- [Prime Cable Provisioning 6.1.4 Bugs, on page 2](#)
- [Product Documentation, on page 4](#)
- [Obtaining Documentation and Submitting a Service Request, on page 4](#)

## Introduction

Cisco Prime Cable Provisioning, referred to as Prime Cable Provisioning throughout this document, automates the tasks of provisioning and managing customer premises equipment (CPE) in a broadband service-provider network. The application provides a simple and easy way to deploy high-speed data, voice technology, and home networking devices.

Prime Cable Provisioning can be scaled to suit networks of virtually any size, even those deploying millions of devices. It also offers high availability, made possible by its distributed architecture with centralized management.

Prime Cable Provisioning incorporates support for many technologies to provide provisioning services for your network. These technologies include:

- DOCSIS high-speed data
- PacketCable voice service, both Secure and Basic work flows
- Non-secure CableHome
- Open Cable Set top box
- eRouter 1.0
- DPoE (DOCSIS Provisioning of EPON) 2.0
- RPD

For detailed information about Prime Cable Provisioning features, see [Cisco Prime Cable Provisioning User Guide](#).

## Important Points to Know Before You Begin

- Before installing Prime Cable Provisioning 6.1.4, please check the system requirements mentioned in [Cisco Prime Cable Provisioning Quick Start Guide](#) are met.
- If you are migrating from an earlier version of Prime Cable Provisioning or BAC to Prime Cable Provisioning 6.1.4, you must review the [Cisco Prime Cable Provisioning Release Notes](#) that were published across the releases.
- License acquired for Prime Cable Provisioning 5.x or earlier releases is not valid for Prime Cable Provisioning 6.1.4. You need to get the permanent or evaluation license of 6.0 to upgrade from 4.2.x/5.0.x/5.1.x/5.2.x/5.3.x/6.x to 6.1.4 or for a fresh installation. For more information, refer to the "Licensing" section in [Cisco Prime Cable Provisioning Quick Start Guide](#).
- From Prime Cable Provisioning 6.0 release, Prime Cable Provisioning does not support the Solaris operating system platform. The Solaris operating system was supported through the Prime Cable Provisioning 5.3.x releases and the last release that supported the Solaris operating system was Prime Cable Provisioning 5.3.2.1.

## Database Schema Changes

There are no new schema changes in Prime Cable Provisioning 6.1.4.

## Prime Cable Provisioning 6.1.4 Bugs

For more information on a specific bug or to search all bugs in a particular Prime Cable Provisioning release, see [Using the Bug Toolkit, on page 3](#).

This section contains:

- [Resolved Bugs, on page 2](#)
- [Using the Bug Toolkit, on page 3](#)

## Resolved Bugs

The following table lists the key issues resolved in the Prime Cable Provisioning 6.1.4 release.

**Table 1: Resolved Bugs in Prime Cable Provisioning 6.1.4**

Bug ID	Description
<a href="#">CSCvs01951</a>	Issue in scheduling DB Compaction with -run parameter
<a href="#">CSCvs01963</a>	Change SNMP retries and SNMP timeout hardcoded default values
<a href="#">CSCvs23384</a>	Unable to retrieve the timestamp details through Device Event Class
<a href="#">CSCvt27778</a>	Address the Apache Tomcat Ghostcat vulnerability existing in 8.5.34

## Using the Bug Toolkit

This section explains how to use the Bug Toolkit to search for a specific bug or to search for all bugs in a release.

### Procedure

- 
- Step 1** Go to [Cisco Bug Search Tool](#).
- Step 2** At the Log In screen, enter your registered Cisco.com username and password; then, click **Log In**. The Bug Search page opens.
- Note** If you do not have a Cisco.com username and password, you can register for them at <https://idreg.cloudapps.cisco.com/idreg/register.do>.
- Step 3** To search for a specific bug, enter the bug ID in the Search For field and press **Return**.
- Step 4** To search for bugs in the current release, specify the following criteria:
- Select Product—**Series/Model**
  - Select Product Name—**Cisco Broadband Access Center for Telco and Wireless**
- Note** Do not enter Cisco Prime Cable Provisioning. Cisco Prime Cable Provisioning is the new product name for the former Cisco Broadband Access Center. At this time, the Bug Search Tool does not accept Cisco Prime Cable Provisioning as the product name.
- Select Releases—Affecting or Fixed in this Release.
  - Product Version—Enter **6.1.4**.
- Step 5** Click on the page. The Bug Search Tool displays the list of bugs based on the specified search criteria.
- Note** For example, if a bug applies to multiple releases, the headline and Release-note enclosure contain the earlier Cisco PCP product terminology.
- Step 6** To export the results to a spreadsheet:
- In the results section of the page, click **Export Results to Excel**.
  - All bugs retrieved by the search are exported in to a spreadsheet and downloaded locally.
- If you cannot export the spreadsheet, log into the Technical Support website at <http://www.cisco.com/cisco/web/support/index.html> or contact the Cisco Technical Assistance Center (TAC).
- Note** For more details about how to use Cisco Bug Search Tool, see <https://www.cisco.com/web/applicat/cbsshelp/help.html>.
-

# Product Documentation

**Note**

We sometimes update the printed and electronic documentation after original publication. Therefore, you should also review the documentation on Cisco.com for any updates.

See [Cisco Prime Cable Provisioning Documentation Overview](#) for the list of Prime Cable Provisioning guides.

**Related Documentation**

See [Cisco Prime Network Registrar Documentation Overview](#) for the list of Cisco Prime Network Registrar guides.

See [Prime Cable Provisioning Upgrade Matrix](#) for the upgrade compatibility of the current release with the previous releases.

See [Prime Cable Provisioning Compatibility Matrix](#) for the PNR, PG and API compatibility of the current release with the previous releases.

## Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, see [What's New in Cisco Product Documentation](#).

To receive new and revised Cisco technical content directly to your desktop, you can subscribe to the *What's New in Cisco Product Documentation RSS feed*. RSS feeds are a free service.
