## 23.5 SET-ATTR-SECUDFLT

(Cisco ONS 15454 SDH and ONS 15600 SDH) The Set Attribute Security Default (SET-ATTR-SECUDFLT) command sets the system-wide default values associated with several security parameters.

**Usage Guidelines**

The following parameters are set on a system-wide basis for all users and all privilege levels: MXINV, DURAL, UOUT, PFRCD, POLD, PINT, and LOGIN. The PRIVLVL keyword cannot be used to set these parameters for a specific privilege level.

The following parameters are set on a privilege-level basis: PAGE, PCND, and TMOUT. If none of these values are specified, the PRIVLVL keyword must also be present. If none of these parameters are specified, the PRIVLVL keyword cannot be used.

**Note**

Password aging can only be enabled/disabled for all privilege levels. The PRIVLVL keyword cannot be used with PAGE=0 to disable a specific user privilege level.

When system-level and privilege-level keywords are combined in the same command, system-level parameters are still set for all privilege levels, regardless of the value specified by PRIVLVL. Privilege-level parameters are only set for the privilege level specified by PRIVLVL.

**Note**

If PAGE and PINT both have values greater than 0, PINT must be less than PAGE.

The order of keywords is not restricted. Commas are only needed to separate keywords. If no keywords are specified, all parameters are left as is.

**Category**

**Input Format**

```
SET-ATTR-SECUDFLT:[<TID>]::<CTAG>::[PAGE=<PAGE>],[PCND=<PCND>],
[MXINV=<MXINV>],[DURAL=<DURAL>],[TMOUT=<TMOUT>],[UOUT=<UOUT>],
[PFRCD=<PFRCD>],[POLD=<POLD>],[PINT=<PINT>],[LOGIN=<LOGIN>],
[PRIVLVL=<PRIVLVL>],[PDIF=<PDIF>];
```

**Input Example**

```
SET-ATTR-SECUDFLT:CISCO::123::PAGE=45,PCND=5,MXINV=5,DURAL=30,
TMOUT=0,UOUT=20,PFRCD=NO,POLD=5,PINT=20,LOGIN=MULTIPLE,
PRIVLVL=RTRV,PDIF=1;
```

**Input Parameters**

<PAGE>	(Optional) Password aging interval. It is the number of days before a user is prompted to change his/her password. 0 indicates the policy is turned off and is the default. If PAGE is turned on for all privilege levels and is not specified for each privilege level, it defaults to 45 days. PAGE ranges from 20 to 90 days. PAGE is an integer.
<PCND>	(Optional) Number of days a password can be used before a new one is mandatory (that is, the warning period). Default is 5 days. PCND ranges from 2 to 20 days. PCND is an integer.

<MXINV>	(Optional) Maximum number of consecutive and invalid session setup attempts allowed to occur before an intrusion attempt is suspected (that is, a “Failed Logins Before Lockout” message is received from CTC). 0 indicates the policy is turned off. Default is 5. MXINV ranges from 0 to 10. MXINV is an integer.
<DURAL>	(Optional) Time interval (in seconds) during which a user ID is locked out when an intrusion attempt is suspected (that is, “Lockout Duration”). If the user is locked out until unlocked by a Superuser, DURAL=INFINITE. Default is 30 seconds. DURAL ranges from 0 to 600 seconds. DURAL is a string.
<TMOUT>	(Optional) Interval (in minutes) after which a session is terminated if no messages are exchanged between the user and the NE. 0 indicates that the session will not timeout. TMOUT ranges from 0 minutes to 999 minutes. Defaults are 0 (no timeout) for RTRV users, 60 minutes for MAINT users, 30 minutes for PROV users, and 15 minutes for SUPER users. TMOUT is an integer.
<UOUT>	(Optional) UID aging interval, expressed in days. If a userid has not been used in UOUT days, the user will be forced to change his/her password (or logout) at the next login. No other command is allowed until the password has been changed. 0 is the default and indicates that the policy is turned off. UOUT is an integer that ranges from 0 to 99 days.
<PFRCD>	(Optional) Indicates a password change is required when a new user establishes a session to the NE for the first time (that is, “Require password change on 1st login”). Default is NO. The parameter type is YES_NO, which indicates whether the user’s password is about to expire, the user is logged into the NE, or the user is locked out of the NE.
• NO	No
• YES	Yes
<POLD>	(Optional) Number of prior passwords that cannot be reused (that is, “Prevent reusing last X passwords”). Default is 1. POLD ranges from 1 to 10. POLD is an integer.
<PINT>	(Optional) Number of days that must pass before a password can be changed. If PINT is 0, the policy is turned off. Default is off. PINT is an integer that ranges from 20 to 95 days.
<LOGIN>	(Optional) Number of times a user can log into an NE. LOGIN is either SINGLE or MULTIPLE. If LOGIN is SINGLE, a user can only log into an NE one time with any given user ID, regardless of the method of login (that is, CTC, TL1, etc.). The default is MULTIPLE. The parameter type is USER_LOGINS, which is the number of times a user can log into the same NE with the same user ID.
• MULTIPLE	A user can log into the same NE many times.
• SINGLE	A user can log into the NE only one time (includes both CTC and TL1 sessions).
<PRIVLVL>	(Optional) User’s access privilege. The parameter type is PRIVILEGE, which is the security level.
• MAINT	Maintenance security level. 60 minutes of idle time.
• PROV	Provision security level. 30 minutes of idle time.
• RTRV	Retrieve security level. Unlimited idle time.
• SUPER	Superuser security level. 15 minutes of idle time.
<PDIF>	(Optional) Indicates how many characters must differ between the old and new password. Default minimum character difference is 1. PDIF ranges from 1 to 5 characters. PDIF is an integer and is rangeable.

## 23.6 SET-PMODE-<VC\_PATH>

(Cisco ONS 15454 SDH) The Set Performance Mode of PM Data Collection for VC44C, VC464C, VC48C, VC4, VC416C, VC42C, or VC43C (SET-PMODE-<VC\_PATH>) command sets the mode and turns the PM data collection mode on or off. The Cisco ONS 15454 SDH is capable of collecting and storing section, line, and path PM data. See [Table 27-1 on page 27-1](#) for supported modifiers by platform.

### Usage Guidelines

- The PM mode and state of an entity are retrieved by using the RTRV-PMODE command.
- The near-end monitoring of the intermediate-path performance monitoring (IPPM) only supports STM1, STM4, STM16, and STM64 on the VC path.
- The far-end IPPM data collection is supported by the MRC-12 card only.
- This release of software supports only the path (P) mode PM parameters with this command. This command is not applicable for line (L) and section (S) mode types. The PM monitoring for line and section are supported by the Cisco ONS 15454 SDH, and PM data is always stored.

• 15-MIN	Performance parameter accumulation interval length is every 15 minutes. There are 32 15-MIN buckets of history data available for this accumulation interval length.
• RAW-DATA	Performance parameter accumulation interval length starts from the last time the counters were cleared. This is only applicable to RMON managed PMs.

## 23.8 SET-TOD

(Cisco ONS 15454 SDH and ONS 15600 SDH) The Set Time of Day (SET-TOD) command sets the system date and time for the NE. The year should be entered using four digits while the hour should be entered using a 24-hour time period (that is, military time).

**Usage Guidelines** None

**Category** System

**Security** Provisioning

**Input Format** SET-TOD:[<TID>]::<CTAG>::<YEAR>,<MONTH>,<DAY>,<HOUR>,<MINUTE>,<SECOND>,<DIFFERENCE>[:DST=<DST>];

**Input Example** SET-TOD:CAZADERO::240::1998,05,08,13,18,55,480:DST=Y;

<b>Input Parameters</b>	<YEAR>	The current calendar year. YEAR is an integer.
	<MONTH>	The month of the year. Ranges from 01 to 12. MONTH is an integer.
