

## Configuring VRF Lite

---

This chapter describes how to configure VPN Routing and Forwarding Lite (VRF Lite) for the ML-Series cards. For additional information about the Cisco IOS commands used in this chapter, refer to the *Cisco IOS Command Reference* publication. This chapter contains the following major sections:

- [Understanding VRF Lite, page 12-1](#)
- [Configuring VRF Lite, page 12-2](#)
- [VRF Lite Configuration Example, page 12-2](#)
- [Monitoring and Verifying VRF Lite, page 12-7](#)

**Note**

---

If you have already configured bridging, you may now proceed with configuring VRF Lite as an optional step.

---

## Understanding VRF Lite

VRF is an extension of IP routing that provides multiple routing instances. It provides a separate IP routing and forwarding table to each VPN and is used in concert with MP-iBGP (Multi-Protocol internal BGP) between provider equipment (PE) routers to provide Layer 3 MPLS-VPN. However, ML-Series VRF implementation is without MP-iBGP. With VRF Lite, the ML Series is considered a PE-extension or a customer equipment (CE)-extension. VRF Lite is considered a PE-extension since it has VRF (but without MP-iBGP), and it is considered a CE-extension since this CE can have multiple VRFs and serves many customer with one CE box.

Under VRF Lite, an ML-Series CE can have multiple interfaces/subinterfaces with PE for different customers (while a normal CE is only for one customer). It holds VRFs (routing information) locally and it does not distribute the VRFs to its connected PE. It uses VRF information to direct traffic to the correct interfaces/subinterfaces when it receives traffic from customers' routers or from Internet service provider (ISP) PE router(s).

## Configuring VRF Lite

Perform the following procedure to configure VRF Lite:

	Command	Purpose
Step 1	Router(config)# <b>ip vrf</b> <i>vrf-name</i>	Enters VRF configuration mode and assigns a VRF name.
Step 2	Router(config-vrf)# <b>rd</b> <i>route-distinguisher</i>	Creates a VPN route distinguisher.
Step 3	Router(config-vrf)# <b>route-target</b> { <b>import</b>   <b>export</b>   <b>both</b> } <i>route-distinguisher</i>	Creates a list of import and/or export route target communities for the specified VRF.
Step 4	Router(config-vrf)# <b>import map</b> <i>route-map</i>	(Optional) Associates the specified route map with the VRF.
Step 5	Router(config-vrf)# <b>exit</b>	Exits the current configuration mode and enters global configuration mode.
Step 6	Router(config)# <b>interface</b> <i>type number</i>	Specifies an interface and enters interface configuration mode.
Step 7	Router(config-vrf)# <b>ip vrf forwarding</b> <i>vrf-name</i>	Associates a VRF with an interface or subinterface.
Step 8	Router(config-if)# <b>end</b>	Exits to privileged EXEC mode.
Step 9	Router# <b>copy running-config</b> <b>startup-config</b>	(Optional) Saves configuration changes to NVRAM.

[Example 12-1](#) shows an example of configuring a VRF. In the example, the VRF name is `customer_a`, the route-distinguisher is `1:1`, and the interface type is Fast Ethernet, number `0.1`.

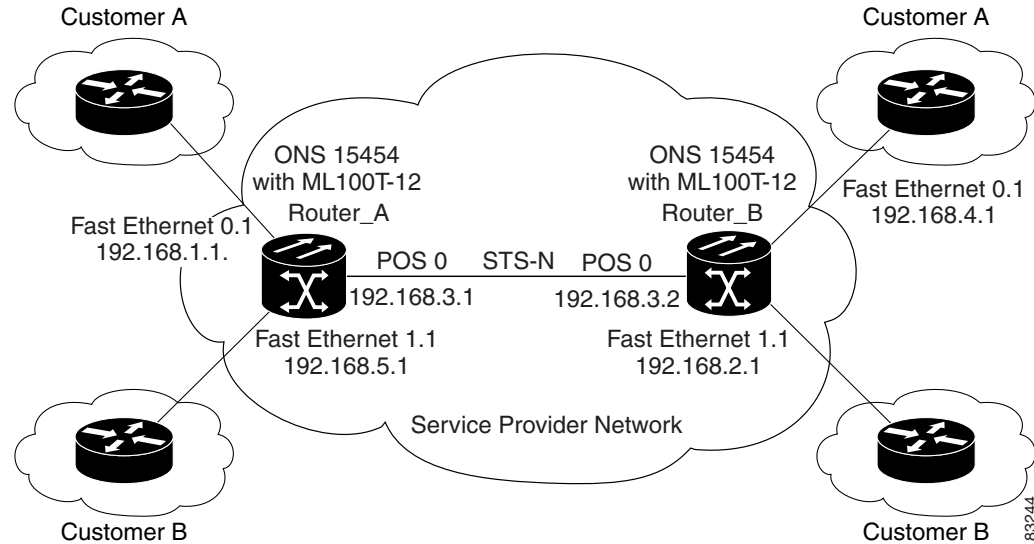

### Example 12-1 Configuring a VRF

```
Router(config)# ip vrf customer_a
Router(config-vrf)# rd 1:1
Router(config-vrf)# route-target both 1:1
Router(config)# interface fastEthernet 0.1
Router(config-subif)# ip vrf forwarding customer_a
```

## VRF Lite Configuration Example

[Figure 12-1](#) shows an example of a VRF Lite configuration. The configurations for Router A and Router B are provided in [Example 12-2](#) and [Example 12-3](#) on page 12-4, respectively. The associated routing tables are shown in [Example 12-4](#) on page 12-5 through [Example 12-9](#) on page 12-7.

Figure 12-1 VRF Lite—Sample Network Scenario

**Example 12-2 Router A Configuration**

```

hostname Router_A
!
ip vrf customer_a
  rd 1:1
  route-target export 1:1
  route-target import 1:1
!
ip vrf customer_b
  rd 2:2
  route-target export 2:2
  route-target import 2:2
!
bridge 1 protocol ieee
bridge 2 protocol ieee
bridge 3 protocol ieee
!
!
interface FastEthernet0
  no ip address
!
interface FastEthernet0.1
  encapsulation dot1Q 2
  ip vrf forwarding customer_a
  ip address 192.168.1.1 255.255.255.0
  bridge-group 2
!
interface FastEthernet1
  no ip address
!
interface FastEthernet1.1

    !

```

#### Example 12-4 Router\_A Global Routing Table

```

Router_A# sh ip route
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
        D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
        N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
        E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
        i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area
        * - candidate default, U - per-user static route, o - ODR
        P - periodic downloaded static route

Gateway of last resort is not set

C    192.168.50.0/24 is directly connected, POS0.1

```

**Example 12-5 Router\_A customer\_a VRF Routing Table**

```

Router_A# show ip route vrf customer_a
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
        D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
        N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
        E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
        i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area
        * - candidate default, U - per-user static route, o - ODR
        P - periodic downloaded static route

Gateway of last resort is not set

O    192.168.4.0/24 [110/2] via 192.168.100.2, 00:15:35, POS0.2
C    192.168.1.0/24 is directly connected, FastEthernet0.1
C    192.168.100.0/24 is directly connected, POS0.2

```

**Example 12-6 Router\_A customer\_b VRF Routing Table**

```

Router_A# show ip route vrf customer_b
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
        D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
        N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
        E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
        i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area
        * - candidate default, U - per-user static route, o - ODR
        P - periodic downloaded static route

Gateway of last resort is not set

C    192.168.200.0/24 is directly connected, POS0.3
O    192.168.5.0/24 [110/2] via 192.168.200.2, 00:10:32, POS0.3
C    192.168.2.0/24 is directly connected, FastEthernet1.1

```

**Example 12-7 Router\_B Global Routing Table**

```

Router_B# sh ip route
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
        D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
        N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
        E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
        i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area
        * - candidate default, U - per-user static route, o - ODR
        P - periodic downloaded static route

Gateway of last resort is not set

C    192.168.50.0/24 is directly connected, POS0.1

```

**Example 12-8 Router\_B customer\_a VRF Routing Table**

```

Router_B# sh ip route vrf customer_a
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
        D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
        N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
        E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
        i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area
        * - candidate default, U - per-user static route, o - ODR
        P - periodic downloaded static route

Gateway of last resort is not set

```

```

C    192.168.4.0/24 is directly connected, FastEthernet0.1
O    192.168.1.0/24 [110/2] via 192.168.100.1, 00:56:24, POS0.2
C    192.168.100.0/24 is directly connected, POS0.2

```

### Example 12-9 Router\_B customer\_b VRF Routing Table

```

Router_B# show ip route vrf customer_b
Codes: C - connected, S - static, I - IGRP, R - RIP, M - mobile, B - BGP
       D - EIGRP, EX - EIGRP external, O - OSPF, IA - OSPF inter area
       N1 - OSPF NSSA external type 1, N2 - OSPF NSSA external type 2
       E1 - OSPF external type 1, E2 - OSPF external type 2, E - EGP
       i - IS-IS, L1 - IS-IS level-1, L2 - IS-IS level-2, ia - IS-IS inter area
       * - candidate default, U - per-user static route, o - ODR
       P - periodic downloaded static route

Gateway of last resort is not set

C    192.168.200.0/24 is directly connected, POS0.3
C    192.168.5.0/24 is directly connected, FastEthernet1.1
O    192.168.2.0/24 [110/2] via 192.168.200.1, 00:10:51, POS0.3

```

## Monitoring and Verifying VRF Lite

Table 12-1 shows the privileged EXEC commands for monitoring and verifying VRF Lite.

**Table 12-1 Commands for Monitoring and Verifying VRF Lite**

Command	Purpose
Router# <b>show ip vrf</b>	Displays the set of VRFs and interfaces.
Router# <b>show ip route vrf vrf-name</b>	Displays the IP routing table for a VRF.
Router# <b>show ip protocols vrf vrf-name</b>	Displays the routing protocol information for a VRF.
Router# <b>ping vrf vrf-name ip-address</b>	Pings an IP address that has a specific VRF.
