Configuring MGCP CAS MD Package

This chapter provides information on configuring the MGCP channel-associated signaling (CAS) MD Package feature. This feature introduces support for Feature Group D (FGD) Exchange Access North American (EANA) protocol signaling. The CAS MD package adds support for the reporting of automatic number identification (ANI) and dialed number identification service (DNIS) digits to enable the MGCP call agent to better handle customer billing.

For more information about this and related Cisco IOS voice features, see the following:

- "Overview of MGCP and Related Protocols" on page 3

Feature History for MGCP CAS MD Package

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for MGCP CAS MD Package

Prerequisites are described in “Prerequisites for Configuring MGCP and Related Protocols” on page 3.

Restrictions for MGCP CAS MD Package

FGD Exchange Access International (EAIN) signaling is not supported.

Information About MGCP CAS MD Package

MD Package

The MD package supports the FGD EANA protocol for T1 CAS interfaces as defined in RFC 3064. It includes support for ANI and DNIS reporting that enables the MGCP call agent to improve its handling of customer billing. The MD package is enabled automatically when a T1 interface is configured using the `ds0-group` command with the `fgd-eana` keyword. The order in which the voice gateway sends the ANI and DNIS digits can be controlled by using the `notify` command in the MGCP profile.

How to Configure the MGCP CAS MD Package

You do not have to enable the CAS MD package with the `mgcp package-capability` command. The CAS MD package is enabled automatically when a T1 controller is configured for FGD EANA signaling using the `ds0-group` command.

Configuring the Incoming Called Number in the MGCP Dial Peer

Perform this procedure to specify the dial string to use for matching incoming calls to the MGCP dial peer.
### SUMMARY STEPS

1. enable
2. configure terminal
3. dial-peer voice tag pots
4. service mgcpapp
5. incoming called number string
6. port port
7. end

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables privileged EXEC mode.  
• Enter your password if prompted. |
| **Example:**  
Router> enable | |
| **Step 2** configure terminal | Enters global configuration mode.  
| **Example:**  
Router# configure terminal | |
| **Step 3** dial-peer voice tag pots | Defines a dial peer as a POTS device and enters dial-peer configuration mode.  
| **Example:**  
Router(config)# dial-peer voice 1003 pots | |
| **Step 4** service mgcpapp | Enables MGCP on the dial peer.  
**Note** Do not use this command in dial peers that support PRI backhaul or BRI backhaul. |
| **Example:**  
Router(config-dial-peer)# service mgcpapp | |
| **Step 5** incoming called number string | Specifies the digit string that is used to match incoming calls to the dial peer.  
| **Example:**  
Router(config-dial-peer)# incoming called number | |
| **Step 6** port port | Binds the MGCP application to the specified voice port.  
| **Example:**  
Router(config-dial-peer)# port 0/0:3:0 | |
Modifying ANI and DNIS Order when Using CAS MD Package

Perform this procedure to specify the order in which ANI and DNIS digits are sent in notify messages to the call agent when using the CAS MD package.

SUMMARY STEPS

1. enable
2. configure terminal
3. mgcp profile {profile-name | default}
4. notify {ani-dnis | dnis-ani}
5. end
6. show mgcp profile [profile-name]

DETAILED STEPS

<table>
<thead>
<tr>
<th>Step</th>

<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example:</td>
<td>Router&gt; enable</td>
<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td>Step 2</td>
<td>configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example:</td>
<td>Router# configure terminal</td>
<td></td>
</tr>
<tr>
<td>Step 3</td>
<td>mgcp profile {profile-name</td>
<td>default}</td>
</tr>
<tr>
<td>Example:</td>
<td>Router(config)# mgcp profile default</td>
<td></td>
</tr>
</tbody>
</table>
### Command or Action | Purpose
--- | ---
**Step 4** | notify {ani-dnis | dnis-ani} Specifies the order in which ANI and DNIS digits are reported to the MGCP call agent.<br>• **ani-dnis** --ANI digits are sent in the first notify message. This is the default order.<br>• **dnis-ani** --DNIS digits are sent in the first notify message.  
**Example:**<br>Router(config-mgcp-profile)# notify dnis-ani

**Step 5** | end Exits to privileged EXEC mode. 
**Example:**<br>Router(config-mgcp-profile)# end

**Step 6** | show mgcp profile [profile-name] Displays configuration information for MGCP profiles including the setting of the notify command. 
**Example:**<br>Router# show mgcp profile default

---
