Upgrade, Add, and Remove Cards and Nodes
Upgrade, Add, and Remove Cards and Nodes

Note
The terms "Unidirectional Path Switched Ring" and "UPSR" may appear in Cisco literature. These terms do not refer to using Cisco ONS 15xxx products in a unidirectional path switched ring configuration. Rather, these terms, as well as "Path Protected Mesh Network" and "PPMN," refer generally to Cisco's path protection feature, which may be used in any topological network configuration. Cisco does not recommend using its path protection feature in any particular topological network configuration.

This document provides procedures for adding and removing dense wavelength division multiplexing (DWDM) cards and nodes.

Note
With references provided to configuration guides, see:

- For software releases 9.3 to 9.8, the Cisco ONS 15454 DWDM Configuration Guide
- For software release 10.0 and later, an appropriate guide from one of these three:
  - Cisco ONS 15454 DWDM Control Card and Node Configuration Guide
  - Cisco ONS 15454 DWDM Line Card Configuration Guide
  - Cisco ONS 15454 DWDM Network Configuration Guide

Note
Unless otherwise specified, "ONS 15454" refers to both ANSI and ETSI shelf assemblies.

Topics include:

Revision History

</tbody>
</table>
Limitations of USB Synchronization with TNC or TSC Cards

USB synchronization with TNC or TSC cards fails when the USB has the 9.8 package in either its active or protect volume and when the TNC or TSC card is inserted as a standalone card in the chassis.

**Scenario 1:** The USB has the 9.8 package in its active volume and any other package in its protect volume. The TNC or TSC card having a package earlier than version 9.8, is loaded on the Cisco ONS 15454 M2 or Cisco ONS 15454 M6 chassis as a standalone card. The USB acts as the master and pushes the 9.8 package from its active volume on the TNC or TSC card. Despite several attempts, the package copy operation fails.

**Scenario 2:** The USB has any package earlier than version 9.8 in its active volume and the 9.8 package in its protect volume. The TNC or TSC card having a package earlier than version 9.8, is loaded on the ONS 15454 M2 or ONS 15454 M6 chassis as a standalone card. The USB acts as the master and pushes the package from its active volume on the TNC or TSC card. The card copies the package and resets. When the card boots up after reset, the USB pushes the 9.8 package from its protect volume on the TNC or TSC card. Despite several attempts, the package copy operation fails.

**Workarounds:**
- For release 9.3 and later releases, use TNC-E or TSC-E cards.
- For scenario 1, ensure that the TNC or TSC card has version 9.8 as the active package.
- For scenario 2, ensure that the protect and the active volumes of USB are the same.

NTP-G107 Remove Permanently or Remove and Replace DWDM Cards

Removing and replacing cards can be traffic affecting.

Caution
Do not use this procedure to replace control cards.

Procedure

Step 1 Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document.

Note If you cannot log into Cisco Transport Controller (CTC) and you need to remove a card, remove the card as described in Step 6, on page 4. After you log into CTC, troubleshoot the mismatched equipment alarm (MEA) with the Cisco ONS 15454 DWDM Troubleshooting Guide.

Step 2 Click the Alarms tab.

a) Verify that the alarm filter is not on. See the "DLP-G128 Disable Alarm Filtering" task in the Alarm and TCA Monitoring and Management document as necessary.

b) Verify that no unexplained alarms appear on the network. If alarms appear, investigate and resolve them before continuing. Refer to the Cisco ONS 15454 DWDM Troubleshooting Guide for procedures.

Step 3 If you are removing and replacing a card, go to Step 5, on page 4.

Step 4 If you are permanently removing a card, go to Step 11, on page 5.

Step 5 To remove and replace a card, complete the following tasks, as needed:

- The circuits traversing through the card that needs to be replaced (for example, an amplifier) need to be protection switched. For instance, if the card you want to replace is an active transponder (TXP) or muxponder (MXP) in a Y-cable protection group, complete the "DLP-G179 Apply a Force Y-Cable or Splitter Protection Switch" task in the Manage the Node document to force traffic away from the TXP or MXP that you will remove. If the card you want to replace is the standby TXP or MXP in a Y-cable protection group, complete the "DLP-G182 Apply a Lockout" task in the Manage the Node document to prevent traffic from switching to the TXP or MXP that you will remove. See the Cisco ONS 15454 Procedure Guide or the Cisco ONS 15454 SDH Procedure Guide for other types of protection switching (path protection, BLSR, optical, and electrical).

- If the card is a node timing reference, complete the "NTP-G112 Change the Node Timing Reference" task in the chapter "Maintain the Node" of the Cisco ONS 15454 DWDM Network Configuration Guide to change the timing reference to a card that will not be removed.

- If the card is an OSCM or OSC-CSM with an optical service channel (OSC) or TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP cards with generic communications channel (GCC) termination, complete the "NTP-G85 Modify or Delete OSC Terminations, GCC Terminations, and Provisionable Patchcords" procedure in the Manage the Node document to delete the termination and recreate it on a card that will not be removed.

Step 6 Physically remove the card:

a) Disconnect any cables.

b) Open the card latches/ejectors.

c) Use the latches/ejectors to pull the card forward and away from the shelf.

Step 7 Insert the new card using one of the following procedures as applicable:
• “NTP-G30 Install the DWDM Cards” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

• “NTP-G179 Install the TXP, MXP, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, ADM-10G, and OTU2_XP Cards” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

**Step 8** Complete the "NTP-G34 Install Fiber-Optic Cables on DWDM Cards and DCUs" procedure in the chapter "Turn Up a Node" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 9** Complete the following tasks or procedures, as needed:

- If you switched a Y-cable protection group in **Step 5, on page 4**, complete the “DLP-G180 Clear a Manual or Force Y-Cable or Splitter Protection Switch” task in the Managethe Node document.

- If you deleted circuits in **Step 5, on page 4**, complete the “DLP-G105 Provision Optical Channel Network Connections” task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

- If you switched the timing reference in **Step 5, on page 4**, complete the "NTP-G112 Change the Node Timing Reference" procedure in the chapter "Maintain the Node" of the *Cisco ONS 15454 DWDM Network Configuration Guide* to change the reference back to the new card.

- If you deleted an OSC or GCC termination in **Step 5, on page 4**, complete the "NTP-G38 Provision OSC Terminations" procedure in the chapter "Turn Up a Node" or the "DLP-G76 Provision GCC Terminations" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 10** Go to **Step 13, on page 6**.

**Step 11** To permanently remove a card, complete the following tasks:

- Delete the circuits associated with the card being removed. Complete the “DLP-G106 Delete Optical Channel Network Connections” task, the “DLP-G347 Delete Optical Channel Client Connections” task, or the “DLP-G418 Delete an Optical Channel Trail” task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide* as needed.

- Delete the DWDM patchcords and optical side associated with the card being removed. Complete the "NTP-G209 Create, Edit, and Delete Optical Sides” procedure in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

- If there are pluggable port modules (PPMs) that terminate on the card, complete the “DLP-G280 Delete a PPM” task in the chapter "Provision Transponder and Muxponder Cards" of the *Cisco ONS 15454 DWDM Network Configuration Guide* to delete these PPMs.

- Physically remove the card:
  - Disconnect and remove any cables, patchcords, and attenuators attached to the card.
  - Open the card latches/ejectors.
  - Use the latches/ejectors to pull the card forward and away from the shelf.

**Step 12** If the card you are removing is an OSCM, OSC-CSM, DWDM Amplifier, or Filter card, complete the following tasks; otherwise, go to **Step 13, on page 6**.
• Reconfigure the circuits (OCHCC, OCHNC, Trails) as needed. Complete the "DLP-G280 Delete a PPM" procedure in the chapter "Provision Transponder and Muxponder Cards", the "DLP-G346 Provision Optical Channel Client Connections" task, or the “DLP-G395 Create an Optical Channel Trail” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the Cisco ONS 15454 DWDM Network Configuration Guide.

• Reload ANS provisioning. Complete the “NTP-G143 Import the Cisco Transport Planner NE Update Configuration File” procedure in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide.

• Relaunch ANS. Complete the “NTP-G37 Run Automatic Node Setup” task in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide.

Step 13 Click the Alarms tab.

a) Verify that the alarm filter is not on. See the "DLP-G128 Disable Alarm Filtering" task in the Alarm and TCA Monitoring and Management document as necessary.

b) Verify that no unexplained alarms appear on the network. If alarms appear, investigate and resolve them. Refer to the Cisco ONS 15454 DWDM Troubleshooting Guide for procedures.

Stop. You have completed this procedure.

#### DLP-G254 Place Amplifier Ports Out of Service

<table>

**NTP-G129 Add a DWDM Node**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This procedure adds a DWDM node to an existing DWDM network.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tools/Equipment</td>
<td>None</td>
</tr>
</tbody>
</table>
| Prerequisite Procedures | • "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document.  
• Complete the turn up procedures in the "Turn Up a Node" chapter in the *Cisco ONS 15454 DWDM Network Configuration Guide* for the node to be added.  
• An updated Cisco Transport Planner network plan recalculated with the new node. |
| Required/As Needed | As needed |
| Onsite/Remote | Onsite |
| Security Level | Provisioning or higher |

⚠️ **Caution**
During this procedure, spans will be disconnected in the network at the point where the new node is added. This is traffic affecting for any unprotected circuits that pass through these spans.

---

**Procedure**

**Step 1**  
If the Cisco Transport Planner network design has not been updated and recalculated for the new node and client services, update and recalculate it now, using the procedures in the *Cisco Transport Planner - DWDM Operations Guide*.

**Step 2**  
Complete the "NTP-G51 Verify DWDM Node Turn Up" procedure in the chapter "Turn Up a Network" of the *Cisco ONS 15454 DWDM Network Configuration Guide* for the node to be added. If the node has not been turned up, do not continue.
Complete the relevant procedures in the chapters "Turn Up a Node" and "Perform Node Acceptance Tests" in the *Cisco ONS 15454 DWDM Network Configuration Guide*, before you begin this procedure again.

**Step 3** Identify the spans that must be disconnected to insert the new node.

**Step 4** From the View menu, choose Go to Network View.

**Step 5** In network view, click the Circuits tab.

**Step 6** Identify the OCHCC, OCHNC, or OCHTRAIL circuits on the fiber spans identified in **Step 3**, on page 9 on both the Side B-to-Side A and Side A-to-Side B directions.

**Step 7** If the OCHCC, OCHNC, or OCHTRAIL circuit is on the active path and is protected by a splitter or Y-cable protection group, complete the "DLP-G179 Apply a Force Y-Cable or Splitter Protection Switch" task in the Manage the Node document to divert traffic away from the span where the node will be added and continue with **Step 9**, on page 9. If the circuit is unprotected, go to **Step 8**, on page 9.

**Step 8** (Optional) Place the unprotected circuits in OOS,DSBLD (ANSI) or Locked,disabled (ETSI) state by completing the following steps:
   a) In the network view, select the OCHNC, OCHCC, or OCHTRAIL circuit and click Edit.
   b) In the Edit Circuit dialog box, click the State tab.
   c) In the State field, choose the OOS,DSBLD (ANSI) or Locked,disabled (ETSI) option from the drop-down list.
   d) Click Apply, then click OK.

**Step 9** Remove the fibers from the cards at the adjacent nodes that will connect to the new node.

**Step 10** Install the fibers from the adjacent nodes to the new node using the "NTP-G34 Install Fiber-Optic Cables on DWDM Cards and DCUs" procedure in the chapter "Turn Up a Node" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 11** Update the ANS parameters for the adjacent nodes by completing the following steps:
   a) Display an adjacent node in the network view.
   b) Complete the "NTP-G143 Import the Cisco Transport Planner NE Update Configuration File" procedure in the chapter "Turn Up a Node" of the *Cisco ONS 15454 DWDM Network Configuration Guide* to load the new NE Update file to the node.
   c) Complete the "NTP-G37 Run Automatic Node Setup" procedure in the chapter "Turn Up a Node" of the *Cisco ONS 15454 DWDM Network Configuration Guide* to recalculate the ANS parameters of the node.
   d) Repeat Steps 11.b, on page 9 and 11.c, on page 9 for the second adjacent node.

**Step 12** Log out of CTC and log back in.

**Step 13** From the View menu, choose the Go to Network View option to display the nodes. The new node must appear on the network map. Wait for a few minutes to allow all the nodes to appear.

**Step 14** Click the Circuits tab and wait for all the circuits to appear, including spans. Count the number of incomplete circuits.

**Step 15** In the network view, right-click the new node and choose the Update Circuits With New Node option from the shortcut menu. Wait for the confirmation dialog box to appear. Verify that the number of updated circuits that appear in the dialog box is correct.

**Step 16** If the circuits take more than a minute to appear, log out of CTC, and log back in.

**Step 17** Click the Circuits tab and verify there are no incomplete circuits.

**Step 18** Put the circuits placed in OOS,DSBLD (ANSI) or Locked,disabled (ETSI) in **Step 8**, on page 9 back in service by completing the following steps:
   a) In the network view, select the OCHNC, OCHCC, or OCHTRAIL circuit and click Edit.
   b) In the Edit Circuit dialog box, click the State tab.
   c) In the State field, choose the IS-AINS (ANSI) or Unlocked,automaticInService (ETSI) option from the drop-down list.
d) Click Apply, then click OK.

**Step 19** Complete the “DLP-G180 Clear a Manual or Force Y-Cable or Splitter Protection Switch” task in the Manage the Node document for the circuits that were switched in Step 7, on page 9 to return the traffic to its original paths.

**Step 20** Complete the “DLP-G105 Provision Optical Channel Network Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the Cisco ONS 15454 DWDM Network Configuration Guide to create new circuits.

Stop. You have completed this procedure.

---

**NTP-G130 Remove a DWDM Node**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This procedure removes a node from a DWDM network.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tools/Equipment</td>
<td>None</td>
</tr>
<tr>
<td>Prerequisite Procedures</td>

</tr>
</tbody>
</table>

**Note**

During this procedure, you will use TL1 commands to delete and recreate OCHNC or OCHCC cross-connects. You might need to refer to the Cisco ONS SONET TL1 Command Guide or the Cisco ONS SDH TL1 Command Guide.

**Caution**

This procedure will affect the service of unprotected circuits that pass through the span where the node will be removed.
Procedure

Step 1 If the Cisco Transport Planner network design has not been updated and recalculated with the node removed, update and recalculate the design now by following the procedures in the Cisco Transport Planner documentation.

Step 2 Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at the DWDM target node that will be removed.

Step 3 Click the Circuits tab.

Step 4 Identify all the OCHNCs and OCHCCs that are passing through or are added and dropped at the node that will be removed.

Step 5 Delete the OCHNCs and OCHCCs identified in Step 4, on page 11 that terminate (add/drop) on the target DWDM node. See the "DLP-G347 Delete Optical Channel Client Connections" task and/or the "DLP-G106 Delete Optical Channel Network Connections" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the Cisco ONS 15454 DWDM Network Configuration Guide to delete OCHCCs and OCHNCs, respectively.

Step 6 For the protected pass through circuits on the target node, perform Step 7, on page 11. Else, go to Step 10, on page 12. Note Non-protected pass through circuits need not be modified or deleted.

Step 7 If the OCHNC and OCHCC circuits pass through the target node on the active path and are protected by a splitter or Y-cable protection group, navigate to an adjacent node connected to the target node and complete the "DLP-G179 Apply a Force Y-Cable or Splitter Protection Switch" task in the Manage the Node document to force the traffic away from the node that will be deleted. Otherwise, continue with Step 8, on page 11.

Step 8 Complete the following steps for the protected pass through circuits:
   a) Select the OCHNCs or OCHCCs and click Edit.
   b) In the Edit Circuit dialog box, click the State tab.
   c) In the State field, choose OOS,DSBLD (ANSI) or Locked,disabled (ETSI) from the drop-down list.
   d) Click Apply, then click OK.

Step 9 Complete the following steps to delete the cross-connects on the target node for each circuit placed in the OOS,DSBLD (ANSI) or Locked,disabled (ETSI) state in Step 8, on page 11:
   a) From the Tools menu, choose Open TL1 Connection.
   b) In the Select Node dialog box, select the new node and click OK.
   c) In the TL1 dialog box, use the DLT-OCHNC command to delete the OCHNC cross-connects for each unprotected pass-through circuit as follows:

   DLT-OCHNC:[<TID>];<SRC>,<DST>:<CTAG>::[CKTID=<CKTID>, [CMDMDE=<CMDMDE>];

   where:
   • <SRC> is the source access identifier from the Channel section in a two-way wavelength.
   • <DST> is the destination access identifier from the LINEWL section in a two-way wavelength
   • <CTAG>S and <DST> are the cross-connect ID. The default is Blank or None. CKTD is a string of ASCII characters. The maximum length is 48. If CKTD is empty or null, the CKTID field will not be displayed.
   • <CMDMDE> is the command execution mode. NORM mode is the default behavior for all commands but you can specify FRCMD to force the system to override a state in which the command would normally be denied.

   For additional information, including valid command values, refer to the Cisco ONS SONET TL1 Command Guide or the Cisco ONS SDH TL1 Command Guide.
d) Click Close to close the TL1 dialog box.

**Step 10** Remove the fibers from the target node, and reconnect the fibers to the adjacent nodes. Note that once the fibers are rerouted, the non-protected pass through circuits will go to OOS-PARTIAL (ANSI) or Locked-partial (ETSI) state.

**Step 11** Complete the following steps to update the ANS parameters at the adjacent nodes:

a) Display an adjacent node in node view.

b) Complete the “NTP-G143 Import the Cisco Transport Planner NE Update Configuration File” procedure in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide* to load the new NE Update file onto the node.

c) Complete the “NTP-G37 Run Automatic Node Setup” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide* to recalculate the ANS parameters at the node.

d) Display the next adjacent node in node view.

e) Repeat Steps 11.b, on page 12 and 11.c, on page 12 for the second adjacent node.

**Step 12** Repeat Step 8, on page 11 to change the circuits placed in OOS,DSBLD (ANSI) or Locked,disabled (ETSI) back in service by changing the Target Circuit Admin State field to IS-AINS (ANSI) or Unlocked,AutomaticInService (ETSI).

**Step 13** Complete the "DLP-G180 Clear a Manual or Force Y-Cable or Splitter Protection Switch" task in the Manage the Node document for the OCHNCs and/or OCHCCs that were switched in Step 7, on page 11.

**Step 14** To discover the non-protected pass through circuits that are in the OOS-PARTIAL (ANSI) or Locked-partial (ETSI) state after completing Step 10, on page 12, select the circuit and choose Tools > Circuits > Reconfigure Circuits from the menu bar. The Reconfigure Circuits dialog box is displayed; click Yes.

Stop. You have completed this procedure.

---

**NTP-G261 Modify ANS Parameters in a Node when Ports are in IS State**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This task modifies ANS parameters when ports are in IS state.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tools/Equipment</td>

<td>Onsite or remote</td>
</tr>
<tr>
<td>Security Level</td>
<td>Provisioning or higher</td>
</tr>
</tbody>
</table>

⚠️ **Caution** Provisioning the ANS parameters incorrectly may impact traffic. Therefore, this procedure must be performed by Cisco qualified personnel only.
Procedure

Step 1 Complete the “NTP-G143 Import the Cisco Transport Planner NE Update Configuration File” task in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide to re-import the updated configuration file. If the updated configuration file is not available, complete the "DLP-G681 Modify an ANS Parameter" task in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide to manually edit the ANS parameters.

Step 2 Complete the "NTP-G37 Run Automatic Node Setup" task in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide.

Step 3 Verify if the modified ANS parameters were applied. Perform the following steps:
   a) In node view (single-shelf mode) or multishelf view (multishelf mode), click the Provisioning > WDM-ANS > Provisioning tabs.
   b) Verify if the Result column displays the value Success – Changed. This indicates that the ANS parameter has been successfully changed with the ports in IS.
   c) Verify if the Set By column displays either of the following values:
      • ANS—This indicates that the new value for the ANS parameters is applied immediately.
      • APC—This indicates that the new value for the ANS parameters is increased or decreased by 0.5 dB until the new power setpoint is reached.

Stop. You have completed this procedure.

NTP-G146 Add a Rack, Passive Shelf, Passive Unit, or Shelf to a Multishelf Node

**Procedure**

**Step 1**
Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at the multishelf DWDM node where you want to add a shelf.

**Step 2**
To add a rack, in the multishelf view, right-click the gray area and choose **Add Rack**. If you do not need to add a rack, continue with **Step 3**, on page 14.

**Step 3**
To add a passive unit, in the multishelf view, right-click the gray space inside the rack and choose the passive unit from the **Add Shelf > PASSIVE CHASSIS** options. The passive unit is added to the rack.

---

**Note** Each shelf you want to add to a multishelf configuration must have network connectivity. For more information, see the "Connect the PC and Log into the GUI" document.
This step does not apply to passive units that are to be installed within the passive shelf.

Note: To add a passive DCU, you need to choose a slot number from the Slot Number Selection dialog box and click OK.

**Step 4**
To add a MF-6RU unit, in the multishelf view right-click the gray space inside the rack and choose Add Shelf > PASSIVE SHELF MF. The Shelf ID Section dialog is displayed.

**Step 5**
Choose a shelf ID and click OK. The MF-6RU unit is added to the rack.

**Step 6**
To add a MF10-6RU unit, in the multishelf view right-click the gray space inside the rack and choose Add Shelf > PASSIVE SHELF MF10. The Shelf ID Section dialog is displayed.

**Step 7**
Choose a shelf ID and click OK. The MF10-6RU unit is added to the rack.

**Step 8**
To add a passive unit to the MF-6RU or MF10-6RU shelf, double-click the shelf to open shelf mode or right-click the passive shelf and choose Open Shelf.

**Step 9**
Right-click a slot inside the passive shelf and choose Add Card > WDM > PASSIVE > passive unit. The MF-2MPO-ADP, MF-4X4-COF, MF-DEG-5, MF-MPO-8LC, MF-6AD-CFS, and MF-UPG-4 passive units can be provisioned in the MF-6RU passive shelf.

The MF-10AD-CFS, MF-16AD-CFS, MF-16AE-CFS, MF-MPO-16LC, MF-8X10G-FO, and MF-MPO-20LC passive units can be provisioned in the MF10-6RU passive shelf.

**Step 10**
To add a shelf, in the multishelf view right-click the gray space inside the rack and choose Add Shelf > CHASSIS_454SDH(ETSI) or CHASSIS_454(ANSI) or 15454 M6 ANSI or 15454 M6 ETSI.

**Step 11**
In the Shelf ID Selection dialog box, choose a shelf ID from the drop-down list.

**Step 12**
Click OK. The shelf appears in the multishelf view.

**Step 13**
Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at the new shelf that has to be configured as a subtending shelf.

**Step 14**
In multishelf view, click the Provisioning > General > Multishelf Config tabs.

**Step 15**
Click Enable as Subtended Shelf.

**Step 16**
From the Shelf ID drop-down list, choose the shelf ID that you created in Step 11, on page 15.

**Step 17**
Click Apply.

**Step 18**
In the confirmation dialog box, click Yes to reboot the shelf. The CTC view changes to network view and the node icon changes to gray. (This might take several minutes.)

**Step 19**
If you are connecting the new ONS 15454 subtending shelf to the Ethernet Adapter Panel (EAP), complete the following steps. If not, continue with Step 22, on page 16.

a) Using a cross-over (CAT 5) LAN cable, plug one connector into the RJ-45 front panel port of the subtending shelf TCC2/TCC2P/TCC3 card in Slot 7 and plug the other end into the SSC port on the left patch panel.

b) Using a cross-over (CAT 5) LAN cable, plug one connector into the RJ-45 front panel port of the subtending shelf TCC2/TCC2P/TCC3 card in Slot 11 and plug the other end into the SSC port on the right patch panel.

**Step 20**
If you are connecting the ONS 15454 subtending shelf to the Catalyst 2950 or the Catalyst 3560 switch, complete the following steps. If not, continue with Step 22, on page 16.

a) Plug one end of a cross-over (CAT-5) LAN cable into the RJ-45 front panel port of the subtending shelf TCC2/TCC2P/TCC3 card in Slot 7 and plug the other end into Port 2 of the active Catalyst 2950 or Catalyst 3560.

b) Plug one end of a cross-over (CAT-5) LAN cable into the RJ-45 front panel port of the subtending shelf TCC2/TCC2P/TCC3 card in Slot 11 and plug the other end into Port 2 of the standby Catalyst 2950 or Catalyst 3560.

**Step 21**
To connect an ONS 15454 M6 subtending shelf to the Catalyst 3560 switches, complete the following:
a) Using a cross-over (CAT-5) LAN cable, plug one connector into the MSM port that corresponds to the TNC/TNCE/TSC/TSCE card in Slot 1 of the subtending ONS 15454 M6 shelf and plug the other end into Port 2 of the active Catalyst 3560.

b) Using a cross-over (CAT-5) LAN cable, plug one connector into the MSM port that corresponds to the TNC/TNCE/TSC/TSCE card in Slot 8 and plug the other end into Port 2 of the standby Catalyst 3560.

c) Repeat Steps 21.a, on page 16 and 21.b, on page 16 for each subtending shelf in the multishelf configuration using Ports 3 through 21 on the Catalyst 3560 switches.

Note: In order to connect the ONS 15454 M6 subtending shelves to the ONS 15454 M6 node controller without using a catalyst, follow the steps described in "NTP-G308 Connect the ONS 15454 M6 Multishelf Node and the ONS 15454 M6 Subtending Shelves" in the Cisco ONS 15454 Hardware Installation Guide. To connect an ONS 15454 subtending shelf to the ONS 15454 M6 node controller without using a catalyst switch, connect the MSM ports that correspond to the TNC/TNCE/TSC/TSCE cards in Slot 1 and Slot 8 of the ONS 15454 M6 node controller to the ONS 15454 subtending shelf TCC2/TCC2P/TCC3 cards in Slot 7 and Slot 11.

Step 22: Repeat Step 10, on page 15 through Step 22, on page 16 for each subtending shelf in the multishelf configuration.

Stop. You have completed this procedure.

---

**NTP-G147 Delete a Passive Unit, Passive Shelf, Shelf, or Rack from a Multishelf Node**

<table>

<td>Onsite/Remote</td>
<td>Onsite or remote</td>
</tr>
<tr>
<td>Security Level</td>
<td>Provisioning or higher</td>
</tr>
</tbody>
</table>

**Note**

You cannot delete a node controller shelf from a multishelf node configuration.

**Procedure**

**Step 1**
Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at the multishelf DWDM node where you want to delete a passive unit, shelf, or rack. If you want to delete a passive unit, continue with Step 2, on page 17. If you want to delete a shelf, continue with Step 6, on page 18. If you want to delete only a rack, go to Step 13, on page 19.

**Step 2**
Complete the following tasks, as needed:

- If passive units on the shelf carry unprotected circuits, you must delete the circuits. Complete the "DLP-G106 Delete Optical Channel Network Connections" task and the "DLP-G347 Delete Optical Channel Client Connections" task
in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

- If passive units use internal patchcords, complete the "DLP-G355 Delete an Internal Patchcord" task in the chapter "Turn Up a Node" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 3** From the View menu, choose **Go to Parent View** to return to multishelf view.

**Step 4** Right-click the passive unit you want to delete and choose **Delete Unit**. The shelf is automatically deleted.

**Step 5** Right-click the passive shelf that you want to delete and choose **Delete Shelf**. The shelf is automatically deleted.

**Note** You must first delete the passive units from the passive shelf before deleting the shelf.

**Step 6** Complete the following tasks, as needed:

- If cards on the shelf carry unprotected circuits, you must delete the circuits. Complete the "DLP-G106 Delete Optical Channel Network Connections" task and the "DLP-G347 Delete Optical Channel Client Connections" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

- If cards use internal patchcords, complete the "DLP-G355 Delete an Internal Patchcord" task in the chapter "Turn Up a Node" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

- If OSCM or OSC-CSM cards with OSC or GCC terminations are on the shelf, complete the "NTP-G85 Modify or Delete OSC Terminations, GCC Terminations, and Provisionable Patchcords" task in the Manage the Node document to delete the terminations.

- Put all ports in the Out-of-Service and Management, Disabled (OOS-MA,DSBLD) (ANSI) or Locked-enabled,disabled (ETSI) service state. For more information, see the chapter "Change DWDM Card Settings" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Note** It is not necessary to delete the cards from the shelf before deleting a shelf.

- If the shelf receives the timing signals from any client or trunk port, complete the "DLP-G95 Set Up External or Line Timing" task in the chapter "Turn Up a Network" of the *Cisco ONS 15454 DWDM Network Configuration Guide*, to receive timing signals from an external source.

**Step 7** From the View menu, choose **Go to Parent View** to return to multishelf view.

**Step 8** Right-click the subtending shelf you want to delete and choose **Delete Shelf**.

**Step 9** In the confirmation dialog box, click **Yes**.

**Step 10** To return the deleted shelf to a single-shelf node, you must use the LCD panel:

- Repeatedly press the **Status** button until Shelf Status appears.
- Repeatedly press the **Port** button until Controller Status=MS Config appears.
- Press **Status** again and press **Port** to set multishelf mode to MS=N.
- Press **Status** again and press **Port** until ID is set to ID=1.
- Press **Status** again and press **Port** to set VLAN=N.
- Press **Status** to choose **Done**.
- Repeatedly press **Status** until "Save and Reboot?" appears, and then press **Slot** to choose Apply. This reboots the shelf. A "Saving changes; TCC may reboot" message appears on the LCD.

**Step 11** After the control cards reboot is complete, complete the following steps to disconnect the removed subtending shelf from the patch panel or Catalyst 2950 or Catalyst 3560:
a) Remove the cross-over (CAT 5) LAN cable from the RJ-45 front panel port of the TCC2/TCC2P/TCC3 card in Slot 7 of the ONS 15454 or from the MSM port that corresponds to TNC/TNCE/TSC/TSCe card in Slot 1 of the ONS 15454 M6.

b) Remove the cross-over (CAT 5) LAN cable from the RJ-45 front panel port of the TCC2/TCC2P/TCC3 card in Slot 11 of the ONS 15454 or from the MSM port that corresponds to TNC/TNCE/TSC/TSCe card in Slot 8 of the ONS 15454 M6.

**Step 12** Reconnect the shelf to the LAN through either the backplane or one of the RJ-45 front panel ports of the TCC2/TCC2P/TCC3 cards of the ONS 15454, or the EMS port or one of the RJ-45 front panel ports of the TNC/TNCE/TSC/TSCe cards of the ONS 15454 M6. For more information, see the Connect the PC and Log into the GUI document.

**Step 13** To delete an empty rack from the CTC window, right-click the gray area on the rack graphic and choose **Delete Rack**.

Stop. You have completed this procedure.

---

### NTP-G173 Convert an OADM Node to a ROADM Node

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This procedure converts an OADM node to a ROADM node.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Tools/Equipment</strong></td>
<td>None</td>
</tr>
</tbody>
</table>
| **Prerequisite Procedures**          | • Turn Up a Network" chapter in the *Cisco ONS 15454 DWDM Network Configuration Guide*  
                                       | • A Cisco Transport Planner site plan recalculated for the new ROADM node. |
| **Required/As Needed**               | As needed                                             |
| **Onsite/Remote**                    | Onsite                                                |
| **Security Level**                   | Provisioning or higher                                |

**Note** Do not begin this procedure until the Cisco Transport Planner site plan has been recalculated with the new ROADM node. You will import the new NE Update file and run ANS to recalculate the ANS parameters. In addition, you will run ANS at the two adjacent nodes to recalculate the ANS parameters at those nodes.

**Note** During this procedure, you will use TL1 commands to delete and recreate OCHNC or OCHCC cross-connects. You might need to refer to the *Cisco ONS SONET TL1 Command Guide* or the *Cisco ONS SDH TL1 Command Guide*. 
Caution
This procedure will affect the service of unprotected circuits that pass through the OADM node.

Procedure

Step 1
Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at a node in the OADM network.

Step 2
In node view (single-shelf mode) or multishelf view (multishelf mode), display the OADM node that you will convert to a ROADM node.

Step 3
Click the Circuits tab.

Step 4
Make a list of the following OCHNCs and/or optical channel client connections (OCHCCs) that:

- Terminate (add/drop) at the node.
- Pass through the node on the express path for both the Side B-to-Side A and Side A-to-Side B directions.

Step 5
If OCHNCs and/or OCHCCs identified in are routed on the active path of a splitter or Y-cable protection group, complete the following steps. If not, continue with Step 6, on page 20.

a) Display the node containing the TXP, MXP, ADM-10G, GE_XP, 10GE_XP, GE_XPE, 10GE_XPE, or ITU-T line card with the Y-cable or splitter protection.

b) Force the traffic to the protect path in the opposite side of the ring using the "DLP-G179 Apply a Force Y-Cable or Splitter Protection Switch" task in the Manage the Node document.

Step 6
In node view, display the node that will be converted.

Step 7
Complete the “DLP-G347 Delete Optical Channel Client Connections” task and/or the “DLP-G106 Delete Optical Channel Network Connections” task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the Cisco ONS 15454 DWDM Network Configuration Guide to delete OCHCCs and/or OCHNCs identified in Step 4, on page 20 that:

- Terminate (add/drop) at the node.
- Pass through the node on an unprotected express path for both the Side B-to-Side A and Side A-to-Side B directions.

Step 8
From the Tools menu, choose Open TL1 Connection.

Step 9
In the Select Node dialog box, choose the OADM node and click OK.

Step 10
In the TL1 dialog box, use the DLT-OCHNC command to delete the OCHNC cross-connects for the express path OCHNCs listed in Step 4, on page 20, using the following format:

`DLT-OCHNC:[<TID>]:<SRC>,<DST>:<CTAG>:::[CKTID=<CKTID>],[CMDMDE=<CMDMDE>];`

where:

- `<SRC>` is the source access identifier from the Channel section in a two-way wavelength.
- `<DST>` is the destination access identifier from the LINEWL section in a two-way wavelength.
- `<CTAG>` is the cross-connect ID. The default is Blank or None. CKTID is a string of ASCII characters. The maximum length is 48. If CKTID is empty or null, the CKTID field will not be displayed.
- `<CMDMDE>` is the command execution mode. NORM mode is the default behavior for all commands but you can specify FRCD to force the system to override a state in which the command would normally be denied.
For additional information, including valid command values, refer to the Cisco ONS SONET TL1 Command Guide or the Cisco ONS SDH TL1 Command Guide.

Step 11
In the TL1 dialog box, use the DLT-OCHCC command to delete the OCHCC cross-connects for the express path OCHCCs listed in Step 4, on page 20, using the following format:

```
DLT-OCHCC[:<TID>]:<AID>:<CTAG>:::<CKTID=<CKTID>:][::CMDMDE=<CMDMDE>];
```

where:

- `<AID>` is the access identifier from the Facility section.
- `<CKTID>` is the cross-connect ID. The default is Blank or None. CKTD is a string of ASCII characters. The maximum length is 48. If CKTID is empty or null, the CKTID field will not be displayed.
- `<CMDMDE>` is the command execution mode. NORM mode is the default behavior for all commands but you can specify FRCD to force the system to override a state in which the command would normally be denied.

For additional information, including valid command values, refer to the Cisco ONS SONET TL1 Command Guide or the Cisco ONS SDH TL1 Command Guide.

Step 12
Click Close to close the TL1 dialog box.

Step 13
Delete the internal patchcords:

a) In node view (single-shelf mode) or multishelf view (multishelf mode), click the Provisioning > WDM-ANS > Internal Patchcords tabs.

b) Highlight all of the internal patchcords.

c) Click Delete.

d) Click Yes on the confirmation dialog box.

Step 14
Delete the OSC terminations:

a) Click the Provisioning > Comm Channels > OSC tabs.

b) Highlight all of the OSC terminations.

c) Click Delete.

d) Click Yes on the confirmation dialog box.

Step 15
Remove any amplifier cards (OPT-BST, OPT-PRE) that are installed but not required in the ROADM node.

Step 16
Install the new ROADM cards in the slots identified by your Cisco Transport Planner site plan using the “NTP-G30 Install the DWDM Cards” task in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide.

Step 17
Complete the “NTP-G34 Install Fiber-Optic Cables on DWDM Cards and DCUs” procedure in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide for the ROADM node, following the new internal connections table generated by Cisco Transport Planner.

Step 18
Complete the “NTP-G152 Create and Verify Internal Patchcords” procedure in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide to recreate the internal patchcords deleted in Step 13, on page 21.

Step 19
Complete the NTP-G38 Provision OSC Terminations” procedure in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide to recreate the OSC terminations deleted in Step 14.

Step 20
Import the recalculated ROADM site parameters using the “NTP-G143 Import the Cisco Transport Planner NE Update Configuration File” procedure in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide.

Step 21
Complete the “NTP-G37 Run Automatic Node Setup” task in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide.

Step 22
Update the ANS parameters at the adjacent nodes:

a) Display an adjacent node in node view.
b) Complete the “NTP-G143 Import the Cisco Transport Planner NE Update Configuration File” procedure in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide* to load the new NE Update file onto the node.

c) Complete the “NTP-G37 Run Automatic Node Setup” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide* to recalculate the ANS parameters at the node.

d) Display the next adjacent node in node view.

e) Repeat 22.b, on page 22 and 22.c, on page 22 for the second adjacent node.

**Step 23** Display the new ROADM node in node view.

**Step 24** Recreate the OCHNCs and/or OCHCCs deleted in Step 7, on page 20 using the following tasks:

- “DLP-G346 Provision Optical Channel Client Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

- “DLP-G105 Provision Optical Channel Network Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 25** Complete the “DLP-G180 Clear a Manual or Force Y-Cable or Splitter Protection Switch” task in the Manage the Node document for OCHNCs and/or OCHCCs that were switched to the opposite side of the ring as part of a splitter or Y-cable protection group to return the traffic to its condition before the card was added.

*Stop. You have completed this procedure.*

---

### NTP-G176 Convert an Line Amplifier Node to an OADM Node

<table>
<thead>
<tr>
<th><strong>Purpose</strong></th>
<th>This procedure converts a full line amplifier node with OPT-PRE and OPT-BST cards installed on each side of the shelf to an OADM node.</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Tools/Equipment</strong></td>
<td>Cisco Transport Planner reports and NE Update file for the new OADM node.</td>
</tr>
</tbody>
</table>
| **Prerequisite Procedures** | • Turn Up a Network” chapter in the *Cisco ONS 15454 DWDM Network Configuration Guide*  
• A Cisco Transport Planner site plan recalculated for the new ROADM node |
| **Required/As Needed** | As needed |
| **Onsite/Remote** | Onsite |
| **Security Level** | Provisioning or higher |
**Procedure**

**Step 1** Complete the “NTP-G139 Verify Cisco Transport Planner Reports and Files” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide* to verify that you have the files and reports prepared by Cisco Transport Planner for the OADM node.

**Step 2** Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at the line amplifier node.

**Step 3** Click the **Circuits** tab.

**Step 4** Make a list of the OCHNCs, OCH trails, and OCHCCs that pass through the node on the express path for both the Side B-to-Side A and Side A-to-Side B directions.

**Caution** You will delete the optical channel circuits in the next step and use the list to recreate the circuits later. Do not proceed until you complete the circuit list.

**Step 5** Delete the circuits identified in Step 4, on page 23 using one or more of the following tasks:

- “DLP-G347 Delete Optical Channel Client Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- “DLP-G418 Delete an Optical Channel Trail” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- “DLP-G106 Delete Optical Channel Network Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

**Step 6** Click the **Provisioning > WDM-ANS > Internal Patchcords** tabs.

**Step 7** In the internal patchcords table, click the OPT-PRE COM-TX to OPT-BST COM-RX internal patchcord.

**Step 8** Click **Delete**.

**Step 9** On the confirmation dialog, click **OK**.

**Step 10** Remove the physical fiber and attenuators, if present, that connect the COM-TX to COM-RX ports and COM-RX to COM-TX ports between the OPT-BST and OPT-PRE cards installed in Side B.

**Step 11** Click **Default Patchcords**.

**Step 12** Complete the “NTP-G143 Import the Cisco Transport Planner NE Update Configuration File” procedure in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 13** Complete the “NTP-G37 Run Automatic Node Setup” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 14** In node view, click the **Circuits** tab.

**Step 15** Complete one or more of the following procedures to recreate circuits identified in Step 4, on page 23 that will pass through the OADM node:

- “DLP-G346 Provision Optical Channel Client Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- “DLP-G105 Provision Optical Channel Network Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- “DLP-G395 Create an Optical Channel Trail” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

**Note** Cisco recommends that you recreate the circuits one at a time.
Step 16 Verify that each circuit appears on the Circuits table with a DISCOVERED status and an IS/Unlocked state. If not, complete Step 14, on page 23 and Step 15, on page 23. If the circuits still do not appear with a DISCOVERED status and IS/Unlocked state, contact your next level of support.

Step 17 Referring to the Cisco Transport Planner Traffic Matrix report, repeat Step 15, on page 23 and Step 16, on page 24 to create the new add/drop circuits at the node, as needed. Stop. You have completed this procedure.

NTP-G182 Convert a Line Amplifier Node to a ROADM Node

| Purpose | This procedure converts a line amplifier node with OPT-PRE and OPT-BST cards installed on each side of the shelf to a ROADM node. |
| Tools/Equipment | Cisco Transport Planner reports and NE Update file for the new ROADM node. |
| Prerequisite Procedures | • “Turn Up a Network” chapter in the Cisco ONS 15454 DWDM Network Configuration Guide  
• A Cisco Transport Planner site plan recalculated for the new ROADM node. |
| Required/As Needed | As needed |
| Onsite/Remote | Onsite |
| Security Level | Provisioning or higher |

⚠️ Caution This procedure will affect the service of unprotected circuits that pass through the ROADM node.

⚠️ Caution This procedure applies to line amplifier nodes with OPT-BST and OPT-PRE cards installed on both sides of the shelf. If the line amplifier node has a different configuration, the upgrade might affect the adjacent nodes and require an update of their ANS parameters. If the line amplifier node is not a full line amplifier, contact your next level of support.
**Procedure**

**Step 1**
Complete the “NTP-G139 Verify Cisco Transport Planner Reports and Files” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide* to verify that you have the files and reports prepared by Cisco Transport Planner for the ROADM node.

**Step 2**
Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at the line amplifier node.

**Step 3**
Click the Circuits tab.

**Step 4**
Make a list of the following OCHNCs, OCH trails, and OCHCCs that pass through the node on the express path for both the Side B-to-Side A and Side A-to-Side B directions.

**Caution** You will delete the optical channel circuits in the next step and use the list to recreate the circuits later. Do not proceed until you complete the circuit list.

**Step 5**
Delete the circuits identified in Step 4, on page 25 using one or more of the following tasks:

- "DLP-G347 Delete Optical Channel Client Connections" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- "DLP-G418 Delete an Optical Channel Trail" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- "DLP-G106 Delete Optical Channel Network Connections" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*

**Step 6**
Click the Provisioning > WDM-ANS > Internal Patchcords tabs.

**Step 7**
In the internal patchcords table, click the OPT-PRE COM-TX to OPT-BST COM-RX internal patchcord.

**Step 8**
Click Delete.

**Step 9**
In the confirmation dialog box, click OK.

**Step 10**
Remove the physical fiber and attenuators, if present, that connect the COM-TX to COM-RX ports and COM-RX to COM-TX ports between the OPT-BST and OPT-PRE cards installed in Side B.

**Step 11**
Referring to the Cisco Transport Planner Shelf Layout report, install one of the following sets of cards on both Side B and Side A of the node as described by the Cisco Transport Planner NE Update file:

- 32WSS and 32DMX cards
- 32WSS-L and 32DMX-L cards
- 40-WSS-C/40-WSS-CE and 40-DMX-C/40-DMX-CE cards

**Step 12**
Referring to the Cisco Transport Planner Internal Connections report, connect the fibers to the new wavelength selective switch and demultiplexer cards.

**Step 13**
Complete the "NTP-G143 Import the Cisco Transport Planner NE Update Configuration File" procedure in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

**Step 14**
Verify that the new internal patchcords are created for the physical cables connected to the new wavelength selective switch and demultiplexer cards in Step 12, on page 25. If not, complete the "NTP-G242 Create an Internal Patchcord"
Manually” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide* to manually create the internal patchcords.

**Step 15** Complete the “NTP-G143 Import the Cisco Transport Planner NE Update Configuration File” procedure in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 16** Complete the “NTP-G37 Run Automatic Node Setup” task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 17** In node view, click the **Circuits** tab.

**Step 18** Complete one or more of the following procedures to recreate circuits identified in Step 4, on page 25 that will pass through the ROADM node:

- “DLP-G105 Provision Optical Channel Network Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- “DLP-G346 Provision Optical Channel Client Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- “DLP-G395 Create an Optical Channel Trail” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

**Note** Cisco recommends that you recreate the circuits one at a time.

**Step 19** Verify that each circuit appears on the Circuits table with a DISCOVERED status and an IS/Unlocked state. If not, repeat Step 17, on page 26 and Step 18, on page 26.

If the circuits still do not appear with a DISCOVERED status and IS/Unlocked state, contact your next level of support.

**Step 20** Referring to the Cisco Transport Planner Traffic Matrix report, repeat Step 17, on page 26 and Step 18, on page 26 to create the new add/drop circuits at the node, as needed.

**Stop. You have completed this procedure.**

### NTP-G195 Convert a Protected ROADM Node from two Separate Nodes to a Single Multishelf Node

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This procedure converts a protected ROADM node from two separate nodes to a single multishelf node.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tools/Equipment</td>
<td>None</td>
</tr>
</tbody>
</table>
| Prerequisite Procedures | • “Turn Up a Network” chapter in the *Cisco ONS 15454 DWDM Network Configuration Guide*  
  • A Cisco Transport Planner site plan recalculated for the new node. |
| Required/As Needed | As needed |
This procedure will affect the service of unprotected circuits that pass through the ROADM node.

This procedure applies to two ROADM nodes, where ROADM Node 1 has amplifier cards (such as, OPT-BST and OPT-PRE) or optical service channel cards (OSCM or OSC-CSM) installed on both the sides of the shelf and 40-WSS-C/40-DMX-C card (or the 32WSS/32DMX and 32WSS-L/32DMX-L cards) installed in Side A (Slots 1 through 6) and the ROADM Node 2 has amplifier cards (such as, OPT-BST and OPT-PRE) or optical service channel cards (OSCM or OSC-CSM) installed on both the sides of the shelf and 40-WSS-C/40-DMX-C card (or the 32WSS/32DMX and 32WSS-L/32DMX-L cards) installed in Side B (Slots 12 through 17).

In this procedure, ROADM Node 1 will be used as node controller and ROADM Node 2 will be added to the multishelf configuration as a subtending shelf.

Procedure

Step 1 Complete the “NTP-G139 Verify Cisco Transport Planner Reports and Files” task in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide to verify that you have the files and reports prepared by Cisco Transport Planner for the ROADM nodes.
Step 2  
Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at ROADM Node 1. The following figure shows the shelf view of ROADM Node 1.

Figure 1: ROADM Node 1 Shelf View

![Figure 1: ROADM Node 1 Shelf View](image-url)
The following figure shows the functional view of ROADM Node 1.

**Figure 2: ROADM Node 1 Functional View**

---

**Step 3** Click the Circuits tab.

**Step 4** Make a list of all the OCHNCs, OCH trails, and OCHCCs that pass through or terminate (add/drop) at the amplifier or optical service channel cards installed in Side B of ROADM Node 1.

**Caution** You will delete only the pass-through circuits in the next step and use the list to recreate the circuits later. Do not proceed until you complete the circuit list. The add/drop circuits will not be deleted and continues to transport traffic.

**Step 5** If OCHNCs and/or OCHCCs identified in Step 4, on page 29 are routed on the active path of a splitter or Y-cable protection group, complete the following steps. If not, continue with Step 6, on page 29.

a) Display the node containing the amplifier or optical service channel cards with the Y-cable or splitter protection.

b) Force the traffic to the protect path in the opposite side of the ring using the “DLP-G179 Apply a Force Y-Cable or Splitter Protection Switch” task in the Manage the Node document.

**Step 6** Delete the circuits identified in Step 4, on page 29 using one or more of the following tasks:

- “DLP-G347 Delete Optical Channel Client Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- “DLP-G418 Delete an Optical Channel Trail” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*

- “DLP-G106 Delete Optical Channel Network Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the *Cisco ONS 15454 DWDM Network Configuration Guide*
Step 7 Click the Provisioning > WDM-ANS > Optical Side tab.

Step 8 In the optical sides table, click the optical side corresponding to the amplifier or optical service channel cards installed in Side B of ROADM Node 1.

Step 9 Click Delete.

Step 10 In the confirmation dialog box, click Yes.

Step 11 Click the Provisioning > WDM-ANS > Internal Patch cords tab.

Step 12 Look in the To column of the internal patch cords table and make a list of internal patch cords that connect the amplifier or optical service channel cards in Side B to the 40-WSS-C/40-DMX-C card (or the 32WSS/32DMX and 32WSS-L/32DMX-L cards) in Side A of ROADM Node 1.

Step 13 Click Delete.

Step 14 In the confirmation dialog box, click Yes.

Step 15 Remove the physical fiber and attenuators, if present, that connect the amplifier or optical service channel cards in Side B to the 40-WSS-C/40-DMX-C card (or the 32WSS/32DMX and 32WSS-L/32DMX-L cards) in Side A of ROADM Node 1.

Step 16 Complete the NTP-G107 Remove Permanently or Remove and Replace DWDM Cards, on page 3 to delete the amplifier or optical service channel cards installed in Side B of ROADM Node 1.

Step 17 Complete the "DLP-G46 Log into CTC" task in the "Connect the PC and Log into the GUI" document at the ROADM Node 2. The following figure shows the ROADM Node 2 shelf view.

*Figure 3: OADM Node 2 Shelf View*
The following figure shows the functional view of ROADM Node 1.

**Figure 4: ROADM Node 2 Functional View**

![ROADM Node 2 Functional View Diagram](image)

**Step 18**  
Click the Circuits tab.

**Step 19**  
Make a list of all the OCHNCs, OCH trails, and OCHCCs that pass through or terminate (add/drop) at the amplifier or optical service channel cards installed in Side A of ROADM Node 2.  
**Caution**  
You will delete all the pass-through and add/drop circuits in the next step and use the list to recreate the circuits later. Do not proceed until you complete the circuit list.

**Step 20**  
If OCHNCs and/or OCHCCs identified in Step 19, on page 31 are routed on the active path of a splitter or Y-cable protection group, complete the following steps. If not, continue with Step 21, on page 31.  
(a) Display the node containing the amplifier or optical service channel cards with the Y-cable or splitter protection.  
(b) Force the traffic to the protect path in the opposite side of the ring using the "DLP-G179 Apply a Force Y-Cable or Splitter Protection Switch" task in the Manage the Node document.

**Step 21**  
Delete the circuits identified in Step 19, on page 31 using one or more of the following tasks:

- "DLP-G347 Delete Optical Channel Client Connections" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*
- "DLP-G418 Delete an Optical Channel Trail" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*
- "DLP-G106 Delete Optical Channel Network Connections" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide*
Step 22. If overhead circuits exist in the amplifier or optical service channel cards installed in Side A of ROADM Node 2, complete "DLP-G112 Delete Overhead Circuits" task in the chapter "Create Optical Channel Circuits and Provisionable Patchcords" of the *Cisco ONS 15454 DWDM Network Configuration Guide* to delete these overhead circuits.

Step 23. Click the Provisioning > WDM-ANS > Optical Side tab.

Step 24. In the optical sides table, click the optical side corresponding to the amplifier or optical service channel cards installed in Side A of ROADM Node 2.

Step 25. Click Delete.

Step 26. In the confirmation dialog box, click Yes.

Step 27. Click the Provisioning > WDM-ANS > Internal Patchcords tab.

Step 28. Look in the To column of the internal patchcords table and make a list of internal patchcords that connect the amplifier or optical service channel cards in Side A to the 40-WSS-C/40-DMX-C card (or the 32WSS/32DMX and 32WSS-L/32DMX-L cards) in Side B of ROADM Node 2.

Step 29. Click Delete.

Step 30. In the confirmation dialog box, click Yes.

Step 31. Remove the physical fiber and attenuators, if present, that connect the amplifier or optical service channel cards in Side A to the 40-WSS-C/40-DMX-C card (or the 32WSS/32DMX and 32WSS-L/32DMX-L cards) in Side B of ROADM Node 2.

Step 32. If there are pluggable port modules (PPMs) that terminate on the ROADM Node 2, complete the "DLP-G280 Delete a PPM" task in the chapter "Provision Transponder and Muxponder Cards" of the *Cisco ONS 15454 DWDM Network Configuration Guide* to delete these PPMs.

Step 33. Complete the NTP-G107 Remove Permanently or Remove and Replace DWDM Cards, on page 3 to delete the amplifier or optical service channel cards installed in Side A of ROADM Node 2.

Step 34. Complete the "NTP-G163 Upgrade Nodes in Single-Shelf Mode to Multishelf Mode" task in the chapter “Turn Up a Node” of the *Cisco ONS 15454 DWDM Network Configuration Guide* to upgrade ROADM Node 1 to a multishelf configuration and add ROADM Node 2 as a subending shelf. The following figure shows the final multishelf view of the node.

Step 35. In the multishelf view, click the Provisioning > WDM-ANS > Internal Patchcords tab.

*Figure 5: Final Multishelf View of the Node*
Step 36 Click Create. The Internal Patchcord Creation wizard appears.

Step 37 In the Internal Patchcord Attributes page, choose OTS/OCH to OTS/OCH option and select the Bidirectional checkbox.

Step 38 Click Next.

Step 39 In the Internal Patchcord Origination page, provision the internal patchcord origination parameters.

- **Shelf**—Choose the shelf where the internal patchcord originates.

- **Slot**—Choose one of the two 40-WSS-C cards (or the 32WSS/32DMX and 32WSS-L/32DMX-L cards) where the internal patchcord originates.

- **Tx Port**—Choose the EXP TX port were the internal patchcord originates.

Step 40 Click Next.

Step 41 In the Internal Patchcord Termination page, provision the internal patchcord origination parameters.

- **Shelf**—Choose the shelf where the internal patchcord terminates.

- **Slot**—Choose the other 40-WSS-C card (or the 32WSS/32DMX and 32WSS-L/32DMX-L cards) where the internal patchcord terminates.

- **Rx Port**—Choose the EXP RX port were the internal patchcord terminates.
Step 42  Click Next.
Step 43  Review the display-only information on the Internal Patchcord Origination Reverse page. This page shows the shelf, slot, and port that CTC will use for the opposite internal patchcord origination route.
Step 44  Click Next.
Step 45  Review the information displayed on the Internal Patchcord Termination Reverse page. This display-only page shows the shelf, slot, and port that CTC will use for the reverse internal patchcord termination route.
Step 46  Click Finish. The new internal patchcord appears on the Internal Patchcord table.
Step 47  Complete the “NTP-G37 Run Automatic Node Setup” task in the chapter “Turn Up a Node” of the Cisco ONS 15454 DWDM Network Configuration Guide.
Step 48  In node view, click the Circuits tab.
Step 49  Complete one or more of the following procedures to recreate circuits identified in Steps 4 and Step 19, on page 31:

- “DLP-G105 Provision Optical Channel Network Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the Cisco ONS 15454 DWDM Network Configuration Guide
- “DLP-G346 Provision Optical Channel Client Connections” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the Cisco ONS 15454 DWDM Network Configuration Guide
- “DLP-G395 Create an Optical Channel Trail” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the Cisco ONS 15454 DWDM Network Configuration Guide

Note  Cisco recommends that you recreate the circuits one at a time.
Step 50  Complete the “NTP-G60 Create and Delete Overhead Circuits” task in the chapter “Create Optical Channel Circuits and Provisionable Patchcords” of the Cisco ONS 15454 DWDM Network Configuration Guide to recreate circuits deleted in Step 22, on page 32.
Step 51  Verify that each circuit appears on the Circuits table with a DISCOVERED status and an IS/Unlocked state. If not, repeat Step 48, on page 34 and Step 49, on page 34. If the circuits still do not appear with a DISCOVERED status and IS/Unlocked state, contact your next level of support.
Step 52  Click the Provisioning > Pluggable Port Module > Pluggable Port Module tab and click Create to recreate the PPMs deleted in Step 32, on page 32.
Step 53  Complete the “DLP-G180 Clear a Manual or Force Y-Cable or Splitter Protection Switch” task in the Manage the Node document for OCHNCs and/or OCHCCs that were switched to the opposite side of the ring as part of a splitter or Y-cable protection group to return the traffic to its original condition.

Stop. You have completed this procedure.

---

**NTP-G242 Modify the CD setting of TDC-CC and TDC-FC Cards**

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This procedure allows you to modify the CD settings of the TDC-CC and TDC-FC cards.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Tools/Equipment</td>
<td>None</td>
</tr>
</tbody>
</table>
Prerequisite Procedures | "NTP-G30 Install the DWDM Cards" task in the chapter "Turn Up a Node" of the Cisco ONS 15454 DWDM Network Configuration Guide.
---|---
Required/As Needed | As needed
Onsite/Remote | Onsite or remote
Security Level | Provisioning or higher

**Procedure**

**Step 1** Complete the "DLP-G46 Log into CTC" task in the Connect the PC and Log into the GUI document at the node where you want to change the TDC-CC or TDC-FC card settings. If you are already logged in, continue with the next step.

**Step 2** Complete the "NTP-G103 Back Up the Database" task in the chapter "Maintain the Node" of the Cisco ONS 15454 DWDM Network Configuration Guide.

**Note** Changing the CD value of the T-DCU can severely affect the performance of the channels travelling through the T-DCU. As a general rule the new value is provided through an additional analysis performed by the CTP. In this case, complete the "NTP-G328 Add, Modify, and Delete ANS Parameters" task in the chapter "Turn Up a Node" of the Cisco ONS 15454 DWDM Network Configuration Guide. If for some reason, the "NTP-G328 Add, Modify, and Delete ANS Parameters" task cannot be applied, then a skilled operator can directly change the CD value according to the CTP findings. To modify the CD setting of the TDC-CC or TDC-FC card proceed to the next step.

**Step 3** To modify the CD setting of the TDC-CC or TDC-FC card, perform any of the following tasks as needed:

**Note** As the operation is traffic affecting, change the CD value during a maintenance window.

- DLP-G526 Modify the CD Value of the TDC-CC and TDC-FC When Connected to OPT-AMP-C, OPT-PRE, 40-SMR-1 and 40-SMR-2 Cards, on page 35
- DLP-G527 Modify the CD Value of the TDC-CC and TDC-FC Cards when Connected to OPT-RAMP-C and OPT-RAMP-CE Amplifiers, on page 36

**Step 4** Complete the "NTP-G103 Back Up the Database" task in the chapter "Maintain the Node" of the Cisco ONS 15454 DWDM Network Configuration Guide.

Stop. You have completed this procedure.

**DLP-G526 Modify the CD Value of the TDC-CC and TDC-FC When Connected to OPT-AMP-C, OPT-PRE, 40-SMR-1 and 40-SMR-2 Cards**

| Purpose | This procedure allows you to modify the CD value when the TDC-CC and TDC-FC cards are connected to the DC ports of the OPT-PRE, OPT-AMP-C, 40-SMR-1 and 40-SMR-2 cards. |
### Procedure

**Step 1**  
Before you modify the CD value of the TDC-CC or TDC-FC card, disable the Automatic Power Control (APC) in the domain that has the TDC-CC or TDC-FC card. To disable the APC domain, complete the "DLP-G157 Disable Automatic Power Control" task in the Manage the Node document.

**Step 2**  
Modify the CD value for the TDC-CC or TDC-FC Card. To modify the CD value, Complete the "DLP-G545 Modify the Chromatic Dispersion Value for the TDC-CC and TDC-FC Cards" task in the chapter "Change DWDM Card Settings" of the *Cisco ONS 15454 DWDM Network Configuration Guide*.

**Step 3**  
Enable the APC domain that has the TDC-CC or TDC-FC card. To enable the APC domain, complete the "DLP-G158 Enable Automatic Power Control" task in the Manage the Node document.

**Step 4**  
Return to your originating procedure (NTP).

### DLP-G527 Modify the CD Value of the TDC-CC and TDC-FC Cards when Connected to OPT-RAMP-C and OPT-RAMP-CE Amplifiers

<table>
<thead>
<tr>
<th>Purpose</th>
<th>This procedure allows you to modify the CD value of the TDC-CC and TDC-FC cards when connected to the DC ports of the OPT-RAMP-C and OPT-RAMP-CE amplifiers.</th>

</tbody>
</table>
Procedure

Step 1  Before you modify the CD value of the TDC-CC or TDC-FC card, run the APC. To run the APC, complete the "DLP-G430 Run Automatic Power Control" task in the Manage the Node document.

Step 2  Modify the CD value for the TDC-CC or TDC-FC Card. To modify the CD value, Complete the "DLP-G545 Modify the Chromatic Dispersion Value for the TDC-CC and TDC-FC Cards" task in the chapter "Change DWDM Card Settings" of the Cisco ONS 15454 DWDM Network Configuration Guide.

Note  Do not change the compensation value directly in one instance. In order to avoid traffic drops and alarms, it is required to change the CD value in steps not too large. For example, if you want to change the CD value of a TDC-CC from -880 to -1320 ps/nm, do not change the CD value in a single step, but in a couple of steps. Change the CD value to an intermediate value of -1100 ps/nm and then to -1320 ps/nm. Change the CD value of the TDC-CC by steps no larger than 330 ps/nm and the CD value of the TDC-FC by steps no larger than 270 ps/nm. This approach of changing the CD value avoids misleading alarms and traffic drops.

Step 3  Run the APC. To run the APC, complete the "DLP-G430 Run Automatic Power Control" task in the Manage the Node document.

Step 4  If the APC correction skipped alarm appears, then force the APC correction. Do the following:
  a) Click the alarmed port.
  b) Click the Maintenance tab.
  c) Click the Force APC correction button.

Step 5  Repeat Step 2, on page 37 and Step 4, on page 37 until the CD target value is set.

Step 6  Return to your originating procedure (NTP).
