

Command Reference

This appendix contains necessary information on disk space management for all types of Cisco Evolved Programmable Network Manager (EPNM) deployments and an alphabetical listing of the commands specific to the Cisco EPNM. The Cisco EPNM comprises the following modes:

- EXEC
 - System-level
 - Show
- Configuration
 - configuration submode

Use EXEC mode system-level config or configure command to access configuration mode.

Each of the commands in this appendix is followed by a brief description of its use, command syntax, any command defaults, command modes, usage guidelines, and one or more examples.

Note If an error occurs in any command usage, use the debug command to determine the cause of the error.

- EXEC Commands, on page 1
- show Commands, on page 66
- Configuration Commands, on page 98

EXEC Commands

This section lists each EXEC command and each command page includes a brief description of its use, command syntax, any command defaults, command modes, usage guidelines, and an example of the command and any related commands.

application install

To install an application bundle file, use the **application install** command in EXEC mode. There is no **No** form of this command.

application install bundle-name remote-repository

Syntax Description	bundle-name	Name of the application bundle file. Up to 255 alphanumeric characters.
	remote-repository	Name of the configured remote repository. Up to 255 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Related Commands	_	Description
	application start	Starts or enables an application.
	show application	Shows application information for the installed application packages on the system.

application remove

To uninstall an application, use the **application remove** command in EXEC mode. There is no **No** form of this command.

application packages on the system.

application remove bundle-name remote-repository

Syntax Description	bundle-name	Name of the application bundle file to be removed. Up to 255 alphanumeric characters.
	remote-repository	Name of the configured remote repository. Up to 255 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Uninstalls an application.	
	epnm-ha-imeir-prim/admin# application remov Continue with application removal? [y/n]	re NCS
Related Commands	_	Description
	application start	Starts or enables an application.
	show application	Shows application information for the installed

I

application start

To start the application process, use the **application start** command in EXEC mode. There is no **NO** form of this command.

application start *application-name*

Syntax Description	application-name	Name of the predefined application that you want to enable (maximum 255 alphanumeric characters).
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Enables an application.	
	You cannot use this command to start t application, you can see that the Cisco	he Cisco EPNM application. If you use this command to start the EPNM is already running.
	epnm-system-168/admin# applicati (Starting EPNM	on start NCS
	This may take a while (10 minute: EPNM started successfully. Redirecting to /bin/systemctl re: Completed in 1029 seconds	

Related Commands	Command	Description
	application stop	Stops or disables an application.
	show application	Shows the application information for the installed application packages on the system.

application stop

To stop the process, use the application stop command in EXEC mode. There is no No form of this command.

application stop application-name

Syntax Description	application-name	Name of the predefined application that you want to disable. Up to 255 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Disables an application.	

```
EPNM-system-117/admin# application stop NCS
EPNM-system/admin# application stop NCS
Stopping EPNM...
This may take a few minutes...
EPNM successfully shutdown.
Stopping SAM daemon again ...
Checking for SAM daemon again ...
Stopping DA daemon ...
Checking for DA daemon again ...
DA Daemon not found...
Completed shutdown of all services
```

Related Commands

	Description
application start	Starts or enables an application.
show application	Shows application information for the installed application packages on the system.

application upgrade

To upgrade an application bundle, use the **application upgrade** command in EXEC mode. There is no **No** form of this command.

application upgrade bundle-name remote-repository

Syntax Description	bundle-name	Name of the application bundle file. Up to 255 alphanumeric characters.
	remote-repository	Name of the configured remote repository. Up to 255 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Related Commands		Description
	application start	Starts or enables an application.
	show application	Shows application information for the installed application packages on the system.

backup

Appliance Backup: To perform a backup (including the Cisco EPNM and Cisco ADE OS data) and place the backup in a repository, use the **backup** command in EXEC mode.

Application Backup: To perform a backup of only the Cisco EPNM application data without the Cisco ADE OS data, use the **application** keyword command.

Command for Appliance Backup:

backup backup-name repository repository-name

Command for Application Backup

backup backup-name repository repository-name application application-name

Syntax Description	backup-name		of the backup file. Up to 26 alphanumeric ters is recommended.	
	<i>repository-name</i> Name of the location where the files sh up to. Up to 80 alphanumeric character		of the location where the files should be backed Up to 80 alphanumeric characters.	
	application-name	Applic	Application name. Up to 255 alphanumeric characters	
		Note	Enter the application name in uppercase.	
Command Default	No default behavior or values.			
Command Modes	EXEC			
Usage Guidelines	Performs a backup of the Cisco EPNM and Cisco ADE OS data and places the backup in a repository.			
J	To perform a backup of only the Cisco EPNM application data without the Cisco ADE OS data, use the application command.			
	Example for Appliance Backup			
	epnm-system/admin# backup Appliancebkp repository test			
	DO NOT press ^C while the backup is in progress Aborting backup with a ^C may terminate the backup operation or the backup file may be corrupted			
	To restore this backup you will have to enter this password

```

Total Backup duration is: 0h:1m:26s epnm-system/admin#

Related Commands

Command	Description
delete	Deletes a file from the Cisco EPNM server.
repository	Enters the repository submode for configuration of backups.
restore	Restores from backup the file contents of a specific repository.
show backup history	Displays the backup history of the system.

Command	Description
show repository	Displays the available backup files located on a specific repository.

backup-logs

To back up system logs, use the **backup-logs** command in EXEC mode. There is no **no** form of this command.

backup-logs backup-name repository repository-name

Syntax Description	backup-name	Name of one or more files to back up. Up to 100 alphanumeric characters.
	repository-name	Location where files should be backed up to. Up to 80 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Backs up system logs.	
	EPNM-admin/admin# backup-logs log-backup repository defaultRepo % Creating log backup with timestamped filename: log-backup-150621-1618.tar.gz Transferring file complete. EPNM-system/admin#	

Related Commands	Command	Description
	repository	Enters the repository submode for configuration of backups.
	show repository	Shows the available backup files located on a specific repository.

banner

To set up messages while logging (pre-login) in to CLI, use the banner install pre-login command.

banner install pre-login banner-text-filename **repository** Repository-name

Syntax Description	banner-text-filename	Banner text file name.
	repository-name	Repository name.

Command Default No defau	It behavior or values.
--------------------------	------------------------

Command Modes EXEC

admin# banner install pre-login test.txt repository defaultRepo

Related Commands	Command	Description
	show banner pre-login, on page 69	Enables you to display a pre-login banner.

change-password

To change the password you use to log in to CLI interface, use the **change-password** command.

Syntax Description	password	New password	
Command Default	No default behavior or values.		
Command Modes	EXEC		
	epnm-system/admin# change-pa :		
	Changing password for user as Changing password for admin.	dmin.	
	(current) UNIX password:		
	New password: Retype new password:		
	passwd: all authentication to	okens updated successfully.	

To set the system clock, use the **clock** command in EXEC mode. You cannot remove this function but reset the clock.

clock set [mmm dd hh:mm:ss yyyy]

Syntax Description	mmm	Current month of the year by name. Up to three alphabetic characters. For example, Jan for January.
	dd	Current day (by date) of the month. Value = 0 to 31 . Up to two numbers.
	hh:mm:ss	Current time in hours (24-hour format), minutes, and seconds.
	уууу	Current year (no abbreviation).

Command Default	ommand Default No default behavior or values.	
Command Modes EXEC		
Usage Guidelines	Sets the system clock. You must restart the Cisco EPNM server after you reset the clock for the change to take effect.	
epnm-system-208/admin# clock set dec 4 12:00:00 2020 epnm-system-208/admin# show clock Fri Dec 4 12:00:10 IST 2020 epnm-system-208/admin#		0:00 2020
Related Commands	Command	Description
	show clock	Displays the time and date set on the system software clock.

configure

To enter configuration mode, use the **configure** command in EXEC mode. If the **replace** option is used with this command, copies a remote configuration to the system which overwrites the existing configuration.

configure terminal

Syntax Description	terminal	Executes configuration commands from the terminal.
Command Default	No default behavior or value	S.
Command Modes	EXEC	
Usage Guidelines	Use this command to enter configuration file when you	onfiguration mode. Note that commands in this mode write to the running enter them (press Enter).
	To exit configuration mode and return to EXEC mode, enter end, exit, or press Ctrl-z.	
	To view the changes that you EXEC mode.	have made to the configuration, use the show running-config command in
	Example 1	
	ncs/admin# configure Enter configuration comm ncs/admin(config)#	ands, one per line. End with CNTL/Z.

Example 2

```
ncs/admin# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
ncs/admin(config)#
```

Related Commands	Command	Description
	show running-config	Displays the contents of the currently running configuration file or the configuration.
	show startup-config	Displays the contents of the startup configuration file or the configuration.

сору

To copy any file from a source to a destination, use the **copy** command in EXEC mode.

Syntax Description

Syntax Description	running-config	Represents the current running configuration file.
	startup-config	Represents the configuration file used during initialization (startup).
	protocol	See Table 1: Protocol Prefix Keywords, on page 12 for protocol keyword options.
	hostname	Hostname of destination.
	location	Location of disk:/ <dirpath>.</dirpath>
	logs	The system log files.
	all	Copies all the Cisco EPNM log files from the system to another location. All logs are packaged as ncslogs.tar.gz and transferred to the specified directory on the remote host.
	filename	Allows you to copy a single Cisco EPNM log file and transfer it to the specified directory on the remote host, with its original name.
	log_filename	Name of the Cisco EPNM log file, as displayed by the show logs command (up to 255 characters).
	mgmt	Copies the Cisco EPNM management debug logs and Tomcat logs from the system, bundles them as mgmtlogs.tar.gz, and transfers them to the specified directory on the remote host.
	runtime	Copies the Cisco EPNM runtime debug logs from the system, bundles them as runtimelogs.tar.gz, and transfers them to the specified directory on the remote host.

Command Modes

Command Reference

EXEC

Usage Guidelines

The fundamental function of the **copy** command allows you to copy a file (such as a system image or configuration file) from one location to another location. The source and destination for the file specified uses the Cisco EPNM file system, through which you can specify any supported local or remote file location. The file system being used (a local memory source or a remote system) dictates the syntax used in the command.

You can enter on the command line all of the necessary source and destination information and the username and password to use; or, you can enter the **copy** command and have the server prompt you for any missing information. You can enter up to a maximum of 2048 characters of source and destination URL information on the command line.

The copy command in the Cisco EPNM copies a configuration (running or startup).

The Cisco EPNM active configuration stores itself in the Cisco EPNM RAM. Every configuration command you enter resides in the running configuration. If you reboot your Cisco EPNM server, you lose the running configuration. If you make changes that you want to save, you must copy the running configuration to a safe location, such as a network server, or save it as the Cisco EPNM server startup configuration.

You cannot edit a startup configuration directly. All commands that you enter store themselves in the running configuration, which you can copy into the startup configuration.

In other words, when you boot a Cisco EPNM server, the startup configuration becomes the initial running configuration. As you modify the configuration, the two diverge: the startup configuration remains the same; the running configuration reflects the changes that you have made. If you want to make your changes permanent, you must save the running configuration to the startup configuration using the **write memory** command. The **write memory** command makes the current running configuration permanent.

Note If you do not save the running configuration, you will lose all your configuration changes during the next reboot of the Cisco EPNM server. You can also save a copy of the running and startup configurations using the following commands, to recover in case of loss of configuration:

copy startup-config location

copy running-config location

Note

The copy command is supported only for the local disk and not for a repository.

P Tip

Aliases reduce the amount of typing that you need to do. For example, type **copy run start** (the abbreviated form of the **copy running-config startup-config** command).

The entire copying process might take several minutes and differs from protocol to protocol and from network to network.

Use the filename relative to the directory for file transfers.

Possible error is the standard FTP error message.

Keyword	Destination
ftp	URL for FTP network server. The syntax for this alias: ftp: //location/directory
sftp	URL for an SFTP network server. The syntax for this alias: sftp://location/directory SFTP Repositories may require the // between the II address/FQDN and the physical path on the SFTP store. If you find that you cannot access the SFTP repository with single slashes, add the additional slash and try the operation again. For example: url
	sftp://server//path Note The remote sftp servers need to be enabled for 'password authentication' (keyboard-interactive mode does not work for sftp transfers). See the documentation on sshd server used at the remote end, to enable password authentication.
	Depending on the SFTP software used with the remote server, you may need to enable "password authentication" instead of "keyboard-interactive mode". Enabling "password authentication" is required; copy to remote SFTP servers will not work unless it is enabled. For example: With OpenSSH 6.6x, "keyboard-interactive mode" is the default. To enable "password authentication", edit the OpenSSF sshd_config file to set the PasswordAuthentication parameter to "yes", as follows: PasswordAuthentication yes.
tftp	URL for a TFTP network server. The syntax for this alias:
	tftp://location/directory

Table 1: Protocol Prefix Keywords

Example 1

```
ncs/admin# copy run start
Generating configuration...
ncs/admin#
```

Example 2

```
ncs/admin# copy running-config startup-config
Generating configuration...
ncs/admin#
```

Example 3

ncs/admin# copy start run
ncs/admin#

Example 4

ncs/admin# copy startup-config running-config
ncs/admin#

Example 5

```
ncs/admin# copy logs disk:/
Collecting logs...
ncs/admin#
```

Example 6

This command is used to copy the certificate from tftp to pnp.

```
copy tftp://<EPNM Server IP Address>/server.key disk:/
copy tftp://<EPNM Server IP Address>/server.crt disk:/
copy tftp://<EPNM Server IP Address>/ncs_server_certificate.crt disk:/
```

Related Commands

ıds	Command	Description
	delete	Deletes a file from the Cisco EPNM server.
	dir	Lists a file from the Cisco EPNM server.

debug

To display errors or events for command situations, use the **debug** command in EXEC mode.

debug{all | application | backup-restore | cdp | config | icmp | copy | locks | logging | snmp | system | transfer | user | utils}

Syntax Description

all

Enables all debugging.

application	Application files.
	• <i>all</i> —Enables all application debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>install</i> —Enables application install debug outpu Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>operation</i> —Enables application operation debu output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>uninstall</i> —Enables application uninstall debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
backup-restore	Backs up and restores files.
	• <i>all</i> —Enables all debug output for backup-restor Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>backup</i> —Enables backup debug output for backup-restore. Set level between 0 and 7, wit 0 being severe and 7 being all.
	• <i>backup-logs</i> —Enables backup-logs debug output for backup-restore. Set level between 0 and 7, with 0 being severe and 7 being all.
	 <i>history</i>—Enables history debug output for backup-restore. Set level between 0 and 7, wit 0 being severe and 7 being all.
	• <i>restore</i> —Enables restore debug output for backup-restore. Set level between 0 and 7, wit 0 being severe and 7 being all.
cdp	Cisco Discovery Protocol configuration files.
	• <i>all</i> —Enables all Cisco Discovery Protocol configuration debug output. Set level between and 7, with 0 being severe and 7 being all.
	• <i>config</i> —Enables configuration debug output for Cisco Discovery Protocol. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>infra</i> —Enables infrastructure debug output fo Cisco Discovery Protocol. Set level between 0 and 7, with 0 being severe and 7 being all.

config	Configuration files.
	• <i>all</i> —Enables all configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>backup</i> —Enables backup configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>clock</i> —Enables clock configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>infra</i> —Enables configuration infrastructure debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>kron</i> —Enables command scheduler configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>network</i> —Enables network configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>repository</i> —Enables repository configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>service</i> —Enables service configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
сору	Copy commands. Set level between 0 and 7, with 0 being severe and 7 being all.
icmp	Internet Control Message Protocol (ICMP) echo response configuration.
	<i>all</i> —Enable all debug output for ICMP echo response configuration. Set level between 0 and 7, with 0 being severe and 7 being all.
locks	Resource locking.
	• <i>all</i> —Enables all resource locking debug output Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>file</i> —Enables file locking debug output. Set leve between 0 and 7, with 0 being severe and 7 being all.

I

logging	Logging configuration files.
	<i>all</i> —Enables all logging configuration debug output Set level between 0 and 7, with 0 being severe and 7 being all.
snmp	SNMP configuration files.
	<i>all</i> —Enables all SNMP configuration debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
system	System files.
	• <i>all</i> —Enables all system files debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>id</i> —Enables system ID debug output. Set level between 0 and 7, with 0 being severe and 7 bein all.
	 <i>info</i>—Enables system info debug output. Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>init</i> —Enables system init debug output. Set leve between 0 and 7, with 0 being severe and 7 bein all.
transfer	File transfer. Set level between 0 and 7, with 0 bein severe and 7 being all.
user	User management.
	• <i>all</i> —Enables all user management debug output Set level between 0 and 7, with 0 being severe and 7 being all.
	• <i>password-policy</i> —Enables user management debug output for password-policy. Set level between 0 and 7, with 0 being severe and 7 bein all.
utils	Utilities configuration files.
	<i>all</i> —Enables all utilities configuration debug output Set level between 0 and 7, with 0 being severe and 7 being all.

Command Modes

Command Default

EXEC

Usage Guidelines Use the **debug** command to identify various failures within the Cisco EPNM server; for example, setup failures or configuration failures.

```
ncs/admin# debug all
ncs/admin# mkdir disk:/1
ncs/admin# 6 [15347]: utils: vsh_root_stubs.c[2742] [admin]: mkdir operation success
ncs/admin# rmdir disk:/1
6 [15351]: utils: vsh_root_stubs.c[2601] [admin]: Invoked Remove Directory disk:/1 command
6 [15351]: utils: vsh_root_stubs.c[2663] [admin]: Remove Directory operation success
ncs/admin#
ncs/admin# undebug all
ncs/admin#
```

Related Commands

Command	Description
undebug	Disables the output (display of errors or events) of the debug command for various command situations.

delete

To delete a file from the server, use the **delete** command in EXEC mode. There is no **no** form of this command.

delete *filename* [*disk:/path*]

Syntax Description	filename	Filename.	
	disk:/path	Location.	
Command Default	No default behavior or values.		
Command Modes	es EXEC		
Usage Guidelines	If you attempt to delete the configuration file or image, the system prompts you to confirm the deletion. Also, if you attempt to delete the last valid system image, the system prompts you to confirm the deletion.		
	ncs/admin# delete disk:/hs_er ncs/admin#	r_pid19962.log	
Related Commands	Command	Description	
	dir	Lists all of the files on the Cisco EPNM server.	

dir

To list a file from the Cisco EPNM server, use the **dir** command in EXEC mode. To remove this function, use the **no** form of this command.

dir [word][recursive] **Syntax Description** Directory name. Up to 80 alphanumeric characters. word Requires disk:/ preceding the directory name. Lists a local directory or filename recursively. recursive No default behavior or values. **Command Default** EXEC **Command Modes** epnm-system-208/admin# dir Directory of disk:/ 20 Dec 02 2020 09:07:53 crash 4096 Dec 03 2020 10:48:22 defaultRepo/ 4096 Dec 04 2020 12:27:33 ftp/ 4096 Dec 03 2020 12:18:28 logs/ 16384 Dec 01 2020 15:25:15 lost+found/ 4096 Dec 02 2020 22:49:13 sftp/ 4096 Dec 02 2020 09:06:12 ssh/ 4096 Dec 02 2020 09:06:12 telnet/ 4096 Dec 02 2020 09:46:31 tftp/ Usage for disk: filesystem 1031405568 bytes total used 42919706624 bytes free 46310408192 bytes available epnm-system-208/admin#

Related Commands	Command	Description
	delete	Deletes a file from the Cisco EPNM server.

exit

To close an active terminal session by logging out of the Cisco EPNM server or to move up one mode level from configuration mode, use the **exit** command in EXEC mode.

	exit
Syntax Description	This command has no arguments or keywords.
Command Default	No default behavior or values.
Command Modes	EXEC
Usage Guidelines	Use the exit command in EXEC mode to exit an active session (log out of the Cisco EPNM server) or to move up from configuration mode.
	epnm-system/admin# exit

Connection closing...Socket close.

	Description
end	Exits the configuration mode.
exit	Exits the configuration mode or EXEC mode.
Ctrl-z	Exits configuration mode.
To force users out of an active termina forceout command in EXEC mode.	l session by logging them out of the Cisco EPNM server, use the
forceout username	
username	The name of the user. Up to 31 alphanumeric characters.
No default behavior or values.	
EXEC	
ncs/admin# forceout user1 ncs/admin#	
	Description
show users, on page 97	Displays the list of users logged in to the Cisco EPNM server.
	exit Ctrl-z To force users out of an active termina forceout command in EXEC mode. forceout username username username No default behavior or values. EXEC ncs/admin# forceout user1 ncs/admin#

halt

This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

Usage Guidelines Before you enter the **halt** command, ensure that the Cisco EPNM is not performing any backup, restore, installation, upgrade, or remove operation. If you enter the **halt** command while the Cisco EPNM is performing any of these operations, you get one of the following warning messages:

WARNING: A backup or restore is currently in progress! Continue with halt?

WARNING: An install/upgrade/remove is currently in progress! Continue with halt?

If you get any of these warnings, enter **yes** to halt the operation, or enter **no** to cancel the halt.

If no processes are running when you use the **halt** command or if you enter **Yes** in response to the warning message displayed, the Cisco EPNM asks you to respond to the following option:

Do you want to save the current configuration ?

Enter **YES** to save the existing Cisco EPNM configuration. The Cisco EPNM displays the following message:

Saved the running configuration to startup successfully

```
epnm-system/admin# halt
Save the current ADE-OS running configuration? (yes/no) [yes] ? yes
Generating configuration...

lms

To migrate data from lms server to EPNM server, use lms command in EXEC mode.

Ims migrate repository repository-name

```
Syntax Description
                    repository-name
                                                                  Name of the EPNM repository.
                   No default values or behaviour.
Command Default
                   EXEC
Command Modes
                   epnm-cluster-160/admin# lms migrate repository test
                   Repository name : test
                   Initiating LMS data restore . Please wait...
                   INFO: no staging url defined, using local space.
                   LMS Migration Normal Flow Started : == true
                   INFO: Backup Status : SUCCESS

```

mkdir

To create a new directory on the Cisco EPNM server, use the mkdir command in EXEC mode.

mkdir directory-name [disk:/path]

Syntax Description	directory-name	The name of the directory to create. Up to 80 alphanumeric characters.	
	disk:/path	Use <i>disk:/path</i> with the directory name.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	Use <i>disk:/path</i> with the directory name; included.	otherwise, an error appears that indicates that the <i>disk:/path</i> must be	
	ncs/admin# mkdir disk:/test ncs/admin# dir		
	Directory of disk:/		
	4096 May 06 2010 13:34:49 4096 May 06 2010 13:40:59 16384 Mar 01 2010 16:07:27 4096 May 06 2010 13:42:53 4096 May 07 2010 12:26:04	logs/ lost+found/ target/	
	Usage for disk: filesy		
	181067776 bytes 19084521472 bytes		
	20314165248 bytes ncs/admin#		

Related Commands	Command	Description
	dir	Displays a list of files on the Cisco EPNM server.
	rmdir	Removes an existing directory.

ncs certvalidation certificate-check

To enable or disable the certificate validation, use **ncs certvalidation certificate-check** command in EXEC mode.

ncs certvalidation certificate-check { *disable* | *enable* | *trust-on-first-use* } **trustzone** *trustzone_name*

Syntax Description	disable	Disable certificate validation
	enable	Enable certificate validation
	trust-on-first-use	Trust and pin the host certificate on first use
	trustzone_name	Name of the trustzone
Command Default	No default behavior or values.	
Command Modes	EXEC	

epnm-system/admin# ncs certvalidation certificate-check trust-on-first-use trustzone **system**

ncs certvalidation certificate-check enable trustzone **system**

ncs certvalidation custom-ocsp-responder

To configure a custom OCSP responder, use **ncs certvalidation custom-ocsp-responder** command in EXEC mode.

ncs certvalidation custom-ocsp-responder { clear *url* | disable | enable | set *url* }

Syntax Description	clear Clear OCSP responder URL	
	disable	Disable custom OCSP responder
	enable	Enable custom OCSP responder
	set	Set OCSP responder URL
	Note You must restart the EPNM after using any of the above ncs certvalidation entries.	
Command Default	No default behavior or values.	
Command Modes	EXEC	
		idation custom-ocsp-responder enable idation custom-ocsp-responder set urll http://10.104.119.201

epnm-system/admin# ncs certvalidation custom-ocsp-responder clear url1
epnm-system/admin# ncs certvalidation custom-ocsp-responder disable

ncs certvalidation revocation-check

To enable or disable revocation check using OCSP or CRL, use **ncs certvalidation revocation-check** command in EXEC mode.

ncs certvalidation revocation-check {disable | enable } trustzone { devicemgmt | pubnet | system
| user }

Syntax Description	disable	Disable certificate revocation
	enable	Enable certificate revocation
Command Default	No default behavior or values.	
Command Modes	EXEC	
	epnm-system/admin# ncs certval epnm-system/admin#	idation revocation-check enable trustzone system

ncs certvalidation tofu-certs

To view and delete the certificates trusted on the first use, use **ncs certvalidation tofu-certs** command in EXEC mode.

ncs certvalidation tofu-certs	{listcerts	deletecert host host name	}
-------------------------------	------------	---------------------------	---

Syntax Description	deletecert	Delete a trust-on-first-use cert for a host
	listcerts	List certificates trusted on first use

Command Default No default behavior or values.

Command Modes EXEC

Example 1: listcert

epnm-system/admin# ncs certvalidation tofu-certs listcerts
Host certificate are automatically added to this list on first connection, if
trust-on-first-use is configured - ncs certvalidation certificate-check ...
host=10.197.71.121_8082; subject= /C=US/ST=CA/L=SJ/O=Cisco Systems/OU=EPNM/CN=epnm-system-121
epnm-system/admin#

Example 2: deletecerts

epnm-system/admin# ncs certvalidation tofu-certs deletecert host 10.197.71.121_8082
Deleted entry for 10.197.71.121_8082
epnm-system/admin#

ncs certvalidation trusted-ca-store

To configure a trusted CA certificate store, use ncs certvalidation trusted-ca-store command in EXEC mode.

ncs certvalidation trusted-ca-store {auto-ca-update { enable | disable truststore truststore_name
} | deletecacert alias { alias_name truststore truststore_name { devicemgmt | pubnet | system |
user } | importcacert alias alias_name repository repository_name truststore truststore_name |
listcacerts truststore truststore_name }

Syntax Description	auto-ca-update	Auto update list of trusted CA certs during software update	
	deletecacert	Enable certificate validation	
	importcacert	Import a certificate to the trust store	
	listcacerts	List all trusted CA certificates	
	truststore_name	Name of the truststore	
	devicemgmt	Trust store used for validating cert from managed devices	
	pubnet	Trust store used for validating cert from public internet	
	system	Trust store used for validating cert from other peer systems	
	user	Trust store used for validating cert for user login	
Command Default	No default behavior or values.		
Command Modes	Configuration		
	Example 1: auto-ca-upadate		
	system	sted-ca-store auto-ca-update enable truststore sted-ca-store auto-ca-update disable truststore	
	Example 2: deletecacert		
	epnm-system/admin# ncs certvalidation trusted-ca-store deletecacert alias quovadisroot truststore system Deleted CA certificate from trust store. Changes will take affect on the next server restart epnm-system/admin#		
	Example 3: importcacert		
	defaultRepo epnm.cer truststore system	sted-ca-store importcacert alias ALIAS repository	

Example 3: listcacert

ncs cleanup

To clean up the data that are listed below and reclaim the disk space, use the **ncs cleanup** command in EXEC mode.

- Files under /opt/backup
- *.m-n.logs, *.n.logs, *.log.n log files under /opt/CSCOlumos/logs
- Regular files under /localdisk
- .hprof file under opt/CSCOlumos/crash
- Matlab*.log under /opt/tmp/
- .trm and .trc files under /opt/oracle/base/diag/rdbms/*/*/trace
- Older expired Archive logs and backup set under /opt/oracle/base/fast_recovery_area/WCS

ncs cleanup

 Syntax Description
 This command has no arguments or keywords.

 Command Default
 No default behavior or values.

 Command Modes
 EXEC

 Usage Guidelines
 When the Cisco EPNM does not have enough disk space, an alarm is raised to free up and reclaim the disk space. If you enter the ncs cleanup command, you see the following confirmation message:

 Do you want to delete all the files in the local disk partition? (Y/N)

epnm-system-117/admin# ncs cleanup

ncs ha authkey

To enter the authentication key for high availability (HA), use the **ncs ha authkey** command in EXEC mode.

 ncs ha authkey authorization key

 Syntax Description

 authorization key

 The authorization key for high availability. Up to 80 alphanumeric characters.

 Command Default

 No default behavior or values.

 Command Modes

 EXEC

 Usage Guidelines

 The ncs ha authkey command changes the authorization for the health monitor.

 This example shows how to set up the authorization key for high availability:

 epnm-system/admin#ncs ha authkey ciscol23

 Going to update primary authentication key

 Successfully updated primary authentication key

 Successfully intimated Primary updated authentication key to Secondary Server

 epnm-system/admin#

Related Commands

ands	Command	Description
	ncs ha remove	Removes the high availability configuration settings from Cisco EPNM.
	ncs ha status	Provides the current status of high availability.

ncs ha configure

To control high availability (HA) operations, use the ncs ha configure command in EXEC mode.

	ncs ha configure		
Syntax Description	This command has no arguments or keywords.		
Command Default	No default behavior or valu	ies.	
Command Modes	EXEC		
Usage Guidelines	To control HA operations.		
	If you enter the ncs ha con	figure command, you see t	the following sub-commands:
	epnm-dev-vm-54/admin# ncs ha configure ? dgtimeout Update the DataGuard Time out for high availability hbinterval Update the HM interval for high availability hbretry Update the HM retry for high availability sqlexpiretime Update the DB SqlExpireTime for high availability sqlinboundtimeout Update the DB SqlInBoundTimeout for high availability tcpkeepaliveintvl Update the Tcp Keep Alive Intvl for high availability tcpkeepalivetime Update the Tcp Keep Alive Probes for high availability updatecheckreadiness Update CheckReadiness		Al for high availability For high availability PreTime for high availability Alive Intvl for high availability Alive Probes for high availability Alive Time for high availability
Related Commands	Command		Description
	ncs ha authkey		Allows you to enter the authentication key for high availability in Cisco EPNM. This command also changes the authorization for the health monitor.
	ncs ha remove		Removes the high availability configuration.

ncs ha monitor interface add

You can add interface to high availability monitoring using **ncs ha monitor interface add** command in EXEC mode.

ncs ha monitor interface add [GigabitEthernet | Team] [interface number]

Command Default No default behavior or values.

Command Modes EXEC

ncs ha monitor interface del

You can delete interface from high availability monitoring using **ncs ha monitor interface del** command in EXEC mode.

ncs ha monitor interface del [GigabitEthernet | Team] [interface number] }

Command Default No default behavior or values.

Command Modes EXEC

ncs ha northbound interface

You can set northbound interface using ncs ha northbound interface command in EXEC mode.

ncs ha northbound interface [GigabitEthernet | Team] [interface number]

Command Default Default mode is GigabitEthernet 0.

Command Modes EXEC

ncs ha remove

To remove the high availability configuration settings from Cisco EPNM, use the **ncs ha remove** command in EXEC mode.

ncs ha remove

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

Usage Guidelines The **ncs ha remove** command removes the high availability configuration settings from the Cisco EPNM. If you enter this command, you will see the following confirmation message:

High availability configuration will be removed. Do you wish to continue? $(\rm Y/N)$

Example

```
epnm-system/admin# ncs ha remove
High availability configuration will be removed
Do you wish to continue? (y/N) y
Removing primary configuration will remove all database information
Primary is attempting to remove high availability configuration from both primary \
and secondary
Successfully removed high availability configuration
epnm-system/admin#
```

L

Related Commands	Command	Description
	ncs ha authkey	Allows you to enter the authentication key for high availability in Cisco EPNM. This command also changes the authorization for the health monitor.
	ncs ha status	Provides the current status of high availability.

ncs ha status

To display the current status of high availability (HA), use the ncs ha status command in EXEC mode.

	ncs ha status	
Syntax Description	This command has no arguments or keywords.	
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Displays the current status of HA.	
	If you enter the ncs ha status command, you see the following response:	

Example 1: When HA is not configured

epnm-system/admin# ncs ha status
[Role] Primary [State] HA not Configured
epnm-systems/admin#

Example 2: When HA is configured

In Primary server:

```
epnm-system/admin# ncs ha status
[Role] Primary [Secondary Server] 10.197.71.162(10.197.71.162) [State] Primary
Active [Failover Type] Automatic
epnm-system/admin#
```

In Secondary server:

```
epnm-system/admin# ncs ha status
[Role] Secondary [Primary Server] epnm-system-161(10.197.71.161) [State] Secondary
Syncing [Failover Type] Automatic
epnm-system/admin#
```

Related Commands	Command	Description
	ncs ha authkey	Allows you to enter the authentication key for high availability in Cisco EPNM. This command also changes the authorization for the health monitor.
	ncs ha remove	Removes the high availability configuration.

ncs key genkey

To generate a new RSA key and self-signed certificate, use the **ncs key genkey** command. You can use this command in the following ways:

ncs key genkey -newdn -csr csrfilename repository repositoryname

Syntax Description	genkey	Generates a new RSA key and self-signed certificate You can use the following options with this command
		-csr: Generates Certificate Signing Request (CSR) file.
		-newdn : Generates a new RSA key and self-signed certificate with domain information.
		<cr>: Carriage return.</cr>
	-newdn	Generates a new RSA key and self-signed cert with domain information. You can use the following options with this command:
		-csr: Generates Certificate Signing Request(CSR) file.
		<cr>: Carriage return.</cr>
	-csr	Generates a new CSR certificate file. You can use the following option with this command:
		< WORD >: Types in a certificate file name (Max Size - 80).
	csrfilename	CSR filename.
	repository	Repository command. This option is available when you use the -csr option.
	repositoryname	Location where the files should be backed up to. Up to 80 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	

This example shows how to generate a new rsa key and certificate files in the Cisco EPNM server:

epnm-cluster-88/admin# ncs key genkey -newdn -csr test.csr repository defaultRepo

```
Changes will take affect on the next server restart
  Enter the fully qualified domain name of the server !!!!: epnm-cluster-88.cisco.com
  Enter the name of your organization unit !!!!!!!!!!!!! cisco
 Enter the name of your organization !!!!!!!!!!!!!!!!!! hcl
 Enter the name of your city or locality !!!!!!!!!!!!!: chennai
 Enter the name of your state or province !!!!!!!!!!!!!! tn
 Specify subject alternate names.
   If none specified, CN will be used.
 Use comma seperated list - DNS:<name>,IP:<address> !!!!!:
DNS:epnm-cluster-88.cisco.com, IP:10.126.168.88
  Specify the public key algorithm [rsa/ec] !!!!!!!!!!!: rsa
  Specify the signature algorithm [sha256/sha512] !!!!!!!: sha256
Key and CSR/Certificate will be generated with following details
  Subject
/C=US/ST=tn/L=chennai/O=hcl/OU=cisco/CN=epnm-cluster-88.cisco.com
 Subject Alternate Name : DNS:epnm-cluster-88.cisco.com, IP:10.126.168.88
  Public Key Alg
                     : rsa, 4096
                      : sha256
  Signature Alg
Continue [yes] : yes
Generating...
Completed generating new key...Changes will take affect on the next server restart
Note: You can provide comma separated list of FQDN and IP of EPNM servers where you want
to import the same certificate received from CA.
To import same CA in other server, you need to import the key from the server where you
generate CSR and them import the CA certiifcates.
```

You will get a csr file generated in the location where the repository is pointing. Use that csr file get a CA certificate or signed certificate from any CA agent.

Related Commands	Command	Description
	ncs key importsignedcert	Applies an RSA key and signed certificate to Cisco EPNM.
	ncs key importkey	Applies an RSA key and certificate to Cisco EPNM.

Note After entering this command, enter the ncs stop and ncs start command to restart the Cisco EPNM server.

ncs key importkey

To apply an RSA key and signed certificate to the Cisco EPNM, use the **ncs key importkey** command in EXEC mode.

	To export key:		
	ncs key exportkey key-filename co	ert-filename repository repositoryname	
	To import key:		
	ncs key importkey key-filename cert-filename repository repositoryname		
Syntax Description	key-filename	RSA private key file name.	
	cert-filename	Certificate file name.	
	repository	Repository command	
	repositoryname	The repository name configured in the Cisco EPNM where the key-file and cert-file are hosted.	
Command Default	No default behavior or values.		
Command Modes	- EXEC		
	This example shows how to apply the new RSA key and certificate files to the server.		
	ncs key exportkey private.key server.cer repository defaultRepo		
	ncs key importkey keyfile certfile repository ncs-sftp-repo		
Note After applying this command, enter the ncs stop and ncs start comma		enter the ncs stop and ncs start command to restart the server.	
Related Commands	Command	Description	

Command	Description
ncs key genkey	Generates a new RSA key and a self-signed certificate.
ncs key importsignedcert	Applies an RSA key and signed certificate to Cisco EPNM.

ncs key importsignedcert

To apply an RSA key and signed certificate, use the ncs key importsignedcert command EXEC mode.

ncs key importsignedcert signed-cert-filename repository repositoryname

Syntax Description	signed-cert-filename	Signed certificate filename.	
	repository	Repository command	
	repositoryname	The repository name that is configured in Cisco EPNM where the key-file and cert-file is hosted.	

Command Default No default behavior or values.

Command Modes EXEC

This example shows how to apply signed certificate files to the Cisco EPNM server:

> ncs key importsignedcert signed-certfile repository ncs-sftp-repo

Note

After applying this command, enter the **ncs stop** and the **ncs start** command to restart the Cisco EPNM server to make changes take effect.

Related Commands

	ncs key genkey	Generates a new RSA key and self-signed certificate.	
	ncs key importkey	Applies an RSA key and signed certificate to Cisco EPNM.	

ncs password ftpuser

To change the FTP username and password, use the ncs password ftpuser command in EXEC mode.

Note

The value for ftpuser in the above command should always be set to ftp-user.

After you enable the ftp-user, you can FTP files to and from the /localdisk/ftp folder on standalone or, if configured, High Availability primary servers only. You cannot use change directory (cd) or list directory (ls) functionality with ftp-user.

ncs password ftpuser ftp-user password password

Syntax Description	ftp-user	The FTP user name	
Command Default	No default behavior or val	lues.	
Command Modes	EXEC		
	This example shows how t	to change the FTP username and password:	
	Updating FTP password Saving FTP account pas Synching FTP account p	ssword in credential store passwd to database store – location-ftp-user password to system store d update	

ncs password root password

To change the root password, use the ncs password root password command in EXEC mode.

ncs password root password userpassword

Syntax Description	userpassword	Password for the root user.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
	This example shows how to ch	ange the root password:	
	epnm-systems/admin# ncs pa Password updated for web r	assword root password Userpassword coot user	

epnm-systems/admin#

ncs run client-auth

You can enable client certificate authentication on your Cisco EPNM application using ncs run client-auth command. ncs run client-auth enable ncs run client-auth disable No default behavior or values. **Command Default** EXEC **Command Modes** epnm-system-117/admin# ncs run client-auth enable WARNING : This feature requires the CA certificate to be installed on the system. Please use the command 'ncs key importcacert \ldots " to import the certificate of the CA used to sign the client certificates. Ignore this warning if the CA certificate is already installed. Use the 'disable' option of this command, to disable client authentication, if not required. client auth status : enabled epnm-system-117/admin# epnm-system-117/admin# ncs run client-auth disable client auth status : disabled epnm-system-117/admin#

ncs run csrf

The cross-site request forgery check can be disabled (not recommended). The CLI provided only for backward compatibility with API clients which are not programmed for CSRF protection. For CSRF protection, this option should be enabled using the following command.

ncs run csrf enable

To disable, use the following command:

ncs run csrf disable

Command Default No default behavior or values.

Command Modes EXEC

epnm-cluster-93/admin# ncs run csrf enable

epnm-cluster-93/admin# ncs run csrf disable

ncs run custom-subject-oid-type-regex

You can set custom OID type regular expression using **ncs run custom-subject-oid-type-regex** command in EXEC mode.

ncs run custom-subject-oid-type-regex { *regex* }

Command Default No default behavior or values.

Command Modes EXEC

ncs run custom-subject-oid-type

You can set custom OID type using ncs run custom-subject-oid-type command in EXEC mode.

ncs run custom-subject-oid-type { *disable* | *cn* | *sn* | *serialnumber* | *c* | *l* | *st* | *s* | *street* | *o* | *ou* | *t* | *title* | *g* | *gn* | *e* | *emailaddress* | *email* | *uid* | *dc* }

Command Default No default behavior or values.

Command Modes EXEC

ncs run diag

Using this command user can deploy or undeploy the ncs diag for troubleshooting the system. This enables the ncsDiag page and you can access various services like Thread Dump, DBQuery to check the database queries, and so on, which will be useful for debugging the issues. After deploying this command, user can access ncsDiag page using https://<epnmn_server_ip>/webacs/ncsDiag.do.

ncs run diag -deploy

ncs run diag -remove

ncs run gen-sec-pwd

Command Default	No default behavior or values.
Command Modes	EXEC
	epnm/admin# ncs run diag -remove Undeploying the ncsdiag app
	epnm/admin# ncs run diag -deploy NCS diag web app is deployed
	Note If user find issues to access ncsDiag page after running 'ncs run diag -deploy', it is requested to run 'ncs run diag -remove' first and then 'ncs run diag -deploy'.

ncs run gen-sec-pwd

To generate a secure password, you can use the **ncs run gen-sec-pwd** command in EXEC mode.

Command Default	No default behavior or values.
Command Modes	EXEC
	<pre>imeir-epnm-func/admin# ncs run gen-sec-pwd Error: Could not find or load main class .opt.CSCOlumos.lib.xmp-third-party.log4j-jul-2.17.0.jar Caused by: java.lang.ClassNotFoundException: /opt/CSCOlumos/lib/xmp-third-party/log4j-jul-2/17/0/jar ERROR: Error in generating secure paassword. ERROR: cmd '/opt/CSCOlumos/bin/run_command.sh gen-sec-pwd' failed</pre>

ncs run jms

Cisco EPNM can send notifications to a Java Message Server (JMS) whenever there are changes in the inventory or configuration parameters that are a part of an audit you have defined. You can enable or disable this feature using **ncs run jms** command.

	ncs run jms enable
	ncs run jms disable
Command Default	No default behavior or values.
Command Modes	EXEC

epnm-cluster-93/admin# ncs run jms enable

epnm-cluster-93/admin# ncs run jms disable Connectivity to the JMS (message bus) from external servers disabled. Connectivity is required for external PnP Gateway servers to interact with the EPNM server. Use the 'enable' option of this command, to enable connectivity again.

ncs run list

To display the list of commands associated with NCS, use ncs run list command in EXEC mode.

fault behavior or arguments
<pre>hds : : - prints this list : iops - tests the disk write performance et [db keys] - reset database and keys to default factory settings : [disable enable] - enable or disable CSRF protection ent-auth [disable enable] - enable or disable client certificate based authentication [disable enable] - enable or disable message bus connectivity (port 61617) : thient-nonfips-ciphers [disable enable] - enable or disable non fips compliant ciphers server-legacy-algorithms [disable enable] - enable or disable legacy algorithms for ervice. -server-versions <ls_versions> - set the TLS versions to be enabled for TLS service Server-ciphers <ls_versions> - set the TLS cipher group to be enabled for TLS server-ciphers <ls_cipher_groups> - set the TLS cipher group to be enabled for TLS ce - tls-ecdhe-sha2 tls-ecdhe-sha1 tls-dhe-sha2 tls-dhe-sha1 tls-static-sha2 escoped - flasecure ade messages] - view audit logs history [all secure ade messages] - view audit logs -server-single-legacy-algorithm [list reset algorithms] -algorithms with space atted g [deploy remove] - deploy or undeploy the ncs diag for trouble shooting the system. responder [disable enable] - enable or disable OCSP Responder (requires EPNM restart) com-subject-oid-type blelcn s serialnumber c l st s street o ou t title g gn e emailaddress email uid de] stom OID type com-subject-oid-type-regex [regex] - custom OID type regular expression</ls_cipher_groups></ls_versions></ls_versions></pre>

ncs run livelogs

You can run ncs run livelogs command to view live audit logs.

```
ncs run livelogs { all | secure | ade | messages }
```

Command Default	No default behavior or values.	
Command Modes	- EXEC	
	epnm-system-120/admin# ncs run livelogs ***Available filter options to limit logs - all secure ade messages*** ***********Press Ctrl+C for stop logging***************

This example shows how to delete all private keys in the Cisco EPNM server:

epnm-system-61/admin# ncs run reset keys This will delete all the private keys and may impact webserver, SSH service etc. Do you want to proceed [yes/no] [no]? **yes**

ncs run ssh-server-legacy-algorithms

You can enable or disable ssh server legacy algorithms using **ncs run ssh-server-legacy-algorithms** command in EXEC mode.

Syntax Description	enable	Enables ssh server legacy algorithms.
,	disable	Disables ssh server legacy algorithms.
Command Default	Default mode is enable.	

ncs run ssh-server-legacy-algorithms { *enable* | *disable* }

```
epnm-system-90/admin# ncs run ssh-server-legacy-algorithms enable

Enabling legacy algorithms for SSH service...

KexAlgorithms :

dfileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargqfdsd/ffileilargq
```

Restarting sshd (via systemctl):

```
Note
```

If customer has moved to EPNM 3.7.x or 3.8.x via upgrade path, some of the Kex, and Ciphers algorithms would have changed in 3.7.x or 3.8.x upgrade, though the ssh legacy algorithms settings were enabled or disabled in the previous EPNM versions. Now, if you upgrade to 3.9 from 3.7.x or 3.8.x, you can see the same list of Kex, and Ciphers algorithms in 3.9 as available in the 3.7.x or 3.8.x upgrade servers.

The following steps explain the workaround, listing all the required ssh algorithms:

• a) When you upgrade from any previous versions to 3.7.x or 3.8.x version, please disable or enable the legacy ssh algorithms. Execute the below commands before upgrading to 3.9.

admin# ncs run ssh-server-legacy-algorithms disable

admin# ncs run ssh-server-legacy-algorithms enable

b) If you upgraded from any previous versions to 3.7.x or 3.8.x and also upgraded to 3.9 version, please execute below commands to disable or enable the ssh legacy ciphers.

admin# ncs run ssh-server-legacy-algorithms disable

admin# ncs run ssh-server-legacy-algorithms enable

ncs run sshclient-nonfips-ciphers

To enable or disable non fips compliant ciphers for outgoing ssh client connections to devices you can use **ncs run sshclient-nonfips-ciphers** command in EXEC mode.

Syntax Description	enable	Enables non fips compliant ciphers for outgoing ssh client connections.
	disable	Disables non fips compliant ciphers for outgoing ssh client connections.
Command Default	Default mode is enable. EXEC	
	epnm-ha-imeir-prim/admin# ncs run sshclien	t-nonfips-ciphers disable

ncs run sshclient-nonfips-ciphers { *enable* | *disable* }

Note This command is available only in the federal information processing standard (FIPS) mode

ncs run test iops

To test and view the details of the input output operations on your Cisco EPNM, use the **ncs run test iops** command in the EXEC mode.

ncs run test iops

Command Default	No default behavior or values.
Command Modes	EXEC

epnm-242/admin# ncs run test iops
Testing disk write speed ...
8388608+0 records in
8388608+0 records out
8589934592 bytes (8.6 GB) copied, 33.4561 s, 257 MB/s

ncs run tls-server-ciphers

You can enable a TLS cipher group using **ncs run tls-server-ciphers** command in EXEC mode.

ncs run tls-server-ciphers { *tls-ecdhe-sha2 | tls-ecdhe-sha1 | tls-dhe-sha2 | tls-dhe-sha1 | tls-static-sha2 | tls-static-sha1 | tls-st*

Syntax Description	tls-ecdhe-sha2	Refers to tls cipher group, ecdhe sha2
	tls-ecdhe-sha1	Refers to tls cipher group, ecdhe sha1
	tls-dhe-sha2	Refers to tls cipher group, dhe sha2
	tls-dhe-sha1	Refers to tls cipher group, dhe sha1
	tls-static-sha2	Refers to tls cipher group, static sha2
	tls-static-sha1	Refers to tls cipher group, static shal
Command Default	The default cipher group is tls-ecdhe-sha2	

EXEC

epnm/admin# ncs run tls-server-ciphers tls-ecdhe-shal Enabled TLS cipher groups are - tls-ecdhe-shal Restart is required for the changes to take effect

ncs run tls-server-versions

To set the TLS (Transport Layer Security) version, use the **ncs run tls-server-versions** command in EXEC mode.

ncs run tls-server-version <TLS version>

Command Default No default behavior or values.

Command Modes EXEC

The following example illustrates the usage of the ncs run set-tls-versions command:

```
epnm-system-168/admin# ncs run tls-server-versions TLSv1 TLSv1.1 TLSv1.2
Enabled TLS version are - TLSv1,TLSv1.1,TLSv1.2
Restart is required for the changes to take effect
epnm-system-168/admin#
```

```
Warning
```

Running this command requires an immediate software restart. It is suggested you perform a failover and failback so that the changes are reflected in primary and secondary servers.

ncs start

To start the EPNM server, use the ncs start command.

	ncs start [verbose]	
Syntax Description	verbose	Displays the detailed messages during the start process.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	To see the messages in the console, use the ncs st	art verbose command.
	This example shows how to start the EPNM serve	er:
	Starting Evolved Programmable Network Man	ager
	This may take a while (10 minutes or more)
	Evolved Programmable Network Manager star	ted successfully.

Related Commands	Command	Description	
	ncs stop	Stops the EPNM server.	
	ncs status	Displays the current status of the EPNM server.	
ncs status			
	To display the EPNM server status, use the	ne ncs status command in EXEC mode.	
	ncs status		
	This command has no arguments or keyw	vords.	
Command Default	No default behavior or values.		
Command Modes	EXEC		
	This example shows how to display the status of the EPNM server:		
	<pre>ncs status Health Monitor Server is running. ([Role] Primary [State] Primary Active) Database server is running Distributed Cache Service is running. Messaging Service is running. FTP Service is disabled TFTP Service is disabled NMS Server is running. LCM Monitor is running. SAM Daemon is running</pre>		
Related Commands	Command	Description	
	ncs start	Starts the EPNM server.	

ncs stop

To stop the EPNM server, use the **ncs stop** command in EXEC mode. To see the detailed messages, use the **ncs stop verbose** command.

Stops the EPNM server.

ncs stop [verbose]

 Syntax Description
 verbose
 Displays the detailed messages during the stop process.

Command Default No default behavior or values.

ncs stop

Command Modes	EXEC
Usage Guidelines	To see the detailed messages, use the ncs stop verbose command.
	This example shows how to stop the EPNM server:
	Stopping Evolved Programmable Network Manager
	This may take a few minutes Database is not running. FTP Service is not running. TFTP Service is not running. NMS Server is not running!.
	Evolved Programmable Network Manager successfully shutdown.
	Stopping SAM daemon Checking for SAM daemon again SAM Daemon not found Stopping DA daemon Checking for DA daemon again DA Daemon not found Completed shutdown of all services

Related Commands

	ncs start	Starts the EPNM server.
	ncs status	Displays the current status of the EPNM server.

nslookup

To look up the hostname of a remote system on the Cisco EPNM server, use the **nslookup** command in EXEC mode.

```
nslookup word
```

Syntax DescriptionwordIPv4 address or hostname of a remote system. Up to
63 alphanumeric characters.

Command Default No default behavior or values.

Command Modes EXEC

Example 1

```
ncs/admin# nslookup 209.165.200.225
Trying "209.165.200.225.in-addr.arpa"
Received 127 bytes from 172.16.168.183#53 in 1 ms

ocsp responder

Online Certificate Status Protocol (OCSP) enables certificate-based authentication for web clients using OCSP responders. Typically, the OCSP responder's URL is read from the certificate's Authority Information Access (AIA). As a failover mechanism, you can configure the same URL on the Cisco EPNM server as well. You can enable or disable a custom OCSP responder, and set/remove OCSP responder URLs using **ocsp responder** command in EXEC mode.

ocsp responder { *remove* | *set* | *show* }

Syntax Description	clear	Clears the OCSP responder URL.
	custom	Enables or disables the custom OCSP responder.
	set	Sets the OCSP responder URL.
Command Default	No default behaviour.	
Command Modes	EXEC	
	ncs/admin# ocsp responder ncs/admin# ocsp responder custom enable	
	ncs/admin# ocsp responder set url1 <word></word> <word> Enter ocsp url (Max Size - 1024)</word>	
	<pre>ncs/admin# ocsp responder clear url1</pre>	

ping

To diagnose the basic IPv4 network connectivity to a remote system, use the **ping** command in EXEC mode.

ping {ip-address | hostname} [Dfdf][packetsizepacketsize][pingcountpingcount]

Syntax Description	ip-address	IP address of the system to ping. Up to 32 alphanumeric characters.
	hostname	Hostname of the system to ping. Up to 32 alphanumeric characters.
	df	Specification for packet fragmentation.
	df	Specifies the value as 1 to prohibit packet fragmentation, or 2 to fragment the packets locally, or 3 to not set df.
	packetsize	Size of the ping packet.
	packetsize	Specifies the size of the ping packet; the value can be between 0 and 65507.
	pingcount	Number of ping echo requests.
	pingcount	Specifies the number of ping echo requests; the value can be between 1 and 10.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	The ping command sends an echo request packet to a you evaluate path-to-host reliability, delays over the	an address, then awaits a reply. The ping output can help path, and whether you can reach a host.
	ncs/admin# ping 172.16.0.1 df 2 packetsize 1 PING 172.16.0.1 (172.16.0.1) 10(38) bytes of 18 bytes from 172.16.0.1: icmp_seq=0 ttl=40 18 bytes from 172.16.0.1: icmp_seq=1 ttl=40	data. time=306 ms
	172.16.0.1 ping statistics 2 packets transmitted, 2 received, 0% packet rtt min/avg/max/mdev = 300.302/303.557/306.8 ncs/admin#	
Related Commands	Command	Description
	ping6	Pings a remote IPv6 address.

ping6

To diagnose the basic IPv6 network connectivity to a remote system, use the **ping6** command in EXEC mode.

ping6 {ip-address | hostname} [GigabitEthernetpacketsizepacketsize][pingcountpingcount]

Syntax Description	ip-address	IP address of the system to ping. Up to 64 alphanumeric characters.
	hostname	Hostname of the system to ping. Up to 64 alphanumeric characters.
	GigabitEthernet	Selects the ethernet interface.
	packetsize	Size of the ping packet.
	packetsize	Specifies the size of the ping packet; the value can be between 0 and 65507.
	pingcount	Number of ping echo requests.
	pingcount	Specifies the number of ping echo requests; the value can be between 1 and 10.
Command Default	No default behavior or values.	
	No default behavior or values.

nands		Description
	ping	Pings a remote IP address.

reload

To reload the Cisco EPNM operating system, use the **reload** command in EXEC mode.

	reload	
Syntax Description	This command has no arguments or keywords.	
Command Default	The command has no default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	The reload command reboots the system. Use the reload command after you enter configuration information into a file and save the running-configuration to the persistent startup-configuration on the CLI and save any settings in the web Administration user interface session.	
	Before you enter the reload command, ensure that the Cisco EPNM is not performing any backup, restore, installation, upgrade, or remove operation. If the Cisco EPNM performs any of these operations and you enter the reload command, you will notice any of the following warning messages:	
	WARNING: A backup or restore is currently in progress! Continue with reload?	
	WARNING: An install/upgrade/remove is currently in progress! Continue with reload?	
	If you get any of these warnings, enter YES to halt the operation, or enter NO to cancel the halt.	
	If no processes are running when you use the reload command or you enter YES in response to the warning message displayed, the Cisco EPNM asks you to respond to the following option:	
	Do you want to save the current configuration ?	
	Enter YES to save the existing Cisco EPNM configuration. The Cisco EPNM displays the following message:	
	Saved the running configuration to startup successfully	

```
ncs/admin# reload
Do you want to save the current configuration ? (yes/no) [yes] ? yes
Generating configuration...
Saved the running configuration to startup successfully
Continue with reboot? [y/n] y
Broadcast message from root (pts/0) (Fri Aug 7 13:26:46 2010):
The system is going down for reboot NOW!
ncs/admin#
```

Related Commands

ommands	Command	Description
	halt	Disables the system.

restore

To perform a restore of a previous backup, use the **restore** command in EXEC mode.

Application Backup Restore:

Use the following command to restore data related only to the Cisco EPNM application:

restore filename repository repository-name application application-name

Application Backup Restore

Use the following command to restore data related to the Cisco EPNM application and Cisco ADE OS:

restore filename repository repository-name

oository	Note You must add the .tar.gpg extension after the filename (for example, myfile.tar.gpg).
ository	
	The repository keyword.
ository-name	Name of the repository you want to restore from backup.
plication	The application keyword.
olication-name	The name of the application data to be restored. Up to 255 alphanumeric characters.
	Note Enter the application name as 'EPNM' in upper case.
[Dication

Command Default No default behavior or values.

Command Modes EXEC

Usage Guidelines

A restore operation restores data related to the Cisco EPNM and Cisco ADE OS. To perform a restore of a previous backup of the application data of the Cisco EPNM only, add the **application** command to the **restore** command in EXEC mode.

When you use these two commands in the Cisco EPNM, the Cisco EPNM server restarts automatically.

```
epnm-system-120/admin# restore
epnm-system-173-190908-0334 VER3.7.0.0.159 BKSZ26G CPU4 MEM3G RAM11G SWAP15G APP CK218281319.tar.gpg
repository defaultRepo application NCS
* NOTE *
If the system console is disconnected or got cleared on session timeout
run 'show restore log' to see the output of the last restore session.
Restore will restart the application services. Continue? (yes/no) [yes] ?
DO NOT press ^C while the restoration is in progress
Aborting restore with a ^C may leave the system in a unrecoverable state
Enter the backup password, if your backup is password protected. Otherwise, press Enter to
continue the data restoration.

Related Commands

Command	Description
dir	Displays a list of files on the Cisco EPNM server.
mkdir	Creates a new directory.

rsakey

To display a configured RSA key or to set a new RSA public key for user authentication, use **rsakey** command in EXEC mode. You can also use it to remove a configured RSA key.

rsakey { remove | set | show }

Syntax Description	remove	Remove RSA public key for user authentication.
	set	Set RSA public key for user authentication.
	show	Show RSA public key for user authentication.

Command Default No default behaviour.

Command Modes EXEC

ncs/admin# **rsakey** ncs/admin# **rsakey show** No RSA key configured for user 'admin'

ncs/admin# rsakey remove
No RSA key configured for user 'admin

ncs/admin# rsakey set <WORD>
<WORD> Filename of RSA public key (Max Size - 256)

show

To show the running system information, use the **show** command in EXEC mode. The **show** commands are used to display the Cisco EPNM settings and is one of the most useful commands.

The commands that are given in the table Table 2: Summary of show Commands, on page 56 require the **show** command to be followed by a keyword; for example, **show application status**. Some **show** commands require an argument or variable after the keyword to function. For example, **show application version**.

For detailed information on all the Cisco EPNM show commands, see show Commands.

show keyword

Syntax Description Table 2: Summary of show Commands

Command(1)	Description
application	Displays information about the installed application.
(requires keyword)(2)	For example, the status or version.
backup	Displays information about the backup.
(requires keyword)	
banner	Displays login banners.
cdp	Displays information about the enabled Cisco
(requires keyword)	Discovery Protocol interfaces.
clock	Displays the day, date, time, time zone, and year of the system clock.
сри	Displays CPU information.
disks	Displays file-system information of the disks.
icmp_status	Displays information about the icmp echo response configuration.
interface	Displays statistics for all the interfaces that are configured on the Cisco ADE OS.
inventory	Displays information about the hardware inventory.
ip	Displays IP information.
logging	Displays system logging information.
(requires keyword)	

Command(1)	Description
logins	Displays login history.
(requires keyword)	
memory	Displays memory usage by all running processes.
netstat	Displays information about the netstat and firewall.
ntp	Displays the status of the Network Time Protocol (NTP).
ports	Displays all the processes listening on the active ports.
process	Displays information about the active processes of the Cisco EPNM server.
repository	Displays the file contents of a specific repository.
(requires keyword)	
restore	Displays the restore history on the Cisco EPNM
(requires keyword)	server.
running-config	Displays the contents of the currently running configuration file on the Cisco EPNM server.
security-status	Displays various information such as services/ports enabled/disabled.
startup-config	Displays the contents of the startup configuration on the Cisco EPNM server.
tech-support	Displays the system and configuration information that you can provide to TAC when you report a problem.
terminal	Displays information about the terminal configuration parameter settings for the current terminal line.
timezone	Displays the time zone of the Cisco EPNM server.
timezones	Displays all the time zones available for use on the Cisco EPNM server.
udi	Displays information about the unique device identifier (UDI) of the Cisco EPNM.
uptime	Displays how long the system you are logged in to has been up and running.
users	Displays information for currently logged in users.

	Command(1)	Description	
	version	Displays information about the installed application version.	
	<u>12</u>		
	application. ² (2) Some show commands	able require that the show command precedes a keyword; for example, show require an argument or variable after the keyword to function; for example, This show command displays the version of the application that is installed oplication).	
Command Default	No default behavior or values.		
Command Modes	EXEC		
Usage Guidelines	All show commands require at least one keyword to function.

ssh			

To start an encrypted session with a remote system, use the ssh command in EXEC mode.

Note An Admin or Operator (user) can use this command (see Table).

ssh [ip-address | hostname] usernameport[number]version[1|2] delete hostkeyword

Syntax Description	ip-address	IP address of the remote system. Up to 64 alphanumeric characters.
	hostname	Hostname of the remote system. Up to 64 alphanumeric characters.

	username	Username of the user logging in through SSH.
	port [number]	(Optional) Indicates the port number of the remote host. From 0 to 65,535. Default 22.
	version [1 2]	(Optional) Indicates the version number. Default 2.
	delete hostkey	Deletes the SSH fingerprint of a specific host.
	word	IPv4 address or hostname of a remote system. Up to 64 alphanumeric characters.
Command Default	Disabled.	
Command Modes	EXEC (Admin or Operator).	
Usage Guidelines	The ssh command enables a system to make a secure, encrypted connection to another remote system or server. This connection provides functionality similar to that of an outbound Telnet connection except that the connection is encrypted. With authentication and encryption, the SSH client allows for secure communication over an insecure network.	
	Example 1	
	ncs/admin# ssh ncsl admin admin@ncsl's password: Last login: Wed Jul 11 05:53:20	2008 from ncs.cisco.com
	ncs1/admin#	
	Example 2	
	ncs/admin# ssh delete host ncs ncs/admin#	
tech dumnto	'n	

tech dumptcp

To dump a Transmission Control Protocol (TCP) package to the console, use the **tech dumptcp** command in EXEC mode.

tech dumptcp gigabit-ethernet

Command Default Disable	
Command Modes EXEC	

ncs/admin# tech dumptcp 0

140816:141088(272) ack 1921 win 14144 08:26:12.034630 IP NCS.cisco.com.ssh > dhcp-64-102-82-153.cisco.com.2221: P 141088:141248(160) ack 1921 win 14144 08:26:12.034635 IP dhcp-64-102-82-153.cisco.com.2221 > NCS.cisco.com.ssh: . ack 139632 win 64656 08:26:12.034677 IP NCS.cisco.com.ssh > dhcp-64-102-82-153.cisco.com.2221: P 141248:141520(272) ack 1921 win 14144 08:26:12.034713 IP NCS.cisco.com.ssh > dhcp-64-102-82-153.cisco.com.2221: P 141520:141680(160) ack 1921 win 14144 08:26:12.034754 IP NCS.cisco.com.ssh > dhcp-64-102-82-153.cisco.com.2221: P 141680:141952(272) ack 1921 win 14144 08:26:12.034756 IP dhcp-64-102-82-153.cisco.com.2221 > NCS.cisco.com.ssh: . ack 140064 win 65520 08:26:12.034796 IP NCS.cisco.com.ssh > dhcp-64-102-82-153.cisco.com.2221: P 141952:142112(160) ack 1921 win 14144 1000 packets captured 1000 packets received by filter 0 packets dropped by kernel ncs/admin#

telnet

To log in to a host that supports Telnet, use the **telnet** command in operator (user) or EXEC mode.

Syntax Description	ip-address	IP address of the remote system. Up to 64 alphanumeric characters.
	hostname	Hostname of the remote system. Up to 64 alphanumeric characters.
	port number	(Optional) Indicates the port number of the remote host. From 0 to 65,535.
Command Default	No default behavior or values.	

telnet [ip-address | hostname] port number

Command Modes EXEC

```
ncs/admin# telnet 172.16.0.11 port 23
ncs.cisco.com login: admin
password:
Last login: Mon Jul 2 08:45:24 on ttyS0
ncs/admin#
```

terminal length

To set the number of lines on the current terminal screen for the current session, use the **terminal length** command in EXEC mode.

terminal length integer

I

Syntax Description	to 511 lines, in	es on the screen. Contains between 0 nclusive. A value of zero (0) disables een screens of output.
Command Default	24 lines.	
Command Modes	EXEC	
Usage Guidelines	The system uses the length value to determine when to pause during	multiple-screen output.
	ncs/admin# terminal length 0	

ncs/admin#

terminal session-timeout

To set the inactivity timeout for all sessions, use the terminal session-timeout command in EXEC mode.

terminal session-timeout minutes

Syntax Description	minutes	Sets the number of minutes for the inactivity timeout. From 0 to 525,600. Zero (0) disables the timeout.	
Command Default	30 minutes.		
Command Modes	- EXEC		
Usage Guidelines	Setting the terminal session-timeout command to zero (0) results in no timeout being set.		
	ncs/admin# terminal session-timeou ncs/admin#	= 40	
Related Commands	Command	Description	
	terminal session-welcome	Sets a welcome message on the system for all users	

terminal session-welcome

string

To set a welcome message on the system for all users who log in to the system, use the **terminal session-welcome** command in EXEC mode.

terminal session-welcome string

Syntax Description

Welcome message. Up to 2,023 alphanumeric characters.

who log in to the system.

Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	Specify a message using up to 2048 characters.	
	ncs/admin# terminal session-welcome Welcome ncs/admin#	
Related Commands	Command	Description

terminal terminal-type

To specify the type of terminal connected to the current line for the current session, use the **terminal terminal-type** command in EXEC mode.

Sets the inactivity timeout for all sessions.

terminal terminal-type type

terminal session-timeout

Syntax Description	type	Defines the terminal name and type, and permits terminal negotiation by hosts that provide that type of service. Up to 80 alphanumeric characters.	
Command Default	- VT100.		
Command Modes	EXEC		
Usage Guidelines	Indicate the terminal type if it is different from the default of VT100.		
	ncs/admin# terminal terminal-t ncs/admin#	type vt220	
traceroute			
	To discover the routes that packets take when traveling to their destination address, use the tracerout command in EXEC mode.		
	traceroute [ip-address hostname]	
Syntax Description	ip-address	IP address of the remote system. Up to 32 alphanumeric characters.	
	hostname	Hostname of the remote system. Up to 32 alphanumeric characters.	

Command Default	No default behavior or values.		
Command Modes	EXEC		
	ncs/admin# traceroute 172.16. traceroute to 172.16.0.11 (17: 1 172.16.0.11 0.067 ms 0.0 ncs/admin#	2.16.0.11), 30 hops max, 38 byte packets	
undebug			
	To disable debugging functions, use the undebug command in EXEC mode.		
Syntax Description	undebug {all application backu transfer user utils} all	up-restore cdp config copy icmp locks logging snmp system Disables all debugging.	
Syntax Description			
	application	Application files.	
		• <i>all</i> —Disables all application debug output.	
		 <i>install</i>—Disables application install debug output. 	
		 <i>operation</i>—Disables application operation debug output. 	
		• <i>uninstall</i> —Disables application uninstall debug output.	
	backup-restore	Backs up and restores files.	
		• <i>all</i> —Disables all debug output for	

backup—Disables backup debug output for backup-restore.

- *backup-logs*—Disables backup-logs debug output for backup-restore.
- *history*—Disables history debug output for backup-restore.
- *restore*—Disables restore debug output for backup-restore.

I

cdp	Cisco Discovery Protocol configuration files.
	 <i>all</i>—Disables all Cisco Discovery Protocol configuration debug output.
	 config—Disables configuration debug output for Cisco Discovery Protocol.
	 <i>infra</i>—Disables infrastructure debug output for Cisco Discovery Protocol.
config	Configuration files.
	• <i>all</i> —Disables all configuration debug output.
	• <i>backup</i> —Disables backup configuration debug output.
	 <i>clock</i>—Disables clock configuration debug output.
	 <i>infra</i>—Disables configuration infrastructure debug output.
	 kron—Disables command scheduler configuration debug output.
	 network—Disables network configuration debug output.
	 repository—Disables repository configuration debug output.
	• <i>service</i> —Disables service configuration debug output.
сору	Copy commands.
icmp	ICMP echo response configuration.
	<i>all</i> —Disable all debug output for ICMP echo response configuration. Set level between 0 and 7, with 0 being severe and 7 being all.
locks	Resource locking.
	• <i>all</i> —Disables all resource locking debug output.
	• <i>file</i> —Disables file locking debug output.
logging	Logging configuration files.
	<i>all</i> —Disables all debug output for logging configuration.

I

	snmp	SNMP configuration files.		
		<i>all</i> —Disables all debug output for SNMP configuration.		
	system	System files.		
		• <i>all</i> —Disables all system files debug output.		
		• <i>id</i> —Disables system ID debug output.		
		• info-Disables system info debug output.		
		• <i>init</i> —Disables system init debug output.		
	transfer	File transfer.		
	user	User management.		
		• all—Disables all user management debug output		
		• <i>password-policy</i> —Disables user management debug output for password-policy.		
	utils	Utilities configuration files.		
		all—Disables all utilities configuration debug outpu		
Command Default	No default behavior or values.			
Command Modes	EXEC			
	ncs/admin# undebug all ncs/admin#			
Related Commands	Command	Description		
	debug	Displays errors or events for command situations.		
write				
	To copy, display, or erase the Cisco EPNM servary argument in EXEC mode.	ver configurations, use the write command with the appropria		
	<pre>write {erase memory terminal}</pre>			
Syntax Description	erase	Erases the startup configuration. This command is disabled by default.		
	memory	Copies the running configuration to the startup configuration.		

	terminal	Copies the running configuration to the console.
Command Default	No default behavior or values.	
Command Modes	EXEC	
	The following is an example of the write	e command with an erase keyword:
	epnm-system/admin# write erase % Warning: 'write erase' function	ality has been disabled by application: NCS

show Commands

epnm-system/admin#

This section lists Cisco EPNM **show** commands. Each command includes a brief description of its use, any command defaults, command modes, usage guidelines, an example of the command syntax and any related commands.

show application

To show application information of the installed application packages on the system, use the **show application** command in EXEC mode.

show application [status | version [app_name]]

Syntax Description	status	Displays the status of the installed application.
	version	Displays the application version for an installed application—EPNM.
	app_name	Name of the installed application.

			Output modifier variables:
			• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.
			• <i>count</i> —Counts the number of lines in the output. Add number after the word <i>count</i> .
			—Output modifier variables.
			• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
			• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
			• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
			• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
			—Output modifier variables.
Command Default	No default b	ehavior or values.	
Command Modes	EXEC		
	Example		
	show applic		
	<name> NCS</name>	<description> EPNM</description>	

Related Commands

	Description
application start	Starts or enables an application.
application stop	Stops or disables an application.

show backup history

To display the backup history of the system, use the **show backup history** command in EXEC mode.

show backup history

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

Example 1

Related Commands	Command	Description
	backup	Performs a backup (Cisco EPNM) and places the backup in a repository.
	restore	Restores the file contents of a specific repository from the backup.
	repository	Enters the repository submode for configuration of backups.
	show repository	Displays the available backup files located on a specific repository.

show banner pre-login

To display the banner that you installed, use the show banner pre-login command in EXEC mode.

	show banner pre-login		
Syntax Description	This command has no arguments or keywords.		
Command Default	No default behavior or values.		
Command Modes	EXEC		
	Example		
	epnm-system/admin# show banner pre-login Banner-Test epnm-system/admin#		
Related Commands	Command	Description	
	banner, on page 7	Enables you to install a pre-login banner.	
show cdp	To display information about the enabled Cisco Disc	covery Protocol interfaces use the show cdn command	
Show Cup	To display information about the enabled Cisco Disc in EXEC mode. show cdp {all neighbors} all	covery Protocol interfaces, use the show cdp command Shows all of the enabled Cisco Discovery Protocol interfaces.	
	in EXEC mode. show cdp {all neighbors}	Shows all of the enabled Cisco Discovery Protocol	
	in EXEC mode. show cdp {all neighbors} all	Shows all of the enabled Cisco Discovery Protocol interfaces.	
- Syntax Description Command Default	in EXEC mode. show cdp {all neighbors} all neighbors No default behavior or values.	Shows all of the enabled Cisco Discovery Protocol interfaces.	
- Syntax Description Command Default	<pre>in EXEC mode. show cdp {all neighbors} all neighbors No default behavior or values. EXEC Example 1 ncs/admin# show cdp all CDP protocol is enabled broadcasting interval is every 60 se time-to-live of cdp packets is 180 second sec</pre>	Shows all of the enabled Cisco Discovery Protocol interfaces. Shows the Cisco Discovery Protocol neighbors.	
- Syntax Description Command Default	<pre>in EXEC mode. show cdp {all neighbors} all neighbors No default behavior or values. EXEC Example 1 ncs/admin# show cdp all CDP protocol is enabled broadcasting interval is every 60 set time-to-live of cdp packets is 180 s CDP is enabled on port GigabitEtherr ncs/admin#</pre>	Shows all of the enabled Cisco Discovery Protocol interfaces. Shows the Cisco Discovery Protocol neighbors.

Related Commands

;	Command	Description
	cdp holdtime	Specifies the length of time that the receiving device should hold a Cisco Discovery Protocol packet from your router before discarding it.
	cdp run	Enables the Cisco Discovery Protocol.
	cdp timer	Specifies how often the Cisco EPNM server sends Cisco Discovery Protocol updates.

show clock

To display the day, month, date, time, time zone, and year of the system software clock, use the **show clock** command in EXEC mode.

show clock

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

epnm-system-196/admin# **show clock** Tue Jan 28 04:11:38 IST 2020

I

	Note		e show clock output in the previous example includes Coordinated Universal Time (UTC) or eenwich Mean Time (GMT), Great Britain, or Zulu time.		
Related Commands	Co	mmand	Description		
	clo	ck	Sets the system clock for display purposes.		
show cpu	То	display CPU information, use the sh	tow cpu command in EXEC mode.		
	show cpu [statistics] [] []				
Syntax Description	sta	tistics	Displays CPU statistics.		
	/		Output modifier variables:		
			• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.		
			• <i>count</i> —Counts the number of lines in the output Add number after the word <i>count</i> .		
			—Output modifier variables.		
			• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.		
			• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.		
			• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.		
			• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.		
			—Output modifier variables.		
Command Default	No	default behavior or values.

Related Commands

S	Command	Description
	show disks	Displays the system information of all disks.
	show memory	Displays the amount of system memory that each system process uses.

show disks

To display the disks file-system information, use the **show disks** command in EXEC mode.

show disks [|] [|]

Syntax Description Output modifier variables: / • begin-Matched pattern. Up to 80 alphanumeric characters. • count—Counts the number of lines in the output. Add number after the word *count*. —Output modifier variables. • end—Ends with line that matches. Up to 80 alphanumeric characters. • exclude—Excludes lines that match. Up to 80 alphanumeric characters. • include—Includes lines that match. Up to 80 alphanumeric characters. • last-Displays last few lines of output. Add number after the word last. Up to 80 lines to display. Default 10. -Output modifier variables.

Command Default No default b

No default behavior or values.

Command Modes EXEC Usage Guidelines Only platforms that have a disk file system support the show disks command. ncs/admin# show disks temp. space 2% used (17828 of 988116) disk: 3% used (143280 of 5944440) Internal filesystems: all internal filesystems have sufficient free space ncs/admin#

Related Commands

s	Command	Description
	show cpu	Displays CPU information.
	show memory	Displays the amount of system memory that each system process uses.

show icmp_status

To display the Internet Control Message Protocol echo response configuration information, use the **show icmp_status** command in EXEC mode.

show icmp_status {> file | |}

Syntax Description > Output direction. file Name of file to redirect standard output (stdout).

	/	Output modifier commands:
		 begin—Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the output Add number after the word count.
		• —Output modifier commands.
		• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• last—Displays last few lines of output. Add number after the word last. Up to 80 lines to display. Default 10.
		• —Output modifier commands.
Command Default	No default behavior or values.	
Command Modes	EXEC	
	Example 1	
	ncs/admin# show icmp_status icmp echo response is turned on ncs/admin#	
	Emanuela A	

Example 2

ncs/admin# show icmp_status
icmp echo response is turned off
ncs/admin#

Related Commands	Command	Description
	1	Configures the Internet Control Message Protocol (ICMP) echo requests.

show ip route

To display details the ip route details of the application, use **show ip route** command in EXEC mode.

show ip route {||}

Syntax Description	Output redirection I Output modifiers						
Command Default	No default behav	iour.					
Command Modes	EXEC						
	ncs/admin# sho Kernel IP rout Destination 10.126.168.0 0.0.0.0	-	Genmask 255.255.255.0 0.0.0.0	Flags Metr U O UG O	ic Ref O O	Use Iface 0 eth0 0 eth0	
	Kernel IPv6 ro Destination		Ne:	xt Hop			Flags
	Metric Ref 2001::/64 256 0	Use Iface 0 eth0	::				UA
	fe80::/64 256 0	0 eth0	::				U
	::/0 1024 18	0 eth0		80::217:dfff	:fe29:98	800	UGDA

show interface

To display the usability status of interfaces configured for IP, use the **show interface** command in EXEC mode.

show interface [GigabitEthernet | Team]

Syntax Description	GigabitEthernet	Shows the Gigabit Ethernet details.	
	Team	Shows the Team interface (virtual network adapters) details.	

	/	Output modifier variables:
		 begin—Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
		• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
		• <i>last</i> —Displays the last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display (default 10).
Command Default	No default behavior or values.	

Command Modes In the show interface output, you can find that the interface has three IPv6 addresses. The first internet address **Usage Guidelines** (starting with 3ffe) is the result of using the stateless autoconfiguration. For this to work, you must have IPv6 route advertisement enabled on that subnet. The next address (starting with fe80) is a link local address that does not have any scope outside the host. You always see a link local address regardless of the IPv6 autoconfiguration or DHCPv6 configuration. The last address (starting with 2001) is the result that is obtained from an IPv6 DHCP server.

Example 1

EXEC

show logging

To display the state of system logging (syslog) and the contents of the standard system logging buffer, use the **show logging** command in EXEC mode.

show logging {application [application-name]} {internal} {system} |

Syntax Description	application	Displays application logs.
--------------------	-------------	----------------------------

application-name	Application name. Up to 255 alphanumeric characters
	• <i>tail</i> —Tail system syslog messages.
	• <i>count</i> —Tail last count messages. 0–4,294,967,295.
	-Output modifier variables (see below).
internal	Displays the syslogs configuration.
security	Displays the security syslog messages.
sync-logs	Displays the sync-logs status.
system	Displays the system syslogs.
	Output modifier variables:
	• <i>begin</i> —Matched pattern. Up to 80 alphanumer characters.
	• <i>count</i> —Counts the number of lines in the interface. Add number after the word <i>count</i> .
	• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
	• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
	• <i>include</i> —Includes lines that match. Up to 80 alphanumeric characters.
	• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.

Command Modes

Usage Guidelines

Command Default

This command displays the state of syslog error and event logging, including host addresses, and for which, logging destinations (console, monitor, buffer, or host) logging is enabled.

Example 1

```
ncs/admin# show logging system

Table 4: Show Process Field Descriptions

Field	Description
USER	Logged-in user.
PID	Process ID.
TIME	The time that the command was last used.
TT	Terminal that controls the process.
COMMAND	Type of process or command used.

show repository

To display the file contents of the repository, use the show repository command in EXEC mode.

show repository repository-name

Syntax Description	repository-name	Name of the repository whose contents you want to view. Up to 30 alphanumeric characters.
Command Default	No default behavior or values.	
Command Modes	EXEC	
Related Commands	Command	Description
	backup	Performs a backup (Cisco EPNM and Cisco ADE OS) and places the backup in a repository.
	restore	Restores from backup the file contents of a specific repository.
	repository	Enters the repository submode for configuration of backups.
	show backup history	Displays the backup history of the system.

show restore

To display the restore history, use the show restore command in EXEC mode.

show restore {history}

Syntax Description	history	history Displays the restore history.			
Command Default	No default behavior or values.				
Command Modes	EXEC				
	epnm-system-176/admin# show restore history Wed Dec 2 21:55:39 IST 2020: restore iol-epnm-discovery-191113- 0832VER3.7.0.0.159_BKSZ18G_CPU16_MEM3G_RAM15G_SWAP15G_APP_CK2443318487.tar.gpg from repository test: success epnm-system-176/admin#				
Related Commands	Command	Description			
	backup	Performs a backup (Cisco EPNM and Cisco ADE OS) and places the backup in a repository.			
	restore	Restores from backup the file contents of a specific repository.			
	repository	Enters the repository submode for configuration of backups.			

show restore log

To display the last restore operation in the case of Auto logout console, use the **show restore log** command in EXEC mode. You can run this command even while performing a restore operation and a successful restore operation.

Displays the backup history of the system.

show restore log

Syntax Description This command has no arguments or keywords.

show backup history

Command Default No default behavior or values.

Command Modes EXEC

Related Commands

Command	Description
configure	Enters the configuration mode.
show running-config	Displays the contents of the currently running configuration file or the configuration.

show security-status

To display the security-related configuration information, use the **show security-status** command in EXEC mode.

show security-status

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

Example

epnm-system/admin# show security-status Open TCP Ports : 21 22 80 443 1522 8078 8080 8082 8087 9992 20828 61617 Open UDP Ports : 69 162 514 9991 FIPS Mode : disabled SSH Legacy Algorithms : enabled TFTP Service : enabled FTP Service : enabled JMS port(61617) : enabled : enabled Root Access Certificate validation settings for pubnet : enabled Cert check OCSP check : disabled Auto CA update : enabled Certificate validation settings for system Cert check : trust-on-first-use OCSP check : disabled Auto CA update : disabled Certificate validation settings for devicemgmt Cert check : enabled OCSP check : disabled Auto CA update : enabled Certificate validation settings for user Cert check : enabled OCSP check : disabled Auto CA update : disabled Algorithm settings enabled for SSH service KexAlgorithms : diffie-hellman-group16-sha512, diffie-hellman-group14-sha256, ecdh-sha2-nistp521, ecdh-sha2-nistp384, ecdh-s ha2-nistp256, diffie-hellman-group18-sha512, diffie-hellman-group14-sha1, diffie-hellman-group-exchange-sha256, diffie-hellman -group-exchange-shal, diffie-hellman-group1-shal : hmac-sha2-512,hmac-sha2-256,hmac-sha1 MACs Ciphers : aes128-gcm@openssh.com,aes128-ctr,chacha20-poly1305@openssh.com,aes256-ctr,aes256-gcm@openssh.com,aes192 -ctr,3des-cbc,aes128-cbc,aes256-cbc : TLSv1.2 TLS versions TLS ciphers : tls-ecdhe-shal Note : Shows currently configured values Changes made after last system start if any, will be effective after next restart

show tech-support

To display technical support information, including email, use the **show tech-support** command in EXEC mode.

show tech-support file [word]

Syntax Description	file				Saves any technical support data as a file in the local disk.			
	word				Filename	e to save. Up t	to 80 alphanumeric characters.	
Command Default	Passwords	and other sec	curity information	ation do not ap	pear in the c	output.		
Command Modes	EXEC							
Usage Guidelines	The show tech-support command is useful for collecting a large amount of information about your Cisco EPNM server for troubleshooting purposes. You can then provide output to technical support representatives when reporting a problem.

show interface

Displays the usability status of the interfaces.

Command	Description	
show process	Displays information about active processes.	
show running-config	Displays the contents of the current running configuration.	

show terminal

To obtain information about the terminal configuration parameter settings, use the **show terminal** command in EXEC mode.

show	terminal
------	----------

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

```
ncs/admin# show terminal
TTY: /dev/pts/0 Type: "vt100"
Length: 27 lines, Width: 80 columns
Session Timeout: 30 minutes
ncs/admin#
```

show terminal describes the fields of the show terminal output.

Table 5: Show Terminal Field Descriptions

Field	Description
TTY: /dev/pts/0	Displays standard output to type of terminal.
Type: "vt100"	Type of current terminal used.
Length: 24 lines	Length of the terminal display.
Width: 80 columns	Width of the terminal display, in character columns.
Session Timeout: 30 minutes	Length of time, in minutes, for a session, after which the connection closes.

show timezone

To display the time zone set on the system, use the **show timezone** command in EXEC mode.

show timezone

Syntax Description

This command has no arguments or keywords.

Command Default	No default behavior or values.	
Command Modes	EXEC	
	epnm-system/admin# show timezone Asia/Kolkata epnm-system/admin#	
Related Commands	Command	Description
	clock timezone	Sets the time zone on the system.
	show timezones	Displays the time zones available on the system.

show timezones

To obtain a list of time zones from which you can select, use the show timezones command in EXEC mode.

show timezones

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes EXEC

Usage Guidelines See the clock timezone command, for examples of the time zones available for the Cisco EPNM server.

ncs/admin# show timezones Africa/Blantyre Africa/Dar_es_Salaam Africa/Dakar Africa/Maputo Africa/Accra Africa/Kigali Africa/Tunis Africa/Nouakchott Africa/Ouagadougou Africa/Windhoek Africa/Douala Africa/Johannesburg Africa/Luanda Africa/Lagos Africa/Djibouti Africa/Khartoum Africa/Monrovia Africa/Bujumbura Africa/Porto-Novo Africa/Malabo Africa/Ceuta Africa/Banjul Africa/Cairo Africa/Mogadishu Africa/Brazzaville

Africa/Kampala Africa/Sao_Tome Africa/Algiers Africa/Addis_Ababa Africa/Ndjamena Africa/Gaborone Africa/Bamako Africa/Freetown --More--(press Spacebar to continue) ncs/admin#

Related Commands

 Command	Description
show timezone	Displays the time zone set on the system.
clock timezone	Sets the time zone on the system.

show udi

To display information about the UDI of the Cisco EPNM appliance, use the **show udi** command in EXEC mode.

	mode.
	show udi
Syntax Description	This command has no arguments or keywords.
Command Default	No default behavior or values.
Command Modes	EXEC
	The following output appears when you run the show udi on Gen 2 appliance server.
	Example 1
	epnm-system/admin# sh udi PID: EPNM-UCS-APL-K9 VPID: A0
	Serial: FCH1842V1EH
	epnm-system-117/admin#

show uptime

To display the length of time that you have been logged in to the Cisco EPNM server, use the **show uptime** command in EXEC mode.

show uptime

Syntax Description	/	(Optional) Output modifier variables:
		• <i>begin</i> —Matched pattern. Up to 80 alphanumeric characters.
		• <i>count</i> —Counts the number of lines in the output. Add number after the word <i>count</i> .
		• <i>end</i> —Ends with line that matches. Up to 80 alphanumeric characters.
		• <i>exclude</i> —Excludes lines that match. Up to 80 alphanumeric characters.
		• <i>include</i> —Includse lines that match. Up to 80 alphanumeric characters.
		• <i>last</i> —Displays last few lines of output. Add number after the word <i>last</i> . Up to 80 lines to display. Default 10.
Command Default	No default behavior or values.	
Command Modes	EXEC	
	ncs/admin# show uptime	

3 day(s), 18:55:02 ncs/admin#

show users

To display the list of users who are logged in to the Cisco EPNM server, use the **show users** command in EXEC mode.

show users

Syntax Description	show users status Displays the details of all users, which include roles, disabled status, and locked status.
Command Default	No default behavior or values.
Command Modes	EXEC
	ncs/admin# show users USERNAME ROLE HOST TTY LOGIN DATETIME admin Admin 10.77.137.60 pts/0 Fri0000 Aug 6 09:45:47 2019 ncs/admin#

show version

To display information about the software version of the system, use the **show version** command in EXEC mode.

	show version	
Syntax Description	This command has no arguments or keywords.	
Command Default	No default behavior or values.	
Command Modes	EXEC	
Usage Guidelines	This command displays the version information about the Cisco ADE-OS software running on the Cisco EPNM server, and displays the Cisco EPNM version.	
	Cisco Application Deployment Engine OS Release: 6.7 ADE-OS Build Version: 6.7.9.001 ADE-OS System Architecture: x86_64	
	Copyright (c) 2009-2020 by Cisco Systems, Inc. All rights reserved. Hostname: erez-esxi-12-vm6	
	Version information of installed applications	
	Cisco EPN Manager ************************************	

Configuration Commands

This section lists the **configuration commands** along with a brief description of their use, command defaults, command syntax, command modes, usage guidelines, command examples, and related commands, where applicable.

Configuration commands include interface and repository.

Ŵ

Note Some of the configuration commands require you to enter the configuration submode to complete the command configuration.

To access configuration mode, you must use the configure command in EXEC mode.

aaa authentication

To configure an external authentication, use the **aaa authentication** command in the configuration mode.

Syntax Description	TACACS server address	IP address or hostname of the TACACS+ server.	
	shared-key	Indicates the shared secret text string.	
Command Default	No default behavior or values.		
Command Modes	Configuration		
admin# aaa authentication tacacs+ server 1.1.1.5 key plai admin# username tacacsuser password remote role network-a			

aaa authentication tacacs+ server TACACS server address key plain shared-key

Ensure that the TACACS+ server has the same username as that of the Cisco EPNM server, and the Cisco EPNM and TACACS+ servers are integrated properly.

backup-staging-url

You can use this option to configure a Network File System (NFS) share on the Cisco EPNM when partition is low on disk space and a backup cannot be taken. You can do so by using the **backup-staging-url** command in the configuration mode.

 backup-staging-url
 word

 Syntax Description
 word
 NFS URL for staging area. Up to 2048 alphanumeric characters. Use nfs://server:path.

 Command Default
 No default behavior or values.
 Configuration

 Usage Guidelines
 The URL is NFS only. The format of the command is backup-staging-url nfs://server:path.

 $\widehat{Caution}$ Ensure that you secure your NFS server in such a way that the directory can be accessed only by the IP address of the Cisco EPNM server.

ncs/admin(config)# backup-staging-url nfs://loc-filer02a:/vol/local1/private1/jdoe
ncs/admin(config)#

cdp holdtime

To specify the amount of time for which the receiving device should hold a Cisco Discovery Protocol packet from the Cisco EPNM server before discarding it, use the **cdp holdtime** command in configuration mode. To revert to the default setting, use the **no** form of this command.

[no] cdp holdtime seconds

Syntax Description Specifies the hold time, in seconds. Value from 10 to seconds 255 seconds. 180 seconds **Command Default** Configuration **Command Modes** Cisco Discovery Protocol packets transmit with a time to live, or hold time, value. The receiving device will **Usage Guidelines** discard the Cisco Discovery Protocol information in the Cisco Discovery Protocol packet after the hold time has elapsed. The **cdp holdtime** command takes only one argument; otherwise, an error occurs. ncs/admin(config)# cdp holdtime 60 ncs/admin(config)# **Related Commands** Description Specifies how often the Cisco EPNM server sends cdp timer Cisco Discovery Protocol updates. cdp run Enables the Cisco Discovery Protocol. cdp run To enable the Cisco Discovery Protocol, use the **cdp run** command in configuration mode. To disable the Cisco Discovery Protocol, use the no form of this command. [no] cdp run [GigabitEthernet] **Syntax Description** Specifies the Gigabit Ethernet interface on which to **GigabitEthernet**

Command DefaultNo default behavior or values.Command ModesConfigurationUsage GuidelinesThe command has one optional argument, which is an interface name. Without an optional interface name, the command enables the Cisco Discovery Protocol on all interfaces.

Note The default for this command is on interfaces that are already up and running. When you are bringing up an interface, stop the Cisco Discovery Protocol first; then, start the Cisco Discovery Protocol again.

enable the Cisco Discovery Protocol.

ncs/admin(config)# cdp run GigabitEthernet 0
ncs/admin(config)#

Related Commands

	Description
cdp holdtime	Specifies the length of time that the receiving device should hold a Cisco Discovery Protocol packet from the Cisco EPNM server before discarding it.
cdp timer	Specifies how often the Cisco EPNM server sends Cisco Discovery Protocol updates.

cdp timer

To specify how often the Cisco EPNM server sends Cisco Discovery Protocol updates, use the **cdp timer** command in configuration mode. To revert to the default setting, use the **no** form of this command.

[no] cdp timer seconds

Syntax Description	seconds	Specifies how often, in seconds, the Cisco EPNM server sends Cisco Discovery Protocol updates. Value from 5 to 254 seconds.	
Command Default	60 seconds		
Command Modes	Configuration		
Usage Guidelines	5 1	t with a time to live, or hold time, value. The receiving device will rmation in the Cisco Discovery Protocol packet after the hold time	
	The cdp timer command takes only one argument; otherwise, an error occurs.		
	ncs/admin(config)# cdp timer 60 ncs/admin(config)#		
Related Commands	-	Description	

5		Description
	cdp holdtime	Specifies the amount of time that the receiving device should hold a Cisco Discovery Protocol packet from the Cisco EPNM server before discarding it.
	cdp run	Enables the Cisco Discovery Protocol.

clock timezone

To set the time zone, use the **clock timezone** command in configuration mode. To disable this function, use the **no** form of this command.

clock timezone timezone

Syntax Description	timezone	Name of the time zone visible when in standard time. Up to 64 alphanumeric characters.		
Command Default	UTC			
Command Modes	Configuration			
Usage Guidelines	The system internally keeps time in Coordinated Universal Time (UTC). If you do not know your specific time zone, you can enter the region, country, and city.			
	Table 6: Common Time Zones			
	Acronym or name	Time Zone Name		
	Europe			
	GMT, GMT0, GMT-0, GMT+0, UTC, Greenwich, Universal, Zulu	Greenwich Mean Time, as UTC		
	GB	British		
	GB-Eire, Eire	Irish		
	WET	Western Europe Time, as UTC		
	СЕТ	Central Europe Time, as UTC + 1 hour		
	EET	Eastern Europe Time, as UTC + 2 hours		
	United States and Canada			
	EST, EST5EDT	Eastern Standard Time, as UTC -5 hours		
	CST, CST6CDT	Central Standard Time, as UTC -6 hours		
	MST, MST7MDT	Mountain Standard Time, as UTC -7 hours		
	PST, PST8PDT	Pacific Standard Time, as UTC -8 hours		
	HST	Hawaiian Standard Time, as UTC -10 hours		

Table 7: Australia Time Zones

AustraliaFootnote.			
ACTFootnote.	Adelaide	Brisbane	Broken_Hill

AustraliaFootnote.				
Canberra	Currie	Darwin	Hobart	
Lord_Howe	Lindeman	LHIFootnote.	Melbourne	
North	NSWFootnote.	Perth	Queensland	
South	Sydney	Tasmania	Victoria	
West	Yancowinna			

³ (1) Enter the country and city together with a forward slash (/) between them; for example, Australia/Currie.

- 4 (2) ACT = Australian Capital Territory
- 5 (3) LHI = Lord Howe Island
- 6 (4) NSW = New South Wales

Table 8: Asia Time Zones

AsiaFootnote.			
AdenFootnote.	Almaty	Amman	Anadyr
Aqtau	Aqtobe	Ashgabat	Ashkhabad
Baghdad	Bahrain	Baku	Bangkok
Beirut	Bishkek	Brunei	Calcutta
Choibalsan	Chongqing	Columbo	Damascus
Dhakar	Dili	Dubai	Dushanbe
Gaza	Harbin	Hong_Kong	Hovd
Irkutsk	Istanbul	Jakarta	Jayapura
Jerusalem	Kabul	Kamchatka	Karachi
Kashgar	Katmandu	Kuala_Lumpur	Kuching
Kuwait	Krasnoyarsk		

⁷ (1) The Asia time zone includes cities from East Asia, Southern Southeast Asia, West Asia, and Central Asia.

⁸ (2) Enter the region and city or country together separated by a forward slash (/); for example, Asia/Aden.

Note Several more time zones are available to you. On your Cisco EPNM server, enter the **show timezones** command. A list of all of the time zones available in the Cisco EPNM server appears. Choose the most appropriate one for your time zone.

epnm-admin/admin(config)# conf t Enter configuration commands, one per line. End with CNTL/Z. epnm-admin/admin(config)# clock timezone Asia/Kolkata epnm-admin/admin(config)#

Related Commands

	Description
show timezones, on page 95	Displays a list of available time zones on the system.
show timezone, on page 94	Displays the current time zone set on the system.

do

To execute an EXEC-level command from configuration mode or any configuration submode, use the **do** command in any configuration mode.

do

Syntax Description This command has no arguments or keywords.

Table 9: Command Options for the Do Command

	Description
application install	Installs a specific application.
application remove	Removes a specific application.
application start	Starts or enables a specific application
application stop	Stops or disables a specific application.
application upgrade	Upgrades a specific application.
backup	Performs a backup (Cisco EPNM and Cisco ADE OS) and places the backup in a repository.
backup-logs	Performs a backup of all the logs on the Cisco EPNM server to a remote location.
clock	Sets the system clock on the Cisco EPNM server.
configure	Enters configuration mode.
сору	Copies any file from a source to a destination.
debug	Displays any errors or events for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.

	Description
delete	Deletes a file on the Cisco EPNM server.
dir	Lists files on the Cisco EPNM server.
forceout	Forces the logout of all the sessions of a specific Cisco EPNM node user.
halt	Disables or shuts down the Cisco EPNM server.
mkdir	Creates a new directory.
nslookup	Queries the IPv4 address or hostname of a remote system.
patch	Install System or Application patch.
pep	Configures the Inline PEP node.
ping	Determines the IPv4 network activity on a remote system.
ping6	Determines the IPv6 network activity on a IPv6 remote system.
reload	Reboots the Cisco EPNM server.
restore	Performs a restore and retrieves the backup out of a repository.
rmdir	Removes an existing directory.
show	Provides information about the Cisco EPNM server.
ssh	Starts an encrypted session with a remote system.
tech	Provides Technical Assistance Center (TAC) commands.
telnet	Establishes a Telnet connection to a remote system.
terminal length	Sets terminal line parameters.
terminal session-timeout	Sets the inactivity timeout for all terminal sessions.
terminal session-welcome	Sets the welcome message on the system for all terminal sessions.
terminal terminal-type	Specifies the type of terminal that is connected to the current line of the current session.
traceroute	Traces the route of a remote IP address.

		Description
	undebug	Disables the output (display of errors or events) of the debug command for various command situations; for example, backup and restore, configuration, copy, resource locking, file transfer, and user management.
	write	Erases the startup configuration that forces the setup utility to run and prompts the network configuration, copies the running configuration to the startup configuration, and displays the running configuration on the console.
Command Default	No default behavior or values.	
Command Modes	Configuration	
Usage Guidelines	Use this command to execute EXEC commands (such as show , clear , and debug commands) while configuring your server. After the EXEC command executes, the system will return to the configuration mode that you were using.	
	<pre>ncs/admin(config)# do show run Generating configuration ! hostname ncs ! ip domain-name cisco.com ! interface GigabitEthernet 0 ip address 172.23.90.113 255.255 ipv6 address autoconfig ! ip name-server 172.16.168.183 ! ip default-gateway 172.23.90.1 ! clock timezone EST ! ntp server time.nist.gov ! username admin password hash \$1\$JH ! service sshd</pre>	5.255.0 DbHvKVG\$xMZ/XL4tH15Knf.FfcZZr. role admin

--More--

ncs/admin(config)#

end

I

To end the current configuration session and return to EXEC mode, use the **end** command in configuration mode.

	end	
Syntax Description	This command has no arguments or keywords.	
Command Default	No default behavior or values.	
Command Modes	Configuration	
Usage Guidelines	This command brings you back to EXEC mode regardless of what configuration mode or submode you are in.	
	Use this command when you finish configuring the system and you want to return to EXEC mode to perform verification steps.	
	ncs/admin(config)# end	

ncs/admin(config)# end
ncs/admin#

Related Commands	Command	Description
	exit	Exits the configuration mode.
	exit (EXEC)	Closes the active terminal session by logging out of the Cisco EPNM server.

exit

To exit any configuration mode to the next-highest mode in the CLI mode hierarchy, use the **exit** command in configuration mode.

exit

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values.

Command Modes Configuration

Usage Guidelines The **exit** command is used in the Cisco EPNM server to exit the current command mode to the next highest command mode in the CLI mode hierarchy.

For example, use the **exit** command in configuration mode to return to EXEC mode. Use the **exit** command in the configuration submodes to return to configuration mode. At the highest level, EXEC mode, the **exit** command exits the EXEC mode and disconnects from the Cisco EPNM server (see exit, for a description of the **exit** (EXEC) command).

ncs/admin(config)# exit
ncs/admin#

Related Commands

Command	Description
end	Exits the configuration mode.
	Closes the active terminal session by logging out of the Cisco EPNM server.

hostname

To set the hostname of the system, use the **hostname** command in configuration mode. To delete the hostname from the system, use the **no** form of this command, which resets the system to localhost.

```
[no] hostname word
Syntax Description
                                                                    Name of the host. Contains at least 2 to 64
                     word
                                                                    alphanumeric characters and an underscore (). The
                                                                    hostname must begin with a character that is not a
                                                                    space.
                    No default behavior or values.
Command Default
                    Configuration
Command Modes
                    A single instance type of command, hostname only occurs once in the configuration of the system. The
Usage Guidelines
                    hostname must contain one argument; otherwise, an error occurs.
                    ncs/admin(config)# hostname ncs-1
                    Changing the hostname or IP may result in undesired side effects,
                    such as installed application(s) being restarted.

```

icmp echo

To configure	the Internet Control	Message Protocol	(ICMP) echo re	esponses, use the	icmp echo command in
configuration	n mode.				

icmp echo {off | on}

Syntax Description	off	Disables ICMP echo response.
	on	Enables ICMP echo response.
Command Default	The system behaves as if the ICMP echo response is	on (enabled).
Command Modes	Configuration	

ncs/admin(config)# icmp echo off
ncs/admin(config)#

Related Commands

Command	Description
show icmp_status	Display ICMP echo response configuration information.

interface

To configure an interface type and enter interface configuration mode, use the **interface** command in configuration mode.

Note VMware virtual machine may have a number of interfaces available. This depends on how many network interfaces (NIC) are added to the virtual machine.

interface GigabitEthernet ip-address

Syntax Description	GigabitEthernet	Configures the Gigabit Ethernet interface.
	0 - 3	Number of the Gigabit Ethernet port to configure.
	Team	Configures the Team interface.
	0 - 255	Number of the Team port to configure.
	•	

Note

After you enter the Gigabit Ethernet port number in the **interface** command, you enter config-GigabitEthernet configuration submode (see the following Syntax Description).

do	EXEC command. Allows you to perform any EXEC commands in this mode (see do).
end	Exits config-{GigabitEthernet Team} submode and returns you to EXEC mode.
exit	Exits the config-{GigabitEthernet Team} configuration submode.
ip	Sets IP address and netmask for the Ethernet interface (see ip address).
ipv6	Configures the IPv6 autoconfiguration address and IPv6 address from DHCPv6 server. (see ipv6 address autoconfig and ipv6 address dhcp).
no	 Negates the command in this mode. Two keywords are available: ip—Sets the IP address and netmask for the interface. shutdown—Shuts down the interface.
shutdown	Shuts down the interface (see shutdown).
virtual-ip	Configures the virtual IP features. Adds an additiona sub-interface/ip to the existing IP. Supports all the regular "interface" commands.

Command Default No default behavior or values.

Command Modes Configuration

Usage Guidelines You can use the **interface** command to configure subinterfaces to support various requirements.

ncs/admin(config)# interface GigabitEthernet 0
ncs/admin(config-GigabitEthernet)#

Related Commands	Command	Description
	show interface	Displays information about the system interfaces.
	ip address (interface configuration mode)	Sets the IP address and netmask for the interface.
	shutdown (interface configuration mode)	Shuts down the interface (see shutdown).

ipv6 address autoconfig

To enable the IPv6 stateless autoconfiguration, use the **ipv6 address autoconfig** command in configuration mode. To remove the address from the interface, use the **no** form of this command.

[no] ipv6 address autoconfig [default]0

Syntax Description	default	(Optional) If a default router is selected on this interface, the default keyword causes a default route to be installed.
		The default keyword can be specified only on one interface.
Command Default	No default behavior or values.	
Command Modes	- Configuration	
Usage Guidelines		he security downfall of having predictable IP addresses. This downfall You can verify that the privacy extensions feature is enabled using the
	IPv6 address autoconfiguration is enabled by default in Linux. Cisco ADE shows the IPv6 address autoconfiguration in the running configuration for any enabled interface.	
	Example 1	
	<pre>ncs/admin# configure terminal Enter configuration commands, o ncs/admin(config)# interface Gi ncs/admin(config)# (config-Gigai ncs/admin(config)# (config-Gigai ncs/admin#</pre>	gabitEthernet 0 bitEthernet)# ipv6 address autoconfig
	When the IPv6 autoconfiguration is enabled, the running configuration displays a similar interface settings output:	
	! interface GigabitEthernet 0 ip address 172.23.90.116 255. ipv6 address autoconfig	255.255.0

You can use the **show interface** command to display the interface settings. In example 2, you can see that the interface has three IPv6 addresses. The first address (starting with 3ffe) is obtained using the stateless autoconfiguration. For the stateless autoconfiguration to work, you must have IPv6 route

advertisement enabled on that subnet. The next address (starting with fe80) is a link-local address that does not have any scope outside the host. You will always see a link local address regardless of the IPv6 autoconfiguration or DHCPv6 configuration. The last address (starting with 2001) is obtained from a IPv6 DHCP server.

Example 2

```
ncs/admin# show interface GigabitEthernet 0
eth0 Link encap:Ethernet HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116 Bcast:172.23.90.255 Mask:255.255.255.0
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: 2001:558:ff10:870:8000:29ff:fe36:200/64 Scope:Global
UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1
RX packets:77848 errors:0 dropped:0 overruns:0 frame:0
TX packets:23131 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:1000
RX bytes:10699801 (10.2 MiB) TX bytes:3448374 (3.2 MiB)
Interrupt:59 Base address:0x2000
```

ncs/admin#

To verify that the privacy extensions feature is enabled, you can use the **show interface** command. You can see two autoconfiguration addresses: address without the privacy extensions and address with the privacy extensions.

In the example 3 below, the MAC is 3ffe:302:11:2:20c:29ff:feaf:da05/64 and the non-RFC3041 address contains the MAC, and the privacy-extension address is 302:11:2:9d65:e608:59a9:d4b9/64.

A displayed output is given in the following example:

Example 3

```
ncs/admin# show interface GigabitEthernet 0
eth0 Link encap:Ethernet HWaddr 00:0C:29:AF:DA:05
inet addr:172.23.90.116 Bcast:172.23.90.255 Mask:255.255.255.0
inet6 addr: 3ffe:302:11:2:9d65:e608:59a9:d4b9/64 Scope:Global
inet6 addr: 3ffe:302:11:2:20c:29ff:feaf:da05/64 Scope:Global
inet6 addr: fe80::20c:29ff:feaf:da05/64 Scope:Link
UP BROADCAST RUNNING MULTICAST MTU:1500 Metric:1
RX packets:60606 errors:0 dropped:0 overruns:0 frame:0
TX packets:2771 errors:0 dropped:0 overruns:0 carrier:0
collisions:0 txqueuelen:1000
RX bytes:9430102 (8.9 MiB) TX bytes:466204 (455.2 KiB)
Interrupt:59 Base address:0x2000
```

ncs/admin#

Related Commands	Command	Description
	show interface	Displays information about the system interfaces.
	ip address (interface configuration mode)	Sets the IP address and netmask for the interface.
	shutdown (interface configuration mode)	Shuts down the interface (see shutdown).
	ipv6 address dhcp	Enables IPv6 address DHCP on an interface.

I

Command	Description
show running-config	Displays the contents of the currently running configuration file or the configuration.

ipv6 address dhcp

To enable IPv6 address DHCP, use the **ipv6 address dhcp** command in configuration mode. To remove the address from the interface, use the **no** form of this command.

[no] ipv6 address dhcp [rapid-commit] 0

Syntax Description	[rapid-commit]	(Optional) Allows the two-message exchange method for address assignment.
	0	GigabitEthernet/Team and virtual-ip port numbers to be configured.
Command Default	No default behavior or values.	
Command Modes	Configuration	
Usage Guidelines	None.	
	<pre>ncs/admin# configure terminal Enter configuration commands, one ncs/admin(config)# interface Giga ncs/admin(config-GigabitEthernet) ncs/admin(config-GigabitEthernet) ncs/admin#</pre>	bitEthernet 0 # ipv6 address dhcp
	When IPv6 DHCPv6 is enabled, the run the following:	nning configuration shows the interface settings similar to
	! interface GigabitEthernet 0 ip address 172.23.90.116 255.25 ipv6 address dhcp !	5.255.0
-	to have both IPv6 stateless autocor	n and IPv6 address DHCP are not mutually exclusive. It is possible ifiguration and IPv6 address DHCP on the same interface. You lay what IPv6 addresses are in use for a particular interface.
		guration and IPv6 address DHCP are enabled, the running

! interface GigabitEthernet 0 ip address 172.23.90.116 255.255.255.0 ipv6 address dhcp

1

Related Commands Co

Command	Description
show interface	Displays information about the system interfaces.
ip address (interface configuration mode)	Sets the IP address and netmask for the interface.
shutdown (interface configuration mode)	Shuts down the interface (see shutdown).

show running-config	Displays the contents of the currently running configuration file or the configuration.

ipv6 address static

To assign static IPv6 address, use the **ipv6 address static** command in configuration mode. To remove the address from the interface, use the **no** form of this command.

ipv6 address static [ipv6 address] 0

Command Default	No default behavior or values.
Command Modes	Configuration
Usage Guidelines	None.

admin(config-GigabitEthernet)# ipv6 address static 0:0:0:0:0:0:ffff:a7e:a9d2 admin(config-GigabitEthernet)# ipv6 default-gateway 0:0:0:0:0:0:ffff:ffff:ffe0

Related Commands

ds	Command	Description
	ipv6 address autoconfig	Enables IPv6 stateless autoconfiguration on an interface.
-	ipv6 address dhcp, on page 113	Enables IPv6 address DHCP on an interface.

ip address

To set the IP address and netmask for the interface, use the **ip address** command in interface configuration mode. To remove an IP address or disable IP processing, use the **no** form of this command.

[no] ip address ip-address netmask

Note			
		te You can configure the same IP address on multiple interfaces. You might want to do this to limit the configuration steps that are needed to switch from using one interface to another.	
Syntax Description	ip-a	address	IPv4 version IP address.
	net	mask	Mask of the associated IP subnet.
Command Default Enabled.			
Command Modes Interface configuration			
Usage Guidelines	Requires exactly one address and one netmask; otherwise, an error occurs.		
	<pre>ncs/admin(config)# interface GigabitEthernet 1 ncs/admin(config-GigabitEthernet)# ip address 209.165.200.227 255.255.255.224 Changing the hostname or IP may result in undesired side effects, such as installed application(s) being restarted. To verify that NCS processes are running, use the 'show application status ncs' command. ncs/admin(config-GigabitEthernet)#</pre>		
	_	nmand

ip default-gateway

To define or set a default gateway with an IP address, use the **ip default-gateway** command in configuration mode. To disable this function, use the **no** form of this command.

[no] ip default-gateway ip-address

Syntax Description	ip-address	IP address of the default gateway.
Command Default	Disabled.	
Command Modes	Configuration	

Usage Guidelines If you enter more than one argument or no arguments at all, an error occurs.

```
ncs/admin(config)# ip default-gateway 209.165.202.129
ncs/admin(config)#
```

Related Commands	Command	Description
	ip address (interface configuration mode)	Sets the IP address and netmask for the Ethernet interface.

ip domain-name

To define a default domain name that the Cisco EPNM server uses to complete hostnames, use the **ip domain-name** command in configuration mode. To disable this function, use the **no** form of this command.

[no] ip domain-name word

Syntax Description	word	Default domain name used to complete the hostnames. Contains at least 2 to 64 alphanumeric characters.
Command Default	Enabled.	
Command Modes	Configuration	
Usage Guidelines	If you enter more or fewer arguments, an error occurs	
	ncs/admin(config)# ip domain-name cisco.com ncs/admin(config)#	

Related Commands		Description
	ip name-server	Sets the DNS servers for use during a DNS query.

ip name-server

To set the Domain Name Server (DNS) servers for use during a DNS query, use the **ip name-server** command in configuration mode. You can configure one to three DNS servers. To disable this function, use the **no** form of this command.

Note Using the **no** form of this command removes all of the name servers from the configuration. Using the **no** form of this command and one of the IP names removes only that IP name server.

[no] ip name-server *ip-address* [*ip-address**]}

Syntax Description	ip-address	Address of a name server.			
	ip-address*	(Option	(Optional) IP addresses of additional name servers.		
		Note	You can configure a maximum of three name servers.		
Command Default	No default behavior or values.				
Command Modes	Configuration				
Usage Guidelines	The first name server that is added with the ip name-server command occupies the first position and the system uses that server first to resolve the IP addresses.				
	You can add name servers to the system one at a time or all at once, until you reach the maximum (3). If already configured the system with three name servers, you must remove at least one server to add addition name servers.				
	To place a name server in the first position servers with the no form of this command	5	em uses it first, you must remove all name		
	<pre>ncs/admin(config)# ip name-server 2</pre>	209.165.201.1			
	To verify that NCS processes are ru 'show application status ncs' comma ncs/admin(config)#				

You can choose not to restart the Cisco EPNM server; nevertheless, the changes will take effect.

Related Commands	Command	Description
	±	Defines a default domain name that the server uses to complete hostnames.

ip route

To configure the static routes, use the **ip route** command in configuration mode. To remove static routes, use the **no** form of this command.

ip route prefix mask gateway ip-address

no ip route prefix mask

Syntax Description

prefix IP route prefix for the destination. mask Prefix mask for the destination. gateway Route-specific gateway ip-address IP address of the next hop that can be used to reach that network.

Command Default	No default behavior or values. Configuration.		
Usage Guidelines	Static routes are manually configured, which makes them inflexible (they cannot dynamically adapt to network topology changes), but extremely stable. Static routes optimize bandwidth utilization, because no routing updates need to be sent to maintain them. They also make it easy to enforce routing policy.		
	ncs/admin(config)# ip route 1 ncs/admin(config)#	92.168.0.0 255.255.0.0 gateway 172.23.90.2	
logging			
	To enable the system to forward logs to a remote system or to configure the log level, use the logging commaning in configuration mode. To disable this function, use the no form of this command.		
	[no] logging {ip-address hostnam	e} {loglevel level}	
Syntax Description	ip-address	IP address of remote system to which you forward the logs. Up to 32 alphanumeric characters.	
	hostname	Hostname of remote system to which you forward the logs. Up to 32 alphanumeric characters.	
	loglevel	The command to configure the log level for the logging command.	
	security	The command for Security logging.	
	sync-logs	The command to configure and enable the continuous logs to sync into a repository.	
	level	Number of the desired priority level at which you set the log messages. Priority levels are (enter the number for the keyword):	
		• 0-emerg—Emergencies: System unusable	
		• 1-alert—Alerts: Immediate action needed	
		• 2-crit—Critical: Critical conditions	
		• 3-err—Error: Error conditions	
		• 4-warn—Warning: Warning conditions	
		 5-notif—Notifications: Normal but significant conditions 	
		 6-inform—(Default) Informational messages 	

• 7-debug—Debugging messages

I

No default behavior or values. **Command Default**

Configuration **Command Modes**

This command requires an IP address or hostname or the loglevel keyword; an error occurs if you enter two **Usage Guidelines** or more of these arguments.

Example 1

ncs/admin(config) # logging 209.165.200.225 ncs/admin(config)#

Example 2

ncs/admin(config)# logging loglevel 0 ncs/admin(config)#

Related Commands

mmand

Command	Description
show logging	Displays the list of logs for the system.

ncs run diag

Using this command user can deploy or undeploy the ncs diag for troubleshooting the system. This enables the ncsDiag page and you can access various services like Thread Dump, DBQuery to check the database queries, and so on, which will be useful for debugging the issues. After deploying this command, user can access ncsDiag page using https://<epnmn_server_ip>/webacs/ncsDiag.do.

ncs run diag -deploy

ncs run diag -remove

No default behavior or values. **Command Default**

EXEC **Command Modes**

> epnm/admin# ncs run diag -remove Undeploying the nosdiag app

```
epnm/admin# ncs run diag -deploy
NCS diag web app is deployed
```

Note If user find issues to access ncsDiag page after running 'ncs run diag -deploy', it is requested to run 'ncs run diag -remove' first and then 'ncs run diag -deploy'.

ntp server

To allow for software clock synchronization by the NTP server for the system, use the ntp server command in configuration mode. Allows up to five servers.

	<pre>ntp server {ntp-server}</pre>		
	For the unauthenticated NTP servers, use the following command:		
	<pre>ntp server {ntp-server}</pre>		
Syntax Description	intp-server	IP address or hostname of the server providing the clock synchronization. Arguments are limited to 255 alphanumeric characters.	
Command Default No servers are configured by default.			
Command Modes	Configuration		
Usage Guidelines	Use this command if you want to	allow the system to synchronize with a specified server.	
Note The synchronization process can take up to 20 minutes to complete.			
Related Commands	Command	Description	
	show ntp	Displays the status information about the NTP	

associations.

```

Warning: Output results may conflict during periods of changing synchronization.

password-policy

To enable or configure the passwords on the system, use the **password-policy** command in configuration mode. To disable this function, use the **no** form of this command.

[no] password-policy option

Note The **password-policy** command requires a policy option (see Syntax Description). You must enter the **password-expiration-enabled** command before the other password-expiration commands.

Syntax Description

option

Different command options.

Ø

e After you enter the password-policy command, you can enter config-password-policy configuration submode.

digit-required	Requires a digit in the password.
disable-repeat-characters	Disables the ability of the password to contain more than four identical characters.
disable-cisco-password	Disables the ability to use the word Cisco or any combination as the password.
do	EXEC command.
end	Exits from configure mode.
exit	Exits from this submode.

Note

lower-case-required	Requires a lowercase letter in the password.	
min-password-length	Specifies a minimum number of characters for a valid password. Integer length from 1 to 40.	
no	Negates a command or set its defaults.	
no-previous-password	Prevents users from reusing a part of their previous password.	
no-username	Prohibits users from reusing their username as a part of a password.	
password-expiration-days	Number of days until a password expires. Integer length from 1 to 3600.	
password-expiration-enabled	Enables password expiration.	
	Note You must enter the password-expiration-enabled command before the other password-expiration commands.	
password-expiration-warning	Number of days before expiration that warnings of impending expiration begin. Integer length from 0 to 3600.	
password-lock-enabled	Locks a password after several failures.	
password-lock-retry-count	Number of failed attempts before password locks. Integer length from 1 to 20.	
upper-case-required	Requires an uppercase letter in the password.	
special-required	Requires a special character in the password.	

Command Default No default behavior or values.

Command Modes Configuration

```
ncs/admin(config)# password-policy
ncs/admin(config-password-policy)# password-expiration-days 30
ncs/admin(config-password-policy)# exit
ncs/admin(config)#
```

repository

To enter the repository submode for configuration of backups, use the **repository** command in configuration mode.

repository *repository-name*

Syntax Description

repository-name

Name of repository. Up to 80 alphanumeric characters.

Note

After you enter the name of the repository in the **repository** command, you enter repository configuration submode.

do	EXEC command.
end	Exits repository config submode and returns you to EXEC mode.
exit	Exits this mode.
no	Negates the command in this mode. Two keywords are available: • url—Repository URL. • user—Repository username and password for access.
url	URL of the repository. Up to 80 alphanumeric characters (see Table 10: URL Keywords, on page 123).
user	Configure the username and password for access. Up to 30 alphanumeric characters.

Table 10: URL Keywords

Keyword	Source of Destination
word	Enter the repository URL, including server and path info. Up to 80 alphanumeric characters.
cdrom:	Local CD-ROM drive (read only).
disk:	Local storage.
	You can enter the show repository <i>repository_name</i> command to view all of the files in the local repository.
	Note All local repositories are created on the /localdisk partition. When you specify disk:/ in the repository URL, the system creates directories in a path that is relative to /localdisk. For example, if you entered disk:/backup, the directory is created at /localdisk/backup.

Keyword	Source of Destination	
ftp:	Source or destination URL for an FTP network server. Use url ftp://server//path(1).	
nfs:	Source or destination URL for an NFS network server. Use url nfs://server:path1.	
sftp:	Source or destination URL for an SFTP network server. Use url sftp://server/path1.NoteSFTP Repositories may require the // between the ip address/FQDN and the physical path on the SFTP store. If you find that you cannot access the SFTP repository with single slashes, add the additional slash and try the operation again.Example: 	
	url sftp://server//path	
tftp:	Source or destination URL for a TFTP network server. Use url tftp://server//path1.	
	Note You cannot use a TFTP repository for performing a Cisco EPNM upgrade.	

Command Default No default behavior or values.

Command Modes Configuration

Example 1

```
ncs/admin#
ncs/admin(config)# repository myrepository
ncs/admin(config-Repository)# url sftp://example.com//repository//system1
ncs/admin(config-Repository)# user abcd password plain example
ncs/admin(config-Repository)# exit
ncs/admin(config)# exit
ncs/admin#
```

Example 2

```
ncs/admin# configure termainal
ncs/admin(config)# repository myrepository
ncs/admin(config-Repository)# url disk:/
ncs/admin(config-Repository)# exit
ncs/admin(config)# exit
```

Related Commands	Command	Description
	backup	Performs a backup (Cisco EPNM and Cisco ADE OS) and places the backup in a repository.
	restore	Performs a restore and takes the backup out of a repository.
	show backup history	Displays the backup history of the system.
	show repository	Displays the available backup files that are located on a specific repository.

service

To manage a specific service, use the **service** command in configuration mode. To disable this function, use the **no** form of this command.

[no] service sshd

Syntax Description	sshd	Secure Shell Daemon. The daemon program for SSH.
Command Default	No default behavior or values.	
Command Modes	Configuration	

ncs/admin(config) # service sshd
ncs/admin(config) #

shutdown

To shut down an interface, use the **shutdown** command in the interface configuration mode. To disable this function, use the **no** form of this command.

	[no] shutdown		
Syntax Description	This command has no arguments or keywords.		
Command Default	No default behavior or values.		
Command Modes	Interface		
Usage Guidelines	When you shut down an interface using this command, you lose connectivity to the Cisco EPNM appliance through that interface (even though the appliance is still powered on). However, if you have configured the second interface on the appliance with a different IP and have not shut down that interface, you can access the appliance through that second interface.		
Related Commands	Command	Description	

interface	Configures an interface type and enters the interface mode.
ip address (interface configuration mode)	Sets the IP address and netmask for the Ethernet interface.
show interface	Displays information about the system IP interfaces.
ip default-gateway	Sets the IP address of the default gateway of an interface.

snmp-server community

To set up the community access string to permit access to the Simple Network Management Protocol (SNMP), use the **snmp-server community** command in configuration mode. To disable this function, use the **no** form of this command.

system.

system.

snmp-server location

To configure the SNMP location MIB value on the system, use the **snmp-server location** command in configuration mode. To remove the system location information, use the **no** form of this command.

[no] snmp-server location word

Syntax Description	wordString that describes the physical location information of the system. Up to 255 alphanumeric characters.	
Command Default	No default behavior or values.	
Command Modes	- Configuration	
Usage Guidelines	We recommend that you use underscores (_) or hyphens (-) between the terms within the <i>word</i> string. If use spaces between terms within the <i>word</i> string, you must enclose the string in quotation marks (").	

Example 1

ncs/admin(config)# snmp-server location Building_3/Room_214
ncs/admin(config)#

Example 2

ncs/admin(config)# snmp-server location "Building 3/Room 214" ncs/admin(config)#

Related Commands

Command	Description
snmp-server host	Sends traps to a remote system.
snmp-server community	Sets up the community access string to permit access to SNMP.
snmp-server contact	Configures the SNMP location MIB value on the system.

username

To add a user who can access the Cisco EPNM using SSH, use the **username** command in configuration mode. If the user already exists, the password, the privilege level, or both change with this command. To delete the user from the system, use the **no** form of this command.

[no] username username password {hash | plain} password role {user | network-admin | security-admin} [disabled [email email-address]] [email email-address]

For an existing user, use the following command option:

username username password role {user | network-admin | security-admin} password

Syntax Description	username	You should enter only one word which can include hyphen (-), underscore (_), and period (.).
		Note Only alphanumeric characters are allowed at an initial setup.
	password	The command to specify the password and user role.
	password	Password character length up to 40 alphanumeric characters. You must specify the password for all new users.
	hash plain	Type of password. Up to 34 alphanumeric characters.
	role user network-admin security-admin	Sets the privilege level for the user.
	disabled	Disables the user according to the user's email address.

I

	email email-address	The user's email address. For example,	
		user1@example.com.	
Command Default	The initial user during setup.		
Command Modes	Configuration		
Usage Guidelines	The username command requires that the username and password keywords precede the hash / plain and the admin / user options.		
	Example 1		
	ncs/admin(config)# username testus ncs/admin(config)#	er password hash ####### role network-admin	
	Example 2		
	ncs/admin(config)# username testus ncs/admin(config)#	er password plain Secr3tp@swd role network-admin	
	Example 3		
	ncs/admin(config)# username testus admin123@example.com ncs/admin(config)#	er password plain Secr3tp@swd role network-admin email
