

# **Configuring Smart Licensing**

This module describes the configuration related to the Smart Licensing.

#### Table 1: Feature History for Smart License

Release	Modification
Release 7.0.11	Smart Licensing was introduced

This model contains the following topics:

- What is Smart Licensing?, on page 1
- What is Flexible Consumption Model?, on page 2
- How Does Smart Licensing Work?, on page 4
- What is Cisco Smart Software Manager?, on page 5
- Configuring Smart Licensing, on page 7
- Registering and Activating Your Router, on page 14
- Verifying the Smart Licensing Configuration, on page 19

# What is Smart Licensing?

Smart Licensing is a cloud-based, flexible software licensing model that enables you to activate and manage Cisco software licenses across their organization. Smart Licensing solution allows you to easily track the status of your license and software usage trends. Cisco Smart Licensing establishes a pool of licenses or entitlements that can be used across the entire organization in a flexible and automated manner. Smart Licensing helps simplify four core functions:

- **Purchase**—Creates a Smart Account (and optionally, your Virtual Account). Licenses are added to your Smart Account and are immediately available for use.
- Install—Register your product with your Smart Account using an account-based Registration Token. Thereafter, the entire process is automatic. Product Activation Keys (PAKs) and license files are no longer needed.
- Management—Make changes to license consumption by updating your configuration; any license change is automatically reflected in your Smart Account. You can share licenses in your Virtual Account through the license pooling option. License pools (logical grouping of licenses) can reflect your organization structure. Smart Licensing solution also offers Cisco Smart Software Manager, a centralized portal that enables you to manage all your Cisco software licenses from one centralized website.

• Visibility and Asset Management—Cisco Smart Software Manager (CSSM) portal offers an integrated view of the licenses you own and have deployed. You can use this data to make better purchase decisions, based on your consumption.

Note

• Smart Licensing is enabled by default.

Only Flexible Consumption Model smart licenses are supported.

For more information on Smart Licensing and related documentation, see https://www.cisco.com/c/en\_in/products/software/smart-accounts/software-licensing.html.

# What is Flexible Consumption Model?

The Flexible Consumption Model (FCM) provides the capability and flexibility to purchase software capacity as needed. FCM delivers the following:

- Pay-as-you-grow-Enables you to lower initial costs and add more capacity over time.
- Simplify operations—FCM delivers the carrier-class IOS-XR software feature set with two software suites, Essentials and Advanced, that simplify license management.
- Utilize capital efficiently—License pooling enables an efficient way to share licenses across the network.

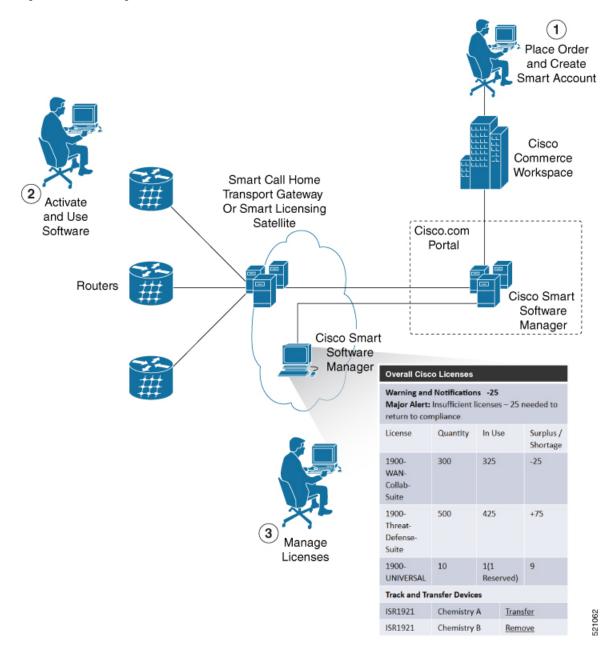

The following table provides information about FCM licenses for Cisco 8000 Series routers:

License Name	Hardware Supported	Consumption Pattern
Essential and Advanced Licenses: • ESS-CA-400G-RTU-2 • ESS-CA-100G-RTU-2 • ADV-CA-400G-RTU-2 • ADV-CA-100G-RTU-2	Fixed port router: Cisco 8201 Router Modular port router: Cisco 8812 Router	The number of essential or advanced licenses consumed depends on the number of active ports and is reported on per chassis basis.

License Name	Hardware Supported	Consumption Pattern
Hardware Tracking Licenses that support chassis	These Tracking licenses are named on the basis of the hardware	The number of licenses consumed depends on the number of line cards
• 8201-TRK	supported. For example, 8201-TRK licenses support Cisco 8201 Router.	in use.
• 8812-TRK		
• 8808-TRK		
• 8818-TRK		
• 8202-TRK		
• 8804-TRK		
• 8800-LC-48H-TRK		
• 8800-LC-36FH-TRK		

# **How Does Smart Licensing Work?**

Figure 1: Smart Licensing - Workflow

- 1. Place Order and Create Smart Account—You must have a Smart Account to set up Smart Licensing.
  - a. Go to https://software.cisco.com/.
  - **b.** Under the Administration section, click Get a Smart Account or Request Access to an Existing Smart Account.
  - c. Verify or enter your Cisco.com profile details to complete creating a Smart Account.

- 2. Activate and Use Software—Register your product. For more information, see the *Registering your Router* section. After you enable Smart Licensing, you can use either of the following options to communicate with the CSSM:
  - Smart Call Home—The Smart Call Home feature is automatically configured after the Smart Licensing is enabled. Smart Call Home is used by Smart Licensing as a medium for communication with the CSSM. You can use this feature to page a network support engineer, email a Network Operations Center, or use Cisco Smart Call Home services to generate a case with the Technical Assistance Center. The Call Home feature can deliver alert messages containing information about diagnostics and environmental faults and events. For more information on Smart Call Home feature, see the Smart Call Home Deployment Guide.
  - Smart Licensing CSSM On-Prem—The Smart licensing on-premise option provides an on-premises collector that can be used to consolidate and manage Smart license usage, as well as facilitate communications back to the CSSM at Cisco.com.
- Manage Licenses—You can manage and view reports about your overall license usage in the Smart Software Manager portal.

# What is Cisco Smart Software Manager?

Cisco Smart Software Manager enables you to manage all of your Cisco Smart software licenses from one centralized website. With Cisco Smart Software Manager, you organize and view your licenses in groups called virtual accounts (collections of licenses and product instances). The Cisco Smart Software Manager allows you to:

- · Create, manage, or view virtual accounts
- · Create and manage Product Instance Registration Tokens
- · Transfer licenses between virtual accounts or view licenses
- Transfer, remove, or view product instances
- · Run reports against your virtual accounts
- Modify your email notification settings
- View overall account information

To access the Cisco Smart Software Manager:

- Go to https://software.cisco.com.
- Under the License section, click Smart Software Licensing.

## **Smart Licensing Deployment Options**

The following illustration shows the various options available for deploying Smart Licensing:

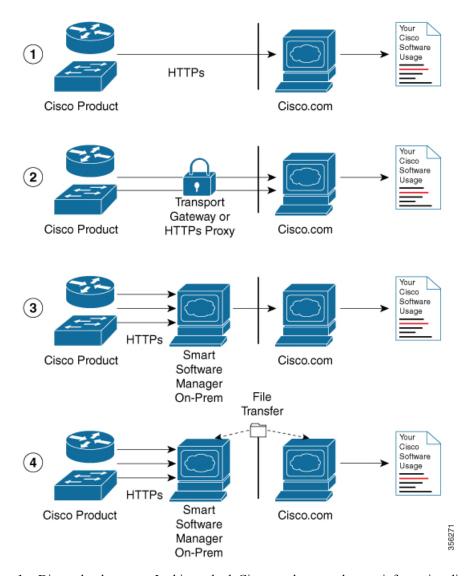

Figure 2: Smart Licensing Deployment Options

- Direct cloud access—In this method, Cisco products send usage information directly over the internet to CSSM on http://www.cisco.com; no additional components are needed for deployment.
- 2. Direct cloud access through an HTTPs proxy—In direct cloud access through an HTTPs proxy deployment method, Cisco products send usage information over the internet through a proxy server—either a Smart Call Home Transport Gateway or off-the-shelf Proxy (such as Apache) to CSSM on http://www.cisco.com.
- **3.** Mediated access through an on-premises collector-connected—In mediated access through an on-premises collector-connected deployment method, Cisco products send usage information to a locally connected collector, which acts as a local license authority. Periodically, the information is exchanged to keep the databases in synchronization.
- 4. Mediated access through an on-premises collector-disconnected—In the mediated access through an on-premises collector-disconnected deployment method, Cisco products send usage information to a local disconnected collector, which acts as a local license authority. Exchange of human-readable information is performed occasionally (once a month) to keep the databases in synchronization.

Options 1 and 2 provide easy deployment options, whereas options 3 and 4 provide secure environment deployment options.

**Note** Smart Software On-Premise provides support for options 3 and 4.

The communication between Cisco devices and CSSM is facilitated by the Smart Call Home software.

# **Configuring Smart Licensing**

## **Prerequisites for Configuring Smart Licensing**

Ensure that you have completed the following activities on Cisco Smart Software Manager:

- Set up a Cisco Smart Account. For more information, see the *How Smart Licensing Works* section in this document.
- Set up Virtual Account or accounts. For more information, see the *Virtual Accounts* section in the Smart Software Manager Help.
- Create user roles in the Users tab in the Manage Smart Account page. Provide the appropriate user access rights.
- Accept the Smart Software Licensing Agreement on Cisco Smart Software Manager to register your router.
- Have a layer 3 connection set up on your router.
- · Configure a valid DNS and proper time on the router to connect CSSM or CSSM On-Prem.

## Setting up the Router for Smart Licensing

Table 2: Three-step Roadmap to Set up the Router for Smart Licensing

Activity	Communication Connection Options					
Step 1—Configure Communications	See the <i>Configuring a</i> <i>Direct Cloud Connection</i> section.	irect Cloud Connection Connection through a				
Step 2—Register and Activate	See the <i>Registering and A</i>	ctivating your Router sec	tion.			
Step 3—Verify the Configuration	See the Verifying your Sm	See the Verifying your Smart Licensing Configuration section.				

# **Configuring a Communications Connection Between the Router and Cisco Smart Software Manager**

### **Configuring a Direct Cloud Connection**

In this deployment option, the **configure call-home profile** is configured by default. Use the **show call-home profile all** command to check the profile status.

Call Home service provides email-based and web-based notification of critical system events to Cisco Smart Software Manager.

To configure and enable Call Home service:

#### **SUMMARY STEPS**

- 1. configure terminal
- 2. call-home
- **3**. service active
- 4. contact-email-addr email-address
- 5. profile CiscoTAC-1
- 6. destination transport-method http
- 7. destination address http *url*
- 8. active
- 9. no destination transport-method email
- 10. commit
- **11.** exit
- 12. exit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	
Step 2	call-home	Enters Call Home configuration mode.
	Example:	
	Router(config)# call-home	
Step 3	service active	Activates Call Home service.
	Example:	
	Router(config-call-home)# service active	
Step 4	contact-email-addr email-address	Assigns the provided email address. You can enter up to
	Example:	200 characters in email address format.
	Router(config-call-home)# contact-email-addr username@example.com	<b>Note</b> Spaces are not allowed in the email address.

	Command or Action	Purpose			
Step 5	profile CiscoTAC-1	Enables the CiscoTAC-1 profile to be used with the Call			
	Example:	Home service. By default, the CiscoTAC-1 profile is disabled.			
	Router(config-call-home)# profile CiscoTAC-1	disabled.			
Step 6	destination transport-method http	Enables the Call Home service through an HTTP			
	Example:	connection.			
	Router(config-call-home-profile)# destination transport-method http				
Step 7	destination address http url	Connects the router to the Cisco Smart Software Manager.			
	Example:				
	Router(config-call-home-profile)# destination address http https://tools.cisco.com/its/service/oddce/services/DDCEService				
Step 8	active	Enables the destination profile.			
	Example:				
	<pre>Router(config-call-home-profile)# active</pre>				
Step 9	no destination transport-method email	Disables the email option for the Call Home service.			
	Example:				
	Router(config-call-home-profile)# no destination transport-method email				
Step 10	commit	Commits the configuration.			
	Example:				
	Router(config-call-home-profile)# commit				
Step 11	exit	Exits the Call Home destination profile configuration mode			
	Example:	and returns to the Call Home configuration mode.			
	Router(config-call-home-profile)# exit				
Step 12	exit	Exits the Call Home configuration mode and returns to the			
	Example:	global configuration mode.			
	Router(config-call-home)# exit Router(config)#				

## **Configuring a Connection Through an HTTP Proxy**

The Call Home service can be configured through an HTTPs proxy server.

#### **SUMMARY STEPS**

- 1. configure terminal
- **2**. call-home
- **3**. service active

- 4. contact-email-address email-address
- **5. http-proxy** *proxy-address* **port** *port-number*
- 6. profile CiscoTAC-1
- 7. no destination transport-method email
- 8. exit
- **9. profile** *profile*-*name*
- 10. reporting smart-licensing-data
- 11. destination transport-method http
- **12.** destination address http *url*
- **13**. active
- 14. exit
- 15. exit
- 16. commit

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	configure terminal	Enters global configuration mode.
	Example:	
	Router# configure terminal	
Step 2	call-home	Enters Call Home configuration mode.
	Example:	
	Router(config)# call-home	
Step 3	service active	Enables the Call Home feature.
	Example:	
	Router(config-call-home)# service active	
Step 4	contact-email-address email-address	Configures the default email address.
	Example:	
	Router(config-call-home)# contact-email-addr sch-smart-licensing@cisco.com	
Step 5	http-proxy proxy-address port port-number	Provides the proxy server information to the Call Home
	Example:	service.
	Router(config-call-home)# http-proxy 198.51.100.10 port 3128	
Step 6	profile CiscoTAC-1	Enables the CiscoTAC-1 profile to be used with the Call
	Example:	Home service. By default, the CiscoTAC-1 profile is disabled.
	Router(config-call-home)# profile CiscoTAC-1	disabled.
Step 7	no destination transport-method email	Disables the email option for the Call Home service.
	Example:	

	Command or Action	Purpose			
	Router(config-call-home-profile) # no destination transport-method email				
Step 8	exit	Exits the Call Home destination profile configuration mode			
	Example:	and returns to the Call Home configuration mode.			
	<pre>Router(config-call-home-profile)# exit Router(config-call-home)#</pre>				
Step 9	profile profile-name	Enters the Call Home destination profile configuration			
	Example:	mode for the specified destination profile name. If the specified destination profile does not exist, it is created.			
	Router(config-call-home)# profile test1	spectried destination prome does not exist, it is created.			
Step 10	reporting smart-licensing-data	Enables data sharing with the Call Home service through			
	Example:	the configured transport method, in this case, HTTP.			
	<pre>Router(config-call-home-profile)# reporting smart-licensing-data</pre>				
Step 11	destination transport-method http	Enables the HTTP message transport method.			
	Example:				
	Router(config-call-home-profile)# destination transport-method http				
Step 12	destination address http url	Connects the router to the Cisco Smart Software Manager.			
	Example:				
	Router(config-call-home-profile)# destination address http				
	https://tools.cisco.com/its/service/oddce/services/DDCEService				
Step 13	active	Enables the destination profile.			
	Example:				
	<pre>Router(config-call-home-profile)# active</pre>				
Step 14	exit	Exits the Call Home destination profile configuration mode			
	Example:	and returns to the Call Home configuration mode.			
	<pre>Router(config-call-home-profile)# exit</pre>				
Step 15	exit	Exits the Call Home configuration mode and returns to the			
	Example:	global configuration mode.			
	Router(config-call-home)# exit Router(config)#				
Step 16	commit	Commits the configuration.			
	Example:				
	Router(config)# commit				

## **Connecting to CSSM On-Premise**

This section describes how to configure the Call Home service for on-premise smart software through connected or disconnected mode.

#### **SUMMARY STEPS**

- 1. configure terminal
- 2. call-home
- **3. profile** *profile*-*name*
- 4. reporting smart-licensing-data
- 5. destination transport-method http
- 6. destination address http *url*
- 7. no destination address http *url*
- 8. destination preferred-msg-format {long-text | short-text | xml}
- 9. active
- **10**. exit
- **11.** exit
- **12.** http client source-interface ip-version interface-type interface-number
- 13. crypto ca trustpoint name
- 14. commit
- 15. end

#### **DETAILED STEPS**

	Command or Action	Purpose				
Step 1	configure terminal	Enters global configuration mode.				
	Example:					
	Router# configure terminal					
Step 2	call-home	Enters Call Home configuration mode.				
	Example:					
	Router(config)# call-home					
Step 3	profile profile-name	Enters the Call Home destination profile configuration				
	Example:	mode for the specified destination profile name. If the specified destination profile does not exist, it is creat				
	Router(config-call-home)# profile test1	specified destination profile does not exist, it is created				
Step 4	reporting smart-licensing-data	Enables data sharing with the Call Home service through				
	Example:	the configured transport method, in this case, HTTP.				
	Router(config-call-home-profile)# reporting smart-licensing-data					
Step 5	destination transport-method http	Enables the HTTP message transport method.				
	Example:					
	Router(config-call-home-profile)# destination transport-method http					

	Command or Action	Purpose
Step 6	destination address http <i>url</i> Example:	Configures the destination URL (CSSM) to which Call Home messages are sent.
	Router(config-call-home-profile)# destination address http http://209.165.201.15/Transportgateway/services/RouterRequestHandler Or	Note Ensure the IP address or the fully qualified domain name (FQDN) in the destination URL matches the IP address or the FQDN as configured for the <b>Host Name</b> on the CSSM On-Prem.
	Router(config-call-home-profile) # destination address http https://209.165.201.15/Transportgateway/services/RouterRequestHandler	
Step 7	no destination address http url	Removes the default destination address.
	<pre>Example: Router(config-call-home-profile) # no destination address http https://tools.cisco.com/its/service/oddce/services/DDCEService</pre>	
Step 8	destination preferred-msg-format {long-text   short-text   xml}	(Optional) Configures a preferred message format. The default message format is XML.
	<pre>Example: Router(config-call-home-profile)# destination preferred-msg-format xml</pre>	
Step 9	active	Enables the destination profile.
	<pre>Example: Router(config-call-home-profile)# active</pre>	
Step 10	<pre>exit Example: Router(config-call-home-profile)# exit</pre>	Exits the Call Home destination profile configuration mode and returns to the Call Home configuration mode.
Step 11	exit Example: Router(config-call-home)# exit	Exits the Call Home configuration mode and returns to the global configuration mode.
Step 12	Router (config) #         http client source-interface ip-version interface-type interface-number         Example:	Configures a source interface for the HTTP client.         Note       This command is mandatory for a VRF interface.
•	Router(config)# http client source-interface ipv4 Vlan100	
Step 13	crypto ca trustpoint <i>name</i> Example:	(Optional) Declares the trustpoint and its name.

	Command or Action	Purpose
	Router(config)# crypto ca trustpoint SLA-TrustPoint Router(config-trustp)#	
Step 14	commit	Commits the configuration.
	Example:	
	Router(config-trustp)# commit	
Step 15	end	Returns to the global configuration mode.
	Example:	
	Router(config-trustp)# end Router(config)#	

#### Installing CSSM On-Premise

For information on installation instructions, see the Smart Software Manager On-Prem Installation Guide.

# **Registering and Activating Your Router**

Product registration securely associates a device with the Smart Account and the Virtual Account of your choice. It also establishes trust between the end product and the CSSM. Tokens are used to register a product with the appropriate Virtual Account on CSSM Cloud (on Cisco.com) or CSSM On-Premise.

A Registration Token:

- Can be either used once or reused multiple times. You can set a limit to the number of times a token can be reused when you create the token.
- Can be created and revoked at any time.
- Expires after a period of time (default is 30 days; minimum is one day; maximum is 365 days)

A Registration Token is not:

- Product specific: The same Registration Token can be used on different product types.
- A license, key, or PAK.
- Stored on the Cisco device and they are not persistent.
- Required after the product is registered. Token expiration has no effect on previously registered products; it simply means that token can no longer be used to register a new product.

## Generating a New Token from CSSM

Step 1If you choose the direct cloud access deployment option, log in to CSSM from https://software.cisco.com/#.If you chose the mediated access deployment option, log in to CSSM On-Prem from https://<on-prem-ip-address>:8443.

L

- **Step 2** Select the **Inventory** tab.
- **Step 3** From the Virtual Account drop-down list, choose the virtual account to which you want to register your product.
- **Step 4** Select the **General** tab.
- Step 5 Click New Token.

You need this token to register your router.

#### What to do next

See the Registering Your Device With the Token section.

# **Registering Your Device With the Token**

#### **SUMMARY STEPS**

1. license smart register idtoken token-ID

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	license smart register idtoken token-ID	Registers Smart Licensing on the router using the
	Example:	registration token created in the CSSM. On successful registration, the product instance is created in the CSSM
	license smart register idtoken \$Tl4UytrNXBzbEs1ck8veUtWaG5abnZJOFdDa1FwbVRa%0Ab1RMbz0%3D%0A	virtual account and its license usage is displayed on the

## **Renewing Your Smart Licensing Registration**

Your registration is automatically renewed every six months. To find the status of the license, use the **license smart renew auth** command.

As long as the license is in an 'Authorized' or 'Out-of-compliance' (OOC) state, the authorization period is renewed. Grace period starts when an authorization period expires. During the grace period or when the grace period is in the 'Expired' state, the system continues to try to renew the authorization period. If a retry is successful, a new authorization period starts.

If the smart license renewal fails, then the product instance goes to an unidentified state and starts consuming the evaluation period.

#### Before you begin

Ensure that the following conditions are met to renew your smart license:

- Smart licensing is enabled.
- The router is registered.

#### **SUMMARY STEPS**

**1.** license smart renew {auth | id}

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	license smart renew {auth   id}	Renews your token ID or authorization with Cisco smart
	Example:	licensing.
	Router# license smart renew auth	

## **Deregistering Your Router from CSSM**

When a router is taken off the inventory, shipped elsewhere for redeployment, or returned to Cisco for replacement, you can deregister that router.

#### Before you begin

Ensure that a Layer 3 connection to CSSM is available to successfully deregister the device.

#### **SUMMARY STEPS**

1. license smart deregister

#### **DETAILED STEPS**

	Command or Action	Purpose	
Step 1	license smart deregister	Cancels the registration of the router and sends the router	
	<b>Example:</b> Router# license smart deregister	into evaluation mode. All smart licensing entitlements and certificates on the corresponding platform are removed. The	
		product instance of the router stored on CSSM is also removed.	

# **Verifying the Smart Licensing Configuration**

Use the following **show** commands to verify the default Smart Licensing configuration. If any issue is detected, take corrective action before making further configurations.

#### **SUMMARY STEPS**

- 1. show license status
- 2. show license all
- 3. show license status
- 4. show license udi
- 5. show license summary
- 6. show license platform summary
- 7. show license platform detail
- 8. show call-home smart-licensing statistics

#### **DETAILED STEPS**

	Command or Action	Purpose
Step 1	show license status	Displays the compliance status of Smart Licensing.
	Example:	Following are the possible status:
	Router# show license status	• Waiting—Indicates that the initial state after your device has made a license entitlement request. The device establishes communication with Cisco and successfully registers itself with the Cisco license manager.
		• Authorized—Indicates that your device is able to communicate with the Cisco license manager, and is authorized to initiate requests for license entitlements
		• Out-Of-Compliance—Indicates that one or more of your licenses are out-of-compliance. Buy more licenses, or renew the existing licenses.
		• Eval Period—Indicates that Smart Licensing is consuming the evaluation period. Register the device with the Cisco Licensing manager, else your license expires.

	Command or Action	Purpose	
		NoteRepetitive 'Smart Licensing evaluation expired' warning messages are displayed on the console every hour, but there is no functionality impact on the device. To stop these repetitive messages, register the device again with new a registration token.	
		• Disabled—Indicates that Smart Licensing is disabled.	
		• <b>Invalid</b> —Indicates that Cisco does not recognize the entitlement tag as the tag is not in the database.	
Step 2	<pre>show license all Example: Router# show license all</pre>	Displays all entitlements in use. The output also displays the associated licensing certificates, compliance status, Unique Device Identifier (UDI), and other details.	
Step 3	show license status	Displays the status of all entitlements in use.	
	<b>Example:</b> Router# show license status		
Step 4	<pre>show license udi Example: Router# show license udi</pre>	Displays the Unique Device Identifier (UDI) information.	
Step 5	<pre>show license summary Example: Router# show license summary</pre>	Displays a summary of all entitlements in use.	
Step 6	<pre>show license platform summary Example: Router# show license platform summary</pre>	Displays the registration status and provides detailed information about the essential, advanced, and tracking license consumption in generic or vortex license model.	
Step 7	show license platform detail	Displays detailed information about:	
	<b>Example:</b> Router# show license platform detail	<ul> <li>Licenses that can be consumed on a platform in both, generic and vortex models</li> <li>The active model, whether generic or vortex model</li> <li>The current count and the next consumption count of a license</li> </ul>	
Step 8	<pre>show call-home smart-licensing statistics Example: Router# show call-home smart-licensing statistics</pre>	Displays statistics of the communication between the Smart Licensing manager and the Cisco back-end using Smart Call Home. Note If the communication fails or drops, check your call home configuration for any errors.	

## **Smart Licensing Configuration Examples**

#### Example: Viewing the Call Home Profile

To display the **http Call Home profile** or the **On-Prem Call Home profile**, use the **show call-home profile all** command.

```
Router# show call-home profile all
Fri Sep 11 23:26:22.571 UTC
Profile Name: CiscoTAC-1
   Profile status: ACTIVE
   Profile mode: Full Reporting
   Reporting Data: Smart Call Home, Smart Licensing
   Preferred Message Format: xml
   Message Size Limit: 3145728 Bytes
   Transport Method: http
   HTTP address(es): https://tools.cisco.com/its/service/oddce/services/DDCEService
   Other address(es): default
   Periodic configuration info message is scheduled every 3 day of the month at 11:25
   Periodic inventory info message is scheduled every 3 day of the month at 11:10
   Alert-group
                           Severity
   _____
   inventory
                          normal
   Syslog-Pattern
                         Severity

#### **Example: Viewing License Information Before Registration**

To display the license entitlements, use the show license all command:

Registration: Status: UNREGISTERED Export-Controlled Functionality: NOT ALLOWED License Authorization: Status: EVAL MODE Evaluation Period Remaining: 89 days, 2 hours, 53 minutes, 27 seconds Export Authorization Key: Features Authorized: <none> Utility: Status: DISABLED Data Privacy: Sending Hostname: yes Callhome hostname privacy: DISABLED Smart Licensing hostname privacy: DISABLED Version privacy: DISABLED Transport: Type: Callhome License Usage \_\_\_\_\_ (8808-TRK): Description: Count: 1 Version: 1.0 Status: EVAL MODE Export status: NOT RESTRICTED (XR-8K-7.0-TRK): Description: Count: 1 Version: 1.0 Status: EVAL MODE Export status: NOT RESTRICTED (8800-LC-48H-TRK): Description: Count: 1 Version: 1.0 Status: EVAL MODE Export status: NOT RESTRICTED Product Information \_\_\_\_\_ UDI: PID:8808, SN:FOX224PJKHQ Agent Version Smart Agent for Licensing: 4.9.6\_rel/41 Reservation Info \_\_\_\_\_ License reservation: DISABLED To display the license usage information, use the show license usage command:

Router# show license usage
License Authorization:
 Status: EVAL MODE
 Evaluation Period Remaining: 89 days, 2 hours, 49 minutes, 40 seconds
 (8808-TRK):

Description: Count: 1 Version: 1.0 Status: EVAL MODE Export status: NOT RESTRICTED (XR-8K-7.0-TRK): Description: Count: 1 Version: 1.0 Status: EVAL MODE Export status: NOT RESTRICTED (8800-LC-48H-TRK): Description: Count: 1 Version: 1.0 Status: EVAL MODE Export status: NOT RESTRICTED

To display all the license summaries, use the show license summary command:

Router# show license s Smart Licensing is ENA	-	
Registration: Status: UNREGISTERED Export-Controlled Fu	nctionality: NOT ALLOWED	
License Authorization: Status: EVAL MODE Evaluation Period Res	maining: 89 days, 2 hours,	46 minutes, 55 seconds
License Usage:		
License	Entitlement tag	Count Status
	(8808-TRK) (XR-8K-7.0-TRK) (8800-LC-48H-TRK)	1 EVAL MODE 1 EVAL MODE 1 EVAL MODE

To display the license status information, use the show license status command:

```
Router# show license status

Smart Licensing is ENABLED

Utility:

Status: DISABLED

Data Privacy:

Sending Hostname: yes

Callhome hostname privacy: DISABLED

Smart Licensing hostname privacy: DISABLED

Version privacy: DISABLED

Transport:

Type: Callhome

Registration:

Status: UNREGISTERED

Export-Controlled Functionality: NOT ALLOWED
```

#### **Example: Registering the Router**

To register a device, use the license smart register idtoken command:

```
Router# license smart register idtoken
Tl4UytrNXBzbEs1ck8veUtWaG5abnZJOFdDa1FwbVRa%0AblRMbz0%3D%0A
```

#### Example: Viewing License Information After Registration

To display the license entitlements, use the show license all command

```
Router# show license all
Smart Licensing Status
_____
Smart Licensing is ENABLED
Registration:
 Status: REGISTERED
 Smart Account: Forty-Two uLtd.
 Export-Controlled Functionality: ALLOWED
 Initial Registration: SUCCEEDED on Sep 11 2020 23:38:45 UTC
 Last Renewal Attempt: None
 Next Renewal Attempt: Mar 10 2021 23:38:45 UTC
