

show mrcp client session active

To display information about active Media Resource Control Protocol (MRCP) client sessions, use the **show mrcp client session active** command in privileged EXEC mode.

show mrcp client session active [detailed]

Syntax Description	detailed (Optional) Displays detailed information about each active MRCP session.
---------------------------	--

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	12.2(11)T	This command was introduced on the Cisco 3640, Cisco 3660, Cisco AS5300, Cisco AS5350, and Cisco AS5400.
	12.4(15)T	The MRCP version, ASR callid, and TTS callid fields were added to the command output and the URL and Stream URL fields were modified to display Media Resource Control Protocol version 2 (MRCP v2) format URLs.

Usage Guidelines	Use this command to display information about all active MRCP sessions for the gateway. Use the detailed keyword to display additional information about the sessions.
-------------------------	---

Examples	The following is sample output from this command:
-----------------	---

```
Router# show mrcp client session active

No Of Active MRCP Sessions:1

      Call-ID:0x1A
      Resource Type:Synthesizer   URL:rtsp://server-asr/synthesizer
Method In Progress:SPEAK State:SPEAKING
      Resource Type:Recognizer   URL:rtsp://server-asr/recognizer
Method In Progress:RECOGNIZE State:RECOGNIZING
```

The following is sample output when the **detailed** keyword is used:

```
Router# show mrcp client session active detailed

No Of Active MRCP Sessions: 1

      Call-ID: 0x14 same: 0
-----
      Resource Type: Synthesizer           URL: sip:mrcpv2TTSServer@10.5.18.224
Method In Progress: SPEAK                 State: S_SYNTH_IDLE

Associated CallID: 0x17
      MRCP version: 2.0
      Control Protocol: TCP Server IP Address: 10.5.18.224   Port: 51000

      Data Protocol: RTP Server IP Address: 10.5.18.224     Port: 10000
```

```

Stream URL: sip:mrpv2TTSserver@10.5.18.224:5060

Packets Transmitted: 0 (0 bytes)
Packets Received: 177 (28320 bytes)
ReceiveDelay: 100      LostPackets: 0
-----
Resource Type: Recognizer          URL: sip:mrpv2ASRServer@10.5.18.224
Method In Progress: RECOGNITION-START-TIMERS      State: S_RECOG_RECOGNIZING

Associated CallID: 0x18
MRCP version: 2.0
Control Protocol: TCP Server IP Address: 10.5.18.224      Port: 51001

Data Protocol: RTP Server IP Address: 10.5.18.224      Port: 10002

Packets Transmitted: 191 (30560 bytes)
Packets Received: 0 (0 bytes)
ReceiveDelay: 100      LostPackets: 0

```

Table 136 describes the fields shown in this output.

Table 136 *show mrcp client session active detailed Field Descriptions*

Field	Description
No. Of Active MRCP Sessions	Number of MRCP sessions that are currently active between the gateway and the media server.
Call-ID	Unique identification number for the call, in hexadecimal.
Resource Type	Whether the media server being used is a speech synthesizer (TTS) or a speech recognizer (ASR).
URL	URL of the media server.
Method In Progress	Type of event that was initiated between the gateway and the media server. Values are defined by the MRCP informational RFC. For speech synthesis, values are IDLE, SPEAK, SET-PARAMS, GET-PARAMS, STOP, or BARGE-IN-OCCURRED. For speech recognition, values are DEFINE-GRAMMAR, RECOGNIZE, SET-PARAMS, GET-PARAMS, STOP, GET-RESULT, or RECOGNITION-START-TIMERS.
State	Current state of the method in progress. Values are defined by the MRCP informational RFC. For speech synthesis, values are SYNTH_IDLE, SPEAKING, SYNTH_ASSOCIATING, PAUSED, or SYNTH_ERROR_STATE. For speech recognition, values are RECOG_IDLE, RECOG_ASSOCIATING, RECOGNIZING, RECOGNIZED, or RECOG_ERROR_STATE.
Associated CallID	Unique identification number for the associated MRCP session, in hexadecimal.
MRCP version	MRCP version used by the client.
Control Protocol	Call control protocol being used, which is always TCP.
Data Protocol	Data protocol being used, which is always RTP.
Local IP Address	IP address of the Cisco gateway that is the MRCP client. This field is not displayed for MRCP v2 sessions because the local IP address is not specified in SIP call legs.

Table 136 *show mrcp client session active detailed Field Descriptions (continued)*

Field	Description
Local Port	Identification number of the Cisco gateway port through which the TCP connection is made. This field is not displayed for MRCP v2 sessions because the local port is not specified in SIP call legs.
Server IP Address	IP address of the media server that is the MRCP server.
Server Port	Identification number of the MRCP server port through which the TCP connection is made.
Signalling URL	URL of the MRCP v2 media server.
Stream URL	URL of the MRCP v1 media server.
Packets Transmitted	Total number of packets that have been transmitted from the client to the ASR server.
Packets Received	Total number of packets that have been received by the client from the TTS server.
ReceiveDelay	Average playout FIFO delay plus the decoder delay during this voice call.

Related Commands

Command	Description
debug mrcp	Displays debug messages for MRCP operations.
show mrcp client session history	Displays information about past MRCP client sessions that are stored on the gateway.
show mrcp client statistics hostname	Displays statistics about MRCP sessions.

show mrcp client session history

To display information about past Media Resource Control Protocol (MRCP) client sessions that are stored on the gateway, use the **show mrcp client session history** command in privileged EXEC mode.

show mrcp client session history [detailed]

Syntax Description	detailed (Optional) Displays detailed information about each MRCP session.
---------------------------	---

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	12.2(11)T	This command was introduced on the Cisco 3640, Cisco 3660, Cisco AS5300, Cisco AS5350, and Cisco AS5400.
	12.4(15)T	The MRCP version field was added to the command output and the URL field was modified to display Media Resource Control Protocol version 2 (MRCP v2) format URLs.

Usage Guidelines The maximum number of inactive MRCP sessions that are stored in history is configured by using the **mrcp client session history records** command. If the **mrcp client session history records** command is not used, the maximum number of history records that are saved is 50.

MRCP history records are stored for the length of time that is specified by the **mrcp client session history duration** command. If the **mrcp client session history duration** command is not configured, MRCP history records are stored for a maximum of 3600 seconds (1 hour).

Examples The following is sample output from this command:

```
Router# show mrcp client session history

MRCP Session ID:0x9
Associated CallID:0x1A
Control Protocol:TCP      Data Protocol:RTP

Local IP Address:10.1.2.230      Local Port 17120
Server IP Address:10.1.2.58      Server Port 4858
Stream URL:rtsp://server-asr:554

Packets Transmitted:423 (101520 bytes)

Table 137 describes the fields shown in this output.

Table 137 *show mrcp client session history detailed Field Descriptions*

Field	Description
MRCP Session ID	Unique identification number for the MRCP session, in hexadecimal.
Associated CallID	Unique identification number for the associated call, in hexadecimal.
MRCP version	MRCP version used by the client.
Control Protocol	Call control protocol being used, which is always TCP.
Data Protocol	Data protocol being used, which is always RTP.
ASR (Callid =)	For MRCP v2 sessions, the unique identification number for the ASR SIP call leg, in hexadecimal.
TTS (Callid =)	For MRCP v2 sessions, the unique identification number for the TTS SIP call leg, in hexadecimal.
Local IP Address	IP address of the Cisco gateway that is the MRCP client. This field is not displayed for MRCP v2 sessions because the local IP address is not specified in SIP call legs.
Local Port	Identification number of the Cisco gateway port through which the TCP connection is made. This field is not displayed for MRCP v2 sessions because the local port is not specified in SIP call legs.
Server IP Address	IP address of the media server that is the MRCP server.
Server Port	Identification number of the MRCP server port through which the TCP connection is made.
Signalling URL	URL of the MRCP v2 media server.
Stream URL	URL of the MRCP v1 media server.
Packets Transmitted	Total number of packets that have been transmitted from the client to the ASR server.
Packets Received	Total number of packets that have been received by the client from the TTS server.
OnTimeRcvPlayout	Duration of voice playout from data received on time for this call. Derive the Total Voice Playout Duration for Active Voice by adding the OnTimeRcvPlayout value to the GapFill values.
GapFillWithSilence	Duration of a voice signal replaced with silence because voice data was lost or not received in time for this call.
GapFillWithPrediction	Duration of a voice signal played out with a signal synthesized from parameters or samples of data preceding in time because voice data was lost or not received in time from the voice gateway for this call. Examples of such pullout are frame-eraser or frame-concealment strategies in G.729 and G.723.1 compression algorithms.

■ show mrcp client session history

Table 137 *show mrcp client session history detailed Field Descriptions (continued)*

Field	Description
GapFillWithInterpolation	Duration of a voice signal played out with a signal synthesized from parameters or samples of data preceding and following in time because voice data was lost or not received in time from the voice gateway for this call.
GapFillWithRedundancy	Duration of a voice signal played out with a signal synthesized from available redundancy parameters because voice data was lost or not received in time from the voice gateway for this call.
HighWaterPlayoutDelay	High-water mark voice playout FIFO delay during this call.
LoWaterPlayoutDelay	Low-water mark voice playout FIFO delay during this call.
ReceiveDelay	Average playout FIFO delay plus the decoder delay during this voice call.

Related Commands

Command	Description
debug mrcp	Displays debug messages for MRCP operations.
mrcp client session history duration	Sets the maximum number of seconds for which MRCP history records are stored on the gateway
mrcp client session history records	Sets the maximum number of MRCP history records that the gateway can store.
show mrcp client session active	Displays information about active MRCP client sessions.

show mrcp client statistics hostname

To display statistics about Media Resource Control Protocol (MRCP) sessions for a specific MRCP client host, use the **show mrcp client statistics hostname** command in privileged EXEC mode.

```
show mrcp client statistics hostname {hostname | ip-address}
```

Syntax Description	hostname	Host
	hostname	Hostname of the MRCP server. Format uses host name only or hostname:port.
	ip-address	IP address of the MRCP server.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(11)T	This command was introduced on the Cisco 3640, Cisco 3660, Cisco AS5300, Cisco AS5350, and Cisco AS5400.
	12.4(15)T	This command was modified to display statistics about MRCP version 2 (MRCP v2) sessions.

Usage Guidelines To display output from this command, you must first use the **mrcp client statistics enable** command.

Examples The following is sample output from this command:

```
Router# show mrcp client statistics hostname asr-host

hostname:asr-host
Method          :Count  Min  Avg  Max
RECOGNIZE       :3      40   562  1604
DEFINE-GRAMMAR  :3      48   568  1604
RECOGNITION-START-TIMERS :2      140  164  188
SPEAK           :6      44   568  1596
RECOG-TIME      :3      804  965  1128
SPEAK-TIME      :6      3636 7063 12068
```

Table 138 describes the fields shown in this output.

Table 138 *show mrcp client statistics hostname Field Descriptions*

Field	Description
hostname	Host name of the media server.
Method	Type of event that was initiated between the gateway and the media server. Values as defined by the MRCP informational RFC are RECOGNIZE, DEFINE-GRAMMAR, RECOGNITION-START-TIMERS, and SPEAK. RECOG-TIME is the milliseconds that it takes the ASR server to recognize the grammar. SPEAK-TIME is the milliseconds that it takes the TTS server to speak.
Count	Total number of MRCP sessions that used this method.
Min	Length of the shortest session, in milliseconds.
Avg	Average length of a session, in milliseconds, based on all sessions.
Max	Length of the longest session, in milliseconds.

Related Commands

Command	Description
debug mrcp	Displays debug messages for MRCP operations.
mrcp client statistics enable	Enables MRCP client statistics to be displayed.
show mrcp client session active	Displays information about active MRCP client sessions.
show mrcp client session history	Displays information about MRCP client history records that are stored on the gateway.

show mwi relay clients

To display registration information for the list of message-waiting indicator (MWI) relay clients, use the **show mwi relay clients** command in EXEC mode.

show mwi relay clients

Syntax Description

This command has no arguments or keywords.

Command Modes

EXEC

Command History

Release	Modification
12.2(2)XT	This command was introduced on the Cisco 1750, Cisco 1751, Cisco 2600, Cisco 3600, and Cisco IAD2420.
12.2(8)T	This command was integrated into Cisco IOS Release 12.2(8)T and implemented on the Cisco 3725 and Cisco 3745.
12.2(8)T1	This command was implemented on the Cisco 2600-XM and Cisco 2691.
12.2(11)T	This command was implemented on the Cisco 1760.

Examples

The following is sample output from this command:

```
Router# show mwi relay clients

Client          IPADDR          EXPIRES(sec)  MWI
=====
4085558653     10.8.17.25      89077         ON
6505556543     10.8.17.34      87654         OFF
```

[Table 139](#) describes significant fields shown in this output.

Table 139 *show mwi relay clients* Field Descriptions

Field	Description
Client	Client number.
IPADDR	IP address.
EXPIRES	Seconds before expiration.
MWI	MWI status.

Related Commands

Command	Description
mwi relay	Enables the Cisco IOS Telephony Service router to relay MWI information to remote Cisco IP phones.

show nextport

To display statistical information on NextPort digital signal processor (DSP) resources for diagnostic and debugging purposes, use the **show nextport** command in privileged EXEC mode.

```
show nextport { dfc slot/port | est [slot/dfc/module | enabled] | ifd { queue slot/port [control | data
| est | gdb | voice | npaddress [qid]] | statistics } | md modem | mm [slot/dfc/module | interrupt]
| np-address slot/port | session { slot/port | tty ttynumber } | siglib test | ssm { info slot/port | test
| vdev slot/port } | test | vpd { statistics [slot/port ] | traffic slot/port } | vsmgr protocol
violations }
```

Syntax Description

dfc slot/port	Displays dial feature card (DFC) manager statistics for the specified slot and port. Range for the slot and port numbers is 1 to 7. The slash is required in the command syntax.
est	Displays Error/Status/Trace (EST) statistics for all the NextPort modules.
est slot/dfc/module	Displays EST information for the NextPort module in the specified slot, DFC, and module location. The slash is required in the command syntax.
est enabled	Displays a list of the enabled NextPort modules.
ifd queue slot/port	Displays the contents of one or more NextPort interface driver queues for the specified slot and port. Information includes the contents of the free, ready, and index rings, and the buffer description tables. The slash is required in the command syntax.
control	(Optional) Displays statistics for the interface control driver queue.
data	(Optional) Displays statistics for the interface data driver queue.
est	(Optional) Displays statistics for the interface EST driver queue.
gdb	(Optional) Displays statistics for the interface GDB driver queue.
voice	(Optional) Displays statistics for the interface voice driver queue.
npaddress	(Optional) The module address, expressed as a number (for example, 0x06000100).
qid	(Optional) Specific queue ID number. Range is from 0 to 31.
ifd statistics	Displays interface driver statistics, including any weak assertions generated.
md modem	Displays information for the specified NextPort modem instance.
mm	Displays modem manager information for the enabled NextPort modules.
mm slot/dfc/module	Displays modem manager information for the specified slot, DFC, and module location. The slash is required in the command syntax.
mm interrupt	Displays a list of system timer interrupt enabled modules.
np-address slot/port	Displays the NextPort address for the specified slot and port. The slash is required in the command syntax.
session slot/port	Displays NextPort session information for the specified slot and port. The slash is required in the command syntax.
session tty ttynumber	Displays NextPort session information for the specified tty session. Range is from 0 to 2003.
siglib test	Displays statistics for the SigLib test configuration.
ssm info slot/port	Displays information about the NextPort session and service manager (SSM) for the specified slot and port. The slash is required in the command syntax.

ssm test	Displays svc_id type, service type, and signaling type for the unit test configuration.
ssm vdev slot/port	Displays NextPort SSM Vdev information for the specified slot and port. The slash is required in the command syntax.
test	Displays information about the NextPort test parameters configuration.
vpd statistics slot/port	Displays the TX/RX packet counters for voice packet drivers (VPDs) (including success and failure statistics). The <i>slot/port</i> argument limits the output to statistics for the specified slot and port. The slash is required in the command syntax.
vpd traffic slot/port	Displays TX/RX VPD traffic statistics for the specified slot and port. The slash is required in the command syntax.
vsmgr protocol violations	Displays the number of payload violations for the NextPort voice resource manager.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
15.1(2)T	Router output for the show nextport mm command updated.
12.1(1)XD1	The show nextport ifd queue command was introduced.
12.3(11)T	This command was modified. Keywords and arguments were added to expand the variations of command output. The command was renamed show nextport with the ifd queue keyword was added.

Usage Guidelines

The **show nextport** command is intended to be used by Cisco Technical Support personnel to look at the NextPort DSP statistics and to perform detailed debugging. Please consult Cisco Technical Support before using this command.

The **show nextport** command is supported on the Cisco AS5300XM series, Cisco AS5400XM series, and Cisco AS5800XM series platforms.

When you enter the **show nextport vpd statistics** command on the Cisco AS5850, the output shows the TX/RX packet counters that could not be forwarded by distributed Cisco Express Forwarding. These packets are routed back to the enhanced route switch controller (ERSC).

The **show nextport vpd statistics slot/port** command (on individual feature boards) displays the TX/RX packet counts for the packets that have been forwarded by distributed Cisco Express Forwarding.

The display of packet counts for the packets forwarded on the Cisco AS5850 is the result of the distributed architecture of the platform.

Examples

The following examples show some of the variations of the **show nextport** command.

Note Field descriptions in the examples provided are self-explanatory.

Router# **show nextport session 1/1**

```

Session Information Display
slot/port : 1/1 TTY# : 217 Session ID : 0x006D
Module Address : Slot 1 DFC 0 Module 0 SPE 0 Channel 1

Related Commands

Command	Description
show voice dsp	Displays the current status or selective statistics of DSP voice channels.

show nextport vpd

To display the TX/RX packet counters for voice packet drivers (VPDs) (including success and failure statistics), use the **show nextport vpd** command in privileged EXEC mode.

```
show nextport vpd {statistics [slot/port-number]| traffic [slot/port-number]}
```

Syntax Description

statistics	Displays information about the VPD statistics.
<i>slot/port number</i>	(Optional) The slot or port number of the interface.
traffic	Displays TX/RX VPD traffic statistics for the specified slot and port.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
15.0(1)M	This command was introduced in a release earlier than Cisco IOS Release 15.0(1)M.

Usage Guidelines

The **show nextport vpd statistics** command displays the TX/RX packet counters that could not be forwarded by distributed Cisco Express Forwarding (dCEF). These packets are routed back to the enhanced route switch controller (ERSC). Executing **show nextport vpd statistics slot/port** (on individual feature boards) shows the TX/RX packet counts for the packets that have been forwarded by dCEF.

Examples

The following is sample output from the **show nextport vpd traffic** command for slot1 and port1:

```
Router# show nextport vpd traffic 1/1

Voice Instance for slot 1 port 1
Status: Idle
Session Duration in second: 0
Rx traffic Statistics
  total rx bytes: 0
  total rx packets: 0
  average rx packets per second: 0
Tx traffic Statistics
  total tx bytes: 0
  total tx packets: 0
  average tx packets per second: 0
```

[Table 140](#) describes the significant fields shown in the display.

Table 140 show nextport vpd Field Descriptions

Field	Description
Status	Current status of the voice traffic.
Session	Duration of the voice sessions in seconds.

Table 140 *show nextport vpd Field Descriptions (continued)*

Field	Description
Rx traffic Statistics	Number of packets received.
Tx traffic Statistics	Number of packets sent.

The following is sample output from the **show nextport vpd statistics** command. The field descriptions are self-explanatory.

```
Router# show nextport vpd statistics
```

```
Voice Instance for slot 1 port 1
Status: Idle
Rx Statistics
  rx_successful= 0
  rx_failed= 0
    queue destroyed = 0
    buffer pool depleted = 0
    invalid packet = 0
    wrong session packet = 0
Tx Statistics
  tx_successful= 0
  tx_acked_by_ifd= 0
  tx_failed= 0
    rejection by IFD = 0
```

show num-exp

To display the number expansions configured, use the **show num-exp** command in privileged EXEC mode.

```
show num-exp [dialed-number]
```

Syntax Description	<i>dialed-number</i> (Optional) Dialed number.
---------------------------	--

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	11.3(1)T	This command was introduced on the Cisco 3600 series.
	12.0(3)T	This command was implemented on the Cisco AS5300.
	12.0(4)XL	This command was implemented on the Cisco AS5800.
	12.0(7)XK	This command was implemented on the Cisco MC3810.
	12.1(2)T	This command was integrated into Cisco IOS Release 12.1(2)T.

Usage Guidelines	Use this command to display all the number expansions configured for this router. To display number expansion for only one number, specify that number by using the <i>dialed-number</i> argument.
-------------------------	--

Examples	<p>The following is sample output from this command:</p> <pre>Router# show num-exp Dest Digit Pattern = '0...' Translation = '+14085270...' Dest Digit Pattern = '1...' Translation = '+14085271...' Dest Digit Pattern = '3..' Translation = '+140852703..' Dest Digit Pattern = '4..' Translation = '+140852804..' Dest Digit Pattern = '5..' Translation = '+140852805..' Dest Digit Pattern = '6....' Translation = '+1408526....' Dest Digit Pattern = '7....' Translation = '+1408527....' Dest Digit Pattern = '8...' Translation = '+14085288...'</pre>
-----------------	--

[Table 141](#) describes significant fields shown in this output.

Table 141 *show num-exp Field Descriptions*

Field	Description
Dest Digit Pattern	Index number identifying the destination telephone number digit pattern.
Translation	Expanded destination telephone number digit pattern.

Related Commands	Command	Description
	show call active voice	Displays the VoIP active call table.
	show call history voice	Displays the VoIP call-history table.
	show dial-peer voice	Displays configuration information for dial peers.
	show voice port	Displays configuration information about a specific voice port.

show piafs status

To display the status of Personal Handyphone System (PHS) Internet Access Forum Standard (PIAFS) calls for each B channel in use on a router, use the **show piafs status** command in privileged EXEC mode.

show piafs status

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(8)T	This command was introduced on the Cisco 803, Cisco 804, and Cisco 813.

Examples The following is sample output from this command showing the status of PIAFS calls on B channel 1 on a Cisco 813 router:

```
Router# show piafs status

PIAFS STATUS INFORMATION
-----
Number of active calls = 1
Details of connection 1
*****
Call Direction is: INCOMING
Call speed is: 64K
Current speed is: 64K
Call Elapsed Time: 59 seconds
The B channel assigned for this call is: B1 CHAN
Control Parameters Agreed Upon:
ARQ Control Information Transfer Protocol: Version 1
ARQ Data Transmission Protocol: Version 1
Measured RTF value: 9
PIAFS Frame Length in Bytes: 80
Maximum Frame Number: 63
Data Transmission Protocol of Peer: FIXED SPEED
Data Transmission Protocol of 800 Router: FIXED SPEED
V42 Negotiated: YES
V42 Parameters:
Direction: BOTH
No of code words: 4096
Max string length: 250
First PPP Frame Detected: YES
Piafs main FSM state: PIAFS_DATA
PIAFS Data Frames Tx Statistics:
Total No: of PIAFS Frames Confirmed: 344
Total Bytes of Application Data Transmitted:
Before Compression: 47021
After Compression: 30952
Compression Ratio in Tx direction is 1.51: 1
Total No: of PIAFS Frames Retransmitted: 32
```

```

Total Bytes of Application Data Retransmitted: 2336
Total Throughput in Tx Direction:
Including PIAFS Dummy Frames: 8000 Bytes/Second
Excluding PIAFS Dummy Frames: 859 Bytes/Second
Excluding PIAFS Dummy and Retransmitted Data Frames: 593 Bytes/Second
PIAFS Data Frames Rx Statistics:
Total No: of PIAFS Frames Received: 86
Total No: of Bad PIAFS Frames Received: 0
Total Bytes of Application Data Received:
Before Uncompression: 1459
After Uncompression: 2955
Compression Ratio in Rx direction is 2.02: 1
Total Throughput in Rx Direction:
Including PIAFS Dummy Frames: 8000 Bytes/Second
Excluding PIAFS Dummy Frames: 656 Bytes/Second
Excluding PIAFS Dummy and Retransmitted Data Frames: 126 Bytes/Second
No: of ReSynchronizations so far: 0

```

Table 142 describes significant fields shown in this output.

Table 142 *show piafs status Field Descriptions*

Field	Description
First PPP Frame Detected	If the output shows “YES,” the first PPP frame from the peer device has been detected by the Cisco 803, Cisco 804, or Cisco 813 router. If the output shows “NO,” the router has not received any PPP frames from the peer device.
Piafs main FSM state	Valid states for the finite state machine (FSM) are Initialization, Sync, Control, and Data.

Related Commands

Command	Description
debug piafs events	Displays debugging messages for PIAFS calls.

show pots csm

To display the current state of calls and the most recent event received by the call-switching module (CSM) on a Cisco 800 series router, use the **show pots csm** command in privileged EXEC mode.

show pots csm *port*

Syntax Description	<i>port</i>	Port number. Range is from 1 to 2.
--------------------	-------------	------------------------------------

Command Modes	Privileged EXEC
---------------	-----------------

Command History	Release	Modification
	12.1.(2)XF	This command was introduced on the Cisco 800 series.

Examples

The following is sample output from this command:

```
Router# show pots csm 1

POTS PORT: 1

    CSM Finite State Machine:
      Call 0 - State: idle, Call Id: 0x0
              Active: no
              Event: CSM_EVENT_NONE Cause: 0
      Call 1 - State: idle, Call Id: 0x0
              Active: no
              Event: CSM_EVENT_NONE Cause: 0
      Call 2 - State: idle, Call Id: 0x0
              Active: no
              Event: CSM_EVENT_NONE Cause: 0
```

Field descriptions should be self-explanatory.

Related Commands	Command	Description
	test pots dial	Dials a telephone number for the POTS port on the router by using a dial application on your workstation.
	test pots disconnect	Disconnects a telephone call for the POTS port on the router.

show pots status

To display the settings of the telephone port physical characteristics and other information on the telephone interfaces of a Cisco 800 series router, use the **show pots status** command in privileged EXEC mode.

show pots status [1 | 2]

Syntax Description	1	(Optional) Displays the settings of telephone port 1.
	2	(Optional) Displays the settings of telephone port 2.

Command Default No default behavior or values

Command Modes Privileged EXEC

Command History	Release	Modification
	12.0(3)T	This command was introduced on the Cisco 800 series.

Examples The following is sample output from this command.

```
Router# show pots status

POTS Global Configuration:

[Table 143](#) describes significant fields shown in this output.

Table 143 *show pots status Field Descriptions*

Field	Descriptions
POTS Global Configuration	Settings of the telephone port physical characteristic commands. Also displays the following: <ul style="list-style-type: none"> • TX GAIN—Current transmit gain of telephone ports. • RX LOSS—Current transmit loss of telephone ports. • Filter Mask—Value determines which filters are currently enabled or disabled in the telephone port hardware. • Adaptive Cntrl Mask—Value determines if telephone port adaptive line impedance hardware is enabled or disabled.
Hook Switch Finite State Machine	Device driver that tracks state of telephone port hook switch.
CODEC Finite State Machine	Device driver that controls telephone port codec hardware.
CODEC Registers	Register contents of telephone port codec hardware.
CODEC Coefficients	Codec coefficients selected by telephone port driver. Selected line type determines codec coefficients.
CSM Finite State Machine	State of call-switching module (CSM) software.
Time Slot Control	Register that determines if telephone port voice or data packets are sent to an ISDN B channel.

Related Commands

Command	Description
pots country	Configures telephones, fax machines, or modems connected to a Cisco 800 series router to use country-specific default settings for each physical characteristic.
pots dialing-method	Specifies how the Cisco 800 series router collects and sends digits dialed on your connected telephones, fax machines, or modems.
pots disconnect-supervision	Specifies how a Cisco 800 series router notifies the connected telephones, fax machines, or modems when the calling party has disconnected.
pots disconnect-time	Specifies the interval in which the disconnect method is applied if telephones, fax machines, or modems connected to a Cisco 800 series router fail to detect that a calling party has disconnected.
pots distinctive-ring-guard-time	Specifies a delay in which a telephone port can be rung after a previous call is disconnected (Cisco 800 series routers).
pots encoding	Specifies the PCM encoding scheme for telephones, fax machines, or modems connected to a Cisco 800 series router.
pots line-type	Specifies the impedance of telephones, fax machines, or modems connected to a Cisco 800 series router.
pots ringing-freq	Specifies the frequency at which telephones, fax machines, or modems connected to a Cisco 800 series router ring.

Command	Description
pots silence-time	Specifies the interval of silence after a calling party disconnects (Cisco 800 series router).
pots tone-source	Specifies the source of dial, ringback, and busy tones for telephones, fax machines, or modems connected to a Cisco 800 series router.

show pots volume

To display the receiver volume level that is configured for each POTS port on a router, use the **show pots volume** command in privileged EXEC mode.

show pots volume

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(8)T	This command was introduced on the Cisco 803, Cisco 804, and Cisco 813.

Examples The following is sample output from this command showing that the receiver volume level is 5 for both POTS port 1 and POTS port 2.

```
Router# show pots volume
```

```
POTS PORT 1: Volume 5
```

```
POTS PORT 2: Volume 5
```

Field descriptions should be self-explanatory.

Related Commands	Command	Description
	volume	Configures the receiver volume level for a POTS port on a router.

show presence global

To display configuration information about the presence service, use the **show presence global** command in user EXEC or privileged EXEC mode.

show presence global

Syntax Description This command has no arguments or keywords.

Command Modes User EXEC
Privileged EXEC

Command History	Release	Modification
	12.4(11)XJ	This command was introduced.
	12.4(15)T	This command was integrated into Cisco IOS Release 12.4(15)T.

Usage Guidelines This command displays the configuration settings for presence.

Examples The following example displays output from the **show subscription global** command:

```
Router# show subscription global

Presence Global Configuration Information:
=====
Presence feature enable           : TRUE
Presence allow external watchers  : FALSE
Presence max subscription allowed : 100
Presence number of subscriptions  : 0
Presence allow external subscribe : FALSE
Presence call list enable         : TRUE
Presence server IP address        : 0.0.0.0
Presence sccp blfsd retry interval : 60
Presence sccp blfsd retry limit   : 10
Presence router mode              : CME mode
```

Table 144 describes the significant fields shown in the display.

Table 144 *show subscription global Field Descriptions*

Field	Description
Presence feature enable	Indicates whether presence is enabled on the router with the presence command.
Presence allow external watchers	Indicates whether internal presentities can be watched by external watchers, as set by the watcher all command
Presence max subscription allowed	Maximum number of presence subscriptions allowed by the max-subscription command.

Table 144 *show subscription global Field Descriptions (continued)*

Field	Description
Presence number of subscriptions	Current number of active presence subscriptions.
Presence allow external subscribe	Indicates whether internal watchers are allowed to subscribe to status notifications from external presentities, as set by the allow subscribe command.
Presence call list enable	Indicates whether the Busy Lamp Field (BLF) call-list feature is enabled with the presence call-list command.
Presence server IP address	Displays the IP address of an external presence server defined with the server command.
Presence sccp blfsd retry interval	Retry timeout, in seconds, for BLF speed-dial numbers on SCCP phones set by the sccp blf-speed-dial retry interval command.
Presence sccp blfsd retry limit	Maximum number of retries allowed for BLF speed-dial numbers on SCCP phones set by the sccp blf-speed-dial retry interval command.
Presence router mode	Indicates whether the configuration mode is set to Cisco Unified CME or Cisco Unified SRST by the mode command.

Related Commands

Command	Description
allow watch	Allows a directory number on a phone registered to Cisco Unified CME to be watched in a presence service.
allow subscribe	Allows internal watchers to monitor external presence entities (directory numbers).
debug presence	Displays debugging information about the presence service.
presence enable	Allows the router to accept incoming presence requests.
server	Specifies the IP address of a presence server for sending presence requests from internal watchers to external presence entities.
show presence subscription	Displays information about active presence subscriptions.
watcher all	Allows external watchers to monitor internal presence entities (directory numbers).

show presence subscription

To display information about active presence subscriptions, use the **show presence subscription** command in user EXEC or privileged EXEC mode.

```
show presence subscription [details | presentity telephone-number | subid subscription-id |
summary]
```

Syntax Description	details	(Optional) Displays detailed information about presentities, watchers, and presence subscriptions.
	presentity <i>telephone-number</i>	(Optional) Displays information on the presentity specified by the destination telephone number.
	subid <i>subscription-id</i>	(Optional) Displays information for the specific subscription ID.
	summary	(Optional) Displays summary information about active subscription requests.

Command Default Information for all active presence subscriptions is displayed.

Command Modes User EXEC
Privileged EXEC

Command History	Release	Modification
	12.4(11)XJ	This command was introduced.
	12.4(15)T	This command was integrated into Cisco IOS Release 12.4(15)T.

Usage Guidelines This command displays details about the currently active presence subscriptions

Examples The following is sample output from the **show presence subscription details** command:

```
Presence Active Subscription Records Details:
=====

Subscription ID      : 1

```

The following is sample output from the **show presence subscription subid 133** command:

Router# **show presence subscription subid 133**

Presence Active Subscription Records:

```

=====
Subscription ID : 133
Watcher : 6005@10.4.171.34
Presentity : 7005@10.4.171.20
Expires : 3600 seconds
line status : idle
watcher type : local
presentity type : remote
Watcher phone type : SIP Phone
subscription type : Outgoing Request

```

■ show presence subscription

```

retry limit          : 0
sibling subID       : 132
sdb                  : 0
dp                   : 0
watcher dial peer tag : 0

```

Table 144 describes the significant fields shown in the display.

Table 145 *show presence subscription Field Descriptions*

Field	Description
Watcher	IP address of the watcher.
Presentity	IP address of the presentity.
Expires	Number of seconds until the subscription expires. Default is 3600.
line status	Status of the line: <ul style="list-style-type: none"> Idle—Line is not being used. In-use—User is on the line, whether or not this line can accept a new call. Unknown—Phone is unregistered or this line is not allowed to be watched.
watcher type	Whether the watcher is local or remote.
presentity type	Whether the presentity is local or remote.
Watcher phone type	Type of phone, either SCCP or SIP.
subscription type	The type of presence subscription, either incoming or outgoing.
retry limit	Maximum number of times the router attempts to subscribe for the line status of an external SCCP phone when either the presentity does not exist or the router receives a terminated NOTIFY from the external presence server. Set with the sccp blf-speed-dial retry-interval command.
sibling subID	Sibling subscription ID if presentity is remote. If value is 0, presentity is local.
sdb	Voice port of the presentity.
dp	Dial peer of the presentity.
watcher dial peer tag	Dial peer tag of the watcher device.

Related Commands

Command	Description
allow watch	Allows a directory number on a phone registered to Cisco Unified CME to be watched in a presence service.
debug ephone blf	Displays debugging information for Busy Lamp Field (BLF) presence features.
debug presence	Displays debugging information about the presence service.
presence	Enables presence service and enters presence configuration mode.

Command	Description
presence enable	Allows the router to accept incoming presence requests.
show presence global	Displays configuration information about the presence service.

show proxy h323 calls

To display a list of active calls on the proxy, use the **show proxy h323 calls** command in privileged EXEC mode.

show proxy h323 calls

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC

Command History	Release	Modification
	11.3(2)NA	This command was introduced.
	12.0(3)T	The command was integrated into Cisco IOS Release 12.0(3)T and implemented on the Cisco MC3810.

Examples The following is sample output from this command:

```
Router# show proxy h323 calls

Call unique key = 1
  Conference ID = [277B87C0A283D111B63E00609704D8EA]
  Calling endpoint call signalling address = 55.0.0.41
  Calling endpoint aliases:
    H323_ID: ptel11@zone1.com
  Call state = Media Streaming
  Time call was initiated = 731146290 ms
```

Field descriptions should be self-explanatory.

Related Commands	Command	Description
	show proxy h323 detail-call	Displays the details of a particular call on a proxy.
	show proxy h323 status	Displays the overall status of a proxy.

show proxy h323 detail-call

To display the details of a particular call on a proxy, use the **show proxy h323 detail-call** command in privileged EXEC mode.

show proxy h323 detail-call *call-key*

Syntax Description	<i>call-key</i>	Call to be displayed, derived from the show proxy h323 calls command output.
--------------------	-----------------	---

Related Commands	Command	Description
	show proxy h323 calls	Displays a list of active calls on the proxy.
	show proxy h323 detail-call	Displays the details of a particular call on a proxy.

show raw

To display leaking raw buffers that have been captured, use the **show raw** command in privileged EXEC mode.

```
show raw {all | cas | ccapi | h323 | ivr | reclaimed | tsp | vtsp}
```

Syntax Description

all	Displays the record of all sections.
cas	Displays the record of channel-associated signaling (CAS).
ccapi	Displays the application programming interface (API) that is used to coordinate interaction between application and call legs (telephony or IP).
h323	Displays the record of the H.323 subsystem.
ivr	Displays the record of interactive voice response (IVR).
reclaimed	Displays the raw buffers reclaimed by the audit module.
tsp	Displays the telephony service provider (TSP) subsystem.
vtsp	Displays the voice telephony service provider (VTSP) subsystem.

Command Modes

Privileged EXEC

Command History

Release	Modification
12.2(2)XU3	This command was introduced.
12.2(11)T	This command was integrated into Cisco IOS Release 12.2(11)T.

Usage Guidelines

The number of raw leaks that are displayed by the **show raw reclaimed** command should be zero, indicating that there are no memory leaks.

Examples

The following is a sample output from this command showing that there are no leaking raw buffers:

```
Router# show raw reclaimed

RAW LEAK REPORT:
ORPHAN      : 0      raw buffers reclaimed
TSP         : 0      raw buffers reclaimed
VTSP        : 0      raw buffers reclaimed
H323        : 0      raw buffers reclaimed
SIP         : 0      raw buffers reclaimed
CCAPI       : 0      raw buffers reclaimed
VOATM       : 0      raw buffers reclaimed
XGCP        : 0      raw buffers reclaimed
CAS         : 0      raw buffers reclaimed
IVR         : 0      raw buffers reclaimed
SSAPP       : 0      raw buffers reclaimed
Last Audit Session is at 20:28:13 UTC Fri Mar 27 2002
```

Table 146 describes significant fields shown in this output.

Table 146 *show raw reclaimed Field Descriptions*

Field	Description
ORPHAN	Raw buffers when a valid owner is not found.
TSP	Raw buffers on the telephony service provider (TSP) subsystem.
VTSP	Raw buffers on the voice telephony service provider (VTSP) subsystem.
H323	Raw buffers on the H.323 subsystem.
SIP	Raw buffers on the Session Initiation Protocol session.
CCAPI	Raw buffers on the API system used to coordinate interaction between application and call legs (telephony or IP).
VOATM	Raw buffers on the Voice over ATM network.
XGCP	Raw buffers on external media gateway control protocols. Includes Simple Gateway Control Protocol (SGCP) and Media Gateway Control Protocol (MGCP).
CAS	Raw buffers on the channel-associated signaling (CAS).
IVR	Raw buffers on the interactive voice response (IVR) system.
SSAPP	Raw buffers on the session application.

Related Commands

Command	Description
show rawmsg	Shows raw messages owned by the required component.

show rawmsg

To display the raw messages owned by the required component, use the **show rawmsg** command in privileged EXEC mode.

```
show rawmsg {all | cas | ccapi | h323 | ivr | reclaimed | tsp | vtsp}
```

Syntax Description

all	Displays the raw messages owned by all the components.
cas	Displays the Channel Associated Signaling (CAS) subsystem.
ccapi	Displays the Application programming interface (API) used to coordinate interaction between application and call legs (telephony or IP).
h323	Displays the H.323 subsystem.
ivr	Displays the Interactive Voice Response (IVR) subsystem.
reclaimed	Displays the raw reclaimed by the audit module.
tsp	Displays the Telephony Service Provider (TSP) subsystem.
vtsp	Displays the Voice Telephony Service Provider (VTSP) subsystem.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
12.0(7)T	This command was introduced on the Cisco AS5300.
12.4(24)T	This command was modified in a release earlier than Cisco IOS Release 12.4(24)T. The cas , ivr , and reclaimed keywords were added.

Usage Guidelines

The number displayed for the **show rawmsg all** command should be zero to indicate that there are no memory leaks.

Examples

The following is a sample output from the **show rawmsg tsp** command that displays memory leaks from the Telephony Service Provider. The field names are self-explanatory.

```
Router# show rawmsg tsp
```

```
Raw Msg Summary:
  Raw Msg in used: 0
```

Related Commands

Command	Description
isdn protocol-emulate	Configures the Layer 2 and Layer 3 port protocol of a BRI voice port or a PRI interface to emulate NT (network) or TE (user) functionality.
isdn switch type	Configures the Cisco AS5300 PRI interface to support Q.SIG signaling.
pri-group nec-fusion	Configures the NEC PBX to support FCCS.
show cdapi	Displays the CDAPI.

show rlm group statistics

To display the network latency of a Redundant Link Manager (RLM) group, use the **show rlm group statistics** command in privileged EXEC mode.

show rlm group [*group-number*] **statistics**

Syntax Description	
<i>group-number</i>	(Optional) RLM group number. The range is from 0 to 255. There is no default value.

Command Modes	
	Privileged EXEC (#)

Command History	Release	Modification
	11.3(7)	This command was introduced.
	12.4(22)T	This command was integrated into Cisco IOS Release 12.4(22)T.

Usage Guidelines	
	You can specify the <i>group-number</i> argument to view the network latency of a specific RLM group. If you do not specify the <i>group-number</i> argument, then the show rlm group statistics command displays the network latency of all the configured RLM groups.

Examples	
	The following is sample output from the show rlm group statistics command:

```
Router# show rlm group statistics

RLM Group Statistics
Link_up:
  last time occurred at 02:45:48.724, total transition=1
  avg=00:00:00.000, max=00:00:00.000, min=00:00:00.000, latest=00:00:00.000
Link_down:
  last time occurred at 02:42:33.724, total transition=1
  avg=00:03:15.000, max=00:03:15.000, min=00:00:00.000, latest=00:03:15.000
Link_recovered:
  last time occurred at 00:00:00.000, success=0(0%), failure=0
  avg=0.000s, max=0.000s, min=0.000s, latest=0.000s
Link_switched:
  last time occurred at 00:00:00.000, success=0(0%), failure=0
  avg=0.000s, max=0.000s, min=0.000s, latest=0.000s
Server_changed:
  last time occurred at 00:00:00.000 for totally 0 times
Server Link Group[r1-server]:
  Open the link [10.1.1.1(Loopback1), 10.1.4.1]:
    last time occurred at 02:43:03.724, success=1(100%), failure=0
    avg=162.000s, max=162.000s, min=0.000s, latest=162.000s
  Echo over link [10.1.1.1(Loopback1), 10.1.4.1]:

```

Table 147 describes the significant fields shown in the display.

Table 147 *show rlm group statistics Field Descriptions*

Field	Description
Link_up	Statistics collected when the RLM group is in the link up state.
total transition	Total number of transitions into a particular RLM group state.
avg	Total average time (in seconds) that the interval lasts.
max	Total maximum time (in seconds) that the interval lasts.
min	Total minimum time (in seconds) that the interval lasts.
latest	The most recent interval.
Link_down	Statistics collected when the RLM group is in the link down state.
Link_recovered	Statistics collected when the RLM group is in the link recovery state.
Link_switched	Statistics collected when the RLM group is in the link switching state.
Server_changed	Statistics collected for when and how many times an RLM server failover happens.
Server Link Group[r1-server]	Statistics collected for the signaling links defined under a particular server link group, for example, r1-server.
Open the link	Statistics collected when a particular signaling link connection is open (broken).
Echo over link	Statistics collected when a particular signaling link connection is established.

Related Commands	Command	Description
	clear interface	Resets the hardware logic on an interface.
	clear rlm group	Clears all RLM group time stamps to zero.
	interface	Configures an interface type and enters interface configuration mode.
	link (RLM)	Specifies the link preference.
	protocol rlm port	Reconfigures the port number for the basic RLM connection for the whole RLM group.
	retry keepalive	Allows consecutive keepalive failures a certain amount of time before the link is declared down.
	server (RLM)	Defines the IP address of the server.
	show rlm group status	Displays the status of an RLM group.
	show rlm group timer	Displays the current RLM group timer values.
	shutdown (RLM)	Shuts down all of the links under an RLM group.
	timer	Overwrites the default setting of timeout values.

show rlm group status

To display the status of a Redundant Link Manager (RLM) group, use the **show rlm group status** command in privileged EXEC mode.

show rlm group [*group-number*] **status**

Syntax Description	<i>group-number</i> (Optional) RLM group number. The range is from 0 to 255. There is no default value.
---------------------------	---

Command Modes	Privileged EXEC (#)
----------------------	---------------------

Command History	Release	Modification
	11.3(7)	This command was introduced.
	12.4(22)T	This command was integrated into Cisco IOS Release 12.4(22)T.

Usage Guidelines	You can specify the <i>group-number</i> argument to view the status of a specific RLM group. If you do not specify the <i>group-number</i> argument, then the show rlm group status command displays the status of all the configured RLM groups.
-------------------------	--

Examples The following is sample output from the **show rlm group status** command:

```
Router# show rlm group status

RLM Group 1 Status
  User/Port: RLM_MGR/3000
  Link State: Up          Last Link Status Reported: Up
  Next tx TID: 1         Last rx TID: 0
  Server Link Group[r1-server]:
    link [10.1.1.1(Loopback1), 10.1.4.1] = socket[active]
    link [10.1.1.2(Loopback2), 10.1.4.2] = socket[standby]
  Server Link Group[r2-server]:
    link [10.1.1.1(Loopback1), 10.1.5.1] = socket[opening]
    link [10.1.1.2(Loopback2), 10.1.5.2] = socket[opening]
```

[Table 148](#) describes the significant fields shown in the display.

Table 148 *show rlm group status* Field Descriptions

Field	Description
User/Port	List of registered RLM users and the port numbers associated with them.
RLM_MGR	RLM management module.
Link State	Current RLM group's link state for connecting to the remote end.
Last Link Status Reported	Most recent link status change is reported to RLM users.

Table 148 *show rlm group status Field Descriptions (continued)*

Field	Description
Next tx TID	Next transaction ID for transmission.
Last rx TID	Most recent transaction ID has been received.
Server Link Group[r1-server]	Status of all signaling links configured under a particular RLM server link group, for example, r1-server.
socket	Status of the individual signaling link.

Related Commands

Command	Description
clear interface	Resets the hardware logic on an interface.
clear rlm group	Clears all RLM group time stamps to zero.
interface	Configures an interface type and enters interface configuration mode.
link (RLM)	Specifies the link preference.
protocol rlm port	Reconfigures the port number for the basic RLM connection for the whole RLM group.
retry keepalive	Allows consecutive keepalive failures a certain amount of time before the link is declared down.
server (RLM)	Defines the IP address of the server.
show rlm group statistics	Displays the network latency of an RLM group.
show rlm group timer	Displays the current RLM group timer values.
shutdown (RLM)	Shuts down all of the links under an RLM group.
timer	Overwrites the default setting of timeout values.

show rlm group timer

To display the current timer values of a Redundant Link Manager (RLM) group, use the **show rlm group timer** command in privileged EXEC mode.

show rlm group [*group-number*] **timer**

Syntax Description

group-number (Optional) RLM group number. The range is from 0 to 255. There is no default value.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
11.3(7)	This command was introduced.
12.4(22)T	This command was integrated into Cisco IOS Release 12.4(22)T.

Usage Guidelines

You can specify the *group-number* argument to view the timer values of a specific RLM group. If you do not specify the *group-number* argument, then the **show rlm group timer** command displays the timer values of all the configured RLM groups.

Examples

The following is sample output from the **show rlm group timer** command:

```
Router# show rlm group timer

RLM Group 1 Timer Values
  open_wait   = 3s           force-down   = 30s
  recovery    = 12s          switch-link  = 5s
  minimum-up  = 60s          retransmit   = 1s
  keepalive   = 1s
```

[Table 149](#) describes the significant fields shown in the display.

Table 149 *show rlm group timer* Field Descriptions

Field	Description
open_wait	Wait for the connection request to be acknowledged.
recovery	Time (in seconds) to allow the link to recover to backup link before declaring the link is down.
minimum-up	Minimum time (in seconds) to force RLM to stay in the link down state for the remote end to detect that the link state is down.
keepalive	A keepalive packet is sent out from the network access server to the Card Security Code (CSC) periodically.
force-down	Minimum time (in seconds) to force RLM to stay in the link down state for the remote end to detect that the link state is down.

Table 149 *show rlm group timer Field Descriptions (continued)*

Field	Description
switch-link	The maximum transition period allows RLM to switch from a lower preference link to a higher preference link. If the switching link does not complete successfully before this timer expires, RLM goes into the recovery state.
retransmit	Because RLM is operating under User Datagram Protocol (UDP), it needs to resend the control packet if the packet is not acknowledged within this retransmit interval (in seconds).

Related Commands

Command	Description
clear interface	Resets the hardware logic on an interface.
clear rlm group	Clears all RLM group time stamps to zero.
interface	Configures an interface type and enters interface configuration mode.
link (RLM)	Specifies the link preference.
protocol rlm port	Reconfigures the port number for the basic RLM connection for the whole RLM group.
retry keepalive	Allows consecutive keepalive failures a certain amount of time before the link is declared down.
server (RLM)	Defines the IP address of the server.
show rlm group statistics	Displays the network latency of an RLM group.
show rlm group status	Displays the status of an RLM group.
shutdown (RLM)	Shuts down all of the links under an RLM group.
timer	Overwrites the default setting of timeout values.

show rpms-proc counters

To display statistics for the number of leg 3 authentication, authorization, and accounting (AAA) preauthentication requests, successes, and rejects, use the **show rpms-proc counters** command in privileged EXEC mode.

show rpms-proc counters

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.2(11)T	This command was introduced.

Usage Guidelines *Leg 3* refers to a call segment from the IP network to a terminating (outgoing) gateway that takes traffic from an IP network to a PSTN network.

Examples The following sample output displays leg 3 statistics for AAA preauthentication requests, successes, and rejects:

```
Router# show rpms-proc counters

H323 Calls

Preauth Requests Sent      : 43433
Preauth Requests Accepted  : 43433
Preauth Requests Rejected  : 0
Preauth Requests TimedOut  : 0
Disconnects during Preauth : 0

SIP Calls

Preauth Requests Sent      : 43080
Preauth Requests Accepted  : 43080
Preauth Requests Rejected  : 0
Preauth Requests TimedOut  : 0
Disconnects during Preauth : 0
```

[Table 150](#) describes significant fields shown in this output.

Table 150 *show rpms-proc counters Field Descriptions*

Field	Description
Preauth Requests Sent	Number of preauthentication requests sent.
Preauth Requests Accepted	Number of preauthentication requests accepted.
Preauth Requests Rejected	Number of preauthentication requests rejected.

Table 150 *show rpms-proc counters Field Descriptions (continued)*

Field	Description
Preauth Requests Timed Out	Number of preauthentication requests rejected because they timed out.
Disconnects during Preauth	Number of calls that were disconnected during the preauthentication process.

Related Commands

Command	Description
clear rpms-proc counters	Clears statistics counters for AAA preauthentication requests, successes, and rejects.

show rtpspi

To display Real-time Transport Protocol (RTP) serial peripheral interface (SPI) active call details and call statistics, use the **show rtpspi** command in privileged EXEC mode.

```
show rtpspi {call | statistics}
```

Syntax Description

call	Displays RTP SPI active call details.
statistics	Displays RTP SPI call statistics information.

Command Modes

Privileged EXEC (#)

Command History

Release	Modification
12.4(22)T	This command was introduced in a release earlier than Cisco IOS Release 12.4(22)T.

Examples

The following is sample output from the **show rtpspi statistics** command:

```
Router# show rtpspi statistics
```

RTP Statistics info:

No.	CallId	Xmit-pkts	Xmit-bytes	Rcvd-pkts	Rcvd-bytes	Lost pkts	Jitter	Latenc
1	48	0x3BA	0x25440	0x17	0xD99	0x0	0x0	0x0
2	50	0x3BA	0x4A88	0x70	0x8AD	0x0	0x0	0x0

[Table 151](#) describes the significant fields shown in the display.

Table 151 show rtpspi statistics Field Descriptions

Field	Description
CallId	The call ID number.
Xmit-pkts	Number of packets transmitted.
Xmit-bytes	Number of bytes transmitted.
Rcvd-pkts	Number of packets received.
Rcvd-bytes	Number of bytes received.
Lost pkts	Number of lost packets.
Jitter	Reports the jitter encountered.
Latenc	Reports the level of latency on the call.

Related Commands

Command	Description
debug rtpspi all	Debugs all RTP SPI errors, sessions, and in/out functions.

show rtsp client session

To display cumulative information about Real Time Streaming Protocol (RTSP) session records, use the **show rtsp client session** command in privileged EXEC mode.

show rtsp client session {history | active} [detailed]

Syntax Description	history	active	detailed
	Displays cumulative information about the session, packet statistics, and general call information such as call ID, session ID, individual RTSP stream URLs, packet statistics, and play duration.	Displays session and stream information for the stream that is currently active.	(Optional) Displays session and stream information in detail for all streams that are associated with the session. This keyword is not available on Cisco 7200 series routers.

Command Default Active (current) stream information is displayed.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.1(3)T	This command was introduced on the Cisco AS5300.
	12.1(5)T	This command was implemented on the Cisco AS5800.
	12.1(5)XM2	This command was implemented on the Cisco AS5350 and Cisco AS5400.
	12.2(2)XB1	This command was implemented on the Cisco AS5850.
	12.2(4)XM	This command was implemented on the Cisco 1750 and Cisco 1751. Support for the Cisco AS5300, Cisco AS5350, Cisco AS5400, Cisco AS5800 and Cisco AS5850 is not included in this release.
	12.2(8)T	This command was integrated into Cisco IOS Release 12.2(8)T and implemented on the Cisco 7200 series. This command is supported on the Cisco AS5300, Cisco AS5350, Cisco AS5400, Cisco AS5800, and Cisco AS5850 in this release.

Usage Guidelines Use this command to display cumulative information about the session, packet statistics, and general call information such as call ID and session ID.

Note

Session refers to a session between the application and the RTSP client. Each call leg that is configured to use RTSP streaming has a session.

A call leg could play several prompts in a session; the “Play Time” refers to the play time associated with a stream or, in other words, a prompt; the cumulative play time is the sum total of all streams (or prompts) played out in a session.

The command output is a stream block that contains information about the stream (URL, packet statistics, current state of the stream, play duration, call ID, session ID, individual RTSP stream URLs, and packet statistics).

Examples

The following is sample output from the **show rtsp client session active** command:

```
Router# show rtsp client session active

RTSP Session ID:0x8      Current Status:RTSP_STATUS_PLAYING
Associated CallID:0xF
Active Request:RTSP_API_REQ_PLAY
Control Protocol:TCP      Data Protocol:RTP

Total Packets Transmitted:0 (0 bytes)
Total Packets Received:708 (226560 bytes)

Cumulative Elapsed Play   Time:00:00:28.296
Cumulative Elapsed Record Time:00:00:00.000

      Session ID:0x8      State:ACTIVE
      Local IP Address:10.13.79.45      Local Port 16660
      Server IP Address:10.13.79.6      Server Port 11046
      Stream URL:rtsp://rtsp-cisco.cisco.com:554/chinna.au/streamid=0

Packets Transmitted:0 (0 bytes)
Packets Received:708 (226560 bytes)

Elapsed Play   Time:00:00:28.296
Elapsed Record Time:00:00:00.000
ReceiveDelay:85      LostPackets:0
```

The following is sample output from the **show rtsp client session history detailed** command:

```
Router# show rtsp client session history detailed

RTSP Session ID:0x8
Associated CallID:0xF
Control Protocol:TCP      Data Protocol:RTP

Total Packets Transmitted:0 (0 bytes)
Total Packets Received:2398 (767360 bytes)

Cumulative Elapsed Play   Time:00:01:35.916
Cumulative Elapsed Record Time:00:00:00.000

      Session ID:0x8      State:INACTIVE
      Local IP Address:10.13.79.45      Local Port 16660
      Server IP Address:10.13.79.6      Server Port 11046
      Stream URL:rtsp://rtsp-cisco.cisco.com:554/chinna.au/streamid=0

Packets Transmitted:0 (0 bytes)
Packets Received:2398 (767360 bytes)

HighWaterPayoutDelay:85
LowWaterPayoutDelay:64
```

```

ReceiveDelay:85      LostPackets:0
EarlyPackets:2      LatePackets:12

```

Table 152 describes significant fields shown in this output.

Table 152 *show rtsp client session Field Descriptions*

Field	Description
RTSP Session ID:0x8	Unique ID for the RTSP session.
Current Status:RTSP_STATUS_PLAYING	Current status: <ul style="list-style-type: none"> RTSP_STATUS_SESSION_IDLE RTSP_STATUS_SERVER_CONNECTED RTSP_STATUS_PLAY_PAUSED RTSP_STATUS_PLAY_COMPLETE
Associated CallID:0xF	ID of associated call.
Control Protocol:TCP	Transport protocol.
Data Protocol:RTP	Data protocol.
Total Packets Transmitted:0 (0 bytes)	Bytes sent out to the RTSP server.
Total Packets Received:708 (226560 bytes)	Bytes received from the server for playing.

Related Commands

Command	Description
rtsp client session history duration	Specifies the length of time for which the RTSP is kept during the session.
rtsp client session history records	Specifies the number of RTSP client session history records during the session.

show rudpv0 failures

To display SS7 Reliable User Datagram Protocol (RUDP) failure statistics, use the **show rudpv0 failures** command in privileged EXEC mode.

show rudpv0 failures

Syntax Description This command has no keywords or arguments.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.0(7)XR	This command was introduced.
	12.1(1)T	This command was integrated into Cisco IOS Release 12.1(1)T.

Examples The following is sample output from this command showing displaying RUDP failures.

```
Router# show rudpv0 failures

**** RUDP Failure Stats ****

CreateBufHdrsFailure      0
CreateConnRecsFailure    0
CreateEventsFailure      0

NotReadyFailures         0
OptionNotSupportedFailures 0
OptionRequiredFailures   0
GetConnRecFailures       0
InvalidConnFailures      0
EventUnavailFailures     0

EmptyBufferSendFailures  0
BufferTooLargeFailures   0
ConnNotOpenFailures      0
SendWindowFullFailures   0
GetBufHdrSendFailures    0

GetDataBufFailures       0
GetBufHdrFailures        0

SendEackFailures         0
SendAckFailures          0
SendSynFailures          0
SendRstFailures          0
SendNullFailures         0
```

```
TimerNullFailures      0
FailedRetransmits      0
IncomingPktsDropped    0
UnknownRudpEvents      0
```

Field descriptions should be self-explanatory.

Related Commands

Command	Description
clear rudpv0 statistics	Resets the counters for the statistics generated by the show rudpv0 failures command to 0.
show rudpv0 statistics	Displays RUDP information about number of packets sent, received, and so forth.

show rudpv0 statistics

To display SS7 Reliable User Datagram Protocol (RUDP) internal statistics, use the **show rudpv0 statistics** command in privileged EXEC command.

show rudpv0 statistics

Syntax Description This command has no keywords or arguments.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.0(7)XR	This command was introduced.
	12.1(1)T	This command was integrated into Cisco IOS Release 12.1(1)T.

Usage Guidelines Because statistics counters are continually updated, the cumulative total may not be exactly equal to individual connection counters. After a connection is reset, previous statistics are lost, so the current connection statistics reflect only instances of the RUDP connection since the last reset.

Cumulative statistics reflect counts since the router was rebooted or since the **clear rudpv0 statistics** command was used.

Examples The following is sample output from this command displaying RUDP statistics and states for two connections. The fields are self-explanatory.

```
Router# show rudpv0 statistics

Related Commands

Command	Description
clear rudpv0 statistics	Resets the counters for the statistics generated by the show rudpv0 statistics command to 0.
show rudpv0 failures	Displays RUDP information about failed connections and the reasons for them.

show rudpv1

To display Reliable User Datagram Protocol (RUDP) information, use the **show rudpv1** command in privileged EXEC mode.

```
show rudpv1 {failures | parameters | statistics}
```

Syntax Description	failures	RUDP failure statistics.
	parameters	RUDP connection parameters.
	statistics	RUDP internal statistics.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.1(1)T	This command was introduced on the Cisco AS5300.
	12.2(2)T	This command was implemented on the Cisco 7200.
	12.2(4)T	This command was implemented on the Cisco 2600 series, Cisco 3600 series, and Cisco MC3810.
	12.2(2)XB1	This command was implemented on the Cisco AS5850.
	12.2(8)T	This command was integrated into Cisco IOS Release 12.2(8)T and implemented on the Cisco IAD2420 series.

Usage Guidelines Because statistics counters are continually updated, the cumulative total may not be exactly equal to individual connection counters. After a connection is reset, previous statistics are lost, so the current connection statistics reflect only instances of the RUDP connection since the last reset.

Cumulative statistics reflect counts since the router was rebooted or since the **clear rudpv1 statistics** command was used.

Examples The following is sample output from this command:

```
Router# show rudpv1 failures

**** RUDPV1 Failure Stats ****

CreateBufHdrsFailure      0
CreateConnRecsFailure     0
CreateEventQueueFailure   0
OsSpecificInitFailure     0

NotReadyFailures         0
OptionNotSupportedFailures 0
InvalidOptionFailures    0
OptionRequiredFailures   0
GetConnRecFailures       0
InvalidConnFailures      0
EventUnavailFailures     0
```

```

GetConnRecFailures      0
FindConnRecFailures     0
EmptyBufferSendFailures 0
BufferTooLargeFailures 0
ConnNotOpenFailures     0
SendWindowFullFailures 0
GetBufHdrSendFailures   0

SendInProgressFailures  0

GetDataBufFailures      0
GetBufHdrFailures       0

SendFailures            0

Related Commands

Command	Description
clear rudpv1 statistics	Clears the RUDP statistics counters.
debug rudpv1	Displays debugging information for RUDP.

show sccp

To display Skinny Client Control Protocol (SCCP) information such as administrative and operational status, use the **show sccp** command in user EXEC or privileged EXEC mode.

```
show sccp [all | ccm group [number] | connections [details | internal | rsvp | summary] | server |
statistics | call-identifications | call-references]
```

Syntax	Description
all	(Optional) Specifies all Skinny Client Control Protocol (SCCP) global information.
ccm	(Optional) Displays SCCP Cisco Unified Communications Manager (CUCM) group related information.
group	(Optional) Displays CUCM groups.
<i>number</i>	(Optional) CUCM group number that needs to be displayed.
connections	(Optional) Specifies information about the connections controlled by the SCCP transcoding and conferencing applications.
details	(Optional) Displays SCCP connections in detail.
internal	(Optional) Displays information about SCCP internal connections.
rsvp	(Optional) Displays Resource Reservation Protocol (RSVP) information about SCCP connections.
summary	(Optional) Displays information about SCCP connections.
server	(Optional) Displays SCCP server information.
statistics	(Optional) Specifies statistical information for SCCP transcoding and conferencing applications.
call-identifications	(Optional) Displays the following identification numbers that is associated with each leg of a call: <ul style="list-style-type: none"> • Session • Call Reference • Connection • Call • Bridge • Profile
call-references	(Optional) Displays codec, port, ID numbers for each leg of a call.

Command Modes	Description
User EXEC	
Privileged EXEC (#)	

Command History	Release	Modification
	12.1(5)YH	This command was introduced on the Cisco VG200.
	12.2(6)T	This command was modified. The rsvp keyword was added.

Release	Modification
12.2(13)T	This command was implemented on the Cisco 2600 series, Cisco 3620, Cisco 3640, Cisco 3660, and Cisco 3700 series.
12.3(8)T	This command was modified. The following keywords and arguments were added: ccm , connections , details , group , internal , <i>number</i> , summary .
12.4(11)XW1	This command was modified. The <i>stype</i> field was added to the show output to show whether a connections is encrypted.
12.4(15)XY	This command was modified. The statistics and server keywords were added.
12.4(22)T	This command was modified. Command output was updated to show IPv6 information and it was integrated into Cisco IOS Release 12.2(13)T.
15.1(4)M	This command was modified. The call-identifications and call-references keywords were added.

Usage Guidelines

The router on which you use the **show sccp** command must be equipped with one or more digital T1/E1 packet voice trunk network modules (NM-HDVs) or high-density voice (HDV) transcoding/conferencing DSP farms (NM-HDV-FARMS) to provide digital signal processor (DSP) resources.

Use the **show sccp ccm group** command to show detailed information about all groups assigned to the Cisco Unified CallManager. The optional group-number argument can be added to select details about a specific group.

Configure the **show sccp server statistics** command on the Cisco Unified Border Element, IP-to-IP Gateway, or Session Border Controller where no SCCP phone is registered, to show the statistical counts on the SCCP server. The counts display queuing errors and message drops on the transcoder alone when it is on the Cisco Unified Border Element, IP-to-IP Gateway, or Session Border Controller.

When the **show sccp server statistics** command is used on the Cisco Unified Manager Express (CME), it is recommended for use together with the `clear sccp server statistics` command.

Examples

In the following sample output, the gateway IP address can be an IPv4 or IPv6 address when it operates on an IPv4/IPv6 dual stack.

```
Router# show sccp
SCCP Admin State: UP
Gateway Local Interface: GigabitEthernet0/0
    IPv6 Address: 2001:DB8:C18:1::3
    IPv4 Address: 10.4.34.100
    Port Number: 2000
IP Precedence: 5
User Masked Codec list: None
Call Manager: 172.19.242.27, Port Number: 2000
    Priority: N/A, Version: 5.0.1, Identifier: 4
    Trustpoint: N/A
Call Manager: 2001:DB8:C18:1::100, Port Number: 2000
    Priority: N/A, Version: 7.0, Identifier: 1
    Trustpoint: N/A
```

Table 153 describes the significant fields shown in the display.

Table 153 *show sccp Field Descriptions*

Field	Description
SCCP Admin State	Current state of the SCCP session.
Gateway Local Interface	Local interface that SCCP applications use to register with Cisco Unified Communications Manager.
IP precedence	Sets the IP precedence value for SCCP.
User Masked Codec list	Codec to mask.
Call Manager	Cisco Unified CallManager server information.

The following is sample output from this command for IPv4 only. The field descriptions are self-explanatory.

```
Router# show sccp

SCCP Admin State: UP
Gateway IP Address: 10.10.10.11, Port Number: 0
Switchover Method: IMMEDIATE, Switchback Method: GUARD_TIMER
Switchback Guard Timer: 1200 sec, IP Precedence: 5
Max Supported MTP sessions: 100
Transcoding Oper State: ACTIVE - Cause Code: NONE
Active CallManager: 10.10.10.35, Port Number: 2000
TCP Link Status: CONNECTED
Conferencing Oper State: DOWN - Cause Code: DSPFARM_DOWN
Active CallManager: NONE
TCP Link Status: NOT_CONNECTED
CallManager: 10.10.10.37, Port Number: 2000
Priority: 3, Version: 3.1
CallManager: 10.10.10.35, Port Number: 2000
Priority: 2, Version: 3.0
```

The following sample shows statistical information for SCCP transcoding and conferencing applications.

```
Router# show sccp statistics

SCCP Transcoding Application Statistics:
TCP packets rx 548, tx 559
Unsupported pkts rx 3, Unrecognized pkts rx 0
Register tx 3, successful 3, rejected 0, failed 0
KeepAlive tx 543, successful 540, failed 2
OpenReceiveChannel rx 2, successful 2, failed 0
CloseReceiveChannel rx 0, successful 0, failed 0
StartMediaTransmission rx 2, successful 2, failed 0
StopMediaTransmission rx 0, successful 0, failed 0
MediaStreamingFailure rx 0
Switchover 1, Switchback 1

SCCP Conferencing Application Statistics:
TCP packets rx 0, tx 0
Unsupported pkts rx 0, Unrecognized pkts rx 0
Register tx 0, successful 0, rejected 0, failed 0
KeepAlive tx 0, successful 0, failed 0
OpenReceiveChannel rx 0, successful 0, failed 0
CloseReceiveChannel rx 0, successful 0, failed 0
StartMediaTransmission rx 0, successful 0, failed 0
StopMediaTransmission rx 0, successful 0, failed 0
```

```
MediaStreamingFailure rx 0
Switchover 0, Switchback 0
```

In the following example, the secure value of the stype field indicates that the connection is encrypted. The field descriptions are self-explanatory.

```
Router# show sccp connections
```

sess_id	conn_id	stype	mode	codec	ripaddr	rport	sport
16777222	16777409	secure-xcode	sendrecv	g729b	10.3.56.120	16772	19534
16777222	16777393	secure-xcode	sendrecv	g711u	10.3.56.50	17030	18464

```
Total number of active session(s) 1, and connection(s) 2
```

The following example shows the remote IP addresses of active RTP sessions, each of which shows either an IPv4 or an IPv6 address.

```
Router# show sccp connections
```

sess_id	conn_id	stype	mode	codec	sport	rport	ripaddr
16777219	16777245	conf	sendrecv	g711u	16516	27814	10.3.43.46
16777219	16777242	conf	sendrecv	g711u	17712	18028	10.3.43.2
16777219	16777232	conf	sendrecv	g711u	16890	19440	10.3.43.2
16777219	16777228	conf	sendrecv	g711u	19452	17464	10.3.43.2
16777220	16777229	xcode	sendrecv	g711u	17464	19452	10.3.43.2
16777220	16777227	xcode	sendrecv	g729b	19466	19434	2001:0DB8:C18:1:212:79FF:FED7:B254
16777221	16777233	mtp	sendrecv	g711u	19440	16890	10.3.43.2
16777221	16777231	mtp	sendrecv	g711u	17698	17426	2001:0DB8:C18:1:212:79FF:FED7:B254
16777223	16777243	mtp	sendrecv	g711u	18028	17712	10.3.43.2
16777223	16777241	mtp	sendrecv	g711u	16588	19446	2001:0DB8:C18:1:212:79FF:FED7:B254

The following is sample output for the two Cisco CallManager Groups assigned to the Cisco Unified CallManager: group 5 named "boston office" and group 988 named "atlanta office".

```
Router# show sccp ccm group
```

```
CCM Group Identifier: 5
Description: boston office
Bound Interface: NONE, IP Address: NONE
Registration Retries: 3, Registration Timeout: 10 sec
Keepalive Retries: 3, Keepalive Timeout: 30 sec
CCM Connect Retries: 3, CCM Connect Interval: 1200 sec
Switchover Method: GRACEFUL, Switchback Method: GRACEFUL_GUARD
Switchback Interval: 10 sec, Switchback Timeout: 7200 sec
Signaling DSCP value: default, Audio DSCP value: default
```

```
CCM Group Identifier: 988
Description: atlanta office
Bound Interface: NONE, IP Address: NONE
Associated CCM Id: 1, Priority in this CCM Group: 1
Associated Profile: 6, Registration Name: MTP123456789988
Associated Profile: 10, Registration Name: CFB123456789966
Registration Retries: 3, Registration Timeout: 10 sec
Keepalive Retries: 5, Keepalive Timeout: 30 sec
CCM Connect Retries: 3, CCM Connect Interval: 10 sec
Switchover Method: IMMEDIATE, Switchback Method: IMMEDIATE
Switchback Interval: 15 sec, Switchback Timeout: 0 sec
Signaling DSCP value: default, Audio DSCP value: default
```

Table 154 describes the significant fields shown in the display.

Table 154 *show sccp ccm group Field Descriptions*

Field	Description
CCM Group Identifier	Current state of the SCCP session.
Description	Local interface that SCCP applications use to register with Cisco Unified Communications Manager.
Binded Interface	Sets the IP precedence value for SCCP.
Registration Retries	Codec to mask.
Registration Timeout	Cisco Unified CallManager server information.
Keepalive Retries	Displays the number of keepalive retries from Skinny Client Control Protocol (SCCP) to Cisco Unified CallManager.
Keepalive Timeout	Displays the number of times that a DSP farm attempts to connect to a Cisco Unified CallManager.
CCM Connect Retries	Displays the amount of time, in seconds, that a given DSP farm profile waits before attempting to connect to a Cisco Unified CallManager when the current Cisco Unified CallManager fails to connect.
CCM Connect Interval	Method that the SCCP client uses when the communication link between the active Cisco Unified CallManager and the SCCP client fails.
Switchover Method	Method used when the secondary Cisco Unified CallManager initiates the switchback process with that higher order Cisco Unified CallManager.
Switchback Method	Method used when the secondary Cisco Unified CallManager initiates the switchback process with that higher order Cisco Unified CallManager.
Switchback Interval	Amount of time that the DSP farm waits before polling the primary Cisco Unified CallManager when the current Cisco Unified CallManager switchback connection fails.
Switchback Timeout	Amount of time, in seconds, that the secondary Cisco Unified CallManager waits before switching back to the primary Cisco Unified CallManager.
Associated CCM Id	Number assigned to the Cisco Unified CallManager.
Registration Name	User-specified device name in Cisco Unified CallManager.
Associated Profile	Number of the DSP farm profile associated with the Cisco Unified CallManager group.

The following sample output displays the summary information for all SCCP call references:

```
Router# show sccp call-reference

Related Commands

Command	Description
dsp service dspfarm	Configures DSP farm services for a specified voice card.
dspfarm (DSP farm)	Enables DSP-farm service.
dspfarm profile	Enters DSP farm profile configuration mode and defines a profile for DSP farm services.
sccp	Enables SCCP and its associated transcoding and conferencing applications.
show dspfarm	Displays summary information about DSP resources.

show sccp ccm group

To display the groups that are configured on a specific Cisco Unified CallManager, use the **show sccp ccm group** command in privileged EXEC mode.

```
show sccp ccm group [group-number]
```

Syntax Description	<i>group-number</i>	(Optional) Number that identifies the Cisco CallManager group. Range is 1 to 65535. There is no default value.
---------------------------	---------------------	--

Command Modes	Privileged EXEC
----------------------	-----------------

Command History	Release	Modification
	12.3(8)T	This command was introduced.

Usage Guidelines Use the **show sccp ccm group** command to show detailed information about all groups assigned to the Cisco Unified CallManager. The optional *group-number* argument can be added to select details about a specific group.

Examples The following is sample output for the two Cisco CallManager Groups assigned to the Cisco Unified CallManager: group 5 named “boston office” and group 988 named “atlanta office”.

```
Router# show sccp ccm group

CCM Group Identifier: 5
Description: boston office
Binded Interface: NONE, IP Address: NONE
Registration Retries: 3, Registration Timeout: 10 sec
Keepalive Retries: 3, Keepalive Timeout: 30 sec
CCM Connect Retries: 3, CCM Connect Interval: 1200 sec
Switchover Method: GRACEFUL, Switchback Method: GRACEFUL_GUARD
Switchback Interval: 10 sec, Switchback Timeout: 7200 sec
Signaling DSCP value: default, Audio DSCP value: default

CCM Group Identifier: 988
Description: atlanta office
Binded Interface: NONE, IP Address: NONE
Associated CCM Id: 1, Priority in this CCM Group: 1
Associated Profile: 6, Registration Name: MTP123456789988
Associated Profile: 10, Registration Name: CFBI23456789966
Registration Retries: 3, Registration Timeout: 10 sec
Keepalive Retries: 5, Keepalive Timeout: 30 sec
CCM Connect Retries: 3, CCM Connect Interval: 10 sec
Switchover Method: IMMEDIATE, Switchback Method: IMMEDIATE
Switchback Interval: 15 sec, Switchback Timeout: 0 sec
Signaling DSCP value: default, Audio DSCP value: default
```

Table 155 describes significant fields shown in this output.

Table 155 *show sccp ccm group Field Descriptions*

Field	Description
CCM Group Identifier	Displays the Cisco CallManager group number.
Description	Displays the optional description of the group assigned to the group number.
Binded Interface	Displays the IP address of the selected interface is used for all calls within a given profile.
Registration Retries	Number of times that SCCP tries to register with a Cisco Unified CallManger
Registration Timeout	Length of time, in seconds, between registration messages sent from SCCP to the Cisco Unified CallManager.
Keepalive Retries	Displays the number of keepalive retries from Skinny Client Control Protocol (SCCP) to Cisco Unified CallManager.
Keepalive Timeout	Displays the length of time, in seconds, between keepalive retries.
CCM Connect Retries	Displays the number of times that a DSP farm attempts to connect to a Cisco Unified CallManager.
CCM Connect Interval	Displays the amount of time, in seconds, that a given DSP farm profile waits before attempting to connect to a Cisco Unified CallManager when the current Cisco Unified CallManager fails to connect.
Switchover Method	Method that the SCCP client uses when the communication link between the active Cisco Unified CallManager and the SCCP client fails.
Switchback Method	Method used when the secondary Cisco Unified CallManager initiates the switchback process with that higher order Cisco Unified CallManager.
Switchback Interval	Amount of time that the DSP farm waits before polling the primary Cisco Unified CallManager when the current Cisco Unified CallManager switchback connection fails.
Switchback Timeout	Amount of time, in seconds, that the secondary Cisco Unified CallManager waits before switching back to the primary Cisco Unified CallManager.
Associated CCM Id	Number assigned to the Cisco Unified CallManager.
Registration Name	User-specified device name in Cisco Unified CallManager.
Associated Profile	Number of the DSP farm profile associated with the Cisco Unified CallManager group.

Related Commands

Command	Description
dspfarm profile	Enters DSP farm profile configuration mode and defines a profile for DSP farm services.
sccp ccm	Adds a Cisco Unified CallManager server to the list of available servers.

show sccp connections details

To display Skinny Client Control Protocol (SCCP) connection details such as call-leg details, use the **show sccp connections details** command in privileged EXEC mode.

show sccp connections details

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.3(8)T	This command was introduced.

Examples The following is sample output from this command:

```
Router# show sccp connections details

bridge-info(bid, cid) - Normal bridge information(Bridge id, Calleg id)
mmbridge-info(bid, cid) - Mixed mode bridge information(Bridge id, Calleg id)

sess_id   conn_id   call-id   codec   pkt-period type       bridge-info(bid, cid)
mmbridge-info(bid, cid)

16800395  -         15       N/A    N/A      transmsp All RTPSPI Callegs  N/A

16800395  18425905  13       g711u  20      rtpspi   (9,15)               N/A

Total number of active session(s) 1, connection(s) 2, and callegs 3
```

Related Commands	Command	Description
	dspfarm profile	Enters DSP farm profile configuration mode and defines a profile for DSP farm services.
	sccp ccm	Adds a Cisco CallManager server to the list of available servers and sets various parameters.
	show sccp connections internal	Displays the internal SCCP details.
	show sccp connections summary	Displays a summary of the number of SCCP sessions and connections.

show sccp connections internal

To display the internal Skinny Client Control Protocol (SCCP) details such as time-stamp values, use the **show sccp connections internal** command in privileged EXEC mode.

show sccp connections internal

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.3(8)T	This command was introduced.

Examples The following is sample output from this command:

```
Router# show sccp connections internal

Total number of active session(s) 0, and connection(s) 0
```

Field descriptions should be self-explanatory.

Related Commands	Command	Description
	dspfarm profile	Enters DSP farm profile configuration mode and defines a profile for DSP farm services.
	sccp ccm	Adds a Cisco CallManager server to the list of available servers and sets various parameters.
	show sccp connections details	Displays the SCCP connection details.
	show sccp connections summary	Displays a summary of the number of SCCP sessions and connections.

show sccp connections rsvp

To display information about active Skinny Client Control Protocol (SCCP) connections that are using RSVP, use the **show sccp connections rsvp** command in privileged EXEC mode.

```
show sccp connections rsvp
```

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.4(6)T	This command was introduced.

Examples The following is sample output from this command:

```
Router# show sccp connections rsvp

sess_id   conn_id   rsvp_id   dir local ip      :port remote ip      :port
16777578  16778093  -210      SEND 192.168.21.1  :18486 192.168.20.1  :16454
16777578  16778093  -211      RECV 192.168.21.1  :18486 192.168.20.1  :16454

Total active sessions 1, connections 2, rsvp sessions 2
```

[Table 156](#) describes the fields shown in the display.

Table 156 *show sccp connections rsvp Field Descriptions*

Field	Description
sess_id	Identification number of the SCCP session.
conn_id	Identification number of the SCCP connection.
rsvp_id	Identification number of the RSVP connection.
dir	Direction of the SCCP connection.
local ip	IP address of the local endpoint.
remote ip	IP address of the remote endpoint.
port	Port number of the local or remote endpoint.
Total active sessions	Total number of active SCCP sessions.
connections	Number of active connections that are a part of the SCCP sessions.
rsvp session	Number of active connections that use RSVP.

show sccp connections rsvp

Related Commands	Command	Description
	debug sccp all	Displays debugging information for SCCP.
	dspfarm profile	Enters DSP farm profile configuration mode and defines a profile for DSP farm services.
	rsvp	Enables RSVP support on a transcoding or MTP device.
	sccp	Enables SCCP on the interface.
	sccp local	Selects the local interface that SCCP applications use to register with Cisco Unified CallManager.
	show sccp connections summary	Displays a summary of the number of SCCP sessions and connections.

show sccp connections summary

To display a summary of the number of sessions and connections based on the service type under the Skinny Client Control Protocol (SCCP) application, use the **show sccp connections summary** command in privileged EXEC mode.

show sccp connections summary

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.3(8)T	This command was introduced.

Examples The following is sample output from this command:

```
Router# show sccp connections summary

SCCP Application Service(s) Statistics Summary:
Total Conferencing Sessions: 0, Connections: 0
Total Transcoding Sessions: 0, Connections: 0
Total MTP Sessions: 0, Connections: 0
Total SCCP Sessions: 0, Connections: 0
```

[Table 157](#) describes significant fields shown in this output.

Table 157 *show sccp connections summary Field Descriptions*

Field	Description
Connections	Displays the total number of current connections associated with a given application.
Total Conferencing Sessions	Displays the number of current conferencing sessions.
Total MTP Sessions	Displays the number of current Media Termination Point (MTP) sessions.
Total SCCP Sessions	Displays the number of current SCCP sessions.
Total Transcoding Sessions	Displays the number of current transcoding sessions.

■ show sccp connections summary

Related Commands	Command	Description
	dspfarm profile	Enters DSP farm profile configuration mode and defines a profile for DSP farm services.
	sccp ccm	Adds a Cisco CallManager server to the list of available servers and sets various parameters.
	show sccp connections details	Displays the SCCP connection details.
	show sccp connections internal	Displays the internal SCCP details.

show sccp server statistics

To display the statistical counts on the Skinny Client Control Protocol (SCCP) server, use the **show sccp server statistics** command in privileged EXEC mode.

show sccp server statistics

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	12.4(15)XY	This command was introduced.

Usage Guidelines Configure the **show sccp server statistics** command on the Cisco Unified Border Element, IP-to-IP Gateway, or Session Border Controller where no SCCP phone is registered, to show the statistical counts on the SCCP server. The counts display queuing errors and message drops on the transcoder alone when it is on the Cisco Unified Border Element, IP-to-IP Gateway, or Session Border Controller.

When the **show sccp server statistics** command is used on the Cisco Unified Manager Express (CME), it is recommended for use together with the **clear sccp server statistics** command.

Examples The following example shows the SCCP statistical counts on the server:

```
Router# show sccp server statistics

Failure type          Error count
-----
Send queue enqueue   2
Socket send          3
Msg discarded upon error 5
```

Field descriptions should be self-explanatory.

Related Commands	Command	Description
	clear sccp server statistics	Clears the counts displayed the under show sccp server statistics command.

show sdsfarm

To display the status of the configured digital signal processor (DSP) farms and transcoding streams, use the **show sdsfarm** command in privileged EXEC mode.

```
show sdsfarm { units [name unit-name | register | summary | tag number | unregister] | sessions
              [active | callID number | states | statistics | streamID number | summary] | message statistics }
```

Syntax Description		
units		Displays the configured and registered DSP farms.
name <i>unit-name</i>	(Optional)	Displays the name of the unit.
register	(Optional)	Displays information about the registered units.
summary	(Optional)	Displays summary information about the units.
tag <i>number</i>	(Optional)	Displays tag number of the unit.
unregister	(Optional)	Displays information about the unregistered units.
sessions		Displays the transcoding streams.
active	(Optional)	Displays all active sessions.
callID	(Optional)	Displays activities for a specific caller ID.
<i>number</i>	(Optional)	The caller ID number displayed by the show voip rtp connection command.
states	(Optional)	Current state of the transcoding stream.
statistics	(Optional)	Displays session statistics.
streamID <i>number</i>	(Optional)	Displays the transcoding stream sequence number.
summary	(Optional)	Displays summary information.
message		Displays message information.
statistics		Displays statistics information about the messages.

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	12.3(11)T	This command was introduced.
	12.4(22)T	The following combinations of keywords and arguments were added: name , <i>unit-name</i> , register , summary , tag number , unregister , states , streamID number , message statistics .

Examples

The following example displays the configured and registered DSP farms:

```
Router# show sdsfarm units

mtp-1 Device:MTP123456782012 TCP socket:[-1] UNREGISTERED
actual_stream:0 max_stream 0 IP:0.0.0.0 0 Unknown 0 keepalive 0

33  2    IDLE  -1    0    G711Ulaw64k /20ms
34  2    IDLE  -1    0    G711Ulaw64k /20ms
35  2    IDLE  -1    0    G711Ulaw64k /20ms
36  2    IDLE  -1    0    G711Ulaw64k /20ms
37  2    IDLE  -1    0    G711Ulaw64k /20ms
38  2    IDLE  -1    0    G711Ulaw64k /20ms
39  2    IDLE  -1    0    G711Ulaw64k /20ms
40  2    IDLE  -1    0    G711Ulaw64k /20ms

```

Table 158 describes the fields shown in the **show sdspfarm** command display.

Table 158 *show sdspfarm Field Descriptions*

Field	Description
act-streams	Active streams that are involved in calls.
alloc-streams	Number of transcoding streams that are actually allocated to all DSP farms that are registered to Cisco CME.
callID	Caller ID that the active stream is in.
Codec	Codec in use.
confID	ConfID that is used to communicate with DSP farms.
discard	Number of packets that are discarded.
dstCall-ID	Caller ID of the destination IP call leg.
Duration or dur	Packet rates, in milliseconds.
ID	Transcoding stream sequence number in Cisco CME.
in-pak	Number of incoming packets from the source call leg.
Local	Local port for voice packets.
max-mtps	Maximum number of Message Transfer Parts (MTPs) that are allowed to register in Cisco CME.
max-streams	Maximum number of transcoding streams that are allowed in Cisco CME.
mtp or MTP	MTP sequence number where the transcoding stream is located.
out-pak	Number of outgoing packets sending to source call leg.
peer Stream-ID	Stream sequence number of the other stream paired in the same transcoding session. (Two transcoding streams make up a transcoding session).
recv-pak	Number of voice packets received from the DSP farm.
srcCall-ID	Source caller ID of the source IP call leg.
State	Current state of the transcoding stream; could be IDLE, SEIZE, START, STOP, or END.
Stream-ID	Transcoding stream sequence number in Cisco CME.

Table 158 *show sdsfarm Field Descriptions (continued)*

Field	Description
TCP socket	Socket number for DSP farm (similar to TCP socket for show ephone output).
usage	Current usage of the stream; for example, Ip-Ip (IP to IP transcoding), Moh (for MOH transcoding) and Conf (conference).
vad	Voice-activity detection (VAD) flag for the transcoding stream. It should always be 0 (False).
xmit-pak	Number of packets that are sent to the DSP farm.

Related Commands

Command	Description
sdspfarm tag	Permits a DSP farm to be registered to Cisco CME and be associated with an SCCP client interface's MAC address.
sdspfarm transcode sessions	Specifies the maximum number of transcoding sessions allowed per Cisco CME router.
sdspfarm units	Specifies the maximum number of DSP farms that are allowed to be registered to Cisco CME.

show settlement

To display the configuration for all settlement servers and see specific provider and transactions, use the **show settlement** command in privileged EXEC mode.

```
show settlement [provider-number [transactions]]
```

Syntax Description	
<i>provider-number</i>	(Optional) Displays the attributes of a specific provider.
transactions	(Optional) Displays the transaction status of a specific provider.

Defaults Information about all servers is displayed.

Command Modes Privileged EXEC

Command History	Release	Modification
	12.0(4)XH1	This command was introduced on the Cisco 2600 series, Cisco 3600 series, and Cisco AS5300.
	12.1(1)T	This command was integrated into Cisco IOS Release 12.1(1)T.

Examples The following is sample output from this command displaying information about all settlement servers that are configured:

```
Router# show settlement

Settlement Provider 0
Type = osp
Address url = https://1.14.115.100:6556/
Encryption = all (default)
Max Concurrent Connections = 20 (default)
Connection Timeout = 3600 (s) (default)
Response Timeout = 1 (s) (default)
Retry Delay = 2 (s) (default)
Retry Limit = 1 (default)
Session Timeout = 86400 (s) (default)
Customer Id = 1000
Device Id = 1000
Roaming = Disabled (default)
Signed Token = on

Number of Connections = 0
Number of Transactions = 7
```

The following is sample output from this command displaying transaction and state information about a specific settlement server:

```
Router# show settlement 0 transactions

Transaction ID=8796304133625270342
      state=OSPC_GET_DEST_SUCCESS, index=0
      callingNumber=5710868, calledNumber=15125551212
```

Table 159 describes significant fields shown in this output. Provider attributes that are not configured are not shown.

Table 159 *show settlement Field Descriptions*

Field	Description
type	Settlement provider type.
address url	URL address of the provider.
encryption	SSL encryption method.
max-connections	Maximum number of concurrent connections to provider.
connection-timeout	Connection timeout with provider (in seconds).
response-timeout	Response timeout with provider (in seconds).
retry-delay	Delay time between retries (in seconds).
retry-limit	Number of retries.
session-timeout	SSL session timeout (in seconds).
customer-id	Customer ID, assigned by provider.
device-id	Device ID, assigned by provider.
roaming	Roaming enabled.
signed-token	Indicates if the settlement token is signed by the server.

Related Commands

Command	Description
connection-timeout	Configures the time that a connection is maintained after a communication exchange is completed.
customer-id	Identifies a carrier or ISP with a settlement provider.
device-id	Specifies a gateway associated with a settlement provider.
encryption	Sets the encryption method to be negotiated with the provider.
max-connection	Sets the maximum number of simultaneous connections to be used for communication with a settlement provider.
response-timeout	Configures the maximum time to wait for a response from a server.
retry-delay	Sets the time between attempts to connect with the settlement provider.
session-timeout	Sets the interval for closing the connection when there is no input or output traffic.
settlement	Enters settlement configuration mode and specifies the attributes specific to a settlement provider.
type	Configures an SAA-RTR operation type.

show sgcp connection

To display all active Simple Gateway Control Protocol (SGCP) connections on a router, use the **show sgcp connection** command in EXEC mode.

show sgcp connection [*interface number*]

Syntax Description	interface	(Optional) Displays output for a particular DS1 interface.
	<i>number</i>	(Optional) Interface (controller) number.

Defaults All active SGCP connections on the host are displayed.

Command Modes EXEC

Command History	Release	Modification
	12.0(5)T	This command was introduced in a private release on the Cisco AS5300 only and was not generally available.
	12.0(7)XK	This command was implemented on the Cisco MC3810 and Cisco 3600 series (except for the Cisco 3620) in a private release that was not generally available.

Examples The following is sample output from this command displaying active connections on a router:

```
Router# show sgcp connection
```

```
Endpoint          Call_ID(C) Conn_ID(I) (P)ort (M)ode (S)tate (E)vent[SIFL] (R)esult[EA]
1. ds1-0/1@r3810-5      C=1,1,2 I=0x1 P=16492,16476 M=3 S=4 E=3,0,0,3 R=0, 0
```

The following is sample output from this command displaying the state of SGCP on a router:

```
Router# show sgcp connection
```

```
SGCP Admin State DOWN, Oper State DOWN
SGCP call-agent: 209.165.200.225 , SGCP graceful-shutdown enabled? FALSE
SGCP request timeout 40, SGCP request retries 10
```

[Table 160](#) describes significant fields shown in this output.

Table 160 *show sgcp connection* Field Descriptions

Field	Description
SGCP Admin State	Administrative and operational state of the SGCP daemon.
SGCP call-agent	Address of the call agent specified with the sgcp command.
SGCP graceful-shutdown enabled	The state of the sgcp graceful-shutdown command.
SGCP request timeout	The setting for the sgcp request timeout command.
SGCP request retries	The setting for the sgcp request retries command.

Related Commands	Command	Description
	show sgcp endpoint	Displays SGCP endpoint information.
	show sgcp statistics	Displays global statistics for the SGCP packet count, success, and failure counts.

show sgcp endpoint

To display Simple Gateway Control Protocol (SGCP) endpoints that are eligible for SGCP management, use the **show sgcp endpoint** command in EXEC mode.

```
show sgcp endpoint [interface ds1 [ds0]]
```

Syntax Description	Parameter	Description
	interface <i>ds1</i>	(Optional) DS1 interface for which to display SGCP endpoint information. Range is from 1 to 1000.
	<i>ds0</i>	(Optional) DS0 interface for which to display SGCP endpoint information. Range is from 0 to 30.

Command Modes EXEC

Command History	Release	Modification
	12.0(5)T	This command was introduced in a private release on the Cisco AS5300 only and was not generally available.
	12.0(7)XK	This command was implemented on the Cisco MC3810 and Cisco 3600 series (except for the Cisco 3620) in a private release that was not generally available.

Usage Guidelines Use this command to display SGCP endpoint information for the whole router or for a specific DS1 interface and, optionally, a specific DS0. If you enter a nonexistent combination of a DS1 and DS0, the following error message appears: “No matching connection found.”

Examples The following is sample output from this command displaying SGCP endpoint information being set for a matching connection between DS1 interface 1 and DS0 interface 10:

```
Router# show sgcp endpoint interface 1 10
```

Related Commands	Command	Description
	show sgcp connection	Displays all the active connections on the host router.
	show sgcp statistics	Displays global statistics for the SGCP packet count, success, and failure counts.

show sgcp statistics

To display global statistics for the Simple Gateway Control Protocol (SGCP) packet count, success and failure counts, and other information, use the **show sgcp statistics** command in EXEC mode.

show sgcp statistics

Syntax Description This command has no arguments or keywords.

Command Modes EXEC

Command History	Release	Modification
	12.0(7)XK	This command was introduced on the Cisco MC3810 and Cisco 3600 series (except for the Cisco 3620) in a private release that was not generally available.
	12.0(5)T	This command was implemented on the Cisco AS5300 only in a private release that was not generally available.

Usage Guidelines You can filter the displayed output, as shown in the examples.

Examples The following is sample output from this command displaying SGCP packet statistics:

```
Router# show sgcp statistics

UDP pkts rx 5, tx 13
Unrecognized rx pkts 0, SGCP message parsing errors 0
Duplicate SGCP ack tx 0
Failed to send SGCP messages 0
CreateConn rx 1, successful 1, failed 0
DeleteConn rx 0, successful 0, failed 0
ModifyConn rx 0, successful 0, failed 0
DeleteConn tx 0, successful 0, failed 0
NotifyRequest rx 3, successful 3, failed 0
Notify tx 3, successful 3, failed 0
ACK tx 4, NACK tx 0
ACK rx 1, NACK rx 0

IP address based Call Agents statistics:
IP address 1.4.63.100, Total msg rx 5,
                    successful 5, failed 2
```

The following is sample output from this command showing how to filter output for specific information:

```
Router# show sgcp statistics | begin Failed

Failed to send SGCP messages 0
CreateConn rx 0, successful 0, failed 0
DeleteConn rx 0, successful 0, failed 0
ModifyConn rx 0, successful 0, failed 0
DeleteConn tx 0, successful 0, failed 0
NotifyRequest rx 0, successful 0, failed 0
```

■ show sgcp statistics

```
Notify tx 0, successful 0, failed 0
ACK tx 0, NACK tx 0
ACK rx 0, NACK rx 0
```

```
Router# show sgcp statistics | exclude ACK
```

```
UDP pkts rx 0, tx 0
Unrecognized rx pkts 0, SGCP message parsing errors 0
Duplicate SGCP ack tx 0
Failed to send SGCP messages 0
CreateConn rx 0, successful 0, failed 0
DeleteConn rx 0, successful 0, failed 0
ModifyConn rx 0, successful 0, failed 0
DeleteConn tx 0, successful 0, failed 0
NotifyRequest rx 0, successful 0, failed 0
Notify tx 0, successful 0, failed 0
```

```
Router# show sgcp statistics | include ACK
```

```
ACK tx 0, NACK tx 0
ACK rx 0, NACK rx 0
```

Related Commands

Command	Description
show sgcp connection	Displays all the active connections on the host Cisco AS5300 universal access server.
show sgcp endpoint	Displays SGCP endpoint information.

show shared-line

To display information about the Session Initiation Protocol (SIP) shared lines, use the **show shared-line** command in user EXEC or privileged EXEC mode.

show shared-line {call | details | subscription | summary}

Syntax Description	call	Displays information about all active calls on shared lines.
	details	Displays detailed information about each shared line.
	subscription	Displays information for specific subscriptions to shared lines.
	summary	Displays summary information about active subscriptions to shared lines.

Command Modes	User EXEC (>) Privileged EXEC (#)
---------------	--------------------------------------

Command History	Release	Modification
	12.4(24)T	This command was introduced.

Examples

The following is sample output from the **show shared-line call** command:

```
Router# show shared-line call
```

```
Shared-Line active call info:
```

```
Shared-Line: '20141', active calls: 3
```

Local User	Local Address	Remote User	Remote Address	CallID
20141	20141@10.6.0.2	20143	20143@10.10.0.1	3168
20141	20141@10.6.0.1	Barge	20143@10.10.0.1	3209
20141	20141@10.6.0.2	20141	20141@10.10.0.1	3210

The following is sample output from the **show shared-line details** command:

```
Router# show shared-line details
```

```
Shared-Line info details:
```

```
Shared-Line: '20141', subscribed users: 2, max calls limit: 10
```

Index	Users	sub_id	peer_tag	Status
1	20141@10.6.0.1	5	40001	ACTIVE
2	20141@10.6.0.2	6	40002	ACTIVE

```
Free call queue size: 7, Active call queue size: 3
```

```
Message queue size: 20, Event queue size: 64
```

The following is sample output from the **show shared-line subscription** command:

```
Router# show shared-line subscription
```

show shared-line

Shared-Line Subscription Info:

```
Subscriptions to: '20141', total subscriptions: 2
SubID      Subscriber      Expires      Sub-Status
=====
5          20141@10.6.0.1      3600        NOTIFY_ACKED
6          20141@10.6.0.2      3600        NOTIFY_ACKED
```

The following is sample output from the **show shared-line summary** command:

```
Router# show shared-line summary
```

```
Shared-Line info summary:
Shared-Line: '20141', subscribed users: 2, max calls limit: 10
```

Table 161 describes the significant fields shown in the displays.

Table 161 show shared-line Field Descriptions

Field	Description
Expires	Number of seconds until the subscription expires.
Local Address	IP address of the local phone involved in the shared line call.
Local User	Extension number of the shared line.
Remote Address	IP address of the remote phone involved in the shared line call.
Remote User	Extension of the remote phone involved in the shared line call.
SubID	Subscription ID.
Subscriber	Extension number of the shared line and the IP address of the phone subscriber.
Sub-Status	Status of the subscription.
Users	IP addresses of the phones using the shared line.

Related Commands

Command	Description
debug shared-line	Displays debugging information about SIP shared lines.

show sip dhcp

To display the Session Initiation Protocol (SIP) parameters retrieved via the Dynamic Host Configuration Protocol (DHCP), use the **show sip dhcp** command in privileged EXEC mode.

show sip dhcp

Syntax Description This command has no arguments or keywords.

Command Modes Privileged EXEC (#)

Command History	Release	Modification
	12.4(22)YB	This command was introduced.
	15.0(1)M	This command was integrated in Cisco IOS Release 15.0(1)M.

Usage Guidelines If SIP parameters are configured to be retrieved via DHCP, use the **show sip dhcp** command to display the SIP parameters retrieved.

Examples The following is sample output from the **show sip dhcp** command:

```
Router# show sip dhcp

SIP UAC DHCP Info

SIP-DHCP interface: GigabitEthernet0/0

SIP server address: ipv4:9.13.2.36
Pilot number:      777777
Domain name:      dns:cisco.com
Secondary number:  222222
Secondary number:  333333
Secondary number:  444444
Secondary number:  555555
Secondary number:  666666
```

Table 162 describes the significant fields shown in the display.

Table 162 show sip dhcp Field Descriptions

Field	Description
SIP-DHCP interface	Indicates the type and number of the interface assigned to be used for SIP provisioning via DHCP.
SIP server address	Displays the address of the SIP server configured on the DHCP server and retrieved via DHCP.

Table 162 *show sip dhcp Field Descriptions (continued)*

Field	Description
Pilot number	Displays the pilot or contract number retrieved via DHCP and registered with the SIP server. Registration is done only for the pilot number.
Domain name	Indicates the domain name of the SIP server. The Cisco Unified Border Element will try to resolve this domain name by Domain Name System (DNS) into a routable layer 3 IP address for sending Register and Invite messages.
Secondary number	Indicates the first five secondary or additional numbers retrieved from the DHCP server. Secondary numbers are not registered with the SIP server.

Related Commands

Command	Description
debug ccsip dhcp	Displays information on SIP and DHCP interaction for debugging DHCP provisioning of SIP parameters.
