Universal Voice Transcoding Support for Cisco Unified Border Elements

Universal Transcoding allows transcoding from any supported codec to any other supported codec.

Finding Feature Information in This Module
Your Cisco IOS software release may not support all of the features documented in this module. To reach links to specific feature documentation in this module and to see a list of the releases in which each feature is supported, use the “Feature Information for Universal Voice Transcoding Support for Cisco Unified Border Elements” section on page 16.

Finding Support Information for Platforms and Cisco IOS and Catalyst OS Software Images
Use Cisco Feature Navigator to find information about platform support and Cisco IOS and Catalyst OS software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn. An account on Cisco.com is not required.

**Information About Universal Voice Transcoding Support for Cisco Unified Border Elements**

Transcoding compresses and decompresses voice streams to match endpoint-device capabilities. Transcoding is required when an incoming voice stream is digitized and compressed (by means of a codec) to save bandwidth, but the local device does not support that type of compression.

Universal Transcoding employs a general transcribing facility where one supported codec is converted to any other supported codec. This functionality interconnects a diverse array of topologies. Universal Transcoding works between two voice sessions that are encoded by using different codecs, different packetization periods, or a combination of the two. The Universal Transcoding channel operates only on RTP packets.

Although Universal Transcoding allows interconnection between endpoints that encode voice by using different codec algorithms, any transcoding causes distortion of the voice and reduces the quality of the received signal. Universal Transcoding causes the voice signal to be encoded and decoded two times. Each time that a voice signal is encoded and decoded, distortion is added and the listening quality is reduced. Additionally, transcoding adds additional dejitter delays to the voice path.

**Note**
Consider Universal Transcoding as the last resort; make every attempt to coordinate the endpoints so that they use the same encoding algorithms.

**How to Configure Universal Transcoding on a DSP Farm Profile**

This section is an update to the “Configuring Enhanced Conferencing and Transcoding” in the Cisco Unified CallManager and Cisco IOS Interoperability Guide.

**Determining DSP Capacity for Universal Transcoding**

Channel density is limited when using the Universal Transcoding mode. As a general rule, the number of sessions needed for a Universal Transcoding channel is the sum of the session requirements for two separate voice channels, one running each of the configured codecs. For example, a channel running Universal Transcoding from a G.729a codec to iLBC would need the session capacity for a voice channel running the G.729a codec and MIPS for a voice channel running iLBC codec. See Table 1 for DSP session capacities.

**Table 1** DSP Session Capacity

<table>
<thead>
<tr>
<th>Transcoding Type</th>
<th>NM-HD-1V/2V (1 DSP)</th>
<th>NM-HD-2VE (3 DSPs)</th>
<th>NM-HDV2 (16 DSPs)</th>
<th>2801/2811 (2 PVDM2-64)</th>
<th>2821/2851 (3 PVDM2-64)</th>
<th>3825, 3845 (4 PVDM2-64)</th>
</tr>
</thead>
<tbody>
<tr>
<td>G.711 a-law/u-law &lt;&gt; Any (with high complexity codec in dspfarm profile)</td>

</tr>
</tbody>
</table>
### Configuring a DSP Farm Profile

Perform this procedure to define a DSP farm on the NM-HDV2, NM-HD-1V, NM-HD-2V, NM-HD-2VE, or PVDM2. You must configure each conferencing, transcoding, and MTP profile separately.

<table>
<thead>
<tr>
<th>Transcoding Type</th>
<th>NM-HD-1V/2V (1 DSP)</th>
<th>NM-HD-2VE (3 DSPs)</th>
<th>NM-HD2 (16 DSPs)</th>
<th>2801/2811 (2 PVDM2-64)</th>
<th>2821/2851 (3 PVDM2-64)</th>
<th>3825, 3845 (4 PVDM2-64)</th>

</tr>
</tbody>
</table>

For additional information, see the “Determining DSP Resource Requirements” section of the *Cisco Unified CallManager and Cisco IOS Interoperability Guide*.

#### Prerequisites

Requires Cisco IOS Release 12.3(8)T or a later release. Universal transcoding requires Cisco IOS Release 12.4(11)XW or a later release.

#### SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `voice-card slot`
4. `dsp services dspfarm`
5. `exit`
6. `dspfarm profile profile-identifier {conference | mtp | transcode [universal]}`
7. `description text`
8. `codec codec-type`
9. `maximum sessions number`
   or
   `maximum sessions {hardware | software} number`
10. `associate application sccp`
11. `no shutdown`
12. `exit`
### How to Configure Universal Transcoding on a DSP Farm Profile

#### 13. gateway

#### 14. timer receive-rtp *seconds*

#### 15. exit

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> allow</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example:</td>
<td>Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example:</td>
<td>Router# configure terminal</td>
</tr>
<tr>
<td><strong>Step 3</strong> voice-card slot</td>
<td>Enters voice-card configuration mode for the network module on which you want to enable DSP-farm services.</td>
</tr>
<tr>
<td>Example:</td>
<td>Router(config)# voice-card 1</td>
</tr>
<tr>
<td><strong>Step 4</strong> dsp services dspfarm</td>
<td>Enables DSP-farm services for the voice card.</td>
</tr>
<tr>
<td>Example:</td>
<td>Router(config-voicecard)# dsp services dspfarm</td>
</tr>
<tr>
<td><strong>Step 5</strong> exit</td>
<td>Exits voice-card configuration mode.</td>
</tr>
<tr>
<td>Example:</td>
<td>Router(config-voicecard)# exit</td>
</tr>
<tr>
<td><strong>Step 6</strong> dspfarm profile profile-identifier (conference</td>
<td>mtp</td>
</tr>
<tr>
<td>Example:</td>
<td>Router(config)# dspfarm profile 20 transcode universal</td>
</tr>
<tr>
<td><strong>Step 7</strong> description text</td>
<td>(Optional) Includes a specific description about the Cisco DSP farm profile.</td>
</tr>
<tr>
<td>Example:</td>
<td>Router(config-dspfarm-profile)# description art_dept</td>
</tr>
</tbody>
</table>

**Note** The *profile-identifier* and service type uniquely identify a profile. If the service type and *profile-identifier* pair are not unique, you are prompted to choose a different *profile-identifier*. 
## How to Configure Universal Transcoding on a DSP Farm Profile

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 8</strong> codec codec-type</td>
<td>Specifies the codecs supported by a DSP farm profile.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router(config-dspfarm-profile)# codec ilbc</td>
<td></td>
</tr>
<tr>
<td><strong>Note</strong> Hardware MTPs support only G.711 a-law and G.711 u-law. If you configure a profile as a hardware MTP, and you want to change the codec to other than G.711, you must first remove the hardware MTP by using the <code>no maximum sessions hardware</code> command.</td>
<td></td>
</tr>
<tr>
<td><strong>Note</strong> Only one codec is supported for each MTP profile. To support multiple codecs, you must define a separate MTP profile for each codec.</td>
<td></td>
</tr>
<tr>
<td><strong>Step 9</strong> maximum sessions number</td>
<td>Specifies the maximum number of sessions that are supported by the profile.</td>
</tr>
<tr>
<td>or maximum sessions (hardware</td>
<td>software) number</td>
</tr>
<tr>
<td><strong>Example:</strong> Router(config-dspfarm-profile)# maximum sessions 4</td>
<td></td>
</tr>
<tr>
<td><strong>Note</strong> number—Range is determined by the available registered DSP resources. Default is 0.</td>
<td></td>
</tr>
<tr>
<td><strong>Note</strong> The <code>hardware</code> and <code>software</code> keywords apply only to MTP profiles.</td>
<td></td>
</tr>
<tr>
<td><strong>Step 10</strong> associate application sccp</td>
<td>Associates the SCCP protocol to the DSP farm profile.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router(config-dspfarm-profile)# associate application sccp</td>
<td></td>
</tr>
<tr>
<td><strong>Step 11</strong> no shutdown</td>
<td>Enables the profile, allocates DSP farm resources, and associates the application.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router(config-dspfarm-profile)# no shutdown</td>
<td></td>
</tr>
<tr>
<td><strong>Step 12</strong> exit</td>
<td>Exits DSP farm profile configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router(config-dspfarm-profile)# exit</td>
<td></td>
</tr>
<tr>
<td><strong>Step 13</strong> gateway</td>
<td>Enters gateway configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router(config)# gateway</td>
<td></td>
</tr>
<tr>
<td><strong>Step 14</strong> timer receive-rtp seconds</td>
<td>Sets the Real-Time Transport Protocol (RTP) timeout interval to clear hanging connections.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router(config-gateway)# timer receive-rtp 600</td>
<td></td>
</tr>
<tr>
<td><strong>Note</strong> seconds—Range is 180 to 1800. Default is 1200.</td>
<td></td>
</tr>
<tr>
<td><strong>Step 15</strong> exit</td>
<td>Exits to global configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router(config-gateway)# exit</td>
<td></td>
</tr>
</tbody>
</table>
What to Do Next

See the the *Cisco Unified CallManager and Cisco IOS Interoperability Guide* for additional configuration information.

Configuration Examples for Universal Voice Transcoding

The following examples show configurations for both Cisco Universal Gateways and Cisco Integrated Services Routers:

- Universal Transcoding with an Inbox on a Universal Gateway: Example, page 6
- G.711 to Any Transcoding with an Inbox on a Universal Gateway: Example, page 7
- Universal and G.711 to Any Transcoding with an Inbox on a Universal Gateway: Example, page 9
- Universal and G.711 to Any Transcoding with an Inbox on an Integrated Services Router: Example, page 10

**Note**

Universal transcoding using the AMR-NB codec in either direction is supported only on the Cisco AS5350XM and Cisco AS5450XM universal gateways.

Universal Transcoding with an Inbox on a Universal Gateway: Example

This example shows a universal transcoding configuration with an inbox on a Cisco Unified Border Element on a universal gateway. Universal gateways include the Cisco AS5350XM and Cisco AS5400XM platforms:

Command Reference

This section documents modified commands only.

- *dsf**arf profile*
**dsfaprm profile**

To enter DSP farm profile configuration mode and define a profile for digital signal processor (DSP) farm services, use the `dsfaprm profile` command in global configuration mode. To delete a disabled profile, use the `no` form of this command.

```plaintext
    dsfaprm profile profile-identifier { conference | mtp | transcode [universal] }
```

```plaintext
    no dsfaprm profile profile-identifier
```

**Syntax Description**

<table>
<thead>
<tr>
<th>Syntax Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>profile-identifier</td>
<td>Number that uniquely identifies a profile. Range is 1 to 65535. There is no default.</td>

<th>Modification</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.3(8)T</td>
<td>This command was introduced.</td>
</tr>
<tr>
<td>12.4(11)XW</td>
<td>The <code>universal</code> keyword was added.</td>
</tr>
</tbody>
</table>

**Usage Guidelines**

Use this command to create a new profile or delete a disabled profile. If you create the profile successfully, you enter the DSP farm profile configuration mode. You can configure multiple profiles for the same service. If the profile is active, you cannot delete the profile.

The profile identifier uniquely identifies a profile. If the service type and profile identifier are not unique, you must choose a different profile identifier.

When the `universal` keyword is used, Universal Transcoding is activated. Universal Transcoding converts any supported codec to any other supported codec. This functionality allows a diverse array of interconnected topologies. Universal Transcoding works between two voice sessions that are encoded using different codecs, different packetization periods, or a combination. The Universal Transcoding channel only operates on RTP packets.

**Examples**

The following example shows how to enable DSP farm services profile 20 for conferencing:

```plaintext
    Router(config)# dsfaprm profile 20 conference
```
Note the response if the profile is already being used:

Router(config)# dspfarm profile 6 conference

Profile id 6 is being used for service TRANSCODING
  please select a different profile id

Feature Information for Universal Voice Transcoding Support for Cisco Unified Border Elements

Table 2 lists the release history for this feature.

Not all commands may be available in your Cisco IOS software release. For release information about a specific command, see the command reference documentation.

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which Cisco IOS and Catalyst OS software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn. An account on Cisco.com is not required.

Note Table 2 lists only the Cisco IOS software release that introduced support for a given feature in a given Cisco IOS software release train. Unless noted otherwise, subsequent releases of that Cisco IOS software release train also support that feature.
