## CHAPTER 1

### Installing Cisco Multicast Manager 1-1

System Requirements	1-1
Hardware Requirements	1-1
Operating System Requirements	1-2
Supported Client Browsers	1-3
Required Services and Ports	1-3
Licensing	1-4
Overview of CMM Licensing	1-4
Obtaining a CMM License	1-5
Installing the CMM License	1-6
Managing CMM Licenses	1-7
TFTP Server	1-9
Linux IP Address/Default Route	1-10
Solaris Installation Instructions	1-10
Installing the License File	1-10
Creating the Installation Directory (Optional)	1-11
Mounting the CD-ROM	1-11
Unzipping the Tar File	1-11
Running the Solaris Installation Script	1-11
Linux Installation Instructions	1-16
Installing the License File	1-16
Creating the Linux Installation Directory (Optional)	1-16
Mounting the CD-ROM (Linux)	1-17
Unzipping the Tar File	1-17
Running the Linux Installation Script	1-17

Changing the HTTPS Port	1-22
Upgrading to Cisco Multicast Manager 3.2	1-22
Upgrading on Linux Using a CD or ISO Image	1-23
Upgrading on Linux Using a Tar File	1-24
Upgrading on Solaris Using a CD or ISO Image	1-27
Upgrading on Solaris Using a Tar File	1-28
Upgrading CMM 2.x to CMM 3.2	1-32
Restoring a Previous Version of CMM	1-32
Starting and Stopping CMM	1-34
Remote Upgrade	1-35
Server Migration	1-35
Export Utility	1-35
Import Utility	1-37
Backup Utility	1-39
