

# Multiple Spanning Tree Protocol Commands

---

This module describes the commands used to configure multiple spanning tree protocol. For detailed information about MSTP concepts, configuration tasks, and examples, see the *L2VPN and Ethernet Services Configuration Guide for Cisco 8000 Series Routers*.

- [instance \(MSTP\), on page 2](#)
- [interface \(MSTP\), on page 3](#)
- [name \(MSTP\), on page 4](#)
- [portfast, on page 5](#)
- [show spanning-tree mst, on page 6](#)
- [spanning-tree mst, on page 8](#)
- [vlan-id \(MSTP\), on page 9](#)

# instance (MSTP)

To enter the multiple spanning tree instance (MSTI) configuration submode, use the **instance** command in MSTP configuration submode.

**instance** *id*

<b>Syntax Description</b>	<i>id</i> MSTI ID. Range is 0 to 4094.
---------------------------	--

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	MSTP configuration
----------------------	--------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 7.2.12	This command was introduced.

## Usage Guidelines

**Note** An instance ID of 0 represents the CIST for the region.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	<b>interface</b>	read, write

## Examples

The following example shows how to enter the MSTI configuration submode:

```
Router# configure
Router(config)#spanning-tree mst a
Router(config-mstp)# instance 101
Router(config-mstp-inst)#
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">show spanning-tree mst, on page 6</a>	Displays the multiple spanning tree protocol status information.
	<a href="#">spanning-tree mst, on page 8</a>	Enters the MSTP configuration submode
	<a href="#">vlan-id (MSTP), on page 9</a>	Associates a set of VLAN IDs with the current MSTI.

# interface (MSTP)

To enter the MSTP interface configuration submode, and to enable STP for the specified port, use the **interface** command in MSTP configuration submode.

**interface interface-type interface-path-id**

<b>Syntax Description</b>	<p><b>interface</b> Interface type. For more information, use the question mark (?) online help function.</p> <hr/> <p><b>interface-path-id</b> Physical interface.</p> <p>Use the <b>show interfaces</b> command to see a list of all possible interfaces currently configured on the router.</p> <p>For more information about the syntax for the router, use the question mark (?) online help function.</p>						
<b>Command Default</b>	None						
<b>Command Modes</b>	MSTP configuration						
<b>Command History</b>	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 7.2.12</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 7.2.12	This command was introduced.		
Release	Modification						
Release 7.2.12	This command was introduced.						
<b>Usage Guidelines</b>	A given port may only be enabled with one of MSTP, MSTAG, REPAG, PVSTAG or PVRSTAG.						
<b>Task ID</b>	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>interface</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	interface	read, write		
Task ID	Operations						
interface	read, write						
<b>Examples</b>	<p>The following example shows how to enter the MSTP interface configuration submode:</p> <pre>Router# <b>configure</b> Router(config)# <b>spanning-tree mst M0</b> Router(config-mstp)# <b>interface hundredGigE 0/0/0/1</b> Router(config-mstp-if)#</pre>						
<b>Related Commands</b>	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td><a href="#">show spanning-tree mst, on page 6</a></td> <td>Displays the multiple spanning tree protocol status information.</td> </tr> <tr> <td><a href="#">spanning-tree mst, on page 8</a></td> <td>Enters the MSTP configuration submode</td> </tr> </tbody> </table>	Command	Description	<a href="#">show spanning-tree mst, on page 6</a>	Displays the multiple spanning tree protocol status information.	<a href="#">spanning-tree mst, on page 8</a>	Enters the MSTP configuration submode
Command	Description						
<a href="#">show spanning-tree mst, on page 6</a>	Displays the multiple spanning tree protocol status information.						
<a href="#">spanning-tree mst, on page 8</a>	Enters the MSTP configuration submode						

## name (MSTP)

To set the name of the MSTP region, use the **name** command in MSTP configuration submode.

**name** *name*

### Syntax Description

*name* Specifies the name of the mstp region.

String of a maximum of 32 characters conforming to the definition of SnmpAdminString in RFC 2271.

### Command Default

The MAC address of the switch, formatted as a text string using the hexadecimal representation specified in IEEE Std 802.

### Command Modes

MSTP configuration

### Command History

Release	Modification
Release 7.2.12	This command was introduced.

### Task ID

Task ID	Operations
interface	read, write

### Examples

The following example shows how to set the name of the MSTP region to m1:

```
Router# configure
RP/0/RP0/CPU0:ios(config)#spanning-tree mst M0
Router(config-mstp)# name m1
```

### Related Commands

Command	Description
<a href="#">show spanning-tree mst, on page 6</a>	Displays the multiple spanning tree protocol status information.
<a href="#">spanning-tree mst, on page 8</a>	Enters the MSTP configuration submode

# portfast

To enable Port Fast on the port, and optionally enable BPDU guard, use the **portfast** command in MSTP interface configuration submenu.

**portfast** [**bpduguard**]

**Syntax Description** This command has no keywords or arguments.

**Command Default** PortFast is disabled.

**Command Modes** MSTP interface configuration

Command History	Release	Modification
	Release 7.2.12	This command was introduced.

**Usage Guidelines** You must disable and re-enable the port for Port Fast configuration to take effect. Use **shutdown** and **no shutdown** command (in interface configuration mode) to disable and re-enable the port.

This command enables the Port Fast feature (also known as edge port). When this is enabled, MSTP treats the port as an edge port, i.e., it keeps it in forwarding state and does not generate topology changes if the port goes down or comes up. It is not expected to receive MSTP BPDUs on an edge port. BPDU guard is a Cisco extension that causes the interface to be shut down using error-disable if an MSTP BPDU is received. For more information on Port Fast feature, refer to the *Multiple Spanning Tree Protocol* module in the *L2VPN and Ethernet Services Configuration Guide for Cisco 8000 Series Routers*

Task ID	Task ID	Operations
	interface	read, write

## Examples

The following example shows how to enable PortFast and BPDU guard on the port:

```
Router# configure
Router(config)# spanning-tree mst a
Router(config-mstp)# interface HundredGigE0/0/0/2
Router(config-mstp-if)# portfast
Router(config-mstp-if)# portfast bpduguard
```

Related Commands	Command	Description
	<a href="#">interface (MSTP), on page 3</a>	Enters the MSTP interface configuration submenu, and enables STP for the specified port.
	<a href="#">show spanning-tree mst, on page 6</a>	Displays the multiple spanning tree protocol status information.
	<a href="#">spanning-tree mst, on page 8</a>	Enters the MSTP configuration submenu

# show spanning-tree mst

To display the multiple spanning tree protocol status information, use the **show spanning-tree mst** command in EXEC mode.

**show spanning-tree mst** *protocol instance identifier* [**instance** *instance-id*] [{**blocked-ports** | **brief**}]

Syntax Description	
<i>protocol instance identifier</i>	String of a maximum of 25 characters that identifies the protocol instance.
<b>instance</b> <i>instance-id</i>	Forward interface in rack/slot/instance/port format.
<b>brief</b>	Displays a summary of MST information only.
<b>blocked-ports</b>	Displays MST information for blocked ports only.

**Command Default** None

**Command Modes** EXEC

Command History	Release	Modification
	Release 7.2.12	This command was introduced.

Task ID	Task ID	Operations
	interface	read

## Examples

The following example shows the output from the **show spanning-tree mst** command, which produces an overview of the spanning tree protocol state:

```
Router# show spanning-tree mst a instance 0
Operating in Provider Bridge mode
MSTI 0 (CIST):

  VLANS Mapped: 1-100, 500-1000, 1017

  Root ID    Priority    4097
            Address    0004.9b78.0800
            This bridge is the root
            Hello Time 2 sec Max Age 20 sec Forward Delay 15 sec

  Bridge ID  Priority    4097 (priority 4096 sys-id-ext 1)
            Address    0004.9b78.0800
            Hello Time 2 sec Max Age 20 sec Forward Delay 15 sec

Interface          Port ID          Designated          Port ID
Name              Prio.Nbr Cost    Role State    Cost Bridge ID    Prio.Nbr
```

```

-----
HundredGigEthernet0/0/0/1  128.65  20000  DSGN FWD  0  4097 0004.9b78.0800 128.65
HundredGigEthernet0/0/0/2  128.66  20000  DSGN FWD  0  4097 0004.9b78.0800 128.66
...

```

The following example shows the output from the **show spanning-tree mst** command when the **brief** and **blocked-ports** keywords are used:

```

Router# show spanning-tree mst a brief
MSTI 0 (CIST):
  VLAN IDs: 1-100, 500-1000, 1017
  This is the Root Bridge
MSTI 1:
  VLAN IDS: 101-499
  Root Port HundredGigEthernet0/0/0/2 , Root Bridge ID 0002.9b78.0812
...
Router# show spanning-tree mst blocked-ports
MSTI 0 (CIST):

Interface          Port ID          Designated          Port ID
Name               Prio.Nbr Cost   Role State   Cost Bridge ID      Prio.Nbr
-----
HundredGigEthernet0/0/0/4  128.196  200000 ALT  BLK  0  4097 0004.9b78.0800 128.195
...

```

---

**Related Commands**

Command	Description
<a href="#">spanning-tree mst, on page 8</a>	Enters the MSTP configuration submode

---

# spanning-tree mst

To enter the MSTP configuration submode, use the **spanning-tree mst** command in global configuration mode.

**spanning-tree mst** *protocol instance identifier*

<b>Syntax Description</b>	<i>protocol instance identifier</i> String of a maximum of 25 characters that identifies the protocol instance.
---------------------------	---

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	Global configuration
----------------------	----------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 7.2.12	This command was introduced.

## Usage Guidelines

**Note** In MSTP configuration, only one protocol instance can be configured at a time.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	interface	read, write

## Examples

The following example shows how to enter the MSTP configuration submode:

```
Router(config)# spanning-tree mst a
Router(config-mstp)#
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">instance (MSTP), on page 2</a>	Enters the multiple spanning tree instance (MSTI) configuration submode.
	<a href="#">interface (MSTP), on page 3</a>	Enters the MSTP interface configuration submode, and enables STP for the specified port.
	<a href="#">show spanning-tree mst, on page 6</a>	Displays the multiple spanning tree protocol status information.

## vlan-id (MSTP)

To associate a set of VLAN IDs with the current MSTI, use the **vlan-id** command in MSTI configuration submode.

```
vlan-id vlan-range [vlan-range] [vlan-range] [vlan-range]
```

<b>Syntax Description</b>	<i>vlan-range</i> List of VLAN ranges in the form a-b, c, d, e-f, g etc.
---------------------------	--

<b>Command Default</b>	None
------------------------	------

<b>Command Modes</b>	MSTI configuration
----------------------	--------------------

<b>Command History</b>	<b>Release</b>	<b>Modification</b>
	Release 7.2.12	This command was introduced.

<b>Task ID</b>	<b>Task ID</b>	<b>Operations</b>
	interface	read, write

**Examples** The following example shows how to use the vlan-id command:

```
Router(config-mstp-inst)# vlan-id 2-1005
```

<b>Related Commands</b>	<b>Command</b>	<b>Description</b>
	<a href="#">instance (MSTP), on page 2</a>	Enters the multiple spanning tree instance (MSTI) configuration submode.
	<a href="#">spanning-tree mst, on page 8</a>	Enters the MSTP configuration submode
	<a href="#">show spanning-tree mst, on page 6</a>	Displays the multiple spanning tree protocol status information.
