Perform Preliminary Checks

After successfully logging into the console, you must perform some preliminary checks to verify the default setup. If any setup issue is detected, take corrective action before making further configurations.

Note The output of the examples in the procedures is not from the latest software release. The output will change for any explicit references to the current release.

Verify status of hardware components

Before you begin

Ensure that all required hardware components are installed on NCS 1004. For installation details, see the *Cisco Network Convergence System 1004 Hardware Installation Guide*.

Procedure

Step 1 Enter the **show platform** command in Cisco IOS XR EXEC mode to display the status of Cisco IOS XR.

Example:

```
RP/0/RP0/CPU0:ios# show platform
Wed Mar  4 06:21:26.929 UTC
Node              Type                       State             Config state
--------------------------------------------------------------------------------
0/0               NCS1K4-LC-FILLER           PRESENT           NSHUT
```

```
0/1               NCS1K4-1.2T-K9             OPERATIONAL       NSHUT
0/2               NCS1K4-1.2TL-K9            OPERATIONAL       NSHUT
0/3               NCS1K4-LC-FILLER           PRESENT           NSHUT
0/RP0/CPU0        NCS1K4-CNTLR-K9(Active)    IOS XR RUN        NSHUT
0/FT0             NCS1K4-FAN                 OPERATIONAL       NSHUT
0/FT1             NCS1K4-FAN                 OPERATIONAL       NSHUT
0/FT2             NCS1K4-FAN                 OPERATIONAL       NSHUT
0/PM0             NCS1K4-AC-PSU              OPERATIONAL       NSHUT
0/PM1             NCS1K4-AC-PSU              OPERATIONAL       NSHUT
0/SC0             NCS1004                    OPERATIONAL       NSHUT

RP/0/RP0/CPU0:ios# show platform
Thu May  7 10:03:03.394 UTC
Node              Type                       State             Config state
--------------------------------------------------------------------------------
0/0               NCS1K4-1.2T-K9             OPERATIONAL       NSHUT
0/1               NCS1K4-OTN-XP              OPERATIONAL       NSHUT
0/2               NCS1K4-OTN-XP              OPERATIONAL       NSHUT
0/3               NCS1K4-OTN-XP              OPERATIONAL       NSHUT
0/RP0/CPU0        NCS1K4-CNTLR-K9(Active)    IOS XR RUN        NSHUT
0/FT0             NCS1K4-FAN                 OPERATIONAL       NSHUT
0/FT1             NCS1K4-FAN                 OPERATIONAL       NSHUT
0/FT2             NCS1K4-FAN                 OPERATIONAL       NSHUT
0/PM0             NCS1K4-DC-PSU              OPERATIONAL       NSHUT
0/PM1             NCS1K4-DC-PSU              OPERATIONAL       NSHUT
0/SC0             NCS1004                    OPERATIONAL       NSHUT
```

a) If Cisco IOS XR is not operational, no output appears. Use the **show sdr** command in Cisco IOS XR mode to verify the state of the service domain router (SDR) on the node.

This example shows sample output of the **show sdr** command in Cisco IOS XR mode.

```
RP/0/RP0/CPU0:ios# show sdr
Wed Mar  4 06:23:16.143 UTC
Type                 NodeName       NodeState      RedState       PartnerName

NCS1K4-DC-PSU        0/PM0          OPERATIONAL                   N/A
NCS1K4-DC-PSU        0/PM1          OPERATIONAL                   N/A
NCS1004              0/SC0          OPERATIONAL                   N/A
```

Step 2 Enter the **admin** command to enter System Admin EXEC mode.

Example:

```
RP/0/RP0/CPU0:ios# admin
```

Step 3 Enter the **show platform** command to display the information and status of each node in the system.

Example:

```
sysadmin-vm:0_RP0# show platform
Wed Mar  4  06:24:46.700 UTC+00:00
Location  Card Type               HW State      SW State      Config State
------------------------------------------------------------------------------
0/0       NCS1K4-LC-FILLER        PRESENT       N/A           NSHUT
0/1       NCS1K4-1.2T-K9          OPERATIONAL   N/A           NSHUT
0/2       NCS1K4-1.2TL-K9         OPERATIONAL   N/A           NSHUT
0/3       NCS1K4-LC-FILLER        PRESENT       N/A           NSHUT
0/RP0     NCS1K4-CNTLR-K9         OPERATIONAL   OPERATIONAL   NSHUT
0/FT0     NCS1K4-FAN              OPERATIONAL   N/A           NSHUT
0/FT1     NCS1K4-FAN              OPERATIONAL   N/A           NSHUT
0/FT2     NCS1K4-FAN              OPERATIONAL   N/A           NSHUT
0/PM0     NCS1K4-AC-PSU           OPERATIONAL   N/A           NSHUT
0/PM1     NCS1K4-AC-PSU           OPERATIONAL   N/A           NSHUT
0/SC0     NCS1004                 OPERATIONAL   N/A           NSHUT

sysadmin-vm:0_RP0# show platform
Thu May  7  10:58:09.331 UTC+00:00
Location  Card Type               HW State      SW State      Config State
------------------------------------------------------------------------------
0/0       NCS1K4-1.2T-K9          OPERATIONAL   N/A           NSHUT
0/1       NCS1K4-OTN-XP           OPERATIONAL   N/A           NSHUT
0/2       NCS1K4-OTN-XP           OPERATIONAL   N/A           NSHUT
0/3       NCS1K4-OTN-XP           OPERATIONAL   N/A           NSHUT
0/RP0     NCS1K4-CNTLR-K9         OPERATIONAL   OPERATIONAL   NSHUT
0/FT0     NCS1K4-FAN              OPERATIONAL   N/A           NSHUT
0/FT1     NCS1K4-FAN              OPERATIONAL   N/A           NSHUT
0/FT2     NCS1K4-FAN              OPERATIONAL   N/A           NSHUT
0/PM0     NCS1K4-DC-PSU           OPERATIONAL   N/A           NSHUT
0/PM1     NCS1K4-DC-PSU           OPERATIONAL   N/A           NSHUT
0/SC0     NCS1004                 OPERATIONAL   N/A           NSHUT
```

Ensure that the output displays all NCS 1004 components. Both the hardware and software states must be OPERATIONAL.

The various hardware and software states are:

Hardware states

- OPERATIONAL: node is operating normally and is fully functional.
- POWERED_ON: power is on and the node is booting up.
- FAILED: node is powered on but has encountered an internal failure.
- PRESENT: node is in intermediate state in the boot sequence.
- POWERED_OFF: power is off and the node cannot be accessed.

Software states

- OPERATIONAL: software is operating normally and is fully functional.
- SW_INACTIVE: software is not completely operational.

Step 4 Enter the **show inventory** command in Cisco IOS XR EXEC mode to display the details of the physical entities of NCS 1004 along with the details of QSFPs.

Example:

```
RP/0/RP0/CPU0:ios# show inventory
Wed Mar  4 05:10:17.107 UTC
NAME: "0/0", DESCR: "Network Convergence System 1004 Filler"

```

Verify software version

NCS 1004 is shipped with Cisco IOS XR software preinstalled. Check whether the software version is current. If a newer version is available, upgrade the system to access the latest features on NCS 1004.

Procedure

Enter the **show version** command to display the software version and details such as system uptime.

Example:

```
RP/0/RP0/CPU0:ios# show version
Wed Feb 10 19:35:38.274 IST
Cisco IOS XR Software, Version 7.3.2
Copyright (c) 2013-2021 by Cisco Systems, Inc.
Build Information:
 Built By     : ingunawa
 Built On     : Tue Feb  9 11:45:12 PST 2021
 Built Host   : iox-lnx-068
 Workspace    : /auto/iox-lnx-068-san1/prod/7.3.2/ncs1k/ws
 Version      : 7.3.2
 Location     : /opt/cisco/XR/packages/
 Label        : 7.3.2
cisco NCS-1002 () processor
System uptime is 3 hours 37 minutes
```

What to do next

Verify the software version to determine if a system upgrade is required. If an upgrade is needed, see the Perform System Upgrade and Install Feature Packages chapter.

Verify the firmware version

The firmware on NCS 1004 hardware components must be compatible with the installed Cisco IOS XR image. NCS 1004 may malfunction if the firmware version is incompatible.

Procedure

Step 1 Enter the **show hw-module fpd** command in the Cisco IOS XR EXEC mode to display the firmware information of various hardware components of NCS 1004.

Example:

```
RP/0/RP0/CPU0:ios#
                          show hw-module fpd
Fri Nov 26 14:53:27.188 UTC
Auto-upgrade:Disabled
                                                                    FPD Versions
                                                                    ==============
Location   Card type             HWver FPD device       ATR Status    Running   Programd

```

In this output, some of the significant fields are:

- FPD Device: name of the hardware component such as FPD, CFP, and so on.
- ATR: attribute of the hardware component. Some attributes are:
  - B: backup image
  - S: secure image
  - P: protected image
- Status: upgrade status of the firmware. The different states are:
  - CURRENT: The firmware version is the latest version.

- NOT READY: The firmware of the FPD is not ready for upgrade.
- NEED UPGD: A newer firmware version is available in the installed image. We recommend that upgrade be performed.
- UPGD PREP: The firmware of the FPD is preparing for upgrade.
- RLOAD REQ: The upgrade is completed, and the card requires a reload.
- UPGD DONE: The firmware upgrade is successful.
- UPGD FAIL: The firmware upgrade has failed.
- UPGD SKIP: The upgrade is skipped because the installed firmware version is higher than the version available in the image.
- Running: Current version of the firmware running on the FPD.

Step 2 Enter the **show fpd package** command to display the FPD image version available with this software release for each hardware component.

```
                        RP/0/RP0/CPU0:ios#
                        show fpd package
Fri May  8 05:11:47.819 UTC

```

What to do next

Upgrade all FPDs using the **upgrade hw-module location all fpd all** command in the Cisco IOS XR EXEC mode. If the upgrade requires a reload, the Status column shows RLOAD REQ.

If reload is required

1. If the FPGA location is 0/RP0, enter the **admin hw-module location 0/RP0 reload** command. This command reboots only the CPU. This reboot does not impact traffic.
2. If the FPGA location is 0/0, enter the **admin hw-module location all reload** command. The chassis reboots, which impacts traffic. When the reload is complete, the new FPGA runs the current firmware version.

Caution The upgrade of OTNXP LC_DP_MOD_FW and LC_OPT_MOD_FW FPDs affect traffic. Perform this upgrade during a maintenance window.

If Firmware upgrade fails

If the firmware upgrade fails, enter the **show logging** command to view more details. Then, upgrade the firmware again using these commands.

Note Upgrade the firmware version of power modules only when both power modules are present and powered on.

Verify the management interface status

Procedure

Enter the **show interfaces mgmtEth** *instance* command to display the management interface configuration.

Example:

```
RP/0/RP0/CPU0:ios# show interfaces MgmtEth 0/RP0/CPU0/0
Wed Mar  4 06:13:12.381 UTC
MgmtEth0/RP0/CPU0/0 is up, line protocol is up
  Interface state transitions: 1
  Hardware is Management Ethernet, address is b026.80ff.d870 (bia b026.80ff.d870)
  Internet address is 10.127.60.184/24
  MTU 1514 bytes, BW 1000000 Kbit (Max: 1000000 Kbit)
     reliability 255/255, txload 0/255, rxload 0/255
  Encapsulation ARPA,
  Full-duplex, 1000Mb/s, CX, link type is autonegotiation
  loopback not set,
  Last link flapped 1d23h
  ARP type ARPA, ARP timeout 04:00:00
  Last input 00:00:00, output 00:00:00
  Last clearing of "show interface" counters never
  5 minute input rate 1368000 bits/sec, 193 packets/sec
  5 minute output rate 95000 bits/sec, 194 packets/sec
     6447256 packets input, 3947875102 bytes, 0 total input drops
     0 drops for unrecognized upper-level protocol
     Received 661276 broadcast packets, 271649 multicast packets
              0 runts, 0 giants, 0 throttles, 0 parity
     0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored, 0 abort
     7190033 packets output, 3906991430 bytes, 0 total output drops
     Output 0 broadcast packets, 0 multicast packets
     0 output errors, 0 underruns, 0 applique, 0 resets
     0 output buffer failures, 0 output buffers swapped out
     1 carrier transitions

RP/0/RP0/CPU0:ios# show interfaces MgmtEth 0/RP0/CPU0/0
Fri May  8 04:40:41.519 UTC
MgmtEth0/RP0/CPU0/0 is up, line protocol is up
  Interface state transitions: 1
```

```
  Hardware is Management Ethernet, address is dc8c.37c3.e1a8 (bia dc8c.37c3.e1a8)
  Internet address is 10.105.57.103/25
  MTU 1514 bytes, BW 1000000 Kbit (Max: 1000000 Kbit)
     reliability 255/255, txload 0/255, rxload 0/255
  Encapsulation ARPA,
  Full-duplex, 1000Mb/s, CX, link type is autonegotiation
  loopback not set,
  Last link flapped 1d04h

  Last input 00:00:00, output 00:00:00
  Last clearing of "show interface" counters never
  5 minute input rate 106000 bits/sec, 140 packets/sec
  5 minute output rate 108000 bits/sec, 139 packets/sec
     7303357 packets input, 696872907 bytes, 0 total input drops
     0 drops for unrecognized upper-level protocol
     Received 40679 broadcast packets, 41523 multicast packets
              0 runs, 0 giants, 0 throttles, 0 parity
     0 input errors, 0 CRC, 0 frame, 0 overrun, 0 ignored, 0 abort
     7231570 packets output, 740818886 bytes, 0 total output drops
     Output 0 broadcast packets, 0 multicast packets
     0 output errors, 0 underruns, 0 applique, 0 resets
     0 output buffer failures, 0 output buffers swapped out
          MgmtEth0/RP0/CPU0/0 is up, line protocol is up
```

The output shows that the management interface is administratively down.

You can also use the **show interfaces summary** or **show interfaces brief** commands in the Cisco IOS XR EXEC mode to verify the management interface status.

This example shows sample output from the **show interfaces summary** command.

```
RP/0/RP0/CPU0:ios# show interfaces summary
Wed Mar  4 06:14:52.995 UTC
Interface Type          Total    UP       Down     Admin Down

```

What to do next

Perform these steps if the management interface is administratively down.

- Check the Ethernet cable connection.
- Verify the IP address configuration of the management interface. For details on configuring the management interface, see Configure Management Interface.
- Use the **show running-config interface mgmtEth** command to verify whether the management interface is in the no shut state.

  This example shows sample output from the **show running-config interface mgmtEth** command.

```
RP/0/RP0/CPU0:ios# show running-config interface mgmtEth 0/RP0/CPU0/0

Wed Mar  4 06:17:33.833 UTC
interface MgmtEth0/RP0/CPU0/0
 ipv4 address dhcp
!
```

```
RP/0/RP0/CPU0:ios# show running-config interface mgmtEth 0/RP0/CPU0/0

Fri May  8 04:46:29.582 UTC
interface MgmtEth0/RP0/CPU0/0
 ipv4 address 10.105.57.103 255.255.255.128
!
```

  The output shows that the management interface is in the no shut state.

Verify alarms

The **show alarms** command displays alarm information for the NCS 1004. You can view alarms in brief or detailed format. You can also filter alarms by location, card, rack, or system level.

Procedure

Use the **show alarms** command with the desired options to display alarm information.

```
show alarms [ brief [ card | rack | system ] [ location location ] [ active | history ] |
detail [ card | rack | system ] [ location location ] [ active | clients | history | stats
] ]
```

This command displays alarms in brief or detail format.

Example:

```
RP/0/RP0/CPU0:ios# show alarms brief card location 0/RP0/CPU0 active

Wed Mar  4 06:10:55.959 UTC

 - Remote Fault
```

Note
In maintenance mode, all alarms are suppressed and the **show alarms** command will not display alarms details. Use the **show controllers** `controllertype R/S/I/P` command to view the client and trunk alarms.

Review the alarm output to identify any critical or major alarms that require immediate attention. Resolve these alarms before making additional configurations.

Verify environmental parameters

The **show environment** command displays the environmental parameters of NCS 1004. Monitoring these parameters helps ensure the system operates within safe limits and prevents hardware damage.

Procedure

Step 1 Enter the **admin** command to access System Admin EXEC mode.

Example:

```
RP/0/RP0/CPU0:ios# admin
```

Step 2 Use the **show environment** command with the appropriate options to view the environmental parameters of NCS 1004.

```
show environment [ all | altitude | fan | power | voltages | current | temperatures ] [
location | location ]
```

These examples show sample output for different environmental parameters:

Example:

Fan speed example:

```
sysadmin-vm:0_RP0# show environment fan
Wed Mar  4  05:36:33.678 UTC+00:00
=============================================
                        Fan speed (rpm)
Location     FRU Type           FAN_0   FAN_1
---------------------------------------------
0/FT0        NCS1K4-FAN          7020    6930
0/FT1        NCS1K4-FAN          6780    6690
0/FT2        NCS1K4-FAN          6810    6720

0/PM0        NCS1K4-AC-PSU      25376   24352

0/PM1        NCS1K4-AC-PSU      11200   11232
```

Temperature example:

```
sysadmin-vm:0_RP0# show environment temperatures location 0/RP0
Wed Mar  4  05:44:51.221 UTC+00:00
================================================================================
```

```

          ADM1293_DB_5V0_USB_0        5007   4000  4500  5500  6000
          ADM1293_DB_5V0_USB_1        5017   4000  4500  5500  6000
          ADM1293_MB_5V0_PMOD0        5062   4600  4750  5250  5400
```

```
ADM1293_MB_5V0_PMOD1          5032   4600  4750  5250  5400
ADM1293_MB_2V5_PLL            2483   2300  2375  2625  2700
```

Verify that all environmental parameters are within acceptable ranges. If any parameter is outside the normal range, investigate and resolve the issue before proceeding.

What to do next

Environment parameter anomalies are logged in the syslog. If an environment parameter displayed in the **show environment** command output is not as expected, check the syslog using the **show logging** command. The syslog provides details on any logged problems.

Verify inventory

The **show inventory** command displays hardware inventory details of NCS 1004. These details include the product identifiers (PID), version identifiers (VID), and serial numbers (SN) of all the installed components.

Procedure

Step 1 Use the **show inventory** command in Cisco IOS XR EXEC mode to display the hardware inventory details of NCS 1004.

Example:

```
RP/0/RP0/CPU0:ios# show inventory
Wed Mar  4 05:10:17.107 UTC

Step 2 Enter the **admin** command to access system admin EXEC mode.

Step 3 Use the **show inventory** command in system admin EXEC mode to display the inventory information of all physical entities of NCS 1004.

Example:

```
sysadmin-vm:0_RP0# show inventory
Wed Mar  4  05:27:26.231 UTC+00:00

```

The significant fields in this output are:

- **PID:** physical model name of the chassis or node
- **VID:** physical hardware revision of the chassis or node
- **SN:** physical serial number of the chassis or node

Check that all expected hardware components are listed in the inventory output. Confirm that the product identifiers, version identifiers, and serial numbers match your hardware configuration.

Verify context

The **show context** command displays core dump context information of NCS 1004. This information helps you identify system crashes or unexpected core dumps that require attention.

Procedure

Step 1 Use the **show context** command in Cisco IOS XR EXEC mode to display core dump context information of NCS 1004.

Example:

```
RP/0/RP0/CPU0:ios# show context
Mon Sep 27 17:21:59.219 UTC
```

```
node: node0_RP0_CPU0
------------------------------------------------------------
No context
```

Note
The command output is empty during system upgrade.

Step 2 Enter the **admin** command to access system admin EXEC mode.

Step 3 Use the **show context** command in system admin EXEC mode to display core dump context information of NCS 1004.

Example:

```
sysadmin-vm:0_RP0# show context
Mon Sep  27 17:22:19.351 UTC+00:00
**********************************************************
Location : 0/RP0
**********************************************************
No context
```

If the output shows "No context" in both modes, the system does not have core dumps and operates normally.

Verify core files

The **run** command allows you to execute shell commands to check for core files on NCS 1004. Core files show system crashes or process failures and might require investigation.

Procedure

Step 1 Use the **run** command in Cisco IOS XR EXEC mode. Then, navigate to the disk location to check for core files.

Example:

```
RP/0/RP0/CPU0:ios# run
Mon Sep 27 17:29:11.163 UTC
[xr-vm_node0_RP0_CPU0:~]$cd /misc/disk1/
[xr-vm_node0_RP0_CPU0:/misc/disk1]$ls -lrt *.tgz
```

This command enters the shell environment and lists any compressed core files (with the .tgz extension) in the /misc/disk1/ directory.

Step 2 Enter the **admin** command to access system admin EXEC mode.

Step 3 Use the **run** command in system admin EXEC mode. Then, navigate to the disk location to check for core files.

Example:

```
sysadmin-vm:0_RP0# run
Mon Sep  27 17:31:10.365 UTC+00:00

[sysadmin-vm:0_RP0:~]$cd /misc/disk1/
[sysadmin-vm:0_RP0:~]$ls -lrt *.tgz
```

This command checks for compressed core files in the system admin environment.

If core files are not listed, the system is operating normally without recent crashes or process failures.
