

Troubleshooting Cisco Container Platform

This appendix describes the problems that may occur during the installation and operation of Cisco Container Platform and the possible ways of resolving these problems.

It contains the following topics:

- [Unable to Deploy NGINX Ingress Controller Using Helm, on page 1](#)
- [Unable to Start NGINX Ingress Controller Pod, on page 2](#)
- [Unable to Power on Worker VMs after a Shutdown, on page 2](#)

Unable to Deploy NGINX Ingress Controller Using Helm

Description	Error Message	Recommended Solution
Deploying the NGINX Ingress controller using Helm fails as RBAC is not configured in Helm.	It seems the cluster it is running with Authorization enabled (like RBAC) and there is no permissions for the ingress controller. Please check the configuration	As Cisco Container Platform uses RBAC for authentication, Helm also needs to be configured to use RBAC. Enable the RBAC parameter in Helm using the following command: <code>--set rbac.create=true</code>

Unable to Start NGINX Ingress Controller Pod

Description	Error Message	Recommended Solution
<p>When kube-proxy is used, setting both the <code>controller.service.externalIPs</code> and <code>controller.hostNetwork</code> variables to true for the NGINX-Ingress chart results in an invalid configuration.</p> <p>Both kube-proxy and NGINX uses port 80 for communication, causing a port conflict, and the NGINX Ingress controller pod is set to the <code>CrashLoopBackOff</code> state.</p>	<p>Port 80 is already in use. Please check the flag <code>--http-port</code></p>	<p>Ensure that both the <code>controller.service.externalIPs</code> and <code>controller.hostNetwork</code> variables are not set to true at the same time.</p>

Unable to Power on Worker VMs after a Shutdown

Description	Error Message	Recommended Solution
<p>Worker VMs may fail to power on after a shutdown.</p>	<p>File system specific implementation of <code>LookupAndOpen[file]</code> failed.</p>	<p>Follow these steps to resolve the problem:</p> <ol style="list-style-type: none"> 1. In the left pane, click on the VM that you want to power on. 2. In the right pane, from the Actions drop-down list, choose Edit Settings. The Edit Settings window displays the multiple hard disks of the VM. 3. Except for the primary hard disk (Hard disk 1), click each hard disk, and then click the Remove icon. Note Ensure that the Delete files from datastore check box is not checked. 4. Click OK.
