

# Cisco NFVI Installation Overview

---

The Cisco NFVI installation overview topic provides an installation map to guide you to the procedures you need to complete for your particular Cisco NFVI installation.

## Overview to Cisco NFVI Installation

Cisco NFVI installation is divided into two processes:

- **Preparation**—Preparing the Cisco NFVI pod hardware and configuring all supporting applications including the Cisco Integrated Management Controller (IMC) and the Cisco UCS Manager.
- **Installation**—Installing the Cisco NFVI component applications includes: Cisco Virtual Infrastructure Manager (VIM), Cisco Insight (Unified Management) and Cisco Virtual Topology System (VTS) including Virtual Topology Forwarder (VTF). The applications you install depend on your Cisco NFVI package.

The sequence in which you perform Cisco NFVI installations depends on the component applications you install. For example, if you are installing Cisco VTS, you will install VTC, before you install Cisco VIM or Cisco Insight. If you are installing Cisco VIM Insight, you will begin the Cisco VIM Management Node installation, then install Insight and complete the Cisco VIM installation through Cisco VIM Insight. If you have Cisco VIM without other Cisco NFVI applications, you only need to complete the Cisco VIM installation procedure.

In addition to the sequence of Cisco NFVI component installations, two other considerations are important:

- **Internet Access**—Internet access is required to download the Cisco NFVI installation files from the Cisco NFVI download site ([cvim-registry.com](http://cvim-registry.com)). If your management node has Internet access, you can download the files directly to it. If you do not have Internet access, you need an alternate server with internet access so that you can download the installation files to a USB stick. You will then use the USB stick to copy the installation files to the management node.
- **Cisco NFVI Configurations**—Before you begin the Cisco NFVI installation, take time to familiarize yourself with the parameters you will provision either during or immediately following Cisco NFVI installation. Configurations are provided in the `setup_data.yaml` file. If you are installing Cisco VIM and not Cisco VIM Insight, you enter the configurations directly into the `setup_data.yaml` file with a yaml editor. Examples of `setup_data` file (for C and B-series) are available at the [openstack-configs](#)

directory in the target install directory in the management node. To see the Cisco NFVI data and OpenStack parameters you must run [Setting Up the Cisco VIM Data Configurations](#) and . If you are installing Cisco VIM Insight, you can run Cisco NFVI using Insight UI wizard. For information, see [Installing Cisco VIM Unified Management](#)

Installation procedures in this guide are designed for one of several Cisco NFVI license options:

- Cisco NFVI Basic—Includes Cisco Virtual Infrastructure Manager (VIM). Cisco VIM is an OpenStack Newton release software solution with additional features and usability enhancements tested for functionality, scale, and performance.
- Cisco NFVI Standard—Includes Cisco VIM and Cisco VIM Insight. Cisco VIM Insight deploys, provisions, and manages Cisco NFVI on Cisco UCS servers.
- Cisco NFVI with third party monitoring - Includes Cisco VIM with or without Cisco VIM Insight based on the preceding choice with monitoring of the pod through Zenoss.
- Optional Cisco NFVI Applications—Cisco Virtual Topology System(VTS) is an optional application that can be installed with Cisco VIM by itself and with Cisco VIM Insight. Cisco VTS is a standards-based, open software-overlay management and provisioning system. It automates data center network fabric provisioning for virtual and physical infrastructure.

The following table lists the procedures you will complete for each option. If you have purchased Cisco VIM, you need to perform additional manual installation procedures. If you purchased Cisco VIM and Insight, you can perform many of the Cisco VIM manual setup and configuration procedures through the Unified management system also called VIM Insight. It should be noted that a cloud installed through Cisco VIM 2.2 from CLI, can be managed through Cisco VIM Insight later in the life-cycle. However, once the VIM Insight starts managing a cloud, we recommend you to continue using it to manage the cloud subsequently. Review the table to make sure you fully understand the installation sequence before you begin.
