Introduction

The Cisco Network Analysis Module (NAM) Traffic Analyzer 5.0 software enables network managers to understand, manage, and improve how applications and services are delivered to end users. The NAM offers flow-based traffic analysis of applications, hosts, and conversations, performance-based measurements on application, server, and network latency, quality of experience metrics for network-based services such as Voice over IP (VoIP) and video, and problem analysis using deep, insightful packet captures. The Cisco NAM includes an embedded, web-based Traffic Analyzer GUI that provides quick access to the configuration menus and presents easy-to-read performance reports on web, voice, and video traffic.

Cisco NAM 5.0 introduces a redesigned interface and user experience, with more intuitive workflows and smart charting capabilities, and many other new features.
