

Inventory Query Result API

```
package com.cisco.vnm.common.api
```

```
public class InventoryQueryResult implements Serializable
```

This class provides methods for the client to fetch the first batch of data.

Public Methods

`getInitBatch()`

Returns the first batch of objects, encoded as an XML string (defined as **QueryResult** in DTD).

Usage:

```
String getInitBatch();
```

Returns:

String which is the first batch of objects, encoded as an XML string.

`getIterator()`

Returns iterator if the result retrieved is more than the first batch returned.

Usage:

```
InventoryIterator getIterator();
```

Returns:

InventoryIterator if the result retrieved is more than the first batch returned.

```
public class InventoryQueryResult implements Serializable
```

setInitBatch()

Sets the first batch of objects, encoded as an XML string (defined as **QueryResult** in DTD).

Usage:

```
void setInitBatch(String batch);
```
