## Overview

The configlets provided in this appendix show the CLIs generated by Prime Fulfillment for particular services and features. Each configlet example provides the following information:

- Service
- Feature
- Devices configuration (network role, hardware platform, relationship of the devices and other relevant information)
- Sample configlets for each device in the configuration
- Comments

**Note**

---

The configlets generated by Prime Fulfillment are only the delta between what needs to be provisioned and what currently exists on the device. This means that if a relevant CLI is already on the device, it does not show up in the associated configlet.

---

**Note**

---

The CLIs shown in bold are the most relevant commands.

---

**Note**

---

All examples in this appendix assume an MPLS core.

## Comments

- In IOS XR, device configuration is specified in XML format.

- With respect to the XML schemas, different versions of IOS XR generate different XML configlets. However the configurations will be almost identical, except for changes in the XML schema.
- There are different cases to consider. For example, when a service request is decommissioned or modified, the XML configuration will slightly differ.

## ERS (EVPL) and EWS (EPL) (Local Connect on E-Line)

### Comments

- The default E-Line name has changed for local connect configlets.
- The format of the default E-line name is:  
*device\_name\_with\_underscores--VCID--VLANID*

# ERS (EVPL), EWS (EPL), ATM, or Frame Relay (Additional Template Variables for L2VPN, IOS and IOS XR Device)

# FlexUNI/EVC (ATM-Ethernet Interworking, Pseudowire Core Connectivity, End-to-End Circuit, with Bridge Domain)

## Configuration

- FlexUNI(EVC)/ATM-Ethernet Interworking.
- Feature: FlexUNI/EVC for ATM-Ethernet interworking with pseudowire core connectivity for end-to-end circuit with multiple links. Bridge domain is enabled. One link terminates on an ATM interface on N-PE 1, and the other (non-flex) link terminates on an Ethernet interface on N-PE 2.
- Device configuration:
  - The N-PE 1 is a Cisco 7600 with IOS 12.2(33) SRB3.  
Interface(s): ATM1/0/0.370.
  - The N-PE 2 is a Cisco ASR 9000 with IOS XR 3.9.0.  
Interface(s): GigabitEthernet0/0/0/20.712.
