

Negotiation of an Audio Codec from a List of Codecs

Last Updated: December 20, 2011

The Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the Cisco Unified Border Element feature supports negotiation of an audio codec using the Voice Class Codec and Codec Transparent infrastructure on the Cisco Unified Border Element (Cisco UBE).

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the Feature Information Table at the end of this document.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Benefits

Following are the benefits of the Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the Cisco Unified Border Element feature:

- You can configure dissimilar Voice Class Codec configurations on the incoming and outgoing dial peers.

Americas Headquarters:
Cisco Systems, Inc., 170 West Tasman Drive, San Jose, CA 95134-1706 USA

- Both normal transcoding and high-density transcoding are supported with the Voice Class Codec configuration.
- Mid-call codec changes for supplementary services are supported with the Voice Class Codec configuration. Transcoder resources are dynamically inserted or deleted when required.
- Reinvite-based supplementary services invoked from the Cisco Unified Communications Manager (CUCM), like call hold, call resume, music on hold (MOH), call transfer, and call forward are supported with the Voice Class Codec configuration.
- T.38 fax and fax passthru switchover with Voice Class Codec configuration are supported.
- Reinvite-based call hold and call resume for Secure Real-Time Transfer protocol (SRTP) and Real-Time Protocol (RTP) interworking on Cisco UBE are supported with the Voice Class Codec configuration.

Prerequisites for Negotiation of an Audio Codec from a List of Codecs

To the configure Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the Cisco Unified Border Element feature you must know the following:

- Transcoding configuration on the Cisco UBE.
- The digital signal processor (DSP) requirements to support the transcoding feature on the Cisco UBE.
- The existing Voice Class Codec configuration on the dial peers.

Cisco Unified Border Element

- Cisco IOS Release 15.1(2)T or a later release must be installed and running on your Cisco Unified Border Element.

Cisco Unified Border Element (Enterprise)

- Cisco IOS XE Release 2.5 or a later release must be installed and running on your Cisco ASR 1000 Series Router.

Restrictions for Negotiation of an Audio Codec from a List of Codecs

The Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the Cisco Unified Border Element feature has the following limitations:

- Mid-call insertion or deletion of the transcoder with voice class codec for H323-H323 and H323-SIP is not supported.
- Voice class codec is not supported for video calls.

Disabling Codec Filtering

Cisco UBE is configured to filter common codecs for the subsets, by default. The filtered codecs are sent in the outgoing offer. You can configure the Cisco UBE to offer all the codecs configured on an outbound leg instead of offering only the filtered codecs.

**Note**

This configuration is applicable only for early offer calls from the Cisco UBE. For delayed offer calls, by default all codecs are offered irrespective of this configuration.

Perform this task to disable codec filtering and allow all the codecs configured on an outbound leg.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **dial-peer voice *tag* voip**
4. **voice-class codec *tag* [offer-all]**
5. **end**

DETAILED STEPS

Command or Action	Purpose
Step 1 enable Example: <pre>Router> enable</pre>	Enables privileged EXEC mode. <ul style="list-style-type: none"> • Enter your password if prompted.
Step 2 configure terminal Example: <pre>Router# configure terminal</pre>	Enters global configuration mode.
Step 3 dial-peer voice <i>tag</i> voip Example: <pre>Router(config)# dial-peer voice 10 voip</pre>	Enters dial peer voice configuration mode.
Step 4 voice-class codec <i>tag</i> [offer-all] Example: <pre>Router(config-dial-peer)# voice-class codec 10 offer-all</pre>	Adds all the configured voice class codec to the outgoing offer from the Cisco UBE.

Command or Action	Purpose
Step 5 <code>end</code> Example: <code>Router(config-dial-peer)# end</code>	Exits the dial peer voice configuration mode.

Troubleshooting Negotiation of an Audio Codec from a List of Codecs

Use the following commands to debug any errors that you may encounter when you configure the Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the Cisco Unified Border Element feature:

- `debug ccsip all`
- `debug voip ccapi input`
- `debug sccp messages`
- `debug voip rtp session`

Verifying Negotiation of an Audio Codec from a List of Codecs

Perform this task to display information to verify Negotiation of an Audio Codec from a List of Codecs on Each Leg of a SIP-to-SIP Call on the Cisco Unified Border Element configuration. These **show** commands need not be entered in any specific order.

SUMMARY STEPS

1. `enable`
2. `show call active voice brief`
3. `show voip rtp connections`
4. `show sccp connections`
5. `show dspfarm dsp active`

DETAILED STEPS

-
- Step 1** `enable`
Enables privileged EXEC mode.
- Step 2** `show call active voice brief`
Displays a truncated version of call information for voice calls in progress.

Example:

```
Router# show call active voice brief
```

```

<ID>: <CallID> <start>ms.<index> +<connect> pid:<peer_id> <dir> <addr> <state>

Multicast call-legs: 0
Total call-legs: 4

```

Step 3**show voip rtp connections**

Displays Real-Time Transport Protocol (RTP) connections.

Example:

```
Router# show voip rtp connections
```

```
VoIP RTP active connections :
```

No.	CallId	dstCallId	LocalRTP	RmtRTP	LocalIP	RemoteIP
1	11	12	16662	19304	192.0.2.1	
2	12	11	17404	16512	192.0.2.2	
3	13	14	18422	2000	192.0.2.4	
4	15	14	16576	2000	192.0.2.6	

```
192.0.2.5
Found 4 active RTP connections
```

Step 4**show sccp connections**

Displays information about the connections controlled by the Skinny Client Control Protocol (SCCP) transcoding and conferencing applications.

Example:

```
Router# show sccp connections
sess_id   conn_id   stype mode   codec   sport rport ripaddr
5         5         xcode sendrecv g729b   16576 2000 192.0.2.3
5         6         xcode sendrecv g711u   18422 2000 192.0.2.4
Total number of active session(s) 1, and connection(s) 2
```

Step 5**show dspfarm dsp active**

Displays active DSP information about the DSP farm service.

Example:

```
Router# show dspfarm dsp active
SLOT DSP VERSION STATUS CHNL USE TYPE RSC_ID BRIDGE_ID PKTS_TXED PKTS_RXED
0 1 27.0.201 UP 1 USED xcode 1 0x9 5 8
0 1 27.0.201 UP 1 USED xcode 1 0x8 2558 17
Total number of DSPFARM DSP channel(s) 1
```

Feature Information for Negotiation of an Audio Codec from a List of Codecs

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Feature History Table entry for the ISR
