

## Preface

---

The *Integration Developer's Guide for Cisco Broadband Access Center, Release 3.5, 3.5.1, 3.5.2* describes the Cisco Broadband Access Center (BAC) Application Programming Interface (API), which you can use to integrate Cisco Broadband Access Center with your Business Support Systems (BSS) and Operational Support Systems (OSS).

This chapter provides an outline of the other chapters in this guide, details information about related documents that support this Cisco BAC release, and demonstrates the styles and conventions used in the guide.

This chapter contains the following sections:

- [Audience, page v](#)
- [Organization, page v](#)
- [Conventions, page vi](#)
- [Product Documentation, page vii](#)
- [Obtaining Documentation and Submitting a Service Request, page viii](#)

## Audience

System integrators, network administrators, and network technicians can use this integration guide to integrate the various BSS and OSS with Cisco BAC. Only experienced users should use these instructions. To use the instructions in this guide, you must be familiar with:

- Cisco BAC architecture.
- Java programming.

## Organization

This guide includes the following sections:

Section	Title	Description
Chapter 1	<a href="#">Introduction</a>	Describes the components that integrate with Cisco BAC.
Chapter 2	<a href="#">Cisco BAC Architecture</a>	Describes the Cisco BAC architecture and the functions of each component.

Section	Title	Description
Chapter 3	<a href="#">Client and RDU Communication</a>	Describes the communication between the Cisco BAC API and the Regional Distribution Unit (RDU).
Chapter 4	<a href="#">Batches and Commands</a>	Describes the concepts and rules related to batches and how you can troubleshoot the errors or any error that occur during integration.
Chapter 5	<a href="#">Events</a>	Describes and explains how to register and handle Cisco BAC events.
Chapter 7	<a href="#">Getting Started with the BAC API</a>	Describes how you can get started with the API.
Chapter 8	<a href="#">Use Cases</a>	Describes some of the most common provisioning API use cases.

## Conventions

This document uses the following conventions:

Convention	Indication
<b>bold font</b>	Commands and keywords and user-entered text appear in <b>bold font</b> .
<i>italic font</i>	Document titles, new or emphasized terms, and arguments for which you supply values are in <i>italic font</i> .
[ ]	Elements in square brackets are optional.
{ x   y   z }	Required alternative keywords are grouped in braces and separated by vertical bars.
[ x   y   z ]	Optional alternative keywords are grouped in brackets and separated by vertical bars.
string	A nonquoted set of characters. Do not use quotation marks around the string or the string will include the quotation marks.
<code>courier font</code>	Terminal sessions and information the system displays appear in <code>courier font</code> .
< >	Nonprinting characters such as passwords are in angle brackets.
[ ]	Default responses to system prompts are in square brackets.
!, #	An exclamation point (!) or a pound sign (#) at the beginning of a line of code indicates a comment line.

### Note

Means *reader take note*.

### Tip

Means *the following information will help you solve a problem*.

### Caution

Means *reader be careful*. In this situation, you might perform an action that could result in equipment damage or loss of data.

# Product Documentation

**Note**

We sometimes update the printed and electronic documentation after original publication. Therefore, you should also review the documentation on <http://www.cisco.com> for any updates.

Table 1 describes the product documentation that is available.
