TDoS Attack Mitigation

The TDoS Attack Mitigation feature enables Cisco Unified Border Element (Cisco UBE) to not respond to Session Initiation Protocol (SIP) requests from IP addresses that are not listed in a trusted IP address list. Cisco UBE validates only out-of-dialog SIP requests against IP addresses in the trusted IP address list. It does not validate in-dialog SIP requests because such requests usually arrive from trusted entities. The TDoS Attack Mitigation feature is supported both on IPv4 and IPv6 networks.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Information About TDoS Attack Mitigation

The TDoS Attack Mitigation feature prevents Cisco Unified Border Element (Cisco UBE) from responding to Session Initiation Protocol (SIP) requests arriving from untrusted IP addresses, which leads to an improvement in performance. The SIP stack authenticates the source IP address of an incoming SIP request and blocks the response if the source IP address does not match any IP address in the trusted IP address list. To create a trusted IP address list, you may configure a list of IP addresses or use the IP addresses that have been configured using the session target command in dial-peer configuration mode.
Cisco UBE does not respond to REGISTER requests and consumes REGISTER requests if you configure it only for Telephony Denial-of-Service (TDoS) Attack Mitigation and not as a registrar server.

If you configure Cisco UBE as a registrar server for TDoS attack mitigation, it consumes responses for REGISTER requests that do not belong to any application. Cisco UBE does not consume responses to REGISTER requests that belong to a registrar application.

**Note**

A SIP registrar is a server that accepts REGISTER requests and is typically collocated with a proxy or redirect server.

Syslogs are printed on the device console every 60 minutes after Cisco UBE consumes a threshold value of 1000 SIP requests.

# How to Configure TDoS Attack Mitigation

## Configuring a Trusted IP Address List for Toll-Fraud Prevention

**SUMMARY STEPS**

1. enable
2. configure terminal
3. voice service voip
4. ip address trusted list
5. ipv4 ipv4-address [network-mask]
6. ipv6 ipv6-address
7. end

**DETAILED STEPS**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device&gt; enable</td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> voice service voip</td>
<td>Enters global VoIP configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config)# voice service voip</td>
<td></td>
</tr>
</tbody>
</table>
## Configuring TDoS Attack Mitigation

### SUMMARY STEPS

1. enable
2. configure terminal
3. voice service voip
4. ip address trusted authenticate
5. allow-connections from-type to to-type
6. sip
7. no registrar server
8. silent-discard untrusted
9. end
10. show sip-ua statistics
11. clear sip-ua statistics

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>

<tbody>
<tr>
<td>Step 1 enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
</tbody>
</table>

### Purpose

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>ip address trusted list</td>
<td>Enters IP address trusted list mode and enables the addition of valid IP addresses.</td>
</tr>
<tr>
<td>Example: Device(conf-voi-serv)# ip address trusted list</td>
<td></td>
</tr>
<tr>
<td>ipv4 ipv4-address [network-mask]</td>
<td>Allows you to add up to 100 IPv4 addresses in the IP address trusted list. Duplicate IP addresses are not allowed.</td>
</tr>
<tr>
<td>Example: Device(cfg-iptrust-list)# ipv4 192.0.2.1 255.255.255.0</td>
<td>- The network-mask argument allows you to define a subnet IP address.</td>
</tr>
<tr>
<td>ipv6 ipv6-address</td>
<td>Allows you to add IPv6 addresses to the trusted IP address list.</td>
</tr>
<tr>
<td>Example: Device(cfg-iptrust-list)# ipv6 2001:DB8:0:ABCD::1/48</td>
<td></td>
</tr>
<tr>
<td>end</td>
<td>Returns to privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: Device(cfg-iptrust-list)# end</td>
<td></td>
</tr>
<tr>
<td>Command or Action</td>
<td>Purpose</td>
</tr>
<tr>
<td>-------------------</td>
<td>---------</td>
</tr>
<tr>
<td><strong>Example:</strong> Device&gt; enable</td>
<td>• Enter your password if prompted.</td>

<tr>
<td><strong>Step 3</strong> voice service voip</td>
<td>Enters voice service configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(config)# voice service voip</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> ip address trusted authenticate</td>
<td>Enables IP address authentication on incoming H.323 or Session Initiation Protocol (SIP) trunk calls for toll fraud prevention support.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(conf-voi-serv)# ip address trusted authenticate</td>
<td></td>
</tr>
<tr>
<td><strong>Step 5</strong> allow-connections from-type to to-type</td>
<td>Allows connections between specific types of endpoints in a Cisco UBE.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(conf-voi-serv)# allow-connections sip to sip</td>
<td></td>
</tr>
<tr>
<td><strong>Step 6</strong> sip</td>
<td>Enters SIP configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(conf-voi-serv)# sip</td>
<td></td>
</tr>
<tr>
<td><strong>Step 7</strong> no registrar server</td>
<td>Disables the local SIP registrar.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(conf-serv-sip)# no registrar server</td>
<td></td>
</tr>
<tr>
<td><strong>Step 8</strong> silent-discard untrusted</td>
<td>Discards SIP requests from untrusted sources on an incoming SIP trunk.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(conf-serv-sip)# silent-discard untrusted</td>
<td></td>
</tr>
<tr>
<td><strong>Step 9</strong> end</td>
<td>Returns to privileged EXEC mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device(conf-serv-sip)# end</td>
<td></td>
</tr>
<tr>
<td><strong>Step 10</strong> show sip-ua statistics</td>
<td>(Optional) Displays response, traffic, and retry SIP statistics.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device# show sip-ua statistics</td>
<td></td>
</tr>
<tr>
<td><strong>Step 11</strong> clear sip-ua statistics</td>
<td>(Optional) Resets the SIP user agent (UA) statistical counters to zero.</td>
</tr>
<tr>
<td><strong>Example:</strong> Device# clear sip-ua statistics</td>
<td></td>
</tr>
</tbody>
</table>
Verifying TDoS Attack Mitigation

Sample output for the show sip-ua statistics command

To display response, traffic, and retry Session Initiation Protocol (SIP) statistics, use the `show sip-ua statistics` command in privileged EXEC mode.

Device# show sip-ua statistics

SIP Response Statistics (Inbound/Outbound)

Informational:
  Trying 0/0, Ringing 0/0,
  Forwarded 0/0, Queued 0/0,
  SessionProgress 0/0

Success:
  OkInvite 0/0, OkBye 0/0,
  OkCancel 0/0, OkOptions 0/0,
  OkPrack 0/0, OkRegister 0/0
  OkSubscribe 0/0, OkNotify 0/0, OkPublish 0/0
  OkInfo 0/0, OkUpdate 0/0,
  200Accepted 0/0, OkOptions 0/0

Redirection (Inbound only except for MovedTemp(Inbound/Outbound)):
  MultipleChoice 0, MovedPermanently 0,
  MovedTemporarily 0/0, UseProxy 0,
  AlternateService 0

Client Error:

Configuration Examples for TDoS Attack Mitigation

Example: Trusted IP Address List Configuration

The following example shows how to configure a Trusted IP Address list.

Device> enable
Device# configure terminal
Device(config)# voice service voip
Device(conf-voi-serv)# ip address trusted list
Device(conf-iptrust-list)# ipv4 192.0.2.1
Device(conf-iptrust-list)# ipv6 2001:DB8:0:ABCD::1/48

Example: TDoS Attack Mitigation Configuration

The following example shows how to configure TDoS Attack Mitigation.

Device> enable
Device# configure terminal
Device(config)# voice service voip
Device(conf-voi-serv)# ip address trusted authenticate
Device(conf-voi-serv)# allow-connections sip to sip
Device(conf-voi-serv)# sip
Device(conf-serv-sip)# no registrar server
Device(conf-serv-sip)# silent-discard untrusted

Feature Information for TDoS Attack Mitigation

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to . An account on Cisco.com is not required.
