show sccp connections**

Use this command to verify the active SCCP connections, for example:

Example:

```

Router# show sccp connections
sess_id  conn_id  stype mode      codec  ripaddr  rport sport
16777268 2164263392 mtp  recvonly g711u  0.0.0.0  0      17540

```

Total number of active session(s) 1, and connection(s) 1

Step 7 **show media resource status**

Use this command to verify the current media resource status, for example:

Example:

```
Router# show media resource status
Resource Providers:
Resource Provider ID :: FLEX_DSPRM Status :: REGISTERED
Service Profiles
MTP ::
TRANSCODING :: 6 11
CONFERENCING :: 10
Applications :
Application ID : SCCP, Status : REGISTERED
```

Tips for Troubleshooting Conferencing and Transcoding on Voice Gateway Routers

This section describes techniques for troubleshooting DSP-farm services.

Basic Troubleshooting Procedures

- 1 Verify the Cisco Unified Communications Manager 4.0 (formerly known as Cisco CallManager 4.0) or later.
- 2 Verify that Cisco Unified Communications Manager is properly configured to provision conferencing, transcoding, and MTP resources.
- 3 Organize your Cisco Unified Communications Manager group IDs, device IDs, and DSP farm profile names. Use the **show dsp** command to verify that the association between SCCP Cisco Unified Communications Manager and the DSP farm profiles match your organizational plan.
- 4 Verify that the VoIP dial peer application exists on the terminating gateway.
- 5 Collect relevant information from **debug** and **show** commands, and configuration files before contacting Cisco Technical Support for assistance.
- 6 You can clear any of the following by disabling the DSP farm or SCCP:
 - Active calls
 - DSPs
 - Active connection to a Cisco Unified Communications Manager

MTP Troubleshooting Tips

- MTP profiles can use only G.711 a-law or G.711 u-law. If you define a profile for a hardware MTP, and you want to change the codec to other than G.711, you must first remove the hardware MTP by using the **no maximum sessions hardware** command.

- Verify that only one codec is assigned for each MTP profile. To support multiple codecs, you must define a separate MTP profile for each codec.

Troubleshooting DSP-Farm Services

You can troubleshoot performance by performing any of the following steps.

SUMMARY STEPS

1. `debug sccp {all | errors | events | packets | parser}`
2. `debug dspfarm {all | errors | events | packets}`
3. `debug media resource provisioning {all | errors| events}`

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|--|---|
| Step 1 | <code>debug sccp {all errors events packets parser}</code> Example: <pre>Router# debug sccp all</pre> | (Optional) Sets debugging levels for SCCP and its applications. |
| Step 2 | <code>debug dspfarm {all errors events packets}</code> Example: <pre>Router# debug dspfarm all</pre> | (Optional) Sets debugging levels for DSP-farm service. |
| Step 3 | <code>debug media resource provisioning {all errors events}</code> Example: <pre>Router# debug media resource provisioning all</pre> | (Optional) Sets debugging levels for media resource provisioning. |

Configuring Conferencing and Transcoding (NM-HDV)

Perform the following procedures to configure enhanced conferencing and transcoding on the NM-HDV.

Configuring the DSP Farm on the NM-HDV

Perform this task to configure a DSP farm on an NM-HDV.

**Note**

If you configured a DSP farm in Cisco IOS Release 12.1(5)YH and have now upgraded to Cisco IOS Release 12.2(13)T or later, you must reconfigure the DSP farm, including enabling DSP-farm services on the NM-HDV and specifying maximum session numbers in each category as appropriate. Your previous configuration no longer works.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **voice-card slot**
4. **dsp services dspfarm**
5. **exit**
6. **dspfarm confbridge maximum sessions number**
7. **dspfarm transcoder maximum sessions number**
8. **dspfarm**
9. **exit**

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|--|--|
| Step 1 | enable Example: Router> enable | Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password when prompted. |
| Step 2 | configure terminal Example: Router# configure terminal | Enters global configuration mode. |
| Step 3 | voice-card slot Example: Router(config)# voice-card 1 | Enters voice-card configuration mode for the network module on which you want to enable DSP-farm services. |
| Step 4 | dsp services dspfarm Example: Router(config-voicecard)# dsp services dspfarm | Enables DSP-farm services on the voice card. |

| | Command or Action | Purpose |
|---------------|---|--|
| Step 5 | exit Example: Router(config-voicecard)# exit | Returns to global configuration mode. |
| Step 6 | dspfarm confbridge maximum sessions <i>number</i> Example: Router(config)# dspfarm confbridge maximum sessions 3 | Specifies the maximum number of conferencing sessions to be supported by the DSP farm. A DSP can support 1 conference session with up to 6 participants. Note When you assign this value, take into account the number of DSPs allocated for transcoding services. |
| Step 7 | dspfarm transcoder maximum sessions <i>number</i> Example: Router(config)# dspfarm transcoder maximum sessions 12 | Specifies the maximum number of transcoding sessions to be supported by the DSP farm. A DSP can support up to 4 transcoding sessions. Note When you assign this value, take into account the number of DSPs allocated for conferencing services. |
| Step 8 | dspfarm Example: Router(config)# dspfarm | Enables the DSP farm. |
| Step 9 | exit Example: Router(config)# exit | Exits global configuration mode. |

Tuning DSP-Farm Performance on the NM-HDV

Use the following optional commands to tune performance.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **sccp switchback timeout guard *seconds***
4. **dspfarm rtp timeout *seconds***
5. **dspfarm connection interval *seconds***
6. **exit**

DETAILED STEPS

| | Command or Action | Purpose |
|--------|---|---|
| Step 1 | enable Example: Router> enable | Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password when prompted. |
| Step 2 | configure terminal Example: Router# configure terminal | Enters global configuration mode. |
| Step 3 | sccp switchback timeout guard <i>seconds</i> Example: Router(config)# sccp switchback timeout guard 180 | (Optional) Sets the guard timer. |
| Step 4 | dspfarm rtp timeout <i>seconds</i> Example: Router(config)# dspfarm rtp timeout 60 | (Optional) Configures the Real-Time Transport Protocol (RTP) timeout interval for when the error condition "RTP port unreachable" occurs. |
| Step 5 | dspfarm connection interval <i>seconds</i> Example: Router(config)# dspfarm connection interval 60 | (Optional) Specifies how long to monitor RTP inactivity before deleting an RTP stream. |
| Step 6 | exit Example: Router(config)# exit | Exits global configuration mode. |

What to Do Next

Configuring Conferencing and Transcoding (PVDM-256K)

Perform this task to configure a DSP farm for conferencing and transcoding services using the PVDM-256K on the Cisco 1751 or Cisco 1760.

Before You Begin

Determine that there are enough DSPs available for conferencing and transcoding services by using the **show voice dsp** command.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **dspfarm confbridge maximum sessions** *number*
4. **dspfarm transcoder maximum sessions** *number*
5. **dspfarm**
6. **exit**

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|---|--|
| Step 1 | enable Example: Router> enable | Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password when prompted. |
| Step 2 | configure terminal Example: Router# configure terminal | Enters global configuration mode. |
| Step 3 | dspfarm confbridge maximum sessions <i>number</i> Example: Router(config)# dspfarm confbridge maximum sessions 3 | Specifies the maximum number of conferencing sessions to be supported by the DSP farm. A DSP can support 1 conference session with up to 6 participants. Note When you assign this value, take into account the number of DSPs allocated for transcoding services. |
| Step 4 | dspfarm transcoder maximum sessions <i>number</i> Example: Router(config)# dspfarm transcoder maximum sessions 12 | Specifies the maximum number of transcoding sessions to be supported by the DSP farm. A DSP can support up to 4 transcoding sessions. Note When you assign this value, take into account the number of DSPs allocated for conferencing services. |
| Step 5 | dspfarm Example: Router(config)# dspfarm | Enables the DSP farm. |

| | Command or Action | Purpose |
|--------|--|----------------------------------|
| Step 6 | exit Example: Router(config)# exit | Exits global configuration mode. |

What to Do Next

Configuring Out-of-Band to In-Band DTMF Relay

There are no specific configuration tasks necessary to support the Out-of-Band to In-Band DTMF Relay for Cisco IOS Voice Gateways feature except those described in the following Prerequisites section.

Prerequisites

Hardware

- NM-HDV2, NM-HD-2VE, or onboard PVDM2 (Cisco 2800 series or Cisco 3800 series).
- WS-SVC-CMM-6T1 or WS-SVC-CMM-6E1 port adapter for Cisco Catalyst 6500 series and Cisco 7600 series Communication Media Module (CMM).

Software

- Enable SCCP on the local interface that the MTP resource uses to communicate with Cisco Unified Communications Manager. For instructions, see the [Enabling SCCP on the Cisco Unified Communications Manager Interface](#), on page 19.
- Configure a DSP farm profile for MTP resources. For instructions, see the [Configuring a DSP Farm Profile](#), on page 21.
- Associate the MTP profile with the Cisco Unified Communications Manager group. For instructions, see the [Associating a DSP Farm Profile to a Cisco Unified Communications Manager Group](#), on page 24.
- Configure DTMF relay in the SIP dial peers using the **dtmf-relay rtp-nte** command.
- Configure DTMF relay in Cisco Unified Communications Manager 4.0 (formerly known as Cisco CallManager 4.0) or later. For information, see the [Cisco Unified CallManager 4.0](#) documentation.
- Consider your system requirements when configuring DSP farms and SCCP because the defaults for some commands might not result in expected behavior. In particular, the correct settings for the following commands are platform-specific and depend on your individual network characteristics:
 - **connect interval**

- connect retries
- keepalive retries
- keepalive timeout
- sccp registration retries
- sccp registration timeout
- switchback interval

Restrictions

- Multifrequency is supported by MTPs but Cisco Unified Communications Manager does not support it.
- Software MTP supports G.711 codecs only.

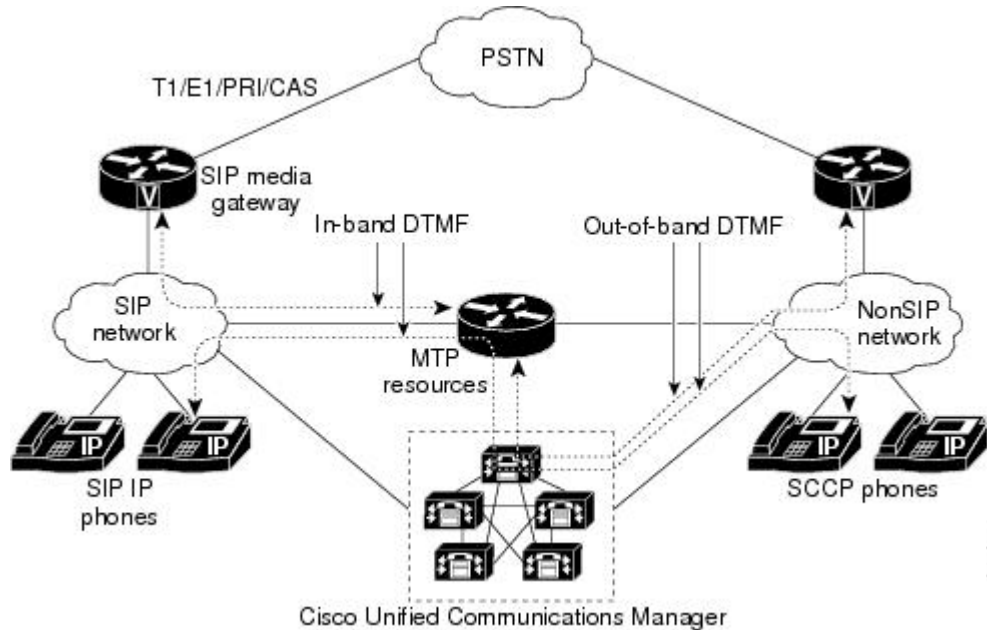

Out-of-Band to In-Band DTMF Relay for Cisco IOS Voice Gateways

The Out-of-Band to In-Band DTMF Relay for Cisco IOS Voice Gateways feature provides the event processing capability in RFC 2833 that enables DTMF relay communication between SIP devices and nonSIP endpoints using Cisco Unified Communications Manager. RFC 2833 defines a method of transporting tones and other telephony events over Real-Time Transport Protocol (RTP) to ensure DTMF digits are accurately transmitted in a packet environment. A single packet representing a DTMF tone as an event code is passed within an RTP audio stream instead of sending the DTMF tone in-band, where it could be corrupted because of packet loss. When the packet reaches the receiver, it re-creates a tone of the correct frequency and duration.

DTMF detection and generation capabilities are added to the hardware and software MTP. The MTP generates out-of-band SCCP events to Cisco Unified Communications Manager when it detects a DTMF tone. The MTP creates event packets for DTMF digits and inserts the packets into the outgoing RTP stream after receiving an SCCP request from Cisco Unified Communications Manager.

The figure below illustrates the media setup and DTMF tone flow between a SIP network and nonSIP network over a DSP farm MTP.

Figure 3: DTMF Tone Flow Between a SIP and NonSIP Network

This feature supports DTMF relay using the following MTP and transcoder resources for Cisco Unified Communications Manager 4.0 (formerly known as Cisco CallManager 4.0):

- Software MTP--Software-only implementation that does not use a DSP resource for endpoints using the same codec and the same packetization time.
- Hardware MTP--Hardware-only implementation that uses a DSP resource for endpoints using the same G.711 codec but a different packetization time. Cisco Unified Communications Manager refers to it also as a software MTP.
- Transcoder--Hardware-only implementation using a DSP resource for endpoints using different codecs. Cisco Unified Communications Manager also refers to it as a hardware MTP.

For MTP and transcoding, the DSP farm supports only two IP streams connected to each other at a time. If more than two streams need connecting, the streams must be connected using conferencing.

Note

For more information on MTPs and transcoders, see the [Cisco Unified Communications Manager System Guide Release 4.0\(1\)](#).

Configuration Examples for Conferencing and Transcoding

Note Universal transcoding using the AMR-NB codec in either direction is supported only on the Cisco AS5350XM and Cisco AS5450XM universal gateways.

DSP-Farm Services on the NM-HDV2 or PVDM2 Example

The following example shows a configuration of conferencing and transcoding services on an NM-HDV2 or PVDM2. DSP farm profile 6, which supports transcoding, and profile 10, which supports conferencing are both assigned to Cisco Unified Communications Manager group 988.

Note This configuration requires Cisco IOS Release 12.3(8)T or later.
