

Cisco NCS 1010 Overview

This chapter provides an overview for Cisco NCS 1010.

Table 1: Feature History

Feature Name	Release Information	Description
LC Ports on OLT and ILA Line Cards	Cisco IOS XR Release 7.10.1	The new OLT and ILA line cards introduce LC ports on their faceplates. These LC ports enable you to directly connect the breakout or multiplexer/demultiplexer modules for degree interconnect or Add/Drop options. The following are the new PIDs introduced for the OLT and ILA line cards: <ul style="list-style-type: none">• NCS1K-E-OLT-C• NCS1K-E-OLT-L• NCS1K-E-OLT-R-C• NCS1K-E-ILA-R-C• NCS1K-E-ILA-2R-C

Cisco NCS 1010 Overview

Cisco NCS 1010 is a next-generation optical line system optimized for ZR/ZR+ WDM router interfaces. Its salient features are:

- Provides point-to-point connectivity between routers with WDM interfaces.
- Multiplexes the signals received from multiple routers over a single fiber.
- With one MPO port, it can be scaled to 8 Degree but if needed node can be scaled to higher than 8 degree, using more EXP MPO ports.
- Caters to C-band WDM transmission to maximize capacity, and can be enhanced to C+L combined band in the future.

Cisco NCS 1010 is a 3RU chassis that has an in-built External Interface Timing Unit (EITU) and the following field-replaceable modules.

- Controller
- Two power supply units
- Two fan trays
- Fan filter
- Line card

There are five different variants of the line card:

- [OLT-C Line Card, on page 4](#)—C-band Optical Line Terminal without Raman
- [OLT-R-C Line Card, on page 5](#)—C-band Optical Line Terminal with Raman
- [ILA-C Line Card, on page 9](#)—C-band In-Line Amplifier without Raman
- [ILA-R-C Line Card, on page 11](#)—C-band In-Line Amplifier with one side Raman
- [ILA-2R-C, on page 12](#)—C-band In-Line Amplifier with both sides Raman

From Release 7.9.1, the following line cards are introduced to perform amplification and add/drop function for the L-band traffic.

- [OLT-L Line Card, on page 7](#)—L-band Optical Line Terminal without Raman
- [ILA-L Line Card, on page 13](#)—L-band In-Line Amplifier without Raman

From Release 7.10.1, the following line cards are introduced with LC ports on their faceplates to enable direct connection for degree interconnect or Add/Drop options.

- [E-OLT-C Line Card, on page 15](#)—C-band Optical Line Terminal without Raman, Enhanced
- [E-OLT-R-C Line Card, on page 18](#)—C-band Optical Line Terminal with Raman, Enhanced

- [E-OLT-L Line Card, on page 20](#)—L-band Optical Line Terminal without Raman, Enhanced
- [E-ILA-R-C Line Card, on page 23](#)—C-band In-Line Amplifier with East-facing Raman, Enhanced
- [E-ILA-2R-C Line Card, on page 26](#)—C-band In-Line Amplifier with both sides Raman, Enhanced

From Release 7.11.1, the following line card is introduced to amplify the C-band traffic on the west-side.

- [E-ILA-R-C-2 Line Card, on page 28](#)—C-band In Line Amplifier with West-facing Raman, Enhanced

For more information about the Cisco NCS 1010 chassis, see [Cisco NCS 1010 Data Sheet](#).

Figure 1: Cisco NCS 1010 Front View

Figure 2: Cisco NCS 1010 Rear View

The airflow on Cisco NCS 1010 is front to back. Cool air enters the chassis through the fan trays and exhausts through the rear end of the chassis.

Figure 3: Airflow in Cisco NCS 1010

OLT-C Line Card

The C-band Optical Line Terminal without Raman (OLT-C) line card includes the following features:

- 25-dBm line preamplifier True Variable Gain (TVG) Erbium-Doped Fiber Amplifier (EDFA) with two switchable gain ranges
- Dedicated amplification of the odd and even add channels through an embedded Fixed Gain (FG) EDFA
- 23-dBm line boost-amplifier TVG EDFA single gain range
- Dedicated EDFA for noise loading
- Embedded Optical Time Domain Reflectometer (OTDR) for line RX and TX monitoring
- 37 ports Optical Channel Monitoring (OCM)
- Dedicated Tunable Laser (TL) enabling Connection Verification (CV) and patch cord discovery features
- Up to 30 EXP ports
- Embedded Optical Service Channel at Fast Ethernet (FE)
- Multiplexing and demultiplexing of odd and even channels
- C+L combiner for multiplexing and demultiplexing L-band channels
- 2x2 switch to reverse transmit direction of Optical Service Channel (OSC)-C
- Fiber reflectors to support fiber end detection by OTDR

Figure 4: Front View of OLT-C Line Card

For details of the OLT-C line card ports, see [Figure 39: Front View of the OLT-C Line Card Faceplate](#), on page 37.

Figure 5: Perspective View of OLT-C Line Card

OLT-R-C Line Card

The C-band Optical Line Terminal with Raman (OLT-R-C) line card includes the features of the OLT-C line card along with the Raman amplifier.

The following are the features of the Raman amplifier:

- Five different pump wavelengths for supporting C+L Raman amplification
- Embedded Distributed Feedback (DFB) laser at 1568.77 nm (class 1M) to be used for optical safety (link continuity)
- Full monitoring of pumps, DFB laser and signal power
- Raman pump back-reflection detector
- Meets class 1M Laser safety.
- Additional Photodiode (PD) to monitor remnant pump power at the far end

Figure 6: Front View of OLT-R-C Line Card

For details of the OLT-R-C line card ports, see [Figure 40: Front View of the OLT-R-C Line Card Faceplate, on page 38](#).

OLT-L Line Card

Table 2: Feature History

Feature Name	Release Information	Description
NCS1K-OLT-L Line Card	Cisco IOS XR Release 7.9.1	The new NCS1K-OLT-L line card for the NCS 1010 optical line system performs the add/drop function for the L-band traffic. The OLT-L card acts as expansion equipment for the OLT-C units and connects to the L-band expansion port in the OLT-C unit. By supporting L-band traffic, the OLT-L line card improves fiber utilization by enabling the existing OLT-C node to send both C-band and L-band traffic.

The OLT-L line card connects to the L-band expansion ports in the OLT-C unit to add, drop, and route the L-band traffic in the existing fiber. This card cannot be deployed as a standalone unit. It can be used as an expansion equipment for both variants of the OLT-C unit. This card enhances the fiber capacity of the existing OLT-C nodes to send both C- and L-band traffic. Supporting L-band traffic, this unit expands the C-band only nodes to C+L-band nodes.

The L-band Optical Line Terminal (OLT-L) line card includes the following features:

- 25-dBm line preamplifier True Variable Gain (TVG) Erbium-Doped Fiber Amplifier (EDFA) with two switchable gain ranges
- Dedicated amplification of the odd and even add channels through an embedded Fixed Gain (FG) EDFA
- 24.5-dBm line boost-amplifier TVG EDFA single gain range

- 15-dBm ADD-side boost-amplifier TVG EDFA with single gain range of 16 dB
- Dedicated EDFA for noise loading
- 37 ports Optical Channel Monitoring (OCM)
- Dedicated Tunable Laser (TL) enabling Connection Verification (CV) and patch cord discovery features
- Up to 30 EXP ports
- Embedded Optical Service Channel at Fast Ethernet (FE) at 184.45 THz (1625.33 nm)
- Multiplexing and demultiplexing of odd and even channels
- 2x2 switch to reverse send direction of Optical Service Channel OSC-L.

Figure 8: Front View of OLT-L Line Card

For details of the OLT-L line card ports, see [Figure 41: Front View of the OLT-L Line Card Faceplate](#), on [page 39](#).

Figure 9: Perspective View of OLT-L Line Card

523061

ILA-C Line Card

The C-band In Line Amplifier without Raman (ILA-C) line card includes the following features:

- Two independent TVG EDFA block, covering full operative gain ranging 8–36 dB
- Each EDFA block can provide up to 23dBm output power
- Dynamic Gain Equalization (DGE) embedded capability to compensate for line tilt and ripple
- Embedded OTDR for line 1/2-RX/TX monitoring
- Four-ports OCM for channels monitoring
- Embedded Optical Service Channel at Fast Ethernet (FE)
- C+L combiner for multiplexing/demultiplexing L-band channels
- Dedicated ports for amplifiers output monitoring
- 2x2 switch to reverse transmit direction of OSC-C for both directions
- Fiber reflectors to support fiber end detection by OTDR

Figure 10: Front View of ILA-C Line Card

For details of the ILA-C line card ports, see [Figure 42: Front View of the ILA-C Line Card Faceplate](#), on page 40

Figure 11: Perspective View of ILA-C Line Card

ILA-R-C Line Card

The C-band In Line Amplifier with Raman (ILA-R-C) line card includes the features of ILA-C and Raman amplifier.

Figure 12: Front View of ILA-R-C Line Card

For details of the ILA-R-C line card ports, see [Figure 43: Front View of the ILA-R-C Line Card Faceplate](#), on page 41.

522360

ILA-2R-C

The C-band In-Line Amplifier with two Raman (ILA-2R-C) line card includes the features of the ILA-C and Raman amplifier.

Figure 14: Front View of ILA-2R-C Line Card

522360

For details of the ILA-2R-C line card ports, see [Figure 44: Front View of the ILA-2R-C Line Card Faceplate](#), on page 42.

Figure 15: Perspective View of ILA-2R-C Line Card

ILA-L Line Card

Table 3: Feature History

Feature Name	Release Information	Description
NCS1K-ILA-L Line Card	Cisco IOS XR Release 7.9.1	The new NCS1K-ILA-L line card for the NCS 1010 optical line system amplifies L-band traffic. The ILA-L card acts as expansion equipment for the ILA-C units and connects to the L-band expansion port in the ILA-C unit. The ILA-L enables sending the low-loss L-Band through the existing ILA-C node to enhance the fiber capacity and effectively upgrade the C-band only node to a C+L band node.

The ILA-L must always be connected to the L-band expansion ports in the ILA-C unit to amplify the L-band traffic that is traveling together with the C-band traffic in the fiber. The ILA-L unit cannot be deployed as standalone. It can always be used as an expansion equipment for all variants of the ILA-C unit, with or without Raman amplification in one or both direction. The Raman module in the ILA-C unit provides amplification for both C- and L-band signals in long-distance transmission.

The L-band In Line Amplifier (ILA-L) line card includes the following features:

- Two independent TVG EDFA block, covering full operative gain ranging 10.8–32.8 dB
- Each EDFA block can provide up to 24.5-dBm total output power
- Dynamic Gain Equalization (DGE) embedded capability to compensate for line tilt and ripple
- Four-ports OCM for channels monitoring
- Embedded Optical Service Channel at Fast Ethernet (FE)
- Dedicated ports for amplifiers output monitoring
- 2x2 switch to reverse transmit direction of OSC-L for both directions

Figure 16: Front View of ILA-L Line Card

For details of the ILA-L line card ports, see [Figure 48: Front View of the ILA-L Line Card Faceplate](#), on page 46

Figure 17: Perspective View of ILA-L Line Card

523062

E-OLT-C Line Card

The C-band Optical Line Terminal without Raman, Enhanced (E-OLT-C) line card includes the following features:

- 25-dBm line preamplifier True Variable Gain (TVG) Erbium-Doped Fiber Amplifier (EDFA) with two switchable gain ranges
- Dedicated amplification of the odd and even add channels through an embedded Fixed Gain (FG) EDFA
- 23-dBm line boost-amplifier TVG EDFA single gain range
- Dedicated EDFA for noise loading
- Embedded Optical Time Domain Reflectometer (OTDR) for line RX and TX monitoring
- 37 ports Optical Channel Monitoring (OCM)
- Dedicated Tunable Laser (TL) enabling Connection Verification (CV) and patch cord discovery features
- Up to 30 EXP ports
- Embedded Optical Service Channel at Fast Ethernet (FE)
- Multiplexing and demultiplexing of odd and even channels
- C+L combiner for multiplexing and demultiplexing L-band channels
- 2x2 switch to reverse transmit direction of Optical Service Channel (OSC)-C

- Fiber reflectors to support fiber end detection by OTDR

523325

E-OLT-R-C Line Card

The C-band Optical Line Terminal with Raman, Enhanced (E-OLT-R-C) line card includes the features of the OLT-C line card along with the Raman amplifier.

The following are the features of the Raman amplifier:

- Five different pump wavelengths for supporting C+L Raman amplification
- Embedded Distributed Feedback (DFB) laser at 1568.77 nm (class 1M) to be used for optical safety (link continuity)
- Full monitoring of pumps, DFB laser and signal power
- Raman pump back-reflection detector
- Meets class 1M Laser safety.
- Additional Photodiode (PD) to monitor remnant pump power at the far end

E-ILA-R-C-2 Line Card

Table 4: Feature History

Feature Name	Release Information	Description
NCS1K-E-ILA-R-C-2 Line Card	Cisco IOS XR Release 7.11.1	NCS1K-E-ILA-R-C-2 line card is a new addition to the NCS 1010 ILA line cards family. With an inbuilt West-facing Raman amplifier, it amplifies the C-band and C+L-band traffic received from the west direction.

The C-band In Line Amplifier with West-facing Raman, Enhanced (E-ILA-R-C-2) line card includes the features of ILA-C and Raman amplifier.

Figure 33: E-ILA-R-C-2 Line Card

Figure 34: Front View of E-ILA-R-C-2 Line Card

For details of the E-ILA-R-C line card ports, see [Figure 47: Front View of the E-ILA-R-C-2 Line Card Faceplate](#), on page 45.

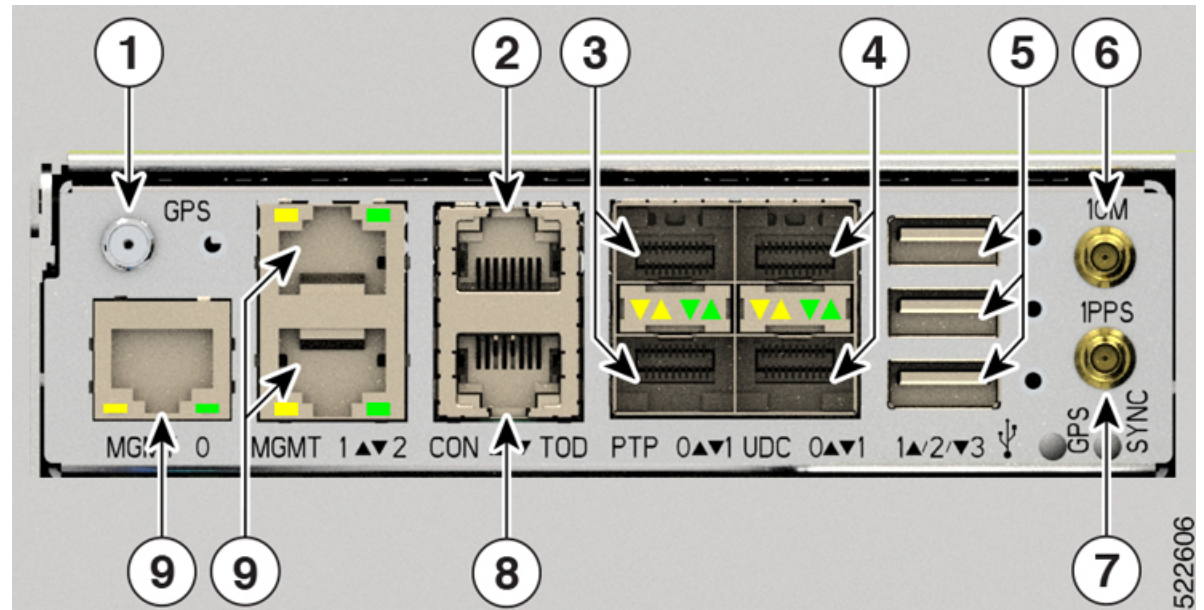

Figure 35: Perspective View of E-ILA-R-C-2 Line Card

External Interface Timing Unit

The External Interface Timing Unit (EITU) manages the control plane interfaces and includes all user external interfaces (timing and management). It is connected to the controller with a redundant 10G Ethernet bus.

Figure 36: Front View of EITU

The following is the list of the available user interfaces:

1	Coaxial connector for GPS antenna RF input (with +5V antenna power, if necessary) (1x)
2	Console/Universal Asynchronous Receiver/Transmitter (UART) Interface (1x)
3	SFP for 1GE optical PTP port (1588 and SyncE) (2x)
4	SFP for 1GE optical User Data Channels (UDC) (2x)
5	USB 2.0 type A, 1.8A max at 5V/12V (with Cisco NCS 1000 Breakout Patch Panel support) (3x) Note The USB ports in the EITU do not support USB drives; they only support passive optical devices from Cisco, such as breakout modules and mux/demux patch panels. If you want to install the operating system or copy files to and from the system, use the USB 3.0 ports labeled "Boot" on the controller cards.

6	Coaxial connector for 10MHz sync signal (bidirectional) (1x)
7	Coaxial connector for 1PPS sync signal (bidirectional) (1x)
8	RJ45 for 1588 TOD (1x)
9	10/100/1000 RJ-45 Ethernet management ports and Interconnection Link (ILINK) (3x)

Supported Modules

Cisco NCS 1010 supports the following passive modules.

- Cisco NCS 1000 Breakout Patch Panel

The breakout panel supports the following passive optical modules:

- NCS1K-BRK-8
- NCS1K-BRK-16
- NCS1K-BRK-24
- Cisco NCS 1000 32-Channel Mux/Demux Patch Panel

For more information on the passive modules, see [Cisco NCS 1000 Breakout Patch Panel and Modules Overview](#) and [Cisco NCS 1000 32-Channel Mux/Demux Patch Panel Overview](#).

Supported Controller Cards

Table 5: Feature History

Feature Name	Release Information	Description
NCS1K10-CNTRLR-B-K9 Controller Card	Cisco IOS XR Release 7.10.1	The new NCS1010-CTRLR-B-K9 controller card for the NCS 1010 optical line system supports a default baud rate of 9600 bps on the RS232 console port. It runs on BIOS version 4.40 and later.

The Cisco NCS 1010 supports the following controller cards:

- **NCS1K10-CNTRLR-K9**

The NCS1K10-CNTRLR-K9 controller card supports a default of 115200 bps baud rate on the RS232 console port. For details of the NCS1K10-CNTRLR-K9 controller card, see [Figure 37: Front View of the NCS1010-CNTRLR-K9 Controller, on page 33](#)

- **NCS1K10-CTRLR-B-K9**

The NCS1K10-CNTLR-B-K9 controller card supports a default of 9600 bps baud rate on the RS232 console port. For details of the NCS1K10-CNTLR-B-K9 controller card, see [Figure 38: Front View of the NCS1010-CTLR-B-K9 Controller](#), on page 34

Cisco NCS 1010 LEDs

Cisco NCS 1010 includes multiple LEDs to determine the overall state of the system and to verify the status of specific connections, ports, and system components.

Controller LEDs

The controller (NCS1010-CNTLR-K9 and NCS1010-CTLR-B-K9) units have five LEDs to indicate the system status and the status of the components.

Figure 37: Front View of the NCS1010-CNTLR-K9 Controller

Figure 38: Front View of the NCS1010-CTRL-B-K9 Controller

1	Bluetooth Low Energy (BLE) Status LED
2	System Status LED
3	Fan Status LED
4	Power Supply Status LED

5	Attention LED
---	---------------

Table 6: Status of the Controller LEDs

LED	Default Status of LED (At the time of Power On and when the System is not Up)	Color	Status
BLE LED	Off	Off	Not supported.
System LED (during controller boot up)	Red	Red	Indicates that the controller unit is powering ON.
		Red (flashing slowly)	Indicates BIOS loading.
		Yellow (flashing slowly)	Indicates operating system loading.
		Red (flashing fast)	Indicates secure boot failure. Replace the controller.
		Yellow (flashing fast)	Indicates that the controller unit is not seated properly. Remove and replace the controller properly.
System LED (controller is operational)	Red	Red	Indicates a major or critical alarm.
		Yellow	Indicates a minor alarm.
		Green	The module is operational and has no active alarms.
Fan LED	Red	Green	Indicates all fans present in the chassis are in working condition.
		Red	Indicates either a fan is missing from its slot or is faulty.

LED	Default Status of LED (At the time of Power On and when the System is not Up)	Color	Status
PSU LED	Red	Green	Indicates all PSUs' present in the chassis are in working condition.
		Red	Indicates either a PSU is missing from its slot or is faulty, or there is no input power.
Attention LED	Off	Blue	Used to identify a specific chassis in a rack or room. This is used for troubleshooting purposes such as replacing the fiber and field-replaceable units. It can be controlled through the software CLI. Use the following command to activate this LED, manually: hw-module attention-led location 0/RP0/CPU0

Line Card LEDs

The OLT line cards (OLT-C, OLT-R-C, OLT-L) have two LEDs to indicate the line port alarm status, two LEDs indicating the add/drop port alarm status, and four LEDs indicating the MPO connector ports alarm status. The MPO port LEDs represent multiple ports.

Figure 39: Front View of the OLT-C Line Card Faceplate

Figure 40: Front View of the OLT-R-C Line Card Faceplate

The OLT-L line card has only one LED to indicate the line port alarm status, two LEDs indicating the add/drop port alarm status, and four LEDs indicating the MPO connector ports alarm status. The MPO port LEDs represent multiple ports.

Figure 41: Front View of the OLT-L Line Card Faceplate

1	Line port LEDs
2	Add/Drop port LEDs
3	MPO connector LEDs

The ILA line cards (ILA-C, ILA-R-C, ILA-2R-C, ILA-R-C, ILA-2R-C, ILA-R-C-2) have four LEDs to indicate the line port alarm status.

Figure 42: Front View of the ILA-C Line Card Faceplate

Figure 43: Front View of the ILA-R-C Line Card Faceplate

Figure 44: Front View of the ILA-2R-C Line Card Faceplate

Figure 46: Front View of the E-ILA-2R-C Line Card Faceplate

Figure 47: Front View of the E-ILA-R-C-2 Line Card Faceplate

The ILA-L line card has two LEDs to indicate the line port alarm status.

Figure 48: Front View of the ILA-L Line Card Faceplate

1	Line port LEDs
---	----------------

Table 7: Status of the Line Card LEDs

LED	Color	Status
Line card LED	Red	Indicates major and critical alarms, which could be a traffic impacting situation.
	Orange	Indicates a minor alarm.
	Green	Indicates that the module is operational and has no alarm.

PSU LED

The PSU has one LED to indicate its status.

Figure 49: Front View of AC PSU

Figure 50: Front View of DC PSU

1	LED
---	-----

The following table has details of the PSU LED:

Table 8: Status of the PSU LED

LED	color	Status
PSU LED	Amber	Indicates that there is no input to the PSU, provided the other PSU is working.
	Off	Both PSUs do not have input.
	Green	Indicates that the input to the PSU is valid.

Fan Tray LED

The fan tray has one LED to indicate its status.

Figure 51: Front View of the Fan Tray

1	Fan tray LED
---	--------------

The following table has details of the fan tray LED:

Table 9: Status of the Fan Tray LED

LED	Color	Status
Fan LED	Amber	Indicates that the fan speed is out of expected range such as fan is not rotating. Also, indicates that the fan speed is not readable.
	Red	Indicates a fault in the fan tray.
	Green	Indicates that the fan tray is working fine.

EITU LEDs

The EITU has 12 LEDs indicating the status of its ports.

Figure 52: Front View of the EITU

1	Ethernet Copper Ports LEDs
2	Ethernet Optical SFP Ports LEDs
3	GPS LED
4	SYNC LED

Table 10: Status of the EITU LEDs

LED	Color	Status
GPS LED	Green	GPS phase is locked.
	Yellow	GPS is enabled.
	Off	GPS is not enabled.
	Red	GPS is used.

LED	Color	Status
Sync LED	Green	Time core is synchronized to an external source including IEEE1588.
	Flashing green	System is in Synchronous Ethernet mode.
	Amber	Acquiring state or Holdover: Time core is in acquiring state or holdover mode.
	Off	Time core clock synchronization is disabled or in free-running state.
Ethernet Copper Ports (MGMT 0/1/2) LEDs	Green	The link is ON.
	Yellow	Link is up but without traffic.
	Flashing yellow	Link is up but with traffic.
Ethernet Optical SFP Ports (PTP0/1, UDC 0/1) LEDs	Green	Indicates the presence of duplex or traffic collision.
	Yellow	LINK is up but without traffic.
	Flashing yellow	LINK is up but with traffic.
