

## Configurable CHAP Challenge Length

---

The Configurable Challenge Handshake Authentication Protocol (CHAP) Challenge Length feature allows you to configure the length of the CHAP challenge by specifying the minimum and maximum allowable challenge lengths in bytes.

### Prerequisites for Configurable CHAP Challenge Length

The PPP encapsulation must be configured on the interface.

### Information About Configurable CHAP Challenge Length

#### Configurable CHAP Challenge Length Overview

Challenge Handshake Authentication Protocol (CHAP) along with PPP is used to provide remote-device information to the central site. It verifies the identity of the peer by means of a three-way handshake.

When CHAP is enabled on any interface that supports PPP encapsulation, and a remote device attempts to connect to it, the local device or the access server sends a CHAP packet to the remote device. The CHAP packet requests or “challenges” the remote device to respond.

By default, the CHAP challenge is sent with a fixed 16-byte length to the peer. The Configurable CHAP Challenge Length feature allows the configuration of variable CHAP challenge lengths. A variable challenge length reduces the probability of an attacker predicting the challenge, thus optimizing the security.

Use the **ppp chap challenge-length** command to configure the CHAP challenge lengths.

# How to Configure Configurable CHAP Challenge Length

## Configuring Configurable CHAP Challenge Length

### SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **interface virtual-template** *number*
4. **ppp authentication chap**
5. **ppp chap challenge-length** *min-length max-length*
6. **end**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>enable</b> <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"><li>• Enter your password if prompted.</li></ul>
<b>Step 2</b>	<b>configure terminal</b> <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>interface virtual-template</b> <i>number</i> <b>Example:</b> Device(config)# interface virtual-template 1	Creates a virtual template interface and enters interface configuration mode. The range is from 1 to 4095.
<b>Step 4</b>	<b>ppp authentication chap</b> <b>Example:</b> Device(config-if)# ppp authentication chap	Enables CHAP authentication.
<b>Step 5</b>	<b>ppp chap challenge-length</b> <i>min-length max-length</i> <b>Example:</b> Device(config-if)# ppp chap challenge-length 20 30	Configures the minimum and maximum CHAP challenge lengths in bytes. The range is from 16 to 63.
<b>Step 6</b>	<b>end</b> <b>Example:</b> Device(config-if)# end	Exits interface configuration mode and returns to privileged EXEC mode.

# Configuration Examples for Configurable CHAP Challenge Length

## Example: Configuring Configurable CHAP Challenge Length

The following example shows how to configure the Challenge Handshake Authentication Protocol (CHAP) challenge lengths:

```
Device> enable
Device# configure terminal
Device(config)# interface virtual-template 1
Device(config-if)# ppp authentication chap
Device(config-if)# ppp chap challenge-length 20 30
Device(config-if)# end
```

## Feature Information for Configurable CHAP Challenge Length

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.

**Table 1: Feature Information for Configurable CHAP Challenge Length**

Feature Name	Releases	Feature Information
Configurable CHAP Challenge Length	Cisco IOS XE Release 3.12S	The Configurable Challenge Handshake Authentication Protocol (CHAP) feature allows you to configure the length of the CHAP challenge by specifying the minimum and maximum allowable challenge length in bytes.  The following command was introduced: <b>ppp chap challenge-length</b> .
