How To Perform a Compliance Audit

The following table lists the basic steps for using the Compliance feature.

<table>
<thead>
<tr>
<th>Description</th>
<th>See:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 Create a compliance policy that contains a name and other descriptive text.</td>
<td>Create a New Compliance Policy, on page 2</td>
</tr>
<tr>
<td>2 Add rules to the compliance policy. The rules specify what constitutes a violation.</td>
<td>Create Compliance Policy Rules, on page 3</td>
</tr>
</tbody>
</table>
Enable and Disable Compliance Auditing

The Compliance feature uses device configuration baselines and audit policies to find and correct any configuration deviations in network devices. It is disabled by default because some of the compliance reports can impact system performance. To enable the Compliance feature, use the following procedure.

**Step 1** Choose Administration > Settings > System Settings, then choose General > Server.

**Step 2** Next to Compliance Services, click Enable, then click Save.

**Step 3** Re-syncronize Cisco EPN Manager’s device inventory: Choose Inventory > Network Devices, select all devices, then click Sync.

**Step 4** Logout of Cisco EPN Manager and login again to view Compliance under the Configuration tab.
If you still don't see the different Compliance options under the Configuration tab, ensure that you have the required system requirements as explained in the latest Cisco Evolved Programmable Network Manager Installation Guide.

Create a New Compliance Policy

You can create a new compliance policy starting with a blank policy template.

**Step 1** Choose Configuration > Compliance > Policies.

**Step 2** Click the Create Compliance Policy (+) icon in the Compliance Policies navigation area on the left.

**Step 3** In the dialog box, enter a name and optional description, then click Create. The policy is added to the Compliance Policies navigation area on the left.
To duplicate the policy click the icon and choose Duplicate Policy.
What to Do Next
Add rules to the compliance policy. See Create Compliance Policy Rules, on page 3.

Create Compliance Policy Rules

Compliance policy rules are platform-specific and define what is considered a device violation. A rule can also contain CLI commands that fix the violation. When you are designing the compliance audit job, you can select the rules you want to include in the audit (see Run a Compliance Audit, on page 7).

Cisco EPN Manager supports audit for AireOS Wireless LAN Controllers platform.

Step 1
Choose Configuration > Compliance > Policies, then select a policy from the navigation area on the left.

Step 2
From the work area pane, click New to add a new rule. If a similar rule exists, you can copy the rule by clicking Duplicate, editing the rule, and saving it with a new name.

Step 3
Configure the new rule by entering your rule criteria.

Note: For explanations of the fields that are displayed in the New Rule window, see the Cisco Prime Infrastructure 3.2 Reference Guide (the information in that document also applies to Cisco EPN Manager).

Note: Cisco EPN Manager supports all Java-based regular expressions. See http://www.rexegg.com/regex-quickstart.html.

a) Enter a title, description, and other information in the Rule Information text fields. This information is free text and does not impact any of the rule settings.

b) Specify the devices for this rule in the Platform Selection area.

c) (Optional) In the Rule Inputs area, click New and specify the input fields that should be displayed to a user when they run a policy that contains this rule. For example, you could prompt a user for an IP address.

d) In the Conditions and Actions area, click New and specify the criteria that will be checked. This will determine the rule pass and fail conditions. For examples, see Examples—Rule Conditions and Actions, on page 3.

Step 4
Click Create. The rule is added to the compliance policy.

You can create as many rules as you want. Remember that when you want to run the audit job, you can pick the rules you want to validate.

What to Do Next
Create a profile that contains the compliance policy and its rules, and then perform the audit using the profile. See Create a Compliance Profile That Contains Policies and Rules, on page 6.

Examples—Rule Conditions and Actions

- Example Conditions and Actions: DNS Servers Configured on Device, on page 4
- Example Conditions and Actions: Community Strings, on page 4
- Example Conditions and Actions: IOS Software Version, on page 5
Example Conditions and Actions: DNS Servers Configured on Device

This compliance policy checks if either IP name-server 1.2.3.4 or IP name-server 2.3.4.5 is configured on the device. If they are, the policy raises a violation with the message "DNS server must be configured as either 1.2.3.4 or 2.3.4.5."

<table>
<thead>
<tr>

<tr>
<td></td>
<td></td>
<td>Violation Text</td>
<td>DNS server must be configured as either 1.2.3.4 or 2.3.4.5</td>
</tr>
</tbody>
</table>

Example Conditions and Actions: Community Strings

This compliance policy checks if either snmp-server community public or snmp-server community private is configured on a device (which is undesirable). If it is, the policy raises a violation with the message "Community string xxxxx configured", where xxx is the first violation that was found.

<table>
<thead>

<td>Operator</td>
<td>Matches the expression</td>
</tr>
<tr>
<td></td>
<td></td>
<td>Value</td>
<td>snmp-server community {public</td>
</tr>
</tbody>
</table>
Example Conditions and Actions: IOS Software Version

This compliance policy checks if Cisco IOS software version 15.0(2)SE7 is installed on a device. If it is not, the policy raises a violation with the message "Output of show version contains the string $xxxx$," where $xxxx$ is the Cisco IOS software version that does not match 15.0(2)SE7.

<table>

</tr>
<tr>
<td></td>
<td>Violation Text</td>
<td>Community string $xxxx$ configured.</td>
<td></td>
</tr>
</tbody>
</table>

Example Conditions and Actions: NTP Server Redundancy

This compliance policy checks if the command ntp server appears at least twice on the device. If it does not, the policy raises a violation with the message "At least two NTP servers must be configured."

<table>
<thead>
<tr>
<th>Tab</th>
<th>Tab Area</th>
<th>Field</th>
<th>Value</th>
</tr>
</thead>
</table>
Create a Compliance Profile That Contains Policies and Rules

A compliance profile contains one or more compliance policies. When you add a compliance policy to a profile, all of the policy's rules are applied to the profile. You can customize the profile by selecting the policy rules you want to include (and ignoring the others). If you group several policies in a profile, you can select and deselect the rules for each policy.

### Step 1
Choose Configuration > Compliance > Profiles.

### Step 2
Click the Create Policy Profile (+) icon in the Compliance Profiles navigation area on the left. This opens the Add Compliance Policies dialog box.

### Step 3
Select the policies you want to include in the profile. User defined policies will be available under the User Defined category.

a) In the Add Compliance Policies dialog box, choose the policies you want to add.
b) Click OK. The policies are added to the Compliance Policy Selector area.

### Step 4
Select the rules you want to include in the policy.

a) Select a policy in the Compliance Policy Selector area. The policy's rules are displayed in the area on the right.
b) Select and deselect specific rules, then click Save.

**Note** The choices you make here only apply to the policy instance in this profile. Your choices do not modify the original version of the compliance policy.

### What to Do Next
Schedule the compliance audit job as described in Run a Compliance Audit, on page 7.
Run a Compliance Audit

To run a compliance audit, select a profile, choose the devices you want to audit (using the policies and rules in the profile), and schedule the audit job.

**Step 1** Choose Configuration > Compliance > Profiles.

**Step 2** Select a profile in the Compliance Profiles navigation area on the left.

**Step 3** Click the Run Compliance Audit icon in the Compliance Profiles navigation area.

**Step 4** Expand the Devices and Configuration area, select the required devices and configuration files that you want to audit.

a) Select the devices (or device groups).

b) Specify which configuration file you want to audit.

- **Use Latest Archived Configuration** — Audit the latest backup file from the archive. If no backup file is available, Cisco EPN Manager does not audit the device.

- **Use Current Device Configuration** — Poll and audit the device's running configuration. (For example, show command output will be from the device's running configuration.)

  When you select this option, Cisco EPN Manager first takes a backup of the configuration from device and then performs audit. This is useful when periodic or event triggered configuration backup is not enabled and also useful because archived configuration in Cisco EPN Manager is often out-of-sync with the device.

c) Click Next.

**Step 5** Select Now to schedule the audit job immediately or select Date and enter a date and time to schedule it later. Use the Recurrence option to repeat the audit job at regular intervals.

**Step 6** Click Finish. An audit job is scheduled. To view the status of the audit job, choose Configuration > Compliance > Jobs.

**What to Do Next**

Check the audit results as described in View the Results of a Compliance Audit, on page 7.

View the Results of a Compliance Audit

Use this procedure to check an audit job results. The results will tell you which devices were audited, which devices were skipped, which devices had violations, and so forth. There might be several different compliance policies running on a single device.

After a job is created, you can set the following preferences for the job:

- **Pause Series** — Can be applied only on jobs that are scheduled in the future. You cannot suspend a job that is running.

- **Resume Series** — Can be applied only on jobs that have been suspended.
Perform Configuration Audits Using Compliance

• Edit Schedule—Reschedule a job that has been scheduled for a different time.

### Step 1
Choose Configuration > Compliance > Jobs.

### Step 2
Click the Audit Jobs tab, locate your job, and check the information in the Last Run column.

<table>
<thead>
<tr>
<th>Last Run Result Value</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Failure</td>
<td>One or more devices audited have a violation in the policies specified in the profile.</td>
</tr>
<tr>
<td>Partial Success</td>
<td>The compliance job contains a mix of both audited and non-audited devices, and the compliance status of audited devices is successful.</td>
</tr>
<tr>
<td>Success</td>
<td>All devices audited conform to the policies specified in the profile.</td>
</tr>
</tbody>
</table>

For a compliance audit job, the number of violations supported is 20000 for Standard setup and 80000 for Pro and above setup of Prime Infrastructure.

### Step 3
If the audit check failed:

- To see which devices failed, hover over the "i" icon next to the Failure hyperlink to display a details popup.
- Launch a Device 360 view by selecting the job, clicking View Job Details, and clicking the "i" icon next to a device in the popup window.

### Step 4
For the most detail, click the Failure hyperlink to open the Compliance Audit Violation Details window.

**Note**
Use the Next and Previous buttons to traverse the Compliance Audit Violation Details window.

- Check the Job Details and Violations area for a summary of the failures. The fields are described in the section Administration > Dashboards > Job Dashboard > User Jobs > Compliance Jobs in Cisco Prime Infrastructure Field Reference (the content is applicable to Cisco EPN Manager).
- Check the Violations by Device area for per-device details.

---

### What to Do Next
To fix any of the violations, see Fix Device Compliance Violations, on page 10.

### View Violation Job Details

The following table shows the details that can be viewed from the Violation Details page.

<table>
<thead>
<tr>
<th>To View:</th>
<th>Do the following</th>
</tr>
</thead>
<tbody>
<tr>
<td>The status of scheduled fixable violation jobs.</td>
<td>1. Go to the Violation Details page.</td>
</tr>
<tr>
<td></td>
<td>2. Click the Fixable column filter box and choose Running.</td>
</tr>
</tbody>
</table>
View Change Audit Details

Step 1  Log in to Cisco Prime Infrastructure as an administrator
Step 2  Choose Monitor > Tools > Change Audit Dashboard.
       The Change Audit Dashboard displays the network audit logs and change audit data of device management, user management, configuration template management, device community and credential changes, and inventory changes of devices. The Change Audit report and Change Audit dashboard display the details irrespective of the virtual domain you are logged in.

View Audit Failure and Violation Summary Details

You can view detailed violation information, export this data, and view details of compliance jobs. You can export detailed data for a specific job, or export summary data for multiple jobs.

Step 1  Choose Configuration > Compliance > Jobs.
Step 2  To view the details for a specific audit job:
       a) Click the Audit Jobs tab and locate your job.
       b) Click the job's Failure hyperlink to view the Compliance Audit Details window.
          You can view information about the policy name, the set rules, its compliance state, the total violation count, the job's instance count, its highest severity value, and the ignored count values.
       c) To export these details use one of the following options:
          • To export the violation details to a Microsoft Excel spreadsheet in XLS format, click Export as XLS.
          • To export the violation details to a Microsoft Excel spreadsheet in comma-separated text, click Export as CSV.
          • To export the violation details to an HTML file, click Export as HTML.
d) Click **Save File**.

**Step 3**

To view a collective summary of all audit jobs:

a) Click the **Violation Summary** tab.

You can view a collective report for all devices on which violations have occurred, their associated policy and profile names, their audit job IDs, their associated rules and rule severity values, details on whether the violations are fixable or not, or whether they are already fixed, and the message associated with the violation.

b) To export this detailed summary report, choose one of the following options from the drop-down menu:

- To export the summary to a Microsoft Excel spreadsheet in comma-separated text, click **Violation Report CSV**.
- To export the summary to a PDF file, click **Violation Report PDF**.

c) Click **Save File**.

---

**What to Do Next**

To fix any of the violations, see **Fix Device Compliance Violations**, on page 10.

---

**Fix Device Compliance Violations**

Use this procedure to fix compliance violations for a failed compliance audit.

---

**Step 1**

Choose **Configuration > Compliance > Jobs**.

**Step 2**

Click the **Audit Jobs**, locate your job, and check the information in the **Last Run Result** column.

**Step 3**

Click the **Failure** hyperlink to open the **Compliance Audit Violation Details** window.

**Note**

Use the **Next** and **Previous** buttons to traverse the **Compliance Audit Violation Details** window.

**Step 4**

In the **Job Details and Violations** area, click **Next**.

**Step 5**

In the **Violations by Device** area, select the device and violation and click **Next**.

**Step 6**

In the **Fix Rule Inputs** area, preview the fix commands that were previously defined in the policy, then click **Next**. If custom policies are created with fix cli `^<Rule input ID>^` as the action for the condition, then the Fix Rule Inputs tab is displayed. Enter the required fix rule values and click **Next** to continue.

**Step 7**

Review the configuration that is displayed in the Preview Fix Commands pop up.

**Step 8**

Schedule the fix job so that the generated configuration can be deployed to the device, then Click **Schedule the Fix Job**.

---

**What to Do Next**

To view any of the violations job details, see **View Audit Failure and Violation Summary Details**, on page 9.
View Audit Failure and Violation Summary Details

You can view detailed violation information, export this data, and view details of compliance jobs. You can export detailed data for a specific job, or export summary data for multiple jobs.

Step 1
Choose Configuration > Compliance > Jobs.

Step 2
To view the details for a specific audit job:

a) Click the Audit Jobs tab and locate your job.

b) Click the job's Failure hyperlink to view the Compliance Audit Details window.
   You can view information about the policy name, the set rules, its compliance state, the total violation count, the job's instance count, its highest severity value, and the ignored count values.

c) To export these details use one of the following options:
   • To export the violation details to a Microsoft Excel spreadsheet in XLS format, click Export as XLS.
   • To export the violation details to a Microsoft Excel spreadsheet in comma-separated text, click Export as CSV.
   • To export the violation details to an HTML file, click Export as HTML.

d) Click Save File.

Step 3
To view a collective summary of all audit jobs:

a) Click the Violation Summary tab.
   You can view a collective report for all devices on which violations have occurred, their associated policy and profile names, their audit job IDs, their associated rules and rule severity values, details on whether the violations are fixable or not, or whether they are already fixed, and the message associated with the violation.

b) To export this detailed summary report, choose one of the following options from the drop-down menu:
   • To export the summary to a Microsoft Excel spreadsheet in comma-separated text, click Violation Report CSV.
   • To export the summary to a PDF file, click Violation Report PDF.

c) Click Save File.

What to Do Next
To fix any of the violations, see Fix Device Compliance Violations, on page 10.
Import and Export Compliance Policies

Compliance policies are saved as XML files. You can export individual compliance policies and, if desired, import them into another server. Files can only be imported in XML format.

Step 1
Choose Configuration > Compliance > Policies.

Step 2
To export a compliance policy:

a) Mouse hover on "i" icon next to the policy in the Compliance Policies navigation area on the left.
b) In the popup window, click the Export Policy as XML hyperlink, and save the file.

Step 3
To import a compliance policy:

a) Click the Import Policies icon above the Compliance Policies navigation area on the left.
b) In the Import Policies dialog box, click Choose Policies.
c) Browse to the XML file and select it.
d) Click Import.

View the Contents of a Compliance Policy XML File

Compliance policies are saved as XML files. To view the contents of a policy's XML file:

Step 1
Choose Configuration > Compliance > Policies.

Step 2
Locate the policy in the Compliance Policies navigation area on the left, then hover your mouse over the "i" icon next to the policy.

Step 3
In the popup window, click the View Policy as XML hyperlink. Cisco EPN Manager displays the content in XML format.

View PSIRT and EoX Information

- View Device Security Vulnerabilities, on page 13
- View Device Hardware and Software End-of-Life Report, on page 13
- View Field Notices for Device, on page 14
View Device Security Vulnerabilities

You can run a report to determine if any devices in your network have security vulnerabilities as defined by the Cisco Product Security Incident Response Team (PSIRT). The report includes Device PSIRT, Device Hardware EOX, Device Software EOX, and Field Notice information. You can also view documentation about the specific vulnerabilities that describes the impact of a vulnerability and any potential steps needed to protect your environment.

**Note**
PSIRT and EoX reports cannot be run for specific devices. When you schedule PSIRT and EoX jobs, the report is generated for all devices in Managed and Completed state (on the Inventory > Configuration > Network Devices page).

**Before You Begin**
Sync the devices prior to scheduling the job. Choose Configuration > Network Devices, select the devices, then click Sync.

**Step 1** Choose Reports > PSIRT and EoX.

**Step 2** Schedule and run the job.

**Step 3** Click View Job Details to view the current status of the PSIRT report.

**Step 4** When the report is completed, click the Device PSIRT tab to view PSIRT information.

**Step 5** In the PSIRT Title column, click the hyperlink to view the full description of a security vulnerability.

**Step 6** (Optional) You can export the device PSIRT details in PDF and CSV format for each device and for all devices collectively.

View Device Hardware and Software End-of-Life Report

You can run a report to determine if any Cisco device hardware or software in your network have reach edits end of life (EOX). This can help you determine product upgrade and substitution options.

**Step 1** Choose Reports > PSIRT and EoX.

**Step 2** Click Schedule Job. A job is created in which Device PSIRT, Device Hardware EOX, Device Software EOX, and Field Note information is gathered and reported. You do not create separate jobs on each of the tabs.

**Step 3** After the job completes, click one of the following EOX tabs to view the report information specific to that tab:

- Device Hardware EOX
- Device Software EOX
Step 4  (Optional) You can export these device EoL details in PDF and CSV format for each device and for all devices collectively.

View Field Notices for Device

You can run a report to determine if any Cisco devices that are managed and have completed a full inventory collection have any field notices. Field Notices are notifications that are published for significant issues, other than security vulnerability-related issues, that directly involve Cisco products and typically require an upgrade, workaround, or other customer action.

Step 1  Choose Reports > PSIRT and EoX.
Step 2  Click Schedule Job. A job is created in which Device PSIRT, Device Hardware EOX, Device Software EOX, and Field Note information is gathered and reported. You do not create separate jobs on each of the tabs.
Step 3  Click the Field Notice tab to view field notice information.
Step 4  Click on the hyperlink in the Field Notice Name column to view more information on cisco.com.
Step 5  (Optional) You can export the device field notice details in PDF and CSV format for each device and for all devices collectively.
