What Are Converged Access Workflows?

The Converged Access workflow simplifies, automates and optimizes deployment of various enterprise-class next generation wireless deployment models for campus and branch networks. can automate the converged access deployment of wireless networks using converged access components such as Catalyst 3650, 3850, 4500 SUP 8-E switches, and Cisco 5760 Wireless LAN controller (WLC). The catalyst switches can be deployed as Mobility Agent (MA), Mobility Controller (MC), and Guest Anchor controller (GA).

The following figure illustrates the wireless converged access deployment mode.

Figure 1: Converged Access Workflow Overview

405446

Single-Switch Small Network Deployment Model

This deployment model assumes single Catalyst 3650, 3850 or 4500 SUP 8-E switch deployed in Access layer in combined MA and MC roles. The Catalyst switches can be deployed in individual standalone system mode or in stackwise redundant supervisor mode.

Controller-Less Single/Multi-Domain Deployment Model

This deployment model consists of multiple sub-domains and allows inter-domain MC peering for end-to-end seamless roaming across sub-domains. The MA switches are deployed in Access layer while the MC switches can be placed in Distribution layer.

Controller-Based Single/Multi-Domain Deployment Model

A large scale converged access campus building is deployed with external 5760 WLC as MC. The Access layer switches are deployed as MA across multiple buildings with centralized 5760 MC. In such large network, multiple 5760 WLCs may co-exist for better load balancing and redundancy. Depending on the roaming requirement across different buildings, the inter-domain mobility peering between 5760 WLCs can be established.

Centralized Wireless Campus Deployment Model

In this deployment model, the switches in Access layer remain in traditional switching mode and wireless communication between Access Point (AP) and WLC is built as overlay network. In large scale campus deployments, multiple 5760 WLCs can be deployed for better load balancing and redundancy. To provide seamless large mobility domains, the inter-domain mobility peering 5760 WLCs can be established.

Key Benefits

- Simple Automated Deployment—Simplifies the converged access deployment by automating the device configuration process. Requires only a few deployment specific inputs from the network administrator and pushes the complete converged access configurations to the network devices.

- **Error Free Deployment**—The template-based configuration used by `by` avoids manual misconfigurations, making it easier to build/maintain enterprise-wide standardized configurations that are well understood by the network administrator.
- **Optimized Deployment**—The configuration templates used by `by` incorporates a large number of Cisco best practice guidelines, improving the deployment quality. Some of the best practice wireless technologies/features that are automatically included in the template are Band-Select, Radio Resource Management (RRM), Fast SSID-Change, CleanAir, and Wireless QoS.
- **High Scalability**—Supports large enterprises with thousands of branches. It not only reduces efforts to deploy greenfield branches, but also simplifies large scale conversion of traditional Ethernet based branch networks to converged access branches in an error-free way.

Supported Cisco IOS-XE Platforms

The following tables describe the supported Cisco IOS-XE platforms for small, large, and centralized network deployment models.

Table 1: Supported Cisco IOS-XE for Small Network Deployment Mode

Device Role	Cisco IOS-XE Platform	System Mode	Software Version
Mobility Agent/Mobility Controller (Single-Switch)	Catalyst 3650	Single or StackWise	3.6.0 and later
	Catalyst 3850	Single or StackWise	3.6.0 and later
	Catalyst 4500 SUP 8-E	Single or Dual-SUP	3.7.0 and later
Guest Anchor WLC	CT5760 WLC	Single or StackWise	3.6.0 and later

Table 2: Supported Cisco IOS-XE for Large Network Deployment Model

Device Role	Cisco IOS-XE Platform	System Mode	Software Version
Mobility Agent	Catalyst 3650	Single or StackWise	3.6.0 and later
	Catalyst 3850	Single or StackWise	3.6.0 and later
	Catalyst 4500 SUP 8-E	Single or Dual-SUP	3.7.0 and later

Device Role	Cisco IOS-XE Platform	System Mode	Software Version
Mobility Controller	Catalyst 3650	Single or StackWise	3.6.0 and later
	Catalyst 3850	Single or StackWise	3.6.0 and later
	Catalyst 4500 SUP 8-E	Single or Dual-SUP	3.7.0 and later
	CT5760 WLC	Single or StackWise	3.6.0 and later
Guest Anchor Controller	CT5760 WLC	Single or StackWise	3.6.0 and later

Table 3: Supported Cisco IOS-XE for Centralized Wireless Deployment Mode

Device Role	Cisco IOS-XE Platform	System Mode	Software Version
Mobility Controller	CT5760 WLC	Single or StackWise	3.6.0 and later
Guest Anchor WLC	CT5760 WLC	Single or StackWise	3.6.0 and later

Prerequisites for Converged Access Deployment

To successfully deploy the Converged Access solution using the Converged Access Workflow, the wired infrastructure of the network should be set for further configuration required for converged access. This section describes the prerequisite configurations for Converged Access Workflow based deployment.

You can view the prerequisites using the [click here](#) link in the Before you Begin page in the Converged Access Workflow (Services > Network Services > Converged Access).

Prerequisites for Layer 2 and Layer 3

The following table describes the Layer 2 and Layer 3 prerequisites, and sample configuration for the Converged Access Workflow. In the sample configuration, the following nomenclature is used to represent the various wireless management VLANs in the MA and MC.

- WM_VLAN - Name of the Wireless Management VLAN

- WM_VLAN_id - ID of the Wireless Management VLAN
- WLAN1_Client_VLAN_Name - VLAN name of WLAN 1
- WLAN2_Client_VLAN_Name - VLAN name of WLAN 2
- WLAN3_Client_VLAN_Name - VLAN name of WLAN 3
- WLAN1_Client_VLAN_id - VLAN ID of WLAN 1
- WLAN2_Client_VLAN_id - VLAN ID of WLAN 2
- WLAN3_Client_VLAN_id - VLAN ID of WLAN 3

Note WLANx_Client_VLAN_id represents all the three client VLAN Ids.

Table 4: Layer 2 and Layer 3 Prerequisites for Converged Access Switches for Device Roles MA and MC

Task on Converged Access Switch	Sample Configuration
<p>Wireless Management VLAN</p> <ul style="list-style-type: none"> • Create wireless management VLAN with a network wide unique name. • Configure access ports connected to APs under this VLAN. 	<pre>! [Prerequisites for Server Configuration](#), on page 8

Prerequisites for Server Configuration

- All network-wide catalyst switches and 5760 WLCs must be configured with SNMP.
- The Converged Access switches must be added to the inventory of . You need to provide SNMP and Telnet credentials to add the devices to the inventory.
- Link with Cisco ISE engine as external server to centrally monitor end-to-end client connectivity and policy enforcement details.
- Cisco ISE/ACS
 - All network devices including catalyst switches and Guest Anchor WLC must be configured in Cisco ISE/ACS to enable centralized policy engine function.
 - AAA configuration is not required for converged access on individual network devices as it is automatically generated by Converged Access Workflow.
- DHCP Server—Internal or external DHCP server must be preconfigured with appropriate pool settings for wireless clients.
- DNS Server—Must be preconfigured with appropriate name-lookup process to successfully connect to the network.

Configure Devices Using Converged Access Templates

uses different templates for different deployment models. You need to select the appropriate template-based on your network topology as explained in the following table:

Network Topology	Configuration Template
Single-switch small network	IOS-XE Controller - Small Network
Controller-less single/multi-domain branch	IOS-XE Controller - Large Network

Network Topology	Configuration Template
Controller-based single/multi-domain branch	IOS-XE Controller - Large Network
Centralized wireless campus	IOS-XE Centralized Wireless Network

To deploy a converged access template:

-
- Step 1** Choose Services > Converged Access.
- Step 2** Click Next to choose the deployment model.
- Step 3** From the Select Deployment Model drop-down list, choose any one of the following options:
- IOS-XE Controller - Small Network
 - IOS-XE Controller - Large Network
 - IOS-XE Centralized Wireless Network
- Step 4** Click Next to choose the devices to be deployed.
- Step 5** Choose the devices and click Next to apply the selected network configuration.
- The selected device will be listed out in the left pane, and in the right pane you can configure the templates by entering the values for the Wireless Management, WLANs, Guest WLAN, Mobility, Security, Application Visibility and Control (AVC), and Quality of Services (QoS).
- Step 6** Choose the devices individually and enter the Wireless Management configuration values.
- Step 7** Click Apply and then Next.
- Step 8** Enter the WLANs configuration values that are common to all the selected devices.
- By default, the All Selected Devices check box is enabled. You can enter the WLAN configuration values for all the devices at the same time.
- Step 9** Click Apply and then Next.
- Step 10** (Optional) Enter the Radio configuration values that are common to all the selected devices. By default, the All Selected Devices check box is enabled.
- Step 11** Click Apply and then Next.
- Step 12** (Optional) Enter the Guest WLAN configuration values that are common to all the selected devices.
- By default, the All Selected Devices check box is enabled.
- Step 13** Click Apply.
- Step 14** Choose the devices individually and enter the Guest Controller configuration values.
- Step 15** Click Apply and then Next.
- Step 16** Select the individual devices and enter the Mobility configuration values. The Mobility configuration fields will be available in the Converged Access Wizard only for large and centralized network deployments.
- Step 17** Click Apply and then Next.
- Step 18** (Optional) Enter the Security configuration values that are common to all the selected devices. By default, the All Selected Devices check box is enabled.
- Step 19** Click Apply and then Next.

- Step 20** (Optional) Enter the AVC and QoS configuration values that are common to all the selected devices. By default, the All Selected Devices check box is enabled.
- Step 21** Click Apply and then Next to view the confirmation screen.
The confirmation screen allows you to view the device configuration information before deployment.
- Step 22** (Optional) Enter the job name and click the Date radio button to schedule the deployment job.
- Step 23** Click Deploy.

Guidelines for Entering Configuration Values

This section provides the field descriptions for converged access template and guidelines for entering the global and local configuration values for the following deployment models with specific examples.

- Controller-less single-switch deployment model
- Controller-less single/multi-domain deployment model
- Controller-based single/multi-domain deployment model
- Centralized wireless campus deployment model

Field Reference: Converged Access Templates

This section contains the field descriptions for converged access template.

Table 6: Wireless Management Field Descriptions

Field Name	Description
VLAN ID	VLAN ID of the selected device.
IP Address	Wireless management IP of the selected device.
Subnet mask	Subnet mask allocated to the selected device.

Table 7: WLAN Field Descriptions

Field	Description
SSID	Name of the wireless LAN.
ID	Wireless LAN ID. If SSID > 16, you need to manually enter the AP group name.

Field	Description
Security	Allows you to customize the login window for configuring an external web server such as ISE. The following security options are available for WLAN: <ul style="list-style-type: none"> • WPA2-Enterprise • WPA2-Personal • OPEN For Guest WLAN, WebAuth (external) option alone is available.
Pre-Shred Key	This is a mandatory field, if you have a selected WPA2-Personal. The value must be alphanumeric and at least eight characters long.
Client VLAN Name	Name of the client VLAN. Can be alphanumeric.
AP Group	AP Group name is used to assign group name for the APs associated with WLAN and Client VLAN.
DHCP Required	This is an optional field. Check the DHCP Required check box for WLAN. This forces the wireless clients to use DHCP to get IP addresses. Clients with static address cannot access the network.
Radio	Radio bands used by WLAN.
Device Classification	You can turn on/off the device classification on the switch, using OUI and DHCP.
Device Profiling	You can turn on/off the device profiling. The following two options are available for device profiling: <ul style="list-style-type: none"> • Local profiling based on HTTP attributes • Radius profiling based on HTTP attributes
Client Exclusion	Turns on/off the client exclusion for the WLAN. When it is turned on, the misbehaving clients are added in an exclusion list so that they cannot access the network until the timeout is over. Clients may be added in the exclusion list due to excessive authentication attempts and using IP address of another client.
Client Exclusion Timeout (sec)	The timeout period for excluded clients.
Session Timeout (sec)	The timeout period for a client session. The client is re-authenticated before this period is over.

Table 8: Wireless Radio Field Descriptions

Field	Description
RF Group Name	Name of the RF group. Multiple MCs can be placed under a single RF group, to perform RRM in a globally optimized manner and perform network calculations on a per-radio basis.
Radio 2 GHz	This is an optional check box.
Radio 5 GHz	This check box is checked by default and it's mandatory. You cannot uncheck this check box.
Disable Rates	These data rates are disabled. Clients cannot use these data rates to connect to access points.
Mandatory Rates	Clients must support these data rates in order to associate to an access point, although it may connect to the AP using one of the supported data rates.

Field	Description
Supported Rates	Clients that support this data rate may communicate with the access using the supported data rate. However, clients are not required to use this data rate in order to associate with the AP.
Country Code	Country code enables you to specify a particular country of operation. Configuring a country code ensures that each radio's broadcast frequency bands, interfaces, channels, and transmit power levels are compliant with country-specific regulation.

Table 9: Guest Services Field Descriptions

Field	Description
Anchor Controller IP	Wireless management IP of Guest Anchor device.
Anchor Group Name	Group name of Anchor device.
Foreign Controller	Wireless management IP of MC to which the Guest Anchor device is associated.

Table 10: Security Field Descriptions

Field	Description
Radius Server (IPs)	IP address of the Remote Authentication Dial In User Service (RADIUS) server.
Key	Password of Radius server.
Device HTTP TACACS Authentication	Select this in order to enable TACACS based device authentication to access the converged access device.
TACACS+ Server IP(s)	IP address of the TACACS server.
Key	Password of the TACACS server.

Table 11: Application Services Field Descriptions

Field Name	Description
Netflow Collectors (IP:Port)	IP—The IP address of the server. Port—The port on which the NetFlow monitor will receive the exported data. For the default port is 9991. Example: 172.20.114.251:9991
WLAN-1 SSID Bandwidth(%)	Specify the maximum bandwidth percentage allowed for first WLAN.
WLAN-2 SSID Bandwidth(%)	Specify the maximum bandwidth percentage allowed for second WLAN.
WLAN-3 SSID Bandwidth(%)	Specify the maximum bandwidth percentage allowed for third WLAN.
Guest SSID Bandwidth(%)	Specify the maximum bandwidth percentage allowed for Guest WLAN.

Table 12: Wireless Mobility Field Descriptions

Field Name	Description
Role	Mobility Controller or Mobility Agent.
Controller IP	Wireless Management IP of Controller device.
Switch Peer Group Name	Peer group name in which the Agent is added.
Mobility Agent IP(s)	Wireless management IP of Mobility Agent devices. If you are entering more than one IP addresses, use semicolon to separate the IP addresses.
Peer Controller IP(s)	Wireless Management IP of peer controller device. If you are entering more than one IP addresses, use semicolon to separate the IP addresses.

Example: Controller-Less Single-Switch Network

A small-sized remote branch office or retail store may consists of a single converged access switch (standalone or stack) to provide network connectivity to the wired and wireless users.

For such network designs, the switch integrates both MC and MA functions. These networks may need guest wireless services, as well as common security and network access policy enforcement across all deployed sites.

The network administrator can use IOS-XE Controller Small Network template to deploy converged access. The following figure 405448 illustrates the reference network for single-switch small network that shows three branch offices. Each site can be independently deployed using the workflow. Alternatively, one deployment workflow can deploy multiple sites. allows you to configure the devices in five WLANs. The following figure illustrates three WLAN configuration scenario in the single-switch small network topology.

Figure 2: Controller-less Single-switch Small Network Model

	SSID	Security	Client VLAN Name	Guest VLAN Name
WLAN 1	ABCCorp_802.1X	WPA2-Enterprise	8021x-WiFi_VLAN	
WLAN 2	ABCCorp_PSK	WPA2-Personal	PSK-WiFi_VLAN	
WLAN 3	ABCCorp-OPEN	OPEN	OPEN_WiFi-VLAN	
Guest WLAN	ABCCorp_Guest	WebAuth-External		Guest_WiFi-VLAN

You must enter the Wireless Management configuration values separately for each device. The following table describes the Wireless Management configuration values for MA/MC (10.100.1.109) and Guest Anchor (10.99.2.242) in the single-switch small network topology shown in above figure.

Table 13: Sample Wireless Management Configuration Values for MA/MC (10.100.1.109) and GA (10.99.2.242)

Data Field	MA/MC	GA
VLAN ID	155	33
IP	10.101.1.109	10.99.2.242
Subnet Mask	255.255.255.240	255.255.255.240

After applying the Wireless Management configuration values, you must enter at least one WLAN configuration values. The following table describes sample configuration of three WLANs for the single-switch small network topology shown in the above figure.

Table 14: Sample WLAN Configuration Values for MC/MA and GA

Data Field	WLAN 1	WLAN 2	WLAN 3
SSID	ABCCorp_802.1x	ABCCorp_PSK	ABCCorp_OPEN
ID	1	2	3
Security	WPA2-Enterprise	WPA2-Personal	OPEN
Pre-Shared Key	—	CISCO123	—
Client VLAN Name	8021X-WiFi_VLAN	PSK-WiFi_VLAN	OPEN_WiFi_VLAN
AP Group	Ap-group-1		Ap-group-HR
DHCP			Yes (Check the DHCP check box)
Radio	All	802.11g	802.11a/g
Device Classification		Yes (Check the Device Classification check box)	
Device Profiling	None	Local	Both
Client Exclusion	Yes (check the Client Exclusion check box)	Yes (check the Client Exclusion check box)	Yes (check the Client Exclusion check box)
Timeout (sec)	60	100	100
Session Timeout (sec)	1800	2000	300

After applying the WLAN configuration values, enter the Wireless Radio configuration values for all the devices at the same time. The following table shows the Wireless Radio configuration values for MC/MA and GA in the single-switch small network topology shown in the above figure.

Table 15: Sample Wireless Radio Configuration Values for MC/MA and GA

Data Field	Sample Configuration Value
RF Group Name	CA-RF
Radio 5 GHz	Yes (This check box is checked by default and it's mandatory. You cannot uncheck this check box.)
Disable Rates	RATE_6M;RATE_18M; RATE_54M
Mandatory Rates	RATE_6M;RATE_18M; RATE_54M
Supported Rates	RATE_6M;RATE_18M; RATE_54M
Radio 2 GHz	No (This is an optional check box)

Example: Controller-Less Single-Switch Network

Data Field	Sample Configuration Value
Disable Rates	—
Mandatory Rates	—
Supported Rates	—
Country Code	UNITED STATES

After applying the Wireless Radio configuration values, enter the Guest Services configuration values for all the devices at the same time. The following table describes the Guest WLAN configuration values for all the devices in the single-switch small network topology shown in the above figure.

Table 16: Sample Guest WLAN Configuration Values for MC/MA and GA

Data Field	Sample Configuration Values
SSID	ABCCorp_Guest
ID	15
Security	WebAuth-External
Pre-Shared Key	—
Client VLAN Name	Guest_WiFi_VLAN
AP Group	AP-group-guest
DHCP	yes (check the DHCP check box)
Radio	802.11a (or 802.11a/g, 802.11b/g, 802.11g, or All)
Device Classification	Yes (check the Device Classification check box)
Device Profiling	Both
Client Exclusion	ON
Timeout (sec)	100
Session Timeout (sec)	5000

The following table describes the sample Guest Controller configuration values for MC/MA (10.100.1.109) and GA in the single-switch small network topology shown in the above figure.

Table 17: Sample Guest Controller Configuration Values for MC/MA (10.100.1.109) and GA

Data Field	MC/MA	GA
Anchor Controller IP	10.99.2.242; 10.99.2.243	10.99.2.242; 10.99.2.243
Anchor Group Name	CA-Mobility-SubDomain-3	CA-Mobility-SubDomain-3

Data Field	MC/MA	GA
Foreign Controllers	10.101.4.109	10.101.1.109; 10.101.4.109; 10.101.7.109

After applying the Guest Services configuration values, enter the Security configuration values for all the devices at the same time. The following table describes the sample Security configuration values for MC/MA and GA in the single-switch small network topology shown in the above figure.

Table 18: Sample Security Configuration values for MC/MA and GA

Data Field	Sample Configuration Values
Radius Server (IPs)	10.100.1.49
Key	CISCO
Device HTTP TACACS Authentication	Yes (check the Device HTTP TACACS Authentication check box)
TACACS+ Server IP(s)	10.100.1.51
Key	cisco

After applying the Security configurations values, enter the AVC and QoS configuration values for all the devices. The following table describes the sample configuration values for MC/MA and GA in the single-switch small network topology shown in the above figure.

Table 19: Sample AVC and QoS Configuration Values for MC/MA and GA

Data Field	Sample Configuration Values
Netflow Collectors (IP:Port)	10.100.1.02:9991; 10.100.1.03:2055
WLAN-1 SSID Bandwidth(%)	40
WLAN-2 SSID Bandwidth(%)	30
WLAN-3 SSID Bandwidth(%)	20
Guest SSID Bandwidth(%)	10

Example: Controller-Less Single/Multi-Domain Wireless Network

The following figure illustrates the controller-less deployment model that leverages Catalyst switches for MA and MC roles without depending on an external WLC. This converged access deployment model is suitable for large branches and campus, and can be implemented using IOS-XE Controller Large Network template.

Figure 3: Controller-Less Large Branch Network Model

Enter the Wireless Management, WLANs, Wireless Radio, and Guest WLAN configuration values for all the devices as described in single-switch small network deployment model. Enter the Guest Controller configuration values and Mobility configuration values for MA, MC, and GA for the topology shown in the above figure.

Table 20: Sample Guest Controller Configuration Values for MA, MC, and GA

Data Field	MA	MC	GA
Anchor Controller IP	10.99.2.242	10.99.2.242	10.99.2.242
Anchor Group Name	CA-Mobility-SubDomain-3	CA-Mobility-SubDomain-3	CA-Mobility-SubDomain-3
Foreign Controller	10.101.4.109	10.101.3.109	10.101.3.109

The following table describes the Mobility configuration values for MA, MC in SPG-1, and GA shown in the above figure.

Table 21: Sample Mobility Configuration Values for MA, MC, and GA

Data Field	MA	MC	GA
Role	Agent	Controller	Controller
Controller IP	10.101.3.109	10.101.3.109	—
Switch Peer Group Name	SPG-1	SPG-1	—
Mobility Agent IP(s)	—	10.101.1.109	—
Peer Controller IP(s)	—	10.101.4.109	—

Repeat the same procedure for MA and MC in SPG-2 as shown in the above figure.

After applying the Mobility configuration values, enter the Security, AVC and QoS configuration values as described in single-switch small network deployment model.

Example: Controller-Based Single/Multi-Domain Wireless Network

The following figure illustrates the controller-based single/multi-domain deployment model that leverages the same IOS-XE Controller Large Network template for deploying converged access with an external 5760 WLC as the MC.

Figure 4: Controller-Based Large Campus Model

Enter the configuration values as explained in controller-less single/multi-domain wireless deployment model.

Example: Centralized Wireless Campus

IOS-XE Centralized Wireless template supports traditional wireless deployment model using next-generation 5760-WLC. In this model, any generation Access layer switches are deployed in traditional Ethernet switch mode over which WLC and the APs build an overlay network using CAPWAP Tunneling mechanism.

The following figure illustrates 5760-WLC based Centralized Wireless deployment using IOS-XE Centralized template.

Figure 5: Centralized Campus Network Model

Enter the Wireless Management, WLANs, Wireless Radio, and Guest WLAN configuration values for all the devices as described in single-switch small network deployment model. Enter the Guest Controller configuration values and Mobility configuration values for 5760 WLC in SPG-1 and GA for the topology shown in the above figure.

Table 22: Sample Guest Controller Configuration Values for 5760 WLC and GA

Data Field	5760 WLC	GA
Anchor Controller IP	10.99.2.242	10.99.2.242
Anchor Group Name	CA-Mobility-SubDomain-3	CA-Mobility-SubDomain-3
Foreign Controllers	10.100.222.1	10.100.221.1; 10.100.222.1

Table 23: Sample Mobility Configuration Values for 5760 WLC and GA

Data Field	5760 WLC	GA
Peer Controller IP(s)	10.100.222.1	—

Repeat the same procedure for 5760 WLC in SPG-2 shown in the above figure. After applying the Mobility configuration values, enter the Security, AVC and QoS configuration values as described in single-switch small network deployment model.
