# CHAPTER 1

## Cisco NCS 1014 Advanced Multihaul Optical Platform - An Overview

This chapter provides an overview for Cisco NCS 1014 Advanced Multihaul Optical Platform.

- [Cisco NCS 1014 chassis and line cards , on page 1](#)
- [Document Objective, on page 3](#)
- [Document Organization, on page 3](#)

### Cisco NCS 1014 chassis and line cards

The Cisco NCS 1014 chassis is an advanced multihaul optical platform supporting transponders and line system cards. It is a 2RU chassis that delivers a universal transponder solution which provides excellent performance for metro, long-haul, and submarine applications.

#### Modules supported in NCS 1014

NCS 1014 chassis have these modules.

- Removable controller
- Removable backup solid state drive (SSD)
- Two replaceable power supply units (PSU)
- Three replaceable fan modules
- Four line cards

#### Line cards and modules supported in NCS 1014

NCS 1014 chassis support these line cards and modules.

*Table 1: Line cards and modules supported*

From Release	PID	Description
7.11.1	<a href="#">NCS1K14-2.4T-K9</a>	2.4T DWDM Transponder Card

**1.2T card**

<b>From Release</b>	<b>PID</b>	<b>Description</b>
7.11.1	<a href="#">NCS1K14-CCMD-16-C/L</a>	16-port Colorless Mux/Demux Optical Line Card
7.11.1	<a href="#">NCS1K4-1.2T-K9</a>	1.2T DWDM Transponder Card

**1.2T card**

The 1.2T DWDM line card is a transponder that has 12 client ports to deliver 100GE and OTU4 client traffic. This line card has two trunks that operate at any rate between 100G and 600G in 50G increments. It uses Advanced Encryption Standard with a 256-bit key length (AES256)-based Layer-1 encryption to encrypt client-side data for 100GE and OTU4. The NCS1K4-1.2T-K9 line card is a single-slot unit that supports C-band traffic.

**2.4T line card**

The 2.4T line card is a coherent optics Transponder and Muxponder for the Cisco NCS 1014 chassis. It is a single-slot card that supports C-band traffic at trunk ports. This line card delivers 400GE, 100GE, and OTU4 client traffic over two trunk ports operating at speeds ranging from 400G to 1.2T each.

**CCMD-16 line card**

The CCMD-16 optical line card has:

- Two line ports to transmit and receive using the same LC connectors.
- 16 ports for add/drop with LC connector-based interfaces

This table shows two variants of the optical line card:

**Table 2: Optical line card variants**

<b>Linecard</b>	<b>Details</b>
<b>NCS1K14-CCMD-16-C</b>	The NCS1K14-CCMD-16-C line card is a C-band, 16-port Colorless Direct attach optical line card with EDFA. It can host up to 16 channels. It supports any signal distribution between 191250 and 196200 GHz, for example, the 64 channels grid with 75-GHz spacing.
<b>NCS1K14-CCMD-16-L</b>	The NCS1K14-CCMD-16-L line card is an L-band, 16-port Colorless Direct attach optical line card with EDFA. It can host up to 16 channels. It supports any signal distribution between 186025 and 191000 GHz, for example, the 64 channels grid with 75-GHz spacing.

# Document Objective

The Cisco NCS 1014 Configuration Guide describes how to configure various card modes for the line cards that are supported in the Cisco NCS 1014 chassis.

# Document Organization

This document is organized into the following chapters:

Chapter	Description
<a href="#">Configuring the Card Mode</a>	Describes different card mode configurations and supported data rates for the 1.2T and 2.4T line cards.
<a href="#">Performance Monitoring</a>	Describes the configuration and retrieval of PM counters for the optics, Ethernet, coherent DSP, OCH, and OMS controller types in flex-bin, 30-second, 15-minute, or 24-hour intervals.

## CHAPTER 2

# Configuring the Card Mode

This chapter lists the supported configurations and the procedures to configure the card mode on the line cards.

**Note** Unless otherwise specified, “line cards” refers to 1.2T and 1.2TL line cards.

- [1.2T Line Card, on page 5](#)
- [2.4T and 2.4TX Card Modes Overview, on page 20](#)

## 1.2T Line Card

The following section describes the supported configurations and procedures to configure the card modes on the line card.

### Card Modes

The line cards support module and slice configurations.

The line cards have two trunk ports (0 and 1) and 12 client ports (2 through 13) each. You can configure the line card in two modes:

- Muxponder—In this mode, both trunk ports are configured with the same trunk rate. The client-to-trunk mapping is in a sequence.
- Muxponder slice—In this mode, each trunk port is configured independent of the other with different trunk rates. The client-to-trunk mapping is fixed. For Trunk 0, the client ports are 2 through 7. For Trunk 1, the client ports are 8 through 13.

### Sub 50G Configuration

You can configure the sub 50G or coupled mode on the line card only in the muxponder mode. The following table displays the port configuration for the supported data rates.

**Sub 50G Configuration**

Trunk Data Rate (per trunk)	Total Configured Data rate	Card Support	Trunk Ports	Client Ports for Trunk 0 (100G)	Shared Client Port (50G per trunk)	Client Ports for Trunk 1 (100G)
50G	100G	1.2T	0, 1	-	2	-
150G	300G	1.2T	0, 1	2	3	4
350G	700G	1.2T	0, 1	2, 3, 4	5	6, 7, 8
450G	900G	1.2T	0, 1	2, 3, 4, 5	6	7, 8, 9, 10
550G	1.1T	1.2T	0, 1	2, 3, 4, 5, 6	7	8, 9, 10, 11, 12

1.2T line card supports an alternate port configuration for Sub 50G (split client port mapping) that you configure using CLI. The following table displays the port configuration for the supported data rates.

Trunk Data Rate (per trunk)	Total Configured Data rate	Card Support	Trunk Ports	Client Ports for Trunk 0 (100G)	Shared Client Port (50G per trunk)	Client Ports for Trunk 1 (100G)
50G	100G	1.2T	0, 1	-	7	-
150G	300G	1.2T	0, 1	2	7	8
250G	500G	1.2T	0, 1	2, 3	7	8, 9
350G	700G	1.2T	0, 1	2, 3, 4	7	8, 9, 10
450G	900G	1.2T	0, 1	2, 3, 4, 5	7	8, 9, 10, 11
550G	1.1T	1.2T	0, 1	2, 3, 4, 5, 6	7	8, 9, 10, 11, 12

**Note** In all x50G configurations, client traffic on the middle port is affected with ODUK-BDI and LF alarms after the **power cycle or link flap** on the trunk side. This issue is raised when the two network lanes work in coupled mode and move from low to high power. To solve this issue, create a new frame either at the near-end or far-end by performing **shut** or **no shut** of the trunk ports.

### Coupled Mode Restrictions

The following restrictions apply to the coupled mode configuration:

- Both trunk ports must be configured with the same bits-per-symbol or baud rate and must be sent over same fiber and direction.
- The chromatic dispersion must be configured to the same value for both trunk ports.
- When trunk internal loopback is configured, it must be done for both trunk ports. Configuring internal loopback on only one trunk results in traffic loss.

- Fault on a trunk port of a coupled pair may cause errors on all clients including those running only on the unaffected trunk port.

## Configure Split Client Port Mapping

You can configure the trunk port to client port mapping for sub 50G data rates in the default mode or in the split client port mapping mode.

To configure the split client port mapping, use the following commands.

**configure**

**hw-module location *location* mxponder**

**split-client-port-mapping**

**commit**

The following is a sample in which split-client-port-mapping is configured with a 450G trunk payload.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config) #hw-module location 0/1/NXR0 mxponder
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#split-client-port-mapping
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#commit
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#end
```

To remove the split client port-mapping configuration and configure default client port mapping, use the following commands.

**configure**

**hw-module location *location* mxponder**

**no split-client-port-mapping**

**commit**

The following is a sample in which split client port-mapping configuration is removed.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config) #hw-module location 0/1/NXR0 mxponder
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#no split-client-port-mapping
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#commit
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#end
```

## Verifying the Port Mapping Configuration

The following is a sample output of the split client port-mapping.

```
RP/0/RP0/CPU0:ios#show hw-module location 0/1/NXR0 mxponder

Location:          0/1/NXR0
Client Bitrate:    100GE
Trunk Bitrate:     450G
Status:            Provisioning In Progress
LLDP Drop Enabled: FALSE
ARP Snoop Enabled: FALSE
Client Port        Mapper/Trunk Port      CoherentDSP0/1/0/0
CoherentDSP0/1/0/1                           Traffic Split Percentage

HundredGigECtrlr0/1/0/2          ODU40/1/0/0/1      100
                                0
HundredGigECtrlr0/1/0/3          ODU40/1/0/0/2      100
```

## Supported Data Rates

0

100		

## Supported Data Rates

The following data rates are supported on the line card.

The following table displays the client and trunk ports that are enabled for the muxponder configuration.

Trunk Data Rate	Card Support	Client Data Rate (100GE, OTU4)	Trunk Ports	Client Ports
100	1.2T	100GE, OTU4	0	2
200	1.2T	100GE, OTU4	0, 1	2, 3, 4, 5

Trunk Data Rate	Card Support	Client Data Rate (100GE, OTU4)	Trunk Ports	Client Ports
300	1.2T	100GE, OTU4	0, 1	2, 3, 4, 5, 6, 7
400	1.2T	100GE, OTU4	0, 1	2, 3, 4, 5, 6, 7, 8, 9
500	1.2T	100GE, OTU4	0, 1	2, 3, 4, 5, 6, 7, 8, 9, 10, 11
600	1.2T	100GE, OTU4	0, 1	2, 3, 4, 5, 6, 7, 8, 9, 10, 11, 12, 13

The following table displays the client and trunk ports that are enabled for the muxponder slice 0 configuration.

Trunk Data Rate	Card Support	Client Data Rate	Trunk Ports	Client Ports
100	1.2T	100, OTU4	0	2
200	1.2T	100, OTU4	0	2, 3
300	1.2T	100, OTU4	0	2, 3, 4
400	1.2T	100, OTU4	0	2, 3, 4, 5
500	1.2T	100, OTU4	0	2, 3, 4, 5, 6
600	1.2T	100, OTU4	0	2, 3, 4, 5, 6, 7

The following table displays the client and trunk ports that are enabled for the muxponder slice 1 configuration.

Trunk Data Rate	Card Support	Client Data Rate	Trunk Ports	Client Ports
100	1.2T	100, OTU4	1	8
200	1.2T	100, OTU4	1	8, 9
300	1.2T	100, OTU4	1	8, 9, 10
400	1.2T	100, OTU4	1	8, 9, 10, 11
500	1.2T	100, OTU4	1	8, 9, 10, 11, 12
600	1.2T	100, OTU4	1	8, 9, 10, 11, 12, 13

All configurations can be accomplished by using appropriate values for client bitrate and trunk bitrate parameters of the **hw-module** command.

The following table displays the trunk parameter ranges for the 1.2T card.

Trunk Payload	FEC	Min BPS	Max BPS	Min GBd	Max GBd
50G	15%	1	1.3125	24.0207911	31.5272884
50G	27%	1	1.4453125	24.0207911	34.7175497

400G	27%	3.8671875	4.5	61.72008838	71.81973921

## Configuring the Card Mode

You can configure the line card in the module (muxponder) or slice configuration (muxponder slice).

To configure the card in the muxponder mode, use the following commands.

**configure**

**hw-module location *location* mxponder client-rate {100GE | OTU4}**

**hw-module location *location* mxponder trunk-rate {50G | 100G|150G | 200G | 250G | 300G | 350G | 400G | 450G | 500G | 550G | 600G }**

**commit**

To configure the card in the muxponder slice mode, use the following commands. **configure hw-module location *location* mxponder-slice *mxponder-slice-number* client-rate { 100GE|OTU4}**

**hw-module location *location* mxponder-slice trunk-rate { 100G | 200G | 300G | 400G | 500G | 600G }**

**commit**

### Examples

The following is a sample in which the card is configured in the muxponder mode with a 550G trunk payload.

```
RP/0/RP0/CPU0:ios#config
Tue Oct 15 01:24:56.355 UTC
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0 mxponder client-rate 100GE
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0 mxponder trunk-rate 550G
RP/0/RP0/CPU0:ios(config)#commit
```

The following is a sample in which the card is configured in the muxponder mode with a 500G trunk payload.

```
RP/0/RP0/CPU0:ios#config
Sun Feb 24 14:09:33.989 UTC
RP/0/RP0/CPU0:ios(config)#hw-module location 0/2/NXR0 mxponder client-rate OTU4
```

## Configuring the Card Mode

```
RP/0/RP0/CPU0:ios(config)#hw-module location 0/2/NXR0 mxponder trunk-rate 500G
RP/0/RP0/CPU0:ios(config)#commit
```

The following is a sample in which the card is configured in the muxponder slice 0 mode with a 500G trunk payload.

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0 mxponder-slice 0 client-rate 100GE
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0 mxponder-slice 0 trunk-rate 500G
RP/0/RP0/CPU0:ios(config)#commit
```

The following is a sample in which the card is configured in the muxponder slice 1 mode with a 400G trunk payload.

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0 mxponder-slice 1 client-rate 100GE
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0 mxponder-slice 1 trunk-rate 400G
RP/0/RP0/CPU0:ios(config)#commit
```

The following is a sample in which the card is configured with mixed client rates in the muxponder slice mode.

```
RP/0/RP0/CPU0:ios#configure
Mon Mar 23 06:10:22.227 UTC
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0 mxponder-slice 0 client-rate OTU4
trunk-rate 500G
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0 mxponder-slice 1 client-rate 100GE
trunk-rate 500G
RP/0/RP0/CPU0:ios(config)#commit
```

## Verifying the Card Configuration

```
RP/0/RP0/CPU0:ios#show hw-module location 0/2/NXR0 mxponder

## Regeneration Mode

In an optical transmission system, 3R regeneration helps extend the reach of the optical communication links by reamplifying, reshaping, and retiming the data pulses. Regeneration helps to correct any distortion of optical signals by converting it to an electrical signal, processing that electrical signal, and then retransmitting it again as an optical signal.

In Regeneration (Regen) mode, the OTN signal is received on a trunk port and the regenerated OTN signal is sent on the other trunk port of the line card and the other way round. In this mode, only the trunk optics controller and coherentDSP controllers are created.

### Configuring the Card in Regen Mode

The supported trunk rates for 1.2T card is 100G to 600G in multiples of 100G.

To configure regen mode on 1.2T, use the following commands:

**configure**

**hw-module location** *location*

**regen**

**trunk-rate** *trunk-rate*

**commit**

**exit**

#### Example

The following is a sample to configure the regen mode on 1.2T line card with the trunk-rate 300.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#hw-module location 0/0/NXR0
RP/0/RP0/CPU0:ios(config-hwmod) #regen
RP/0/RP0/CPU0:ios(config-regen) #trunk-rate 300
RP/0/RP0/CPU0:ios(config-regen) #commit
RP/0/RP0/CPU0:ios(config-regen) #exit
```

### Verifying the Regen Mode

The following is a sample to verify the regen mode.

**show hw-module location** *location* **regen**

```
RP/0/RP0/CPU0:ios#show hw-module location 0/0 regen
Mon Mar 25 09:50:42.936 UTC

Location:          0/0/NXR0
Trunk Bitrate:    400G
Status:            Provisioned
East Port          West Port
CoherentDSP0/0/0/0   CoherentDSP0/0/0/1
```

The terms, East Port and West Port are used to represent OTN signal regeneration at the same layer.

# Configuring the BPS

You can configure the Bits per Symbol (BPS) to 3.4375 to support 300G trunk configurations on 75 GHz networks using the following commands:

**configure**

**controller optics R/S/I/P bits-per-symbol value**

**commit**

The following is a sample in which the BPS is configured to 3.4375.

```
RP/0/RP0/CPU0:ios#configure
Wed Mar 27 14:12:49.932 UTC
RP/0/RP0/CPU0:ios(config)#controller optics 0/3/0/0 bits-per-symbol 3.4375
RP/0/RP0/CPU0:ios(config)#commit
```

## Supported Baud Rates

**Table 3: Supported Baud Rates**

Traffic Rate	Minimum Baud Rate	Maximum Baud Rate
400	43.34518	130.4647
600	59.53435	148.0555
800	79.37913	148.0555
1000	99.22392	148.0555

## Viewing BPS and Baud Rate Ranges

To view the the BPS for a specific range use the following command:

**show controller optics R/S/I/P bps-range bps-range | include data-rate | include fec-type**

```
RP/0/RP0/CPU0:ios#show controllers optics 0/3/0/0 bps-range 3 3.05 | include 300G | include
SD27
Thu Mar 28 03:01:39.751 UTC
300G           SD27          3.0000000   69.4350994
300G           SD27          3.0078125   69.2547485
300G           SD27          3.0156250   69.0753320
300G           SD27          3.0234375   68.8968428
300G           SD27          3.0312500   68.7192736
300G           SD27          3.0390625   68.5426174
300G           SD27          3.0468750   68.3668671
```

To view the baud for a specific range use the following command:

**show controller optics R/S/I/P baud-rate-range baud-range | include data-rate | include fec-type**

```
RP/0/RP0/CPU0:ios#show controllers optics 0/3/0/0 baud-rate-range 43 43.4 | include 300G |
include SD27
Thu Mar 28 03:12:36.521 UTC
300G           SD27          4.8046875   43.3545986
300G           SD27          4.8125000   43.2842178
300G           SD27          4.8203125   43.2140651
300G           SD27          4.8281250   43.1441394
```

## Configuring the Trunk Rate for BPSK

300G	SD27	4.8359375	43.0744397
300G	SD27	4.8437500	43.0049648

## Configuring the Trunk Rate for BPSK

You can configure trunk rates of 50G, 100G, and 150G to support Binary Phase-Shift Keying (BPSK) modulation. The BPSK modulation enables information to be carried over radio signals more efficiently.

You can configure trunk rates for BPSK using CLI, NetConf YANG, and OC models.

The following table lists the 50G, 100G, and 150G trunk rates with the supported BPSK modulation:

Trunk Rate	BPSK Modulation
50G	1 to 1.4453125
100G	1 to 2.890625
150G	1.453125 to 4.3359375

To configure the trunk rate for BPSK modulation, enter the following commands:

**configure**

**hw-module location *location* mxponder**

**trunk-rate {50G | 100G | 150G}**

**commit**

The following example shows how to configure trunk rate to 50G:

```
RP/0/RP0/CPU0:(config)#hw-module location 0/0/NXR0 mxponder
RP/0/RP0/CPU0:(config-hwmod-mxp)#trunk-rate 50G
RP/0/RP0/CPU0:(config-hwmod-mxp)#commit
```

## Viewing the BPSK Trunk Rate Ranges

To view the trunk rate configured for the BPSK modulation, use the following **show** commands:

```
RP/0/RP0/CPU0:ios (hwmod-mxp) #show hw-module location 0/0/NXR0 mxponder
```

```
Tue Feb 25 11:13:41.934 UTC
```

## **2.4T and 2.4TX Card Modes Overview**

This section helps you familiarize with the different card modes available in the 2.4T and 2.4TX cards, their corresponding data rates, baud rate of each data rate, and the step-by-step procedure to configure line card in muxponder modes with the QDD-4x100GE and QDD-400GE pluggables.

### **Available Card Modes**

The 2.4T and 2.4TX line cards have two trunk ports (0 and 7) and six client ports (from 1 to 6) each. You can configure the line card in:

- Muxponder slice—You can configure each trunk port independent of the other with different trunk rates. The client-to-trunk mapping is fixed. For Trunk 0, the client ports are 1 to 3. For Trunk 7, the client ports are 4 to 6.

### **Muxponder Slice Mode for 2.4T and 2.4TX Cards**

The line card is divided into two slices, namely, Slice 0 and Slice 1. Each slice contains a trunk port and three client ports. In this mode, the trunk ports operate independently, carrying different data rates. The slices enable the card to function as two different modules. For example, if you set the trunk as 400 G for Slice 0 and 600 G for Slice 1, then Trunk 0 delivers 400 G and Trunk 7 delivers 600 G.

Figure 1: 2.4T Line Card Slices and Ports

Figure 2: 2.4TX Line Card Slices and Ports

Table 4: Client-to-Trunk Mapping in Slice 0 and Slice 1 Modes

Slice 0		Slice 1	
Trunk Port	Client Ports	Trunk Port	Client Ports
0	1, 2, 3	7	4, 5, 6

## Data Rate Capabilities for 2.4T and 2.4TX Line Cards in Muxponder Slice Mode

The 2.4T and 2.4TX line cards support various trunk rates.

The table shows the releases from which the 2.4T and 2.4TX cards started supporting each trunk rate.

## Recommended Trunk Parameters in the 2.4T and 2.4TX Cards

### Baud Rate Ranges for Each Trunk Rate in the 2.4T Card

The 2.4T card carries signals at different trunk rates, with each trunk rate operating within a baud rate range.

In the *Baud Rate Ranges for Each Trunk Rate in the 2.4T Card* table, you can find the recommended baud rate ranges to maintain the signal health for each trunk rate in the network.

**Table 5: Baud Rate Ranges for Each Trunk Rate in the 2.4T Card**

Data Rate per Trunk (G)	Minimum Baud Rate (GBd)	Maximum Baud Rate (GBd)
400	43.34518	130.4647
500	49.61196	147.7235
600	59.53435	148.0555
700	69.45674	147.8182
800	79.37913	148.0555
900	89.30152	147.8709
1000	99.22392	148.0555
1100	109.1463	148.2068
1200	119.0687	148.0555

### Baud Rate and Bit Rate Range for Each Trunk Rate in the 2.4TX Card

The 2.4TX card carries trunk signals at different data rates. Each trunk data rate operates in a default baud rate. However, you can customize the baud rate within the recommended baud rate range based on your deployment scenario. To customize baud rate, see.

In the *Baud Rate and Bit Rate Range for Each Trunk Rate in the 2.4TX Card* table, you can find the recommended baud rate ranges to maintain the signal health for each trunk rate in the network. The table also features the bit per second information for the respective baud rates.

## Customize Baud Rates

The muxponder mode enables the 2.4T and 2.4TX cards to carry signals in default baud rates when you set up the trunk rate. However, you can customize the baud rates for each trunk rate based on the bandwidth in the network.

Use this procedure to customize the baud rates within the recommended range as per your deployment scenario.

### Before you begin

- Install the following pluggable modules as required.
  - QDD-4x100G
  - QDD-400G

- Enter the Cisco IOS XR configuration mode.

## Procedure

---

**Step 1** Locate the Trunk Optics Controller for the 2.4T or 2.4TX card.

**Example:**

```
RP/0/RP0/CPU0:ios(config)#controller optics 0/0/0/7
```

**Step 2** Enter baud rate.

**Example:**

```
RP/0/RP0/CPU0:ios(config-Optics)#baud-rate 120.0000
```

**Step 3** Save the changes.

**Example:**

```
RP/0/RP0/CPU0:ios(config-Optics)#commit
```

---

## Client Pluggables for Configuring Muxponder Slice Modes

This section provides details about the client pluggable combinations that you need to set up the client rate for each trunk rate in slice 0 and slice 1.

### Pluggable Combinations in Muxponder Slice Modes

The client data rates and ports differ for each trunk rate in the muxponder slice 0 (Trunk 0) and muxponder slice 1 (Trunk 1) configurations. However, the type of client pluggable modules stays the same for both slice modes.

*Table 6: Trunk Rate and Client Pluggable Combinations for Slices 0 and Slice 1*

Trunk Rate (G) per Trunk	Card Support	Client Rate	Client Pluggable	Client Ports	
				Slice 0	Slice 1
400	2.4T	400 GE	QDD-400G	1	4
		4x 100 GE	QDD-4x100G		
600	2.4T	400 GE + 2x 100 GE	QDD-400G + QDD-4x100G	1, 2	4, 5
		6x 100 GE	2x QDD-4x100G		

## Set Up the Client and Trunk Rate in the Muxponder Slice Mode for 2.4T and 2.4TX Cards

Trunk Rate (G) per Trunk	Card Support	Client Rate	Client Pluggable	Client Ports	
				Slice 0	Slice 1
800	2.4T	2x 400 GE	2x QDD-400G	1, 2	4, 5
		400 GE + 4x 100 GE	QDD-400G + QDD-4x100G		
		8x 100 GE	2x QDD-4x100G		
1000	2.4T	2x 400GE + 2x 100 GE	2x QDD-400G + 2x QDD-4x100G	1, 2, 3	4, 5, 6
		10x 100 GE	3x QDD-4x100G		

<sup>1</sup> QDD-400G refers to QDD-400G-FR4-S, QDD-400G-AOCxM, and QDD-400G-DR4-S pluggable modules.

<sup>2</sup> QDD-4x100G refers to QDD-4X100G-LR-S, and QDD-400G-DR4-S pluggable modules.

Make sure you use the appropriate values for client bitrate and trunk bitrate parameters when configuring the Muxponder slice mode using the **hw-module** command.

## Set Up the Client and Trunk Rate in the Muxponder Slice Mode for 2.4T and 2.4TX Cards

Use this procedure to set up the client and trunk rate in the muxponder slice mode for the 2.4T and 2.4TX cards.

This procedure considers that you are setting up the 600-G data rate in one of the trunk ports of the 2.4T or 2.4TX card. This scenario requires you to set the client rate for the client ports. Based on the client pluggable that you use, the client rate can change to 400-GE client, 100-GE client, or mixed client.

For more information on the the data rate on each client port, see [Client Pluggables for Configuring Muxponder Slice Modes, on page 23](#).

### Before you begin

- Install the following pluggables as required.
  - QDD-400G
  - QDD-4x100G

### Procedure

**Step 1** Specify the card location.

#### Example:

```
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1/NXR0
```

**Step 2** Configure the 2.4T or 2.4TX line cards in the muxponder slice mode.

For Trunk 0 port, enter the `muxponder-slice 0` mode.

**Example:**

```
RP/0/RP0/CPU0:ios(config)#muxponder-slice 0
```

For Trunk 1 port, enter the `muxponder-slice 1` mode.

**Example:**

```
RP/0/RP0/CPU0:ios(config)#muxponder-slice 1
```

**Note**

You can configure both muxponder slice 0 and slice 1 modes when needed.

For more information on how to configure muxponder slice mode with QDD-4x100GE and QDD-4x100GE pluggables, see the [hw-module](#) command.

**Step 3** Set up the trunk rate for the 2.4T or 2.4TX card.

**Example:**

```
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#trunk-rate 600G
```

**Step 4** Set up the client rate based on the pluggables that you use.

For the QDD-400G pluggable, run this command.

**Example:**

```
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-port-rate 1 client-type 400GE
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-port-rate 2 client-type 400GE
```

For the QDD-4x100G pluggable, run this command.

**Example:**

```
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-port-rate 1 lane 1 client-type 100GE
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-port-rate 1 lane 2 client-type 100GE
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-port-rate 1 lane 3 client-type 100GE
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-port-rate 1 lane 4 client-type 100GE
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-port-rate 2 lane 1 client-type 100GE
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-port-rate 2 lane 2 client-type 100GE
```

**Note**

Use the `lane` keyword to set up the 100-GE client rate in the client ports.

For the mixed client pluggable, use the combination of the QDD-400G and QDD-4x100G commands.

**Step 5** Save the configuration and exit the muxponder slice mode.

**Example:**

**Command**

```
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#commit
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#exit
RP/0/RP0/CPU0:ios(config)#exit
```

**Step 6** Verify the 600-G data rate that you set up.

The following sample shows the 600-G data rate (**Trunk Bitrate: 600G**) set up in client ports 1 (**FourHundredGigECtrlr0/1/0/1**) and 2 with breakout lanes 1 and 2 (**HundredGigECtrlr0/1/0/2/1** and **HundredGigECtrlr0/1/0/2/2**) using 400-GE and 100-GE client type pluggables (**Client Bitrate: MIXED**) in muxponder slice 0 (**Slice ID: 0**).

**Muxponder Mode for 2.4TX Card****Example:**

```
RP/0/RP0/CPU0:ios#show hw-module location 0/1/NXR0 muxponder-slice 0
Thu Nov 16 15:41:25.720 UTC
Location:          0/1/NXR0
Slice ID:          0
Client Bitrate:    MIXED
Trunk Bitrate:     600G
Status:             Provisioned
LLDP Drop Enabled: FALSE
ARP Snoop Enabled: FALSE
Client Port          Mapper/Trunk Port      CoherentDSP0/1/0/0
                      Traffic Split Percentage
FourHundredGigECtrlr0/1/0/1   ODU-FLEX0/1/0/0/1   100
HundredGigECtrlr0/1/0/2/1    ODU-FLEX0/1/0/0/2/1   100
HundredGigECtrlr0/1/0/2/2    ODU-FLEX0/1/0/0/2/2   100
```

The following sample shows the 600-G data rate (**Trunk Bitrate: 600G**) set up in client ports 0 with breakout lanes 1 to 4 (**HundredGigECtrlr0/1/0/1/1** to **HundredGigECtrlr0/1/0/1/4**) and 1 (**HundredGigECtrlr0/1/0/2/1**) using 100-GE client type pluggable (**Client Bitrate: 100GE**) in muxponder slice 0 (**Slice ID: 0**).

**Example:**

```
RP/0/RP0/CPU0:ios#show hw-module location 0/1/NXR0 muxponder-slice 0
Thu Nov 16 16:06:57.575 UTC
Location:          0/1/NXR0
Slice ID:          0
Client Bitrate:    100GE
Trunk Bitrate:     600G
Status:             Provisioned
LLDP Drop Enabled: FALSE
ARP Snoop Enabled: FALSE
Client Port          Mapper/Trunk Port      CoherentDSP0/1/0/0
                      Traffic Split Percentage
HundredGigECtrlr0/1/0/1/1   ODU-FLEX0/1/0/0/1/1   100
HundredGigECtrlr0/1/0/1/2   ODU-FLEX0/1/0/0/1/2   100
HundredGigECtrlr0/1/0/1/3   ODU-FLEX0/1/0/0/1/3   100
HundredGigECtrlr0/1/0/1/4   ODU-FLEX0/1/0/0/1/4   100
HundredGigECtrlr0/1/0/2/1   ODU-FLEX0/1/0/0/2/1   100
HundredGigECtrlr0/1/0/2/2   ODU-FLEX0/1/0/0/2/2   100
```

**Muxponder Mode for 2.4TX Card**

The muxponder mode enables the 2.4TX card to split wavelengths in specific client ports between the two trunk ports. In the slice mode, the client ports that support wavelength splitting act the same as other client ports. However, in the muxponder mode, the 2.4TX card activates the split client ports. The shared client ports are client port 2 for 600G and client port 3 for 1000G.

**How Muxponder Mode Splits 400GE and 4x100GE Client Traffic**

This use case explains the wavelength splitting for 600G trunk rate.

For 600G trunk rate, you must configure client port 1, 2, and 4 as 400GE or 4x100GE. Trunk 0 receives 400GE from port 1. Trunk 7 receives 400GE from port 4. As per split client configuration, port 2 gives 200GE to Trunk 0 and another 200GE to Trunk 7. In this way, both trunk ports deliver 600G trunk rate each.

## Recommended Connections for Point-to-Point Topology in Muxponder Mode

- Connect the port 0 and port 7 in the near end node to their respective port 0 and port 7 in the far end node.
- Make sure the optic fibers connected to trunk ports 0 and 7 are the same length. The difference must be less than 500 m; otherwise, you'll lose traffic on the split port.

## Data Rate Capabilities for the 2.4TX Card

The 2.4TX card supports different trunk rates.

## Client Pluggables for Configuring 2.4TX Muxponder Mode

*Table 7: Feature History*

Feature Name	Release Information	Description
100GE Channel Support for the 600G and 1000G Trunk Rate in NCS1K14-2.4T-X-K9 Muxponder Mode	Cisco IOS XR Release 24.3.1	The NCS1K14-2.4T-X-K9 line card now allows 100G breakout client support for 600G and 1000G trunk rate in muxponder mode. It features 4x100GE breakout channels in shared client ports, enabling easy integration with existing 100G networks using QDD-4X100G-LR-S, QDD-4X100G-FR-S, and QDD-400G-DR4-S pluggable modules. These channels offer high density and bandwidth efficiency without extra costs.

This section provides details about the client pluggable combinations that you need to set up the client rate for each trunk rate.

### Client Pluggable Combinations in Muxponder Mode

The 2.4TX muxponder mode supports various trunk rate per trunk with different client pluggable combinations.

**Note** From R24.3.1, the 2.4TX card supports 100GE client traffic in the shared client port for both 600G and 1000G trunk rates.

The client channel rate in the table refers to both the total client rate and the client rate per channel in the client ports. For example, **2x 400GE + 2x 100GE** indicates that the client traffic consists of two channels at 400GE each and two channels at 100GE each.

Table 8: 2.4TX Muxponder Mode Port Configurations

Trunk Rate (G) per Trunk	Total Configured Trunk Rate (G)	Client Channel Rate	Client Pluggable	Shared Client Port	Client Ports
500	1000	2x 400GE + 2x 100GE	2x QDD-400G + 1x QDD-4x100G	2	1, 4
		1x 400GE + 6x 100GE	1x QDD-400G + 2x QDD-4x100G		
		10x 100GE	3x QDD-4x100G		
600	1200	3x 400GE	3x QDD-400G	2	1, 4
		2x 400GE + 4x 100GE	2x QDD-400G + 1x QDD-4x100G		
		1x 400GE + 8x 100GE	1x QDD-400G + 2x QDD-4x100G		
900	1800	4x 400GE + 2x 100GE	4x QDD-400G + 1x QDD-4x100G	3	1, 2, 4, 5
		3x 400GE + 6x 100GE	3x QDD-400G + 2x QDD-4x100G		
		2x 400GE + 10x 100GE	2x QDD-400G + 3x QDD-4x100G		
		1x 400GE + 14x 100GE	1x QDD-400G + 4x QDD-4x100G		
		18x 100GE	5x QDD-4x100G		

Trunk Rate (G) per Trunk	Total Configured Trunk Rate (G)	Client Channel Rate	Client Pluggable	Shared Client Port	Client Ports
1000	2000	5x 400GE	5x QDD-400G	3	1, 2, 4, 5
		4x 400GE + 4x 100GE	4x QDD-400G + 1x QDD-4x100G		
		3x 400GE + 8x 100GE	3x QDD-400G + 2x QDD-4x100G		
		2x 400GE + 12x 100GE	2x QDD-400G + 3x QDD-4x100G		
		1x 400GE + 16x 100GE	1x QDD-400G + 4x QDD-4x100G		

### Understanding Client Rates per Client Port for Each Trunk Rate

The table shows the sample client rate per client port for each trunk rate. This simplified matrix helps you understand the traffic flow in each client port. It also indicates the number of channels that each client port uses to deliver the client traffic. The type of pluggable module inserted in the shared client port determines the traffic rate through breakout and non-breakout channels.

You can customize the configuration by mixing and matching the client pluggable modules according to your requirements.

*Table 9: Client Rate Traffic per Trunk Rate and Client Pluggable Combinations*

Trunk Rate (G) per Trunk	Client Pluggable	Client Rate (GE) per Trunk 0 Client Ports		Client Rate (GE) per Shared Client Ports		Client Rate (GE) per Trunk 1 client ports		
		1	2	2	3	4	5	6
500	2x QDD-400G + 1x QDD-4x100G	400	-	2x 100	-	400	-	-
	1x QDD-400G + 2x QDD-4x100G	400	-	2x 100 <sup>3</sup>	-	4x 100	-	-
	1x QDD-4x100G	4x 100	-	2x 100 <sup>3</sup>	-	4x 100	-	-
600	3x QDD-400G	400	-	400	-	400	-	-
	2x QDD-400G + 1x QDD-4x100G	400	-	4x 100 <sup>3</sup>	-	400	-	-
	1x QDD-400G + 2x QDD-4x100G	400	-	4x 100 <sup>3</sup>	-	4x 100	-	-

## Set Up the Client and Trunk Rate in the Muxponder Mode for the 2.4TX Card

Trunk Rate (G) per Trunk	Client Pluggable	Client Rate (GE) per Trunk 0 Client Ports		Client Rate (GE) per Shared Client Ports		Client Rate (GE) per Trunk 1 client ports		
		1	2	2	3	4	5	6
900	4x QDD-400G + 1x QDD-4x100G	400	400	-	2x 100 <sup>3</sup>	400	400	-
	3x QDD-400G + 2x QDD-4x100G	400	400	-	2x 100 <sup>3</sup>	400	4x 100	-
	2x QDD-400G + 3x QDD-4x100G	400	400	-	2x 100 <sup>3</sup>	4x 100	4x 100	-
	1x QDD-400G + 4x QDD-4x100G	400	4x 100	-	2x 100 <sup>3</sup>	4x 100	4x 100	-
	5x QDD-4x100G	4x 100	4x 100	-	2x 100 <sup>3</sup>	4x 100	4x 100	-
1000	5x QDD-400G	400	400	-	400	400	400	-
	4x QDD-400G + 1x QDD-4x100G	400	400	-	4x 100	400	400	-
	3x QDD-400G + 2x QDD-4x100G	400	400	-	4x 100	400	4x 100	-
	2x QDD-400G + 3x QDD-4x100G	400	400	-	4x 100	4x 100	4x 100	-
	1x QDD-400G + 4x QDD-4x100G	400	4x 100	-	4x 100	4x 100	4x 100	-

<sup>3</sup> In this shared port, the pluggable capacity is 400GE or 4x 100GE, but, for this trunk rate, the 2.4TX card consumes only 2x 100GE client data.

## Set Up the Client and Trunk Rate in the Muxponder Mode for the 2.4TX Card

Use this procedure to configure a trunk rate in muxponder mode for the 2.4TX card.

**Note** This procedure considers that you're setting up the 600G trunk rate in the muxponder mode for the 2.4TX card. The commands and output shown are for 600G trunk rate. The commands and output change for other trunk rates.

This procedure uses a mix of client pluggable modules. For this procedure, the card has:

- QDD-4x100G pluggable in shared client port 2, and
- QDD-400G pluggable in client ports 1 and 4

**Note** For the 600G trunk rate, the split port supports both 400GE and 4x100GE. For more information on required pluggable modules for other trunk rates, see [Client Pluggables for Configuring 2.4TX Muxponder Mode, on page 27](#).

### Before you begin

- Install the pluggables as required.
  - QDD-400G
  - QDD-4x100G

## Procedure

**Step 1** Specify the card location.

**Example:**

```
RP/0/RP0/CPU0:ios(config) #hw-module location 0/1/NXR0
```

**Step 2** Enter the muxponder card mode.

**Example:**

```
RP/0/RP0/CPU0:ios(config-hwmod) #mxponder
```

**Step 3** Set up the trunk rate.

**Example:**

```
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #trunk-rate 600G
```

**Step 4** Set up the client rate for the QDD-400G and QDD-4x100G pluggable modules.

**Example:**

```
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #client-port-rate 1 client-type 400GE
// QDD-400G pluggable in client port 1
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #client-port-rate 2 lane 1 client-type 100GE
// Enter lane for the QDD-4x100G pluggable in client port 2
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #client-port-rate 2 lane 2 client-type 100GE
// Enter lane for the QDD-4x100G pluggable in client port 2
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #client-port-rate 2 lane 3 client-type 100GE
// Enter lane for the QDD-4x100G pluggable in client port 2
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #client-port-rate 2 lane 4 client-type 100GE
// Enter lane for the QDD-4x100G pluggable in client port 2
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #client-port-rate 4 client-type 400GE
```

**Note**

Use the **lane** keyword to set up the 100GE client rate in the client ports.

**Step 5** Save the configuration and exit the muxponder mode.

**Example:**

```
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #commit
RP/0/RP0/CPU0:ios(config-hwmod-mxp) #exit
```

## Set Up the Client and Trunk Rate in the Muxponder Mode for the 2.4TX Card

```
// Exits muxponder mode
RP/0/RP0/CPU0:ios(config)#exit
// Exits configuration mode
```

### Step 6 Verify the 600G mixed client rate configured for the 2.4TX muxponder mode.

The sample shows the 600G data rate (**Trunk Bitrate: 600G**) set up in client ports 1 and 4 (**FourHundredGigEController0/2/0/1** and **FourHundredGigEController0/2/0/4**) and split client port 2 with breakout lanes 1 to 4 (**HundredGigEController0/2/0/2/1** to **HundredGigEController0/2/0/2/4**).

#### Example:

```
RP/0/RP0/CPU0:ios#show hw-module location 0/2/NXR0 muxponder

Location:          0/2/NXR0
Client Bitrate:    MIXED
Trunk Bitrate:     600G
Status:            Provisioned
LLDP Drop Enabled: FALSE
ARP Snoop Enabled: FALSE
Client Port        Mapper/Trunk Port      CoherentDSP0/2/0/0  CoherentDSP0/2/0/7
                                         Traffic Split Percentage
FourHundredGigEController0/2/0/1   ODU-FLEX0/2/0/0/1      100
        0
HundredGigEController0/2/0/2/1    ODU-FLEX0/2/0/0/2/1    100
        0
HundredGigEController0/2/0/2/2    ODU-FLEX0/2/0/0/2/2    100
        0
HundredGigEController0/2/0/2/1    ODU-FLEX0/2/0/7/2/3    0
        100
HundredGigEController0/2/0/2/2    ODU-FLEX0/2/0/7/2/4    0
        100
FourHundredGigEController0/2/0/4   ODU-FLEX0/2/0/7/4      0
        100
```

---

## CHAPTER 3

# Configuring Controllers

---

There are three types of controllers for the line card. The controllers are the optics controller, the ethernet controller, and the coherent DSP controller. This chapter describes the procedures used to configure these controllers.

- [AINS, on page 33](#)
- [FEC, on page 39](#)
- [Laser Squelching, on page 43](#)
- [Idle Insertion, on page 46](#)
- [FlexO GID and IID, on page 52](#)

- [Transmit Power Threshold, on page 85](#)
- [Frequency, on page 87](#)
- [Baud rate, on page 87](#)
- [CCMD-16 Controllers, on page 88](#)
- [Configure Controller Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards, on page 91](#)

## AINS

The Automatic-In-Service (AINS) feature allows the controller to automatically move to the automatic-in-service state after the maintenance window is completed. A soak time period is associated with the AINS state. The controller automatically moves to the In-Service state after the soak time period is

completed. During the AINS maintenance window, alarms are not propagated to the EMS/NMS monitoring system.

You can configure AINS on the client ports of the 1.2T and 2.4T cards.

## AINS States

The following table lists the AINS states.

State	Description
None	AINS is not enabled on the controller or the soak time period is complete.
Pending	AINS is configured on the controller. However, the soak time period has not started because either the primary state of controller is in Shutdown, Admin down, or Not ready state or the secondary state is in Maintenance state. AINS can also move to Pending state if alarms are raised during the soak time period.
Running	AINS is enabled on the controller. The primary state of the controller is Up and the secondary state is AINS.

If there are any service-affecting alarms when AINS is running on ethernet or optics controllers, the AINS state moves to Pending state. When the alarms are cleared, the AINS state moves to Running state.

The AINS soak time period restarts when there are line card reloads, XR reloads, line card warm reloads, power cycles, or alarm conditioning.

## Soak Time Period

You can configure the soak time period to be between 1 minute to 48 hours.

All alarms are suppressed during the AINS state. When the optical and ethernet alarms are raised on the port during the soak time period, the AINS state moves to Pending. These alarms are not displayed in the output of the **show alarms brief card location 0/RP0/CPU0 active** command but in the output of the **show alarms brief card location 0/RP0/CPU0 conditions** command. When all the alarms clear, the soak time period starts, and the AINS state moves to Running. When the soak time period expires, the port moves to IS state.

## Configuring AINS

To configure AINS on a controller, use the following command:

**automatic-in-service controller controller rate controller hours hours minutes minutes**

The following is a sample to configure AINS on a controller.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios#automatic-in-service controller coherentDSP 0/0/0/12 hours 0 minutes 15
RP/0/RP0/CPU0:ios(config)#commit
```

To configure AINS on a muxponder slice, use the following command:

**configure**

**hw-module location *location* mxponder-slice *slice-number* client-port-ains-soak hours *hours* minutes *minutes***

**commit**

The following is a sample in which slice 0 client ports are configured with AINS with soak time period specified to be 40 minutes.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#hw-module location 0/3/nxr0 mxponder-slice 0 client-port-ains-soak
hours 0 minutes 40
RP/0/RP0/CPU0:ios(config)#commit
```

To configure AINS globally, use the following command:

**ains-soak *hours* *minutes***

The following is a sample to configure AINS globally.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#ains-soak hours 0 minutes 15
RP/0/RP0/CPU0:ios(config)#commit
```

## Disabling AINS

To disable AINS on all muxponder client ports, set the hours and minutes to 0. Use the following commands:

**configure**

**hw-module location *location* mxponder-slice *slice-number* client-port-ains-soak hours *hours* minutes *minutes***

**commit**

The following is a sample in which AINS is disabled on all client ports.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#hw-module location 0/3/nxr0 mxponder-slice 0 client-port-ains-soak
hours 0 minutes 0
RP/0/RP0/CPU0:ios(config)#commit
```

To disable AINS on a muxponder slice, set the hours and minutes to 0. Use the following command:

**configure**

**hw-module location *location* mxponder-slice *slice-number* client-port-ains-soak hours *hours* minutes *minutes***

**commit**

The following is a sample in which AINS is disabled on all client ports of slice 0.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#hw-module location 0/3/nxr0 mxponder-slice 0 client-port-ains-soak
hours 0 minutes 0
RP/0/RP0/CPU0:ios(config)#commit
```

## Displaying the AINS Configuration

The AINS Soak field in the output indicates the current state of AINS. The current state can be None, Pending, or Running. The Total Duration field indicates the total soak time period that is configured. The Remaining Duration field indicates the soak time that remains, after which, the AINS state moves to None.

This example displays the ethernet controller statistics with AINS Soak in running state.

```
RP/0/RP0/CPU0:ios#show controller HundredGigEController 0/1/0/2
Thu Feb 21 19:52:55.001 UTC

## FEC

Forward Error Correction (FEC) is used for controlling errors during data transmission. This feature can be enabled on 1.2T and 2.4T cards and works by adding data redundancy to the transmitted message using an algorithm. This redundancy allows the receiver to detect and correct a limited number of errors occurring anywhere in the message, instead of having to ask the transmitter to resend the message.

FEC is automatically enabled on the pluggables installed in the Cisco NCS 1014. When you upgrade the software of an NCS 1014 with pluggables in the FEC disabled mode, traffic is affected.

## Configuring FEC on the Ethernet Controller

The following sample shows the running FEC configuration on a 2.4T card:

```
RP/0/RP0/CPU0:ios#sh controllers fourHundredGigEctrllr 0/1/0/1

```

## FEC States for CoherentDSP Controller

The following table lists the FEC states for the coherentDSP controllers.

**Table 10: FEC State for CoherentDSP Controllers**

State	Description
EnhancedSD15	FEC Soft-Decision 15. (Default)

## Q-Margin Support

Q-margin is an important optical parameter that characterizes the health of an optical link. The Q-margin value is calculated based on the average bit error rate (BER) in the optical link.

### Enhanced Q-Margin Support

Enhanced Q-Margin is supported for Forward Error Correction (FEC) and Performance Monitoring on CoherentDSP controllers for 2.4T cards. Enhanced Q-margin provides a better error free signal in the optical link. The enhanced Q-margin value is calculated based on the maximum number of errors per frame. An

attribute that is called instantaneous Q-margin is displayed in the output of the **show controllers coherentDSP** command. The lower the delta value between the instantaneous Q-margin value with the Q-margin value, the better the FEC performance of the NCS 1014 system. The instantaneous Q-margin values thus help you to optimize the system with continuous error correction in subsea transport networks.

## Configuring FEC on CoherentDSP Controllers

To configure FEC on the CoherentDSP controller, use the following command:

```
configure
controller coherentDSP R/S/I/P
fec {EnhancedSD15}
commit
```

The following sample shows how to configure FEC on the CoherentDSP controller:

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/0
RP/0/RP0/CPU0:ios(config-CoDSP) #fec EnhancedSD15
Tue Feb 25 11:25:52.670 UTC
WARNING! Changing FEC mode can impact traffic
RP/0/RP0/CPU0:ios(config-CoDSP) #commit
```

## Verifying FEC on CoherentDSP Controllers

The following sample shows the FEC configuration on the CoherentDSP controller:

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/0/0/0
Tue Feb 25 11:26:08.235 UTC

```

## Laser Squelching

You can enable laser squelching on Ethernet controllers. Laser squelching can be enabled on 1.2T and 2.4T cards which shuts down the laser in the event of trunk faults (LOS, LOF), and a SQUELCHED alarm is raised on the mapped client port.

Laser squelching uses an interrupt based method. Hence squelching happens faster when compared to previous releases. Squelch happens for client alarms also like Ingress LF, LOA, and CSF (not for egress client alarms) in addition to trunk fault cases.

To configure laser squelching on 1.2T card, use the following commands:

```

configure
controller HundredGigECtrlr Rack/Slot/Instance/Port
laser-squelch
commit

```

To configure laser squelching on a 2.4T card, use the following commands:

```

configure
controller HundredGigECtrlr Rack/Slot/Instance/Port/Lane | controller fourHundredGigECtrlr
Rack/Slot/Instance/Port
laser-squelch
commit

```

The following is a sample where laser squelching is enabled on the Ethernet controller of a 2.4T card.

```

RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller fourHundredGigECtrlr 0/1/0/1
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#laser-squelch
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit

```

The following is a sample to view the laser squelch status on the controller of a 2.4T card.

```

RP/0/RP0/CPU0:ios#show controllers fourHundredGigECtrlr 0/0/0/4
Fri Nov 17 14:26:43.213 UTC
Operational data for interface FourHundredGigECtrlr0/0/0/4:

State:
  Administrative state: enabled
  Operational state: Up
  LED state: Green On
  Maintenance: Disabled

```

## Protection Switching Use Cases

Fast-Squelching provides increased protection switching speed when there is a trunk fault or a client fault.  
Fast-Squelching is supported on 1.2T cards.

**Note** Protection Switching is not supported on 2.4T card.

The following sample topology includes a Far End (FE) station and a Near End (NE) station. Each station includes an NCS 1014 node having two line cards. The nodes are connected to the respective Traffic generators through a Protection Switching Module (PSM).

Figure 3: Reference Topology for Protection Switching

#### Protection Switching Principle (Trunk fault)

If there is a fiber cut in the trunk working path from the FE station to the NE station, an LOS alarm is raised on the NE working trunk. This results in the squelching of all client ports mapped to the working NE trunk port. As the laser of the client port is squelched, LOS is reported on the W-RX2 port of the PSM2. As the received optical power on the W-RX2 port of PSM is below the threshold, PSM2 switches to receive the optical signal in the P-RX2 port instead of the W-RX2 port. Hence switching happens for traffic from work to protect in FE station to NE station direction.

In the case of a unidirectional trunk fault, switching happens in one direction as explained above. In the other direction, when LOS is received at the W-RX2 port of PSM2, W-TX2 sends LOS for 25 milliseconds. When LOS is reported on the NE client port, fault gets propagated over the trunk, resulting in the squelching of FE station client ports. Finally, the LOS on the PSM port results in switching in this direction as well. In this way, bidirectional switching is implemented.

#### **Protection Switching Principle (Client fault)**

When a client failure happens on the FE station, a Client Signal Failure (CSF) alarm is raised on the NE station trunk. The CSF on the trunk results in the squelching of the corresponding client port, and the PSM switching happens. In summary, a fault on the NE station client RX port results in CSF on the FE station trunk, and the switching happens. And, a fault on the NE station client TX port results in LOS on the PSM ports, and the switching happens.

#### **Note**

- PSM must be in the standalone mode.
- PSM alarm threshold must be set to  $+/- 3$  dBm from the actual power received in the PSM RX port.
- If line card protection is required, the working and protect path must be configured in two different line cards.
- If only client protection is required, the working and protection path can be configured in the same line card.
- If the LC trunk configuration is x50 rate, then we can't use single line card for work and protection due to x50 coupled mode limitations (coupled trunk).
- Manual switch, Force switch, and lock-out protection on PSM, result in bidirectional switching.

## **Idle Insertion**

When a fault occurs on the trunk port, you can hold the propagation of local faults using the idle insertion feature. This feature can be enabled on the ethernet controllers of 1.2T and 2.4T cards by configuring the hold-off timer.

When the fault occurs on the trunk, idles are inserted in the traffic stream from the trunk port to the client port for the duration of the configured holdoff-time. If the trunk port remains faulty beyond the configured holdoff-time, a local fault is transmitted towards the client device. If the trunk recovers from the fault before the holdoff-time expires, traffic resumes.

This feature can be used on customer deployments to prevent reset of client ports during a PSM switchover.

#### **Configure Idle Insertion**

You can enable the idle insertion feature on a 1.2T card using the following commands:

**configure**

**controller HundredGigECtrlr Rack/Slot/Instance/Port**

**holdoff-time trunk-fault time-value**

You can enable the idle insertion feature on 2.4T card using the following commands:

**configure**

**controller HundredGigECtrlr** *Rack/Slot/Instance/Port/Lane* | **controller fourHundredGigECtrlr** *Rack/Slot/Instance/Port*

**holdoff-time trunk-fault** *time-value*

The range of *timevalue* is from 0 ms to 3000 ms.

**Example 1**

The following is a sample for enabling the hold off -timer in 100GE controller:

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller HundredGigECtrlr 0/0/0/4/1
RP/0/RP0/CPU0:ios (config-eth-ctrlr)#holdoff-time trunk-fault 3000
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit
```

**View Hold Off Timer**

To view the hold-off time that is configured on 100GE controller, use the following command:

**show controllers hundredGigECtrlr** *Rack/Slot/Instance/Port*

**Example 2**

```
RP/0/RP0/CPU0:ios#show controllers HundredGigECtrlr 0/1/0/1
Fri Feb 22 18:58:06.888 UTC
Operational data for interface HundredGigECtrlr0/1/0/1:

State:
    Administrative state: enabled

```

## Idle Insertion for Ethernet Controllers

Idle insertion for Ethernet controllers feature allows you to perform end-to-end link verification between 100GE or 400GE Ethernet controllers before bringing up the actual traffic. This feature enables you to perform pre-provisioning checks to isolate link errors in advance without any Ethernet testers.

**Note** OTU4 client rate is not supported.

Idle frames can be inserted in both the ingress and egress directions on Ethernet controllers and the LOCAL-FAULT and REMOTE-FAULT alarms are cleared. The performance monitoring counters on the pcs layer are monitored to check for any errors on the link.

**Warning** Do not configure the Idle insertion for Ethernet controllers feature on the link that carries live traffic.

## Recommended Topology for Link Verification

The following diagram describes the recommended topology for link verification:

*Figure 4: Topology for Link Verification*

The following steps describe the sequence for link verification using this topology:

1. Both the near-end and far-end clients have the LOCAL-FAULT alarm if the trunk is up on both the ends.
2. Enable idle ingress on the near-end client. The idle frame transmits toward the trunk link and reaches the far-end client. The LOCAL-FAULT alarm is then cleared on the far-end client.
3. As the far-end client has fiber loop, the idle frame is inserted again into the same client RX toward the trunk link and reaches the near-end client. The LOCAL-FAULT alarm is then cleared on the near-end client as well.
4. When you enable idle insertion on any client and in any direction, the idle frame transmits in loop similar to this topology and all the LOCAL-FAULT and the REMOTE-FAULT alarms are cleared.
5. The link can be monitored after all the alarms are cleared. The link has a problem if any alarm is reported during the link test.

## Configuring Idle Insertion for Ethernet Controllers

### Before You Begin:

- Do not configure idle frame insertion with hold-off timer.

You can configure this feature by using the following commands:

```
configure
controller hundredGigECtrlr Rack/Slot/Instance/Port/
insert-idle ingress
insert-idle egress
commit
end
```

The following is a sample for enabling the idle ingress and idle egress in 100GE controllers:

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller hundredGigECtrlr 0/2/0/2
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#insert-idle ingress
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#insert-idle egress
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#end
```

You can disable this feature by using the following commands:

```
configure
controller hundredGigECtrlr Rack/Slot/Instance/Port
no insert-idle ingress
no insert-idle egress
commit
end
```

### Limitation

After disabling the idle frame insertion feature, the LOCAL-FAULT or REMOTE-FAULT alarm may not appear again because the idle frames are in loop. Hence, you must break the idle frame loop in the link by performing either one of the following:

- Perform fiber OIR on either the near-end or far-end client port.
- Perform shut and unshut operation on any client port.

## Verifying Idle Insertion Configuration for Ethernet Controllers

To verify the *idle ingress* and *idle egress* that is configured on the Ethernet controllers of a 1.2T card, use the following command:

```
RP/0/RP0/CPU0:ios# show controllers hundredGigECtrlr Rack/Slot/Instance/Port
```

### Example

```
RP/0/RP0/CPU0:ios#show controllers hundredGigECtrlr 0/2/0/2
Wed Mar 30 06:56:58.878 UTC
Operational data for interface HundredGigECtrlr0/2/0/2:
State:
    Administrative state: enabled
    Operational state: Up
```

## Enable Idle Insertion on QXP Card

```

LED state: Green On
Maintenance: Disabled
AINS Soak: None
    Total Duration: 0 hour(s) 0 minute(s)
    Remaining Duration: 0 hour(s) 0 minute(s) 0 second(s)
Laser Squelch: Disabled

Insert Idle Ingress: Enabled
Insert Idle Egress: Enabled

Phy:
Media type: Not known
Statistics:
    FEC:
        Corrected Codeword Count: 0
        Uncorrected Codeword Count: 0
Autonegotiation disabled.
Operational values:
    Speed: 100Gbps
    Duplex: Full Duplex
    Flowcontrol: None
    Loopback: None (or external)
    BER monitoring:
        Not supported
    Forward error correction: Standard (Reed-Solomon)
    Holdoff Time: 0ms

```

## Enable Idle Insertion on QXP Card

You can enable idle insertion on 100GE or 400GE controllers for the QXP card.

### Configure Idle Insertion on 100GE Controllers

To configure idle insertion on the 100GE controllers for the QXP card, use the following commands:

**configure**

**controller HundredGigECtrlr Rack/Slot/Instance/Port**

**holdoff-time trunk-fault *time-value***

**commit**

The range of *timevalue* is from 0 ms to 3000 ms.

The following is a sample where idle insertion is enabled on the 100GE controller for the QXP card.

```

RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller HundredGigECtrlr 0/1/0/1
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#holdoff-time trunk-fault 3000
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit

```

The following is a sample to view the idle insertion status on the 100GE controller.

```

RP/0/RP0/CPU0:ios#show controller hundredGigECtrlr 0/1/0/1
Fri Jul 23 16:07:11.541 UTC
Operational data for interface HundredGigECtrlr0/1/0/1:

State:
    Administrative state: enabled

```

```

Operational state: Up
LED state: Green On
Maintenance: Disabled
AINS Soak: None
    Total Duration: 0 hour(s) 0 minute(s)
    Remaining Duration: 0 hour(s) 0 minute(s) 0 second(s)
Laser Squelch: Enabled

    BER monitoring:
        Not supported
        Forward error correction: Standard (Reed-Solomon)
Holdoff Time: 3000ms

```

### Configure Idle Insertion on 400GE Controllers

To configure idle insertion on the 400GE controllers for the QXP card, use the following commands:

```

configure
controller fourHundredGigECtrlr Rack/Slot/Instance/Port
holdoff-time trunk-fault time-value
commit

```

The following is a sample where idle insertion is enabled on the 400GE controller for the NCS1K4-QXP-K9 card.

```

RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller fourHundredGigECtrlr 0/0/0/10
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#holdoff-time trunk-fault 2000
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit

```

The following is a sample to view the idle insertion status on the 400GE controller.

```

RP/0/RP0/CPU0:ios#show controller fourhundredGigECtrlr 0/0/0/10
Fri Jul 23 16:07:11.541 UTC
Operational data for interface fourHundredGigECtrlr0/0/0/10:

State:
    Administrative state: enabled
    Operational state: Up

```

## FlexO GID and IID

The 2.4T card uses flexible OTN (flexO) interfaces on trunk ports. These flexO interfaces provide a flexible and interoperable mechanism to transport OTU signals by grouping standard lower rate interfaces. Each flexO interface group is identified by a flexO group identification (GID) number, which ranges 1–1,048,576. Each member of a flexO group is identified by a flexO instance identification (IID) number. The IID cannot be changed.

### Configuring FlexO GID

To configure flexO GID and IID on the coherentDSP controller, enter the following commands:

```

configure
controller coherentDSP R/S/I/P
flexo
gid <gid-no>
commit

```

The following sample shows how to configure flexO GID on the CoherentDSP controller:

```

P0/RP0/CPU0:ios#configure terminal
Mon Feb 5 05:14:42.919 UTC
RP0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/0
RP0/RP0/CPU0:ios(config-CoDSP)#flexo gid 1048575
RP0/RP0/CPU0:ios(config-CoDSP)#commit

```

### Verifying FlexO GID

The following sample shows the flexO GID configuration on the CoherentDSP controller:

```

RP0/RP0/CPU0:ios#show controllers coherentDSP 0/0/0/0
Mon Feb 5 05:20:01.660 UTC

## Link Layer Discovery Protocol (LLDP) Support on Management Interface

The LLDP can be configured on management interface of 1.2T and 2.4T cards. It requires a system to form LLDP neighborship over the system management interface, through which it advertises and learns LLDP neighbor information. This information about neighbors is used to learn about the neighbors and in turn the topology of the devices for Operations, Administration, and Maintenance (OAM) purposes.

### Advantages of LLDP

- Provides support on non-Cisco devices.
- Enables neighbor discovery between non-Cisco devices.

### Limitation

- When you disable LLDP globally, the LLDP gets disabled on all the interfaces.

**Note** By default, LLDP is enabled for NCS 1014. But when you enable and disable LLDP in the global configuration mode, LLDP gets disabled on all the interfaces.

**Workaround:** You must enable LLDP globally or reload the Router.

### Cisco Discovery Protocol (CDP) vs LLDP

The CDP is a device discovery protocol that runs over Layer 2. Layer 2 is also known as the data link layer that runs on all Cisco devices, such as routers, bridges, access servers, and switches. This protocol allows the network management applications to automatically discover and learn about other Cisco devices that connect to the network.

The LLDP is also a device discovery protocol that runs over Layer 2. This protocol allows the network management applications to automatically discover and learn about other non-Cisco devices that connect to the network.

### Interoperability between non-Cisco devices using LLDP

LLDP is also a neighbor discovery protocol that is used by network devices to advertise information about themselves to other devices on the network. This protocol runs over the data link layer, which allows two systems running different network layer protocols to learn about each other.

With LLDP, the user can also access the information about a particular physical network connection. If the user uses a non-Cisco monitoring tool (through SNMP), LLDP helps you identify the Object Identifiers (OIDs) that the system supports. The following OIDs are supported:

- 1.0.8802.1.1.2.1.4.1.1.4
- 1.0.8802.1.1.2.1.4.1.1.5
- 1.0.8802.1.1.2.1.4.1.1.6
- 1.0.8802.1.1.2.1.4.1.1.7
- 1.0.8802.1.1.2.1.4.1.1.8
- 1.0.8802.1.1.2.1.4.1.1.9
- 1.0.8802.1.1.2.1.4.1.1.10
- 1.0.8802.1.1.2.1.4.1.1.11
- 1.0.8802.1.1.2.1.4.1.1.12

### Neighbor Discovery

System advertises the LLDP TLV (Type Length Value) details over the management network using which other devices in the management network can learn about this device.

### Configuring LLDP

- LLDP full stack functionality is supported on all three management interfaces supported in NCS 1014.
- You can selectively enable or disable LLDP on any of the management interfaces on demand.

- You can selectively enable or disable LLDP transmit or receive functionality at the management interface level.
- Information gathered using LLDP can be stored in the device Management Information Database (MIB) and queried with the Simple Network Management protocol (SNMP).
- LLDP operational data are available in both Command Line Interface and netconf-yang interface.

### Enabling LLDP Globally

When you enable LLDP globally, all interfaces that support LLDP are automatically enabled for both transmit and receive operations.

**Note** You can override this default operation at the interface to disable receive or transmit operations.

The following table describes the global LLDP attributes that the user can configure:

**Table 11:**

Attribute	Default	Range	Description
Holdtime	120	0–65535	Specifies the hold time (in sec). Hold time refers to the time or duration that an LLDP device maintains the neighbor information before discarding.
Reinit	2	2–5	Delay (in sec) for LLDP initialization on any interface
Timer	30	5–65534	Specifies the rate at which LLDP packets are sent (in sec)

The following example shows the commands to configure LLDP globally. The global LLDP configuration enables LLDP on all the three management interfaces.

```
RP/0/RP0/CPU0:regen#configure terminal
RP/0/RP0/CPU0:regen(config)#lldp management enable
RP/0/RP0/CPU0:regen(config)#lldp holdtime 30
RP/0/RP0/CPU0:regen(config)#lldp reinit 2
RP/0/RP0/CPU0:regen(config)#commit
```

### Verification

You can verify the LLDP configuration using the **show running-config lldp** command.

The output of **show running-config lldp** command is as follows:

```
RP/0/RP0/CPU0:regen#show running-config lldp
Tue Dec 10 10:36:11.567 UTC
lldp
timer 30
reinit 2
```

## Link Layer Discovery Protocol (LLDP) Support on Management Interface

```
holdtime 120
management enable
!
```

You can verify the LLDP data using the **show lldp interface** and **show lldp neighbors** commands.

The output of **show lldp interface** command is as follows:

```
RP/0/RP0/CPU0:regen#show lldp interface
Thu Nov 7 08:45:22.934 UTC
```

```
MgmtEth0/RP0/CPU0/0:
  Tx: enabled
  Rx: enabled
  Tx state: IDLE
  Rx state: WAIT FOR FRAME
```

```
MgmtEth0/RP0/CPU0/1:
  Tx: enabled
  Rx: enabled
  Tx state: IDLE
  Rx state: WAIT FOR FRAME
```

The output of **show lldp neighbors** command is as follows:

```
RP/0/RP0/CPU0:M-131#show lldp neighbors
Mon Dec 2 11:01:20.143 CET
Capability codes:
  (R) Router, (B) Bridge, (T) Telephone, (C) DOCSIS Cable Device
  (W) WLAN Access Point, (P) Repeater, (S) Station, (O) Other

Device ID      Local Intf          Hold-time  Capability      Port ID
[DISABLED]     MgmtEth0/RP0/CPU0/0   120        B              gi19
MYS-130        MgmtEth0/RP0/CPU0/1   120        R              MgmtEth0/RP0/CPU0/1
```

where [ DISABLED] shows that the LLDP is disabled on the interface MgmtEth0/RP0/CPU0/0.

### Enabling LLDP per Management Interface

The following example shows the commands to configure LLDP at the management interface level.

```
RP/0/RP0/CPU0:ios(config)#interface mgmtEth 0/RP0/CPU0/X
RP/0/RP0/CPU0:ios(config-if)#lldp enable
RP/0/RP0/CPU0:ios(config-if)#commit
```

### Disabling LLDP Transmit and Receive Operations

The following example shows the commands to disable the LLDP transmit operations at the specified management interface.

```
RP/0/RP0/CPU0:ios(config)#interface mgmtEth 0/RP0/CPU0/X
RP/0/RP0/CPU0:ios(config-if)#lldp transmit disable
RP/0/RP0/CPU0:ios(config-if)#commit
```

The following example shows the commands to disable the LLDP receive operations at the specified management interface.

```
RP/0/RP0/CPU0:ios(config)#interface mgmtEth 0/RP0/CPU0/X
RP/0/RP0/CPU0:ios(config-if)#lldp receive disable
RP/0/RP0/CPU0:ios(config-if)#commit
```

### Debugging LLDP Issues

The following commands are used for debugging issues in the LLDP functionality.

- **show lldp traffic**
- **debug lldp all**
- **debug lldp errors**
- **debug lldp events**
- **debug lldp packets**
- **debug lldp tlvs**
- **debug lldp trace**
- **debug lldp verbose**

## MAC Address Snooping on Client Ports

MAC address snooping allows you to learn the MAC address of the neighbor on 1.2T cards, that is connected to the client ports. You can enable ARP snooping on all client ports and learn the MAC address of neighbors through CLI.

This feature overcomes the limitation, where LLDP (Link Layer Discovery protocol) cannot be enabled in some networks.

### Limitations

- When you enable or disable MAC address snooping on any slice, few packets are dropped during configuration.
- Open config interface for enabling or disabling MAC address snooping is not supported.
- SNMP MIB is not supported for the MAC address attribute.

**Note** When you enable MAC address snooping on client ports, it overrides LLDP.

## Configuring MAC Address Snooping on Client Ports

You can configure MAC address or ARP snoop on slice in Muxponder slice mode using the following commands.

### configure

**hw-module location *location* mxponder-slice *slice-number***

**client-rate 100GE**

### Example

## Viewing Neighbor MAC Address

The following is a sample in which, MAC address or ARP snoop is configured on the client ports of slice 0 in Muxponder slice mode.

```
RP/0/RP0/CPU0:ios#configure
Mon Mar 16 19:30:33.933 UTC
RP/0/RP0/CPU0:ios(config)#hw-module location 0/3/nxr0 mxponder-slice 0
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#client-rate 100GE
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#trunk-rate 600G
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#arp-snoop
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#commit
Mon Mar 16 19:30:52.636 UTC
RP/0/RP0/CPU0:ios(config-hwmod-mxp)#end
```

The following is a sample in which, MAC address or ARP snoop is configured in Muxponder mode.

```
RP/0/RP0/CPU0:ios#configure
Mon Mar 16 19:08:17.154 UTC
RP/0/RP0/CPU0:ios(config)#hw-module location 0/1 mxponder arp-snoop
RP/0/RP0/CPU0:ios(config)#commit
```

The following sample shows the output of **show controllers hundredGigEctrllr** command, before configuring MAC address or ARP snoop on client ports.

```
RP/0/RP0/CPU0:ios#show controllers HundredGigEctrllr 0/1/0/2/1
Mon Mar 16 19:40:37.434 UTC
Operational data for interface HundredGigEctrllr0/1/0/2/1:

State:
    Administrative state: enabled
    Operational state: Up
    LED state: Green On
    Maintenance: Disabled
    AINS Soak: None
        Total Duration: 0 hour(s) 0 minute(s)
        Remaining Duration: 0 hour(s) 0 minute(s) 0 second(s)
    Laser Squelch: Disabled

Phy:
    Media type: Not known

Autonegotiation disabled.

Operational values:
    Speed: 100Gbps
    Duplex: Full Duplex
    Flowcontrol: None
    Loopback: None (or external)
    BER monitoring:
        Not supported
    Holdoff Time: 0ms
```

## Viewing Neighbor MAC Address

You can view the neighbor's physical address after enabling MAC address or ARP snoop using the following command. MAC address snoop output is enabled after ARP packets are received on the respective 100G client.

**show controllers hundredGigEctrllr R/S/I/P**

The following sample shows the neighbor's MAC address after configuring MAC address or ARP snoop on client ports.

```
RP/0/RP0/CPU0:ios#show controllers HundredGigEController 0/1/0/2/1
Mon Mar 16 19:41:08.047 UTC
Operational data for interface HundredGigEController0/1/0/2/1:

State:
    Administrative state: enabled
    Operational state: Up
    LED state: Green On
    Maintenance: Disabled
    AINS Soak: None
        Total Duration: 0 hour(s) 0 minute(s)
        Remaining Duration: 0 hour(s) 0 minute(s) 0 second(s)
    Laser Squelch: Disabled
    Neighbor Address:
        0010.9400.5502

Phy:
    Media type: Not known

Autonegotiation disabled.

Operational values:
    Speed: 100Gbps
    Duplex: Full Duplex
    Flowcontrol: None
```

## Transmit Shutdown

Transmit shut on trunk optics controller brings down the CIM8 and PICO transmit power. You can configure transmit shut on optics controller of a 1.2T or 2.4T card.

### Configuring Transmit Shutdown on Trunk Optics Controller

To perform transmit shutdown, enter the following commands:

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:chassisA164(config)#controller optics 0/1/0/0
RP/0/RP0/CPU0:chassisA164(config-Optics)#transmit-shutdown
RP/0/RP0/CPU0:chassisA164(config-Optics)#commit
RP/0/RP0/CPU0:ios(config-Optics)#exit
RP/0/RP0/CPU0:ios(config)#exit
```

### Verifying Transmit Shutdown on Trunk Optics Controller

To verify the transmit shutdown details on the trunk optics controller, use the following command:

**show controllers optics R/S/I/P**

#### Example

Following is an example to view the transmit shutdown details:

```
RP/0/RP0/CPU0:ios#show controllers optics 0/0/0/0
Tue Dec 12 05:38:32.416 UTC
```

# Loopback

You can configure loopback on the CoherentDSP and Ethernet controllers of QXP, 1.2T and 2.4T cards to identify connection problems. The loopback can be configured only in the maintenance mode. Use the **controller controller-type** and the **secondary-admin-state maintenance** commands to place the controllers in the maintenance mode.

Loopback configuration alarm details for each controller are triggered whenever there is a change in the loopback configuration. Details such as, location of the controller, severity, configuration date and time, and description are available in the output of the **show alarms brief system active** and **show alarms brief history** commands.

#### Configuring Loopback on the 1.2T Card

To configure the loopback on a 1.2T card, use the following commands:

**controller controller-type Rack/Slot/Instance/Port**

**sec-admin-state maintenance**

**loopback [ internal ]**

**Note**

Line loopback is not supported on CoherentDSP controller of 1.2T card.

### Configuring Loopback on 2.4T Card

To configure the loopback on 2.4T card , use the following commands:

```
controller {HundredGigECtrlr Rack/Slot/Instance/Port/Lane |
fourHundredGigECtrlrRack/Slot/Instance/Port}
sec-admin-state maintenance
loopback [ line | internal ]
```

#### Example 1

The following example shows how a internal loopback is configured on the Ethernet controller of a 1.2T card.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller HundredGigECtrlr 0/1/0/1
RP/0/RP0/CPU0:ios(config-eth-crtlr)#sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config-eth-crtlr)#loopback internal
RP/0/RP0/CPU0:ios(config-eth-crtlr)#commit
RP/0/RP0/CPU0:ios(config)#exit
```

#### Example 2

The following example shows how a line loopback is configured on coherentDSP controller of a 2.4T card .

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/1/0/0
RP/0/RP0/CPU0:ios(config-eth-crtlr)#sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config-eth-crtlr)#loopback line
RP/0/RP0/CPU0:ios(config-eth-crtlr)#commit
RP/0/RP0/CPU0:ios(config)#exit
```

#### Example 3

The following example shows how to verify a internal loopback configured on the Ethernet controller of 1.2T card.

```
RP/0/RP0/CPU0:ios#show controller HundredGigECtrlr 0/1/0/1

HundredGigEController0/2/0/1/2 - Loss of Synchronization The Data Interface

0/2          Minor          Controller    09/13/2022 17:39:19 UTC      CoherentDSP0/2/0/0
- Internal Loopback Configured

```

**Note** Perform this operation only on the console port.

You can restore the factory settings on the NCS 1014. The entire system configuration, including usernames, passwords, and IP addresses, is removed. You can perform this operation only through the console port and not on the management interface. To restore NCS 1014 to factory settings, use the **commit replace** command. After the **commit replace** operation completes, you must perform the IOS XR reload operation.

The **commit best-effort** command merges the target configuration with the running configuration and commits only valid changes (best effort). Some configuration changes might fail due to semantic errors.

### Example

```

RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#commit replace
Tue Sep 24 09:36:59.430 UTC

This commit will replace or remove the entire running configuration. This
operation can be service affecting.
Do you wish to proceed? [no]: yes

## Headless Mode

During process restarts, CPU reload, or removal of CPU, the NCS 1014 operates in headless mode for up to 72 hours. During this time, traffic is not impacted, although the control plane is not up and running. Fault propagation continues to operate for failures on client and trunk ports. However, you cannot provision anything nor view operational data with a non-functional CPU. Performance monitoring data based on 15 minutes and 24 hour intervals is not supported with a non-functional CPU.

## Trail Trace Identifier

The Trail trace identifier (TTI) feature helps you to identify the signal from the source to the destination within the network. You can configure the TTI sent or expected in ASCII and HEX. When the expected TTI string does not match the received TTI trace string, the controller goes down and the TIM alarm is raised. To configure TTI on the coherent DSP controllers of a 1.2T or 2.4T card, use the following commands:

**configure**

**controller coherentDSP R/S/I/P tti {sent | expected} ascii | hextti-string**

**commit**

**Note** The *tti-string* can have a maximum of 64 characters.

The following sample displays how to configure TTI on a coherent DSP controller with the sent and expected strings set to the same ASCII string. The state of the controller is up.

```
RP/0/RP0/CPU0:ios#config
RP/0/RP0/CPU0:ios(config)#controller coherentDSP
RP/0/RP0/CPU0:ios(config-CoDSP)#tti sent ascii hello
RP/0/RP0/CPU0:ios(config-CoDSP)#tti expected ascii hello cisco
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
Thu Dec 7 14:25:43.391 IST
RP/0/RP0/CPU0:ios(config-CoDSP)#end
```

The following is sample to view the TTI details on a coherentDSP controller.

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/3/0/0

RP/0/RP0/CPU0:ne(config-CoDSP)#tti expected hex 3F4B4B4B3D3E3A
RP/0/RP0/CPU0:ne(config-CoDSP)#commit
RP/0/RP0/CPU0:ios(config)#exit

```

## Configure TTI on QXP Card

You can configure the TTI sent or expected string in the full ASCII format, or Source Access Point Identifier (SAPI)/Destination Access Point Identifier (DAPI) format on ODU-flex, ODU4, and coherentDSP controllers for the QXP card.

**Note** TTI operates only in **trunk mode OR**.

The following table lists the ASCII format that is supported for TTI:

ASCII with Character String	Controller
Full ASCII 64-character	CoherentDSP,odu4,odu-flex
SAPI ASCII 15-character	CoherentDSP,odu4,odu-flex
DAPI ASCII 15-character	CoherentDSP,odu4,odu-flex
Operator-specific ASCII 32-character	CoherentDSP,odu4,odu-flex

To configure TTI, use the following commands:

**configure**

**controller controller-type R/S/I/P tti {sent | expected} {ascii | sapi ascii | dapi ascii | operator-specific ascii } tti-string**

**commit**

## Chromatic Dispersion

The following is a sample configuration for FULL TTI for coherentDSP controller

```
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/8
RP/0/RP0/CPU0:ios(config-CoDSP)#tti sent ascii cisco
RP/0/RP0/CPU0:ios(config-CoDSP)#tti expected ascii cisco123
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
```

The following is a sample configuration for TTI HEX for coherentDSP controller

```
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/8
RP/0/RP0/CPU0:ios(config-CoDSP)#tti sent hex 6E6E6E2A2A2A
RP/0/RP0/CPU0:ios(config-CoDSP)#tti expected hex 3F4B4B4B3D3E3A
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
```

The following is a sample configuration for Operator specific TTI for coherentDSP controller

```
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/8
RP/0/RP0/CPU0:ios(config-CoDSP)#tti sent operator-specific ascii helooo
RP/0/RP0/CPU0:ios(config-CoDSP)#tti expected operator-specific ascii helooo
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
```

The following is a sample configuration for Operator specific TTI HEX for coherentDSP controller

```
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/8
RP/0/RP0/CPU0:ios(config-CoDSP)#tti sent operator-specific hex
6E6E6E2A2A2A3D3E3A3A6E6E6E2A2A3D
RP/0/RP0/CPU0:ios(config-CoDSP)#tti expected operator-specific hex 5A5A6D3A3B3C3F4B4B4B3D3E3A
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
```

The following is a sample configuration for SAPI for coherentDSP controller

```
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/8
RP/0/RP0/CPU0:ios(config-CoDSP)#tti sent operator-specific ascii helooo
RP/0/RP0/CPU0:ios(config-CoDSP)#tti expected operator-specific ascii helooo
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
```

The following is a sample configuration for DAPI for coherentDSP controller

```
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/8
RP/0/RP0/CPU0:ios(config-CoDSP)#tti sent dapi ascii cisco123
RP/0/RP0/CPU0:ios(config-CoDSP)#tti expected dapi ascii hello
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
```

## Chromatic Dispersion

You can configure chromatic dispersion on optics controllers of 1.2T and 2.4T cards. When you configure the maximum and minimum values for chromatic dispersion for any data rate, ensure the minimum difference between the configured values is equal to or greater than 1500 ps/nm.

The following table lists the default CD search range for a 1.2T card.

Data Rate	BPS	Card Support	Default CD Search Range
200G to 500G	BPS <= 3	1.2T, 1.2TL	-10,000 to 100,000 ps/nm
	3 < BPS <= 4	1.2T, 1.2TL	-10,000 to 80,000 ps/nm
	4 < BPS <= 5	1.2T	-5,000 to 20,000 ps/nm
600G	BPS=5.2578125	1.2T	-2000 to 2,000 ps/nm

The following table lists the default CD search range for 2.4T cards.

Line Rate	138GBd	128GBd	118GBd	108GBd
	1000G	20000 to -5000	20000 to -5000	20000 to -5000
800G	48000 to -10000	48000 to -10000	48000 to -10000	35000 to -10000
600G	74000 to -10000	74000 to -10000	74000 to -10000	60000 to -10000
400G	—	90000 to -10000	90000 to -10000	72000 to -10000

**Note** The cd-min and cd-max values must be set for BPS values that are greater than 4 in the 1.2T card.

**Note** When the user provisions the cd-min and cd-max values that are outside the range through CLI, the provisioned values are accepted; however, only the actual values supported by the hardware are applied.

The following is a sample where chromatic dispersion is configured on the optics controller.

```
RP/0/RP0/CPU0:ios#configure
Mon Aug 19 19:31:42.115 UTC

## Chromatic Dispersion Threshold

You can configure the minimum and maximum acceptable chromatic dispersion for the trunk optics controllers. The CD alarm is raised if the chromatic dispersion goes below the minimum or exceeds the maximum value.

The following is a sample of configuring the minimum and maximum chromatic dispersion threshold:

To configure the maximum and minimum acceptable CD, use the following command:

**configure**

**controller optics R/S/I/P**

**cd-high-threshold cd-high**

**cd-low-threshold cd-low**

**commit**

The following sample configures the maximum and minimum acceptable CD on the controller optics:

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller optics 0/0/0/7
RP/0/RP0/CPU0:ios(config-Optics)#cd-high-threshold 2400
RP/0/RP0/CPU0:ios(config-Optics)#cd-low-threshold -2400
RP/0/RP0/CPU0:ios(config-Optics)#commit
```

The following sample shows the maximum and minimum acceptable CD configured on the controller optics:

```
RP/0/RP0/CPU0:ios#show controllers optics 0/0/0/7

# Transmit Power

To configure transmit power on the trunk (CIM8 and PICO) optics within the -190 to +50 range (in units of 0.1dBm), use the following commands:

```
RP/0/RP0/CPU0:ios#configure
Mon Aug 19 19:31:42.115 UTC
RP/0/RP0/CPU0:ios(config)#controller optics 0/1/0/7
RP/0/RP0/CPU0:ios(config-Optics)#transmit-power -1.50
RP/0/RP0/CPU0:ios(config-Optics)#commit
Mon Aug 19 19:35:24.697 UTC
RP/0/RP0/CPU0:ios(config-Optics)#exit
RP/0/RP0/CPU0:ios(config)#exit
```

The following is a sample in which transmit power of -1.50 dBm is configured on the CIM8 optics.

```

## Laser Bias Current High Threshold

You can configure the threshold of the laser bias current flowing on the physical pluggable port on the trunk optics controller. The range is 0 to 100%

To configure the laser bias current threshold, use the following command:

**configure**

**controller optics R/S/I/P**

**lbc-high-threshold lbc-value**

**commit**

The following sample configures the high laser bias threshold on the controller optics:

```

RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller optics 0/0/0/7
RP/0/RP0/CPU0:ios(config-Optics)#lbc-high-threshold 55
RP/0/RP0/CPU0:ios(config-Optics)#commit

```

The following sample shows the high rlasier bias threshold configured on the controller optics:

```

## Differential Group Delay Threshold

You can configure the threshold value for the maximum acceptable differential group delay (DGD) on the trunk optics controllers. The DGD alarm is raised if DGD exceeds this value.

The range is 0–18000 (in the units of 0.01 ps).

To configure the maximum acceptable DGD, use the following command:

**configure**

**controller optics R/S/I/P**

**dgd-high-threshold dgd-value**

**commit**

The following sample configures the minimum acceptable DGD on the controller optics:

```

RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller optics 0/0/0/7
RP/0/RP0/CPU0:ios(config-Optics)#dgd-high-threshold 30
RP/0/RP0/CPU0:ios(config-Optics)#commit

```

The following sample shows the maximum acceptable DGD configured on the controller optics:

```

RP/0/RP0/CPU0:ios#show controllers optics 0/0/0/7

## Optical Signal to Noise Ratio

You can configure the minimum acceptable Optical Signal to Noise ratio (OSNR) value on the 1.2T and 2.4T cards. The OSNR alarm is raised if OSNR goes below this value.

The range is 0–4000 (in units of 0.01db).

To configure the minimum acceptable OSNR, use the following command:

**configure**

**controller optics R/S/I/P**

**osnr-low-threshold *osnr-value***

**commit**

The following sample configures the minimum acceptable OSNR on the controller optics:

```

RP/0/RP0/CPU0:ios#configure

# Frequency

You can configure the frequency on trunk ports of the 1.2T and 2.4T line cards.

The following table lists the frequency range with grid spacing supported on the line card:

Line Card	Frequency Range (THz)	Default Frequency (THz)	Grid Spacing
1.2T	191.25 to 196.1	193.1	50GHz and 100MHz
1.2TL <sup>4</sup>	186.1 to 190.85	188.5	100MHz
2.4T	191.25 to 196.1	193.1	50GHz and 100MHz
2.4TX using C band trunk pluggables	191.25 to 196.1	193.1	50GHz and 100MHz
2.4TX using L band trunk pluggables	186.15 to 190.925	No default frequency	100MHz

<sup>4</sup> Only non-ITU channels are supported

To configure the wavelength, use the following commands:

**configure**

**controller optics Rack/Slot/Instance/Port**

**dwdm-carrier {100MHz-grid frequency frequency} | {50GHz-grid [frequency frequency]}**

**commit**

# Baud rate

You can configure the baud rate on trunk ports of the 2.4T and 2.4TX line cards.

During baud rate configuration, any changes or configurations must differ by at least 0.5 from the current baud rate. For example, if the current baud rate on the node is 130.525, the new configuration must be set to a value greater than 131.

This table lists the baud range supported on the line card:

Line Rate	Min BR [GBd]	Min BR [GBd]	Approx.max Net bpS	Approx.min Net bpS	Default Baud rate
400G	62	128	4.1	2.1	127.931418
500G	62	138	5	2.5	137.834059
600G	72	138	5.1	2.8	137.738007
700G	88	138	5	3.2	138.081665

Line Rate	Min BR [GBd]	Min BR [GBd]	Approx.max Net bps	Approx.min Net bps	Default Baud rate
800G	98	138	5.1	3.5	137.978388
900G	108	138	5.2	3.8	137.898168
1000G	118	138	5.3	4.3	137.834059
1100G	128	138	5.3	4.7	137.78165
1200G	128	138	5.7	5.3	137.738007

## CCMD-16 Controllers

The NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L cards have two types of controllers. The controllers are OMS and OCH controllers. When the NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L cards become operational, both the OMS and OCH controllers are automatically created by default.

To view the OCH controllers, run the following command:

### Command

```
RP/0/RP0/CPU0:ios#show controllers och ?
```

The following output shows the active OCH controllers in *Slot 0* from *port 1 to 16*.

### Output Example

0/0/0/1	Och Interface Instance
0/0/0/10	Och Interface Instance
0/0/0/11	Och Interface Instance
0/0/0/12	Och Interface Instance
0/0/0/13	Och Interface Instance
0/0/0/14	Och Interface Instance
0/0/0/15	Och Interface Instance
<b>0/0/0/16</b>	<b>Och Interface Instance</b>
0/0/0/2	Och Interface Instance
0/0/0/3	Och Interface Instance
0/0/0/4	Och Interface Instance
0/0/0/5	Och Interface Instance
0/0/0/6	Och Interface Instance
0/0/0/7	Och Interface Instance
0/0/0/8	Och Interface Instance
0/0/0/9	Och Interface Instance

To view the OMS controllers, run the following command:

### Command

```
RP/0/RP0/CPU0:ios#show controllers oms ?
```

The following output shows the active OMS controller in *Slot 0*.

### Output Example

0/0/0/0	Oms Interface Instance
---------	------------------------

## OCH Controller

When you bring up the nodes with NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L cards, the OCH controllers are automatically created by default. The OCH controllers for the NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L cards are:

**Table 12: Supported Interfaces**

Card	Port Type	OCH Ports	Interfaces
NCS1K14-CCMD-16-C	LC Ports	16	och R/S/I/1 to och R/S/I/16
NCS1K14-CCMD-16-L	LC Ports	16	och R/S/I/1 to och R/S/I/16

**Note** R/S/I/P stands for Rack/Slot/Instance/Port.

To view the parameters of an OCH controller, use the following command:

### Command Example

```
RP/0/RP0/CPU0:ios#show controllers och 0/1/0/1
```

The following output shows the parameters of the OCH controller.

### Output Example

```
Thu Oct 12 09:26:38.555 UTC
Controller State: Up
Transport Admin State: In Service
LED State: Green
Alarm Status:
-----
Detected Alarms: None

Alarm Statistics:
-----
RX-LOS-P = 0

Parameter Statistics:
-----
Tx Power = -2.30 dBm
Rx Power = -0.70 dBm
```

## OMS Controller

When you bring up the nodes with NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L cards, the OMS controllers are automatically created by default. The OMS controllers for the NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L cards are:

**Table 13: Supported Interfaces**

Card	Port Type	OMS Ports	Interfaces
NCS1K14-CCMD-16-C	LC Ports	1	oms R/S/I/0
NCS1K14-CCMD-16-L	LC Ports	1	oms R/S/I/0

**Note** R/S/I/P stands for Rack/Slot/Instance/Port.

To view the parameters of an OMS controller, use the following command:

#### Command Example

```
RP/0/RP0/CPU0:ios#show controllers oms 0/1/0/0
```

The following output shows the parameters of an OMS controller.

#### Output Example

```

## Configure Controller Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards

**Table 14: Feature History**

Feature Name	Release Information	Feature Description
Supported Functionalities of CCMD-16-C and CCMD-16-L Line Cards	Cisco IOS XR Release 7.11.1	<p>Supported Functionalities of CCMD-16-C and CCMD-16-L Line Cards: The software supports Variable Optical Attenuator (VoA), power monitoring and reporting of parameters to the controllers at the OCH and OMS level. It helps in configuring the amplifier parameters for optimizing signal transmissions.</p> <p>The software also supports in-band and out-of-band tone detection and monitoring and reporting of alarms.</p>

This chapter describes the controller configuration using EDFA, VoA, optical safety, and photodiode parameters which are supported on NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L line cards.

**Table 15: Basic Controller Configuration Parameters**

Parameter	CLI	Description
EDFA-ADD Control Mode	controller Oms R/S/I/P egress-ampli-mode power-control	<p>Here the default mode is gain-control.</p> <p>Use this command to change the mode to power-control mode.</p> <p>You can delete this configuration to revert to gain-control mode.</p>

**Configure Controller Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards**

EDFA-ADD Power	controller Oms R/S/I/P egress-ampli-power <val in 0.1 dBm>	This is the target output power configuration for the EDFA located on COM-Tx. If the output power is not configured, then a default value is used by the system. You can find the applied target output power by using the <b>show controller oms</b> output.
----------------	---	---

EDFA-ADD Gain Range	controller Oms R/S/I/P egress-ampli-gain-range <normal   extended>	
------------------------	--	--

## Configure Controller Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards

If you change the gain range from Normal to Extended or the opposite way, without updating the proper gain value for the new gain range, then the following may happen:

- The EDFA switches to the preconfigured or default value of the gain causing a mismatch between the operational and configured gain.
- The gain configuration is lost during the reload of software or line card, as the configured gain mismatches with the latest gain-range. This may result in traffic interruption during these reload operations.

Hence, we recommend that you explicitly configure the gain range mode as normal or extended, and the corresponding gain values for each mode to get the expected results.

The following are a few example scenarios that may not work as expected:

- Scenario 1:

Current running config:

```
controller Oms R/S/I/P
  egress-ampli-gain-range extended
  egress-ampli-gain <gain value in
extended mode>
```

New applied config:

```
controller Oms R/S/I/P
  no egress-ampli-gain-range extended
  commit
```

- Scenario 2:

Current running config:

```
controller Oms R/S/I/P
  egress-ampli-gain-range extended
  egress-ampli-gain <gain value in
extended mode>
```

New applied config:

```
controller Oms R/S/I/P
  egress-ampli-gain-range Normal
  commit
```

- Scenario 3:

Current running config:

```
controller Oms R/S/I/P
  egress-ampli-gain <gain value in normal
mode>
```

		<p>New applied config:</p> <pre>controller Oms R/S/I/P egress-ampli-gain-range extended commit</pre> <p>The following is another example scenario that involves commit-replace command where you replace the existing gain configuration that does not have explicitly configured gain-range, with new gain-range and gain value.</p> <p>Scenario 4:</p> <p>Current running config:</p> <pre>controller Oms R/S/I/P egress-ampli-gain &lt;gain value in normal mode&gt;</pre> <p>New applied config:</p> <pre>...... controller Oms R/S/I/P egress-ampli-gain-range extended egress-ampli-gain &lt;gain value in extended mode&gt; commit replace</pre>
EDFA-ADD Gain	<pre>controller Oms R/S/I/P egress-ampli-gain &lt;val in 0.1 dB&gt;</pre>	This is used for configuring gain for the EDFA located on the COM-Tx port. If the gain is not configured, then a default value is used by the system. The <b>show controller oms</b> output can be used for finding the applied gain.
EDFA-DROP Control Mode	<pre>controller Oms R/S/I/P ingress-ampli-mode power-control</pre>	<p>The default mode is gain-control.</p> <p>Use this command to change the mode to power-control mode.</p> <p>You can delete this configuration to revert to gain-control mode.</p>
EDFA-DROP Power	<pre>controller Oms R/S/I/P ingress-ampli-power &lt;vale in 0.1 dBm&gt;</pre>	This is the target output power configuration for the EDFA located on COM-Rx. If the output power is not configured, then a default value is used by the system. You can find the applied target output power by using the <b>show controller oms</b> output.
EDFA-DROP Gain	<pre>controller Oms R/S/I/P ingress-ampli-gain &lt;val in 0.1 dB&gt;</pre>	This is used for configuring gain for the EDFA located on the COM-Rx port. If the gain is not configured, then a default value is used by the system. The <b>show controller oms</b> output can be used for finding the applied gain.

## Configure Controller Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards

VoA Attenuation	controller Oms R/S/I/P tx-voa-attenuation <val in 0.1 dB> rx-voa-attenuation <val in 01. dB>	This is used to configure VoA attenuation for COM-Tx and COM-Rx ports. The system picks a default value if the gain is not configured. The <b>show controller oms</b> output can be used for finding the applied attenuation.
Shutdown (COM Port)	controller Oms R/S/I/P shutdown	COM-Tx and Rx ports are put in Out of Service (OOS) when this command is executed. This turns off the EDFA devices on both COM-Tx and COM-Rx ports and the respective alarms are masked.  Here the default value is 'unshut'.
Shutdown (Ch Ports)	controller Och R/S/I/P shutdown	The channel port will be marked as out-of-service.

### Configure Operational Parameters

The different operational parameters supported are given below.

**Table 16: Operational Parameters**

Parameter	CLI	Description
Photo Diodes (COM Port)	<b>OMS Controller</b>  Tx Power and Rx Power	Rx Power = Inband power + OOB  Tx Power = Inband power + OOB  It reports the power transmitted and received on the OMS port. The OOB power received on COM-Rx is looped back to COM-Tx with some loss due to the insertion-loss on the loop back path.
Photo Diodes (CH Ports)	<b>OCH Controller</b>  Tx Power and Rx Power	It reports the power transmitted and received on the channel ports.
Amplifier Parameters	<b>OMS Controller</b>  Ingress Ampli Mode Ingress Ampli Gain Ingress Ampli Tilt Ingress Ampli OSRI Egress Ampli Mode Egress Ampli Gain Egress Ampli Tilt Egress Ampli Gain Range Egress Ampli OSRI Egress Ampli BR Power Egress Ampli BR Ratio	Egress and ingress amplifier parameters.

VoA Parameters	<b>OMS Controller</b> Tx VoA Attenuation and Rx VoA Attenuation	VoA attenuation parameters.
----------------	--	-----------------------------

### Configure Optical Safety Parameters

Use the following parameters for configuring optical safety.

*Table 17: Optical Safety Parameters*

Parameter	CLI	Description
OSRI	controller Oms R/S/I/P egress-ampli-osri ingress-ampli-osri	Use this configuration to enable or Disable Optical Safety Remote Interlock (OSRI) on the amplifiers located on COM-Tx and COM-Rx ports. The default value is 'Off'. The <b>show controller oms</b> output can be used for finding the OSRI configuration and status.

## Configure Controller Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards

## CHAPTER 4

# Performance Monitoring

Performance monitoring (PM) parameters are used by service providers to gather, store, set thresholds for, and report performance data for early detection of network issues. You can configure and retrieve PM counters for the various controllers in 30 second, 15-minute, or 24-hour flex-bin intervals. These parameters simplify troubleshooting operations and enhance data that can be collected directly from the equipment.

- [Performance Monitoring, on page 99](#)
- [Performance Monitoring for NCS1K14-2.4T-X-K9 Card, on page 119](#)
- [Performance Monitoring for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards, on page 119](#)
- [Configuring PM Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards, on page 120](#)

## Performance Monitoring

Performance monitoring (PM) parameters are used by service providers to gather, store, set thresholds for, and report performance data for early detection of network issues. You can configure and retrieve PM counters for the various controllers in 30 second, 15-minute, or 24-hour flex-bin intervals. These parameters simplify troubleshooting operations and enhance data that can be collected directly from the equipment.

## Configuring PM Parameters

You can configure and view the performance monitoring parameters for the Optics, Ethernet, odu-flex, and coherent DSP controllers.

To configure PM parameters, use the following commands.

**configure**

```
show controller controller-type R/S/I/P { pm { current | history } { 30-sec 15-min || 24-hour } { optics | ether | fec | otn | prbs } linenumbers }
```

**commit**

```
show controller controller-type R/S/I/P { pm { current | history } { 30-sec 15-min || 24-hour } { flex-bin } { optics } linenumbers }
```

## Examples

The following is a sample in which the performance monitoring parameters of Optics controller are configured for 24-hour intervals.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller optics 0/0/1/5 pm 24-hour optics threshold osnr max
345
RP/0/RP0/CPU0:ios(config)#commit

RP/0/RP0/CPU0:RINode1#configure
Tue Feb 25 17:52:54.320 IST
RP/0/RP0/CPU0:RINode1(config)#controller och 0/5/0/8 pm 24-hour optics threshold opr min
-30
RP/0/RP0/CPU0:RINode1(config)#commit
```

The following is a sample in which the performance monitoring parameters of the Ethernet controller are configured for 15-minute intervals.

```
RP/0/RP0/CPU0:chassisA164(config)#controller fourHundredGigECtrlr 0/1/0/4 pm 15-min ether
threshold rx-pkt 1

RP/0/RP0/CPU0:RINode1#configure
Tue Feb 25 17:51:18.353 IST
RP/0/RP0/CPU0:RINode1(config)#controller och 0/5/0/8 pm 15-min optics threshold opr min -30

RP/0/RP0/CPU0:RINode1(config)#commit
Tue Feb 25 17:52:02.504 IST
```

The following is a sample in which performance monitoring parameters of Coherent DSP controller are configured for 30-second intervals.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:ios(config)#controller coherentDSP 0/0/0/7 pm 30-sec fec threshold post-fec-ber
max OE-15
RP/0/RP0/CPU0:ios(config)#commit

RP/0/RP0/CPU0:RINode1#configur

### Viewing PM Parameters

To view the performance monitoring parameters for Optics, Ethernet, and Coherent DSP controllers, use the following command:

```
show controllers controller-type R/S/I/P { pm { current | history } { 30 sec | 15-min | 24-hour } { optics | ether | fec | otn | prbs} linenumbers }
```

```
show controllers controller-type R/S/I/P { pm { current | history } { 30 sec | 15-min | 24-hour } { optics} linenumbers }
```

**Example 1:** The following command displays the current performance monitoring parameters of the Optics controller with 15-minute intervals:

```
RP/0/RP0/CPU0:ios#show controller optics 0/1/0/3 pm current 15-min optics 3
Fri Sep 22 13:53:37.120 IST
```

```
Optics in the current interval [13:45:00 - 13:53:37 Fri Sep 22 2023]
```

## Instantaneous Q-Margin

### Scenarios on Instantaneous Q-margin

In the following scenarios, the initial few PM buckets are displayed as valid although the instantaneous Q-margin values are displayed as invalid in those buckets. The PM is performed for 30 sec, 15 mins, and 24 hours, respectively.

- Shutdown or no shutdown on optics
- Trunk rate change
- Fiber cut

To overcome such situations, avoid the initial PM bucket readings while monitoring the instantaneous Q-margin values for these scenarios.

The following sample illustrates that the initial PM bucket readings for specified scenarios are invalid and at a later point the PM buckets readings are valid although the instantaneous Q-margin value is invalid.

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/2/0/0 pm history flex-bin fec 1
Fri Sep 22 14:17:01.008 IST

g709 FEC in interval 1 [14:16:50 - 14:17:00 Fri Sep 22 2023]
```

Flexible bin interval size: 10 seconds

```
FEC history bucket type : Valid
  EC-BITS   : 25615718133          UC-WORDS   : 0
```

	MIN	AVG	MAX
PreFEC BER	3.37E-03	3.49E-03	3.90E-03
PostFEC BER	0E-15	0E-15	0E-15
Q	8.60	8.60	8.60
Q_margin	2.50	2.56	2.60
Instantaneous Q_margin	2.20	2.20	2.20

Now, the PM buckets are valid although the instantaneous Q-margin value is invalid.

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/2/0/0 pm history 30-sec fec 1
Sep 22 08:52:03.750 UTC
```

```
g709 FEC in interval 1 [08:51:50 - 08:52:00 Fri Sep 22 2023]
```

```
FEC history bucket type : Invalid
  EC-BITS   : 35072302421          UC-WORDS   : 0
```

	MIN	AVG	MAX
PreFEC BER	5.20E-03	5.30E-03	5.64E-03
PostFEC BER	0E-15	0E-15	0E-15
Q	8.10	8.10	8.10
Q_margin	2.10	2.10	2.10
Instantaneous Q_margin	1.80	1.80	1.80

### Clearing PM Parameters

To clear the performance monitoring parameters for Ethernet and Coherent DSP controllers, use this command:

**clear controller controller-type R/S/I/P pm**

**Example 1:** Clears the PM parameters on the Coherent DSP controller.

```
RP/0/RP0/CPU0:ios#show controller coherentDSP 0/0/0/0 pm current 15-min fec
Fri Sep 22 14:28:12.100 IST
```

```
g709 FEC in the current interval [14:15:00 - 14:28:12 Fri Sep 22 2023]
```

```
FEC current bucket type : Valid
  EC-BITS   : 1159814176244          Threshold : 540000000000000          TCA(enable)   :
YES
  UC-WORDS   : 0                      Threshold : 5                      TCA(enable)   :
YES
```

Threshold	TCA	MIN	Avg	MAX	Threshold	TCA
(max)	(enable)				(min)	(enable)
PreFEC BER	NO	: 0E-15	2.14E-03	2.28E-02	0E-15	NO
PostFEC BER	NO	: 0E-15	1.37E-10	6.59E-08	0E-15	NO

```

**Note** Performance monitoring statistics are not supported for the input unicast packets, output unicast packets, and input error fragments counters for Ethernet clients.

### PM History Persistence

PM history parameters for Optics, Ethernet, and coherent DSP controllers are retained even after a line card cold reload, line card warm reload, XR reload, Calvados reload, RP reload, Hw-module all reload, power cycle, or upgrade of the NCS 1014 chassis.

After a software upgrade to the latest release, you can view the history performance monitoring parameters from the previous release. The PM history persistence is supported for 30-second, 15-minute, and 24-hour bucket types.

However, the following list describes the time that is required to fill all historical buckets of each bucket type, later while fetching PM historical data, no error appears.

- For 30-second bucket type, 15 minutes is required to fill 30 historical buckets.
- For 15-minute bucket type, 8 hours is required to fill 32 historical buckets.
- For 24-hour bucket type, 24 hours is required to fill 7 historical bucket.

PM counters are updated continuously in current bucket for all bucket types (flex, 30-second, 15-minute, and 24-hour). After the timer expires for the respective bucket type, the current PM data is moved to the historical PM bucket. This process of moving PM data to the historical bucket is called Rollover. After rollover, you can access the current PM data as historical PM data.

In case of deletion or removal of the controller, the PM data is persistent for 3 hours. Unless the controller is brought up within 3 hours, the PM data is cleared because the controller is considered to be not in use.

### Limitations

If NCS 1014 reload happens during the rollover time, one of the following scenarios occurs:

- Complete PM bucket is missing and the next PM bucket is marked as *Invalid*.

- PM bucket expiry message appears as follows:

```
RP/0/RP0/CPU0:ios#show controllers hundredGigECtrlr 0/3/0/2/2 pm history 30-sec ether
29
Fri Apr 1 01:32:20.646 UTC
History data is empty, Verify at least one collection period is expired
```

- PM bucket interval is marked as *Invalid* and counters are updated as zero.
- PM bucket interval is marked as *Invalid* and counters are updated as nonzero.

## Performance Monitoring for NCS1K14-2.4T-X-K9 Card

Performance monitoring (PM) parameters are used by service providers to gather, store, set thresholds for, and report performance data for early detection of network issues. You can configure and retrieve PM counters for 30-second, 15-minute, or 24-hour intervals. These parameters simplify troubleshooting operations and enhance data that can be collected directly from the equipment.

### Limitations

On the 2.4TX card in the muxponder mode, PM parameters do not show the Runt and invalid Start Frame Delimiter (SFD) values for the split ports 2 and 3 for 600G and 1000G trunk rates respectively.

## Performance Monitoring for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards

**Table 18: Feature History**

Feature Name	Release Information	Feature Description
Supported Functionalities of CCMD-16-C and CCMD-16-L Line Cards	Cisco IOS XR Release 7.11.1	Supported Functionalities of CCMD-16-C and CCMD-16-L Line Cards: The software supports Variable Optical Attenuator (VoA), power monitoring and reporting of parameters to the controllers at the OCH and OMS level. It helps in configuring the amplifier parameters for optimizing signal transmissions.  The software also supports in-band and out-of-band tone detection and monitoring and reporting of alarms.

Performance monitoring (PM) parameters are used by service providers to gather, store, set thresholds for, and report performance data for early detection of network issues. You can configure and retrieve PM counters for the OCH and OMS controllers in 30-second, 15-minute, 24-hour intervals or in 10-second flexible bin

interval. These parameters simplify troubleshooting operations and enhance data that can be collected directly from the equipment.

### PM Parameters Supported on OMS Controller

The PM parameters that are supported on OMS controller are given below.

**Table 19: PM Parameters Supported on OMS Controller**

Controller	Supported PM Parameters	Description
OMS	OPT (dBm)	Transmitted power
	OPR (dBm)	Received Power
	OPBR (dBm)	Back Reflection Power
	OPBRR (dB)	Back Reflection Ratio
	EAGN (dB)	Egress Ampli Gain
	EATL (dB)	Egress Ampli Tilt
	IAGN (dB)	Ingress Ampli Gain
	IATL (dB)	Ingress Ampli Tilt

### PM Parameters Supported on OCH Controller

The PM parameters that are supported on OCH controller are given below.

Controller	Supported PM Parameters	Description
OCH	OPT (dBm)	Transmitted Power
	OPR (dBm)	Received Power

## Configuring PM Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards

You can configure and view the performance monitoring parameters for the OMS and OCH controllers.

To configure minimum and maximum threshold for individual parameters, use the following commands.

**configure**

```
controller controller-type R/S/I/P pm {30-sec | 15-min | 24-hour} optics threshold { parameter-name } {max|min} {value}
```

**commit**

To enable reporting of threshold crossing alarms for individual parameters, use the following commands.

**configure**

```
controller controller-type R/S/I/P pm {30-sec | 15-min | 24-hour} optics report { parameter-name } {min-tca|max-tca}
```

**commit**

### Examples

The following is a sample with the performance monitoring parameters of OMS controller.

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:(config)#controller oms 0/1/0/0 pm 30-sec optics threshold opt min < value >
RP/0/RP0/CPU0:ios(config)#commit
```

The following is a sample with the performance monitoring parameters of OCH controller

```
RP/0/RP0/CPU0:ios#configure
RP/0/RP0/CPU0:(config)#controller och 0/1/0/1 pm 30-sec optics threshold opt min < value >
RP/0/RP0/CPU0:ios(config)#commit
```

### Viewing PM Parameters

To view the performance monitoring parameters for OMS and OCH controllers, use this command:

```
show controllers controller-type R/S/I/P pm { current | history } { 30 sec | 15-min | 24-hour | flex-bin }
optics { linenumber }
```

This example shows how to view PM parameters for OMS controller.

#### Example

```
RP/0/RP0/CPU0:Tethys_P2A_DT_03#show controllers oms 0/1/0/0 pm current 30-sec optics 1

Optics in the current interval [15:02:30 - 15:02:36 Mon Nov 20 2023]

Optics current bucket type : Valid
      MIN      AVG      MAX      Operational      Configured      TCA      Operational
      Configured      TCA
      Threshold(max)  (max)
      Threshold(min)  (min)  Threshold(max)

OPT[dBm]   : -8.30    -8.24    -8.20    -50.00      NA      NO     30.00
              NA        NO
OPR[dBm]   : -1.80    -1.76    -1.60    -50.00      NA      NO     30.00

OPBR[dBm]  : -11.61   -11.61   -11.61   -50.00      NA      NO    -10.00
              NA        NO
OPBRR[dB]  : -3.30    -3.30    -3.30    -50.00      NA      NO     0.00
              NA        NO
EAGN[dB]   : 2.00     2.00     2.00     -3.00      NA      NO    22.00
              NA        NO
EATL[dB]   : 0.00     0.00     0.00     -6.50      NA      NO     6.50
              NA        NO
IAGN[dB]   : 5.00     5.00     5.00     0.00      NA      NO    10.00
              NA        NO
IATL[dB]   : 0.00     0.00     0.00     -6.50      NA      NO     6.50
              NA        NO
```

Last clearing of "show controllers OPTICS" counters never

### View PM Parameters for OCH Controller

Examples for viewing PM parameters for OCH controller are given below:

#### Example 1

## Configuring PM Parameters for NCS1K14-CCMD-16-C and NCS1K14-CCMD-16-L Cards

```
RP/0/RP0/CPU0:Tethys_P2A_DT_03#show controllers och 0/1/0/2 pm current 30-sec optics 1
Optics in the current interval [15:04:30 - 15:04:39 Mon Nov 20 2023]
Optics current bucket type : Valid
MIN AVG MAX Operational Configured TCA Operational Configured TCA
Threshold(min) Threshold(min) (min) Threshold(max) Threshold(max) (max)
OPT[dBm] : -1.40 -1.36 -1.30 -50.00 NA NO 30.00 NA NO
OPR[dBm] : -5.80 -5.71 -5.70 -50.00 NA NO 30.00 NA NO
```

### Example 2

```
RP/0/RP0/CPU0:Tethys_P2A_DT_03#show controllers och 0/1/0/2 pm current 15-min optics 1
Optics in the current interval [15:00:00 - 15:05:03 Mon Nov 20 2023]
Optics current bucket type : Valid
MIN AVG MAX Operational Configured TCA Operational Configured TCA
Threshold(min) Threshold(min) (min) Threshold(max) Threshold(max) (max)
OPT[dBm] : -1.80 -1.50 -1.30 -50.00 NA NO 30.00 NA NO
OPR[dBm] : -5.80 -5.75 -5.70 -50.00 NA NO 30.00 NA NO
Last clearing of "show controllers OPTICS" counters never
```

## Viewing PM History Parameters

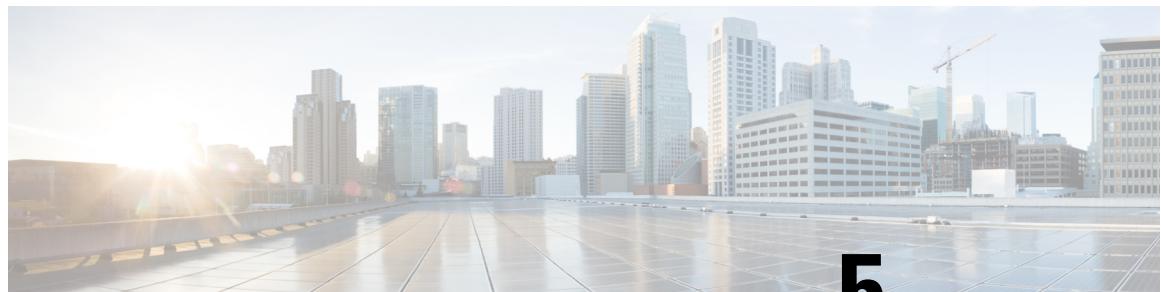

To view the performance monitoring parameters for OMS and OCH controllers, use this command:

```
show controllers controllertype R/S/I/P pm history { 30 sec | 15-min | 24-hour }[ optics { lanenumber } ]
```

### Example 2

The following example shows how you can view the historical PM parameters on a OMS controller for the 30 seconds interval.

```
RP/0/RP0/CPU0:Tethys_P2A_DT_02#show controllers oms 0/3/0/0 pm history 30-sec optics 1
bucket 1
Wed Dec 6 11:04:50.821 UTC
Optics in interval 1 [11:04:00 - 11:04:30 Wed Dec 6 2023]
Optics history bucket type : Valid
MIN AVG MAX
OPT[dBm] : -8.30 -8.27 -8.20
OPR[dBm] : -3.00 -1.62 -0.20
OPBR[dBm] : -11.61 -11.61 -11.51
OPBRR[dB] : -3.40 -3.31 -3.30
EAGN[dB] : 2.00 2.00 2.00
EATL[dB] : 0.00 0.00 0.10
IAGN[dB] : 5.00 5.00 5.00
IATL[dB] : 0.00 0.00 0.00
```

## CHAPTER 5

# Pseudo Random Binary Sequence

- Pseudo Random Binary Sequence, on page 123

## Pseudo Random Binary Sequence

The Pseudo Random Binary Sequence (PRBS) feature enables data integrity checks between NCS1014 trunk and client links without generating client traffic.

To ensure that the traffic is error-free during link bring up without relying on the peer port, you must enable the PRBS feature on both the transmitting and receiving ports of your NCS 1014 trunk. The transmitting trunk port creates a bit pattern and sends it to the peer NCS 1014 device. The device then confirms if the sent bit pattern is received. The 1.2T card supports PRBS on the ODU4 controller.

You can configure PRBS on the NCS 1014 trunk and client ports of a 1.2T and 2.4T1.2T, 2.4T, and 2.4TX cards.

- **Source mode** — The NCS 1014 at trunk port generates PRBS signal on the line continuously as per the configured PRBS pattern.
- **Sink mode** — The NCS 1014 at trunk port gets locked to the ingress signal according to the configured pattern, analyzes and reports the errors.
- **Source-Sink mode** — The NCS 1014 at trunk port acts as both the PRBS transmitter and receiver, that is, it generates PRBS signal as per the configured pattern, and also gets locked to the ingress signal with the same pattern, and reports the errors.

## Configure Pseudo Random Binary Sequence

You can configure PRBS on a coherentDSP or Ethernet controller of a 1.2T or 2.4T cards. PRBS can also be configured on a ODU controller of the 1.2T card. Before enabling PRBS, the secondary admin state of the controllers must be set to *maintenance*.

### Configure PRBS on CoherentDSP Controller

To configure PRBS on the trunk port of the coherentDSP controller of a 1.2T or 2.4T 1.2T, 2.4T, or 2.4TX card, use the following configuration commands in the configuration mode:

**controller coherentDSP R/S/I/P**

**secondary-admin-state maintenance**

## Configure Pseudo Random Binary Sequence

**prbs mode {source | sink | source-sink} pattern {pn31 | pn23 | pn15 | pn7}**

### Example to Configure PRBS on CoherentDSP Controller:

Use the following sample configuration to configure PRBS on trunk ports of a coherentDSP controller :

```
RP/0/RP0/CPU0:ios(config)#controller CoherentDSP 0/0/0/7
RP/0/RP0/CPU0:ios(config-CoDSP)#secondary-admin-state maintenance
RP/0/RP0/CPU0:ios(config-CoDSP)#prbs mode source-sink pattern pn15
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
Wed Nov 15 18:11:55.450 UTC
```

### Configure PRBS on ODU Controller

You can configure PRBS in the following combinations for an ODU controller on a 1.2T card. The client ports need to have a physical loopback in all the combinations.

- Near End client and Near End trunk ODU4
- Near End client and Far End client ODU4
- Near End client and Far End trunk ODU4
- Near End trunk and Far End trunk ODU4

To enable PRBS on ODU4 controller's trunk ports of a 1.2T card, use these commands in configuration mode:

**controller odu4 R/S/I/P**

**secondary-admin-state maintenance**

**opu prbs mode {source | sink | source-sink} pattern {pn31 | pn23 | pn15 | pn7}**

Example to Configure PRBS on ODU Controller:

Following is an example to configure PRBS on client ports of an ODU controller of a 1.2T card:

```
RP/0/RP0/CPU0:ios(config)#controller odu4 0/0/0/4
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#prbs mode source-sink pattern pn23
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit
```

### Configure PRBS on Ethernet Controller

To configure PRBS on the client ports of an Ethernet controller of a 2.4T card, use the following commands in the configuration mode:

**controller {fourHundredGigECtrlr} R/S/I/P**

**secondary-admin-state maintenance**

**opu prbs mode {source | sink | source-sink} pattern {pn31 | pn23 }**

Example to Configure PRBS on Ethernet Controller:

Following is an example to configure PRBS on client ports of an Ethernet controller of a 2.4T card:

```
RP/0/RP0/CPU0:ios(config)#controller FourHundredGigECtrlr 0/3/0/1
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#prbs mode source-sink pattern pn31
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit
```

## Verifying PRBS

You can monitor the status of Pseudo Random Binary Sequence (PRBS) using the following command:

```
show controllers coherentDSP | ODU4 | fourHundredGigEctrllr R/S/I/P prbs-details
```

### Example to view PRBS details on Ethernet controller

Use the following sample configuration to display PRBS details configured on an Ethernet controller:

```
RP/0/RP0/CPU0:ios#show controllers fourHundredGigEctrllr 0/0/0/4
Wed Nov 15 18:39:29.478 UTC
Operational data for interface FourHundredGigEctrllr0/0/0/4:

State:
    Administrative state: enabled
    Operational state: Up
    LED state: Green On
    Maintenance: Enabled
    AINS Soak: None
        Total Duration: 0 hour(s) 0 minute(s)
        Remaining Duration: 0 hour(s) 0 minute(s) 0 second(s)

PRBS:
    Status: Locked
    Mode: Source-sink
    Pattern: PN23
    Direction: Line
    Framing: Framed
    Laser Squelch: Disabled
    Insert Idle Ingress: Disabled
    Insert Idle Egress: Disabled

Phy:

    Forward error correction: Standard (Reed-Solomon)
    Holdoff Time: 0ms
```

## Viewing PRBS Performance Monitoring Parameters

### Example to view PRBS details on CoherentDSP controller

Use the following sample configuration to display PRBS details configured on a coherentDSP controller:

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/0/0/7 prbs-details
Wed Nov 15 18:13:35.210 UTC

-----PRBS details-----
PRBS Test : Enable
PRBS Mode : Source-Sink
PRBS Pattern : PN15
PRBS Status : Locked
```

### Example to view PRBS details on ODU controller

Use the following sample configuration to display PRBS details configured on an ODU controller where the PRBS status is displayed as **Not Applicable**, when the mode is **Source**.

```
RP/0/RP0/CPU0:ios#show controllers ODU4 0/3/0/8 prbs-details
Mon Jan 11 05:29:12.436 UTC

-----PRBS details-----
PRBS Test : Enable
PRBS Mode : Source
PRBS Pattern : PN7
PRBS Status : Not Applicable
```

## Viewing PRBS Performance Monitoring Parameters

To view the PRBS performance monitoring parameters on a coherentDSP, ODU, or Ethernet controller, use the following command:

**show controllers coherentDSP | ODU4 R/S/I/P pm {current | history } {15-min|24-hour} prbs**

Following is an example of how to view the cumulative count of PRBS bit errors in the 15-min sampling interval on a CoherentDSP controller:

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/0/0/7 pm current 15-min prbs
Wed Nov 15 18:19:10.308 UTC

PRBS in the current interval [18:15:00 - 18:19:10 Wed Nov 15 2023]

PRBS current bucket type : Valid

EBC : 0 Threshold : 0 TCA(enable) : NO
FOUND-COUNT : 0 Threshold : 0 TCA(enable) : NO
LOST-COUNT : 0 Threshold : 0 TCA(enable) : NO

FOUND-AT-TS : NULL
LOST-AT-TS : NULL

CONFIG-PTRN : PRBS_PATTERN_PN15
STATUS : LOCKED

Last clearing of "show controllers OTU" counters never
```

Following is an example of how to view PRBS performance monitoring parameters for a 15-minute sampling interval on an ODU controller:

```
RP/0/RP0 ios#show controllers ODU4 0/3/0/1 pm current 15-min prbs
Mon Jan 11 00:58:48.327 UTC

PRBS in the current interval [00:45:00 - 00:58:48 Mon Jan 11 2021]
PRBS current bucket type : Valid
EBC : 40437528165
FOUND-COUNT : 1 FOUND-AT-TS : 00:51:22 Mon Jan 11 2021
LOST-COUNT : 1 LOST-AT-TS : 00:52:52 Mon Jan 11 2021
CONFIG-PTRN : PRBS_PATTERN_PN7
Last clearing of "show controllers ODU" counters never
```

The following tables describes the fields of PRBS PM parameters.

Following is an example of how to view PRBS performance monitoring parameters for a 15-minute sampling interval on an Ethernet controller:

```
RP/0/RP0/CPU0 ios#show controllers fourHundredGigEctrlr 0/0/0/4 pm current 15-min prbs
Wed Nov 15 18:48:19.114 UTC

PRBS in the current interval [18:45:00 - 18:48:19 Wed Nov 15 2023]
PRBS current bucket type : Valid

EBC : 0 Threshold : 0 TCA(enable) : NO
FOUND-COUNT : 0 Threshold : 0 TCA(enable) : NO
LOST-COUNT : 0 Threshold : 0 TCA(enable) : NO

FOUND-AT-TS : NULL
LOST-AT-TS : NULL

CONFIG-PTRN : PRBS_PATTERN_PN23
STATUS : LOCKED

Last clearing of "show controllers ETHERNET" counters never
```

The following tables describes the fields of PRBS PM parameters.

**Table 20: PRBS PM Parameters**

PM Parameter	Description
EBC	Cumulative count of PRBS bit errors in the sampling interval (15-minute or 24-hour). PRBS bit errors are accumulated only if PRBS signal is locked.
FOUND-COUNT	Number of state transitions from signal unlocked state to signal locked state in the sampling interval. If state change is not observed in the interval, the count is 0.
LOST-COUNT	Number of state transitions from signal locked state to signal unlocked state in the sampling interval. If state change is not observed in the interval, the count is 0.

**Clearing Bit Errors and Lock Time for PRBS**

PM Parameter	Description
FOUND-AT-TS	Latest timestamp when the PRBS state moves from unlocked state to locked state in the sampling interval. If state change is not observed in the interval, the value is null.
CONFIG-PTRN	Configured PRBS pattern on the port.
STATUS	Displays the PRBS status.

**Clearing Bit Errors and Lock Time for PRBS**

Lock time is the time that is elapsed since the last PRBS lock is detected.

The following sample shows that bit errors are observed during the PRBS test:

```
RP/0/RP0/CPU0:ios#show controllers odu4 0/2/0/5 prbs-details
Fri Nov 13 03:21:44.191 UTC
-----
PRBS details-----
PRBS Test : Enable
PRBS Mode : Source-Sink
PRBS Pattern : INVERTED PN31
PRBS Status : Locked
PRBS Direction : Line
PRBS Lock Time(in seconds) : 28
PRBS Bit Errors : 23776
-----
```

To clear the lock time and bit errors before the PRBS test, use the **clear** command:

```
RP/0/RP0/CPU0:ios#clear controller odu4 0/2/0/5 prbs-details
Fri Nov 13 03:21:50.726 UTC
PRBS bit errors cleared
```

The following sample displays the bit errors and lock time are removed.

```
RP/0/RP0/CPU0:ios#show controllers odu4 0/2/0/5 prbs-details

PRBS details-----
PRBS Test : Enable
PRBS Mode : Source-Sink
PRBS Pattern : INVERTED PN31
PRBS Status : Locked
PRBS Direction : Line
PRBS Lock Time(in seconds) : 2
PRBS Bit Errors : 0
```

**Trunk PRBS**

NCS 1014 trunk port supports the following PRBS patterns:

- **PRBS31** — Sequence length is from  $2^{31}-1$  bits.
- **PRBS23** — Sequence length is from  $2^{23}-1$  bits.

- **PRBS15** — Sequence length is from  $2^{15}-1$  bits.
- **PRBS11** — Sequence length is from  $2^{11}-1$  bits.
- **PRBS7** — Sequence length is from  $2^7-1$  bits.

**Note** NCS1K4-2.4T-K9 Interoperability for ethernet PRBS PN23 pattern is not supported.

### Configuring Trunk PRBS on NCS1K4-2.4T-K9

Use the following sample configuration to configure PRBS trunk mode on the NCS1K4-2.4T-K9:

```
RP/0/RP0/CPU0:ios(config)#controller CoherentDSP0/0/0/7
RP/0/RP0/CPU0:ios(config-CoDSP)#secondary-admin-state maintenance
RP/0/RP0/CPU0:ios(config-CoDSP)#prbs mode source-sink pattern pn15
RP/0/RP0/CPU0:ios(config-CoDSP)#commit
Wed Nov 15 18:11:55.450 UTC
```

Use the following sample configuration to display PRBS details:

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/0/0/7 prbs-details
Wed Nov 15 18:13:35.210 UTC

-----PRBS details-----
PRBS Test : Enable
PRBS Mode : Source-Sink
PRBS Pattern : PN15
PRBS Status : Locked
```

Use the following sample configuration to display cumulative count of PRBS bit errors in the 15-min sampling interval:

```
RP/0/RP0/CPU0:ios#show controllers coherentDSP 0/0/0/7 pm current 15-min prbs
Wed Nov 15 18:19:10.308 UTC

PRBS in the current interval [18:15:00 - 18:19:10 Wed Nov 15 2023]

PRBS current bucket type : Valid

EBC : 0 Threshold : 0 TCA(enable) : NO
FOUND-COUNT : 0 Threshold : 0 TCA(enable) : NO
LOST-COUNT : 0 Threshold : 0 TCA(enable) : NO

FOUND-AT-TS : NULL
LOST-AT-TS : NULL

CONFIG-PTRN : PRBS_PATTERN_PN15
STATUS : LOCKED

Last clearing of "show controllers OTU" counters never
```

## Client PRBS

NCS 1014 client port supports the following PRBS patterns:

- **PRBS31** — Sequence length is from  $2^{31}-1$  bits.
- **PRBS23** — Sequence length is from  $2^{23}-1$  bits.

## Configuring Client PRBS on NCS1K4-2.4T-K9

Use the following sample configuration to configure PRBS client mode on the NCS1K4-2.4T-K9:

```
RP/0/RP0/CPU0:ios(config)#controller fourHundredGigECtrlr 0/0/0/4
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#prbs mode source-sink pattern pn23
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#sec-admin-state maintenance
RP/0/RP0/CPU0:ios(config-eth-ctrlr)#commit
```

Use the following sample configuration to display four hundred gigabit client controllers details:

```
RP/0/RP0/CPU0:ios#show controllers fourHundredGigECtrlr 0/0/0/4
Wed Nov 15 18:39:29.478 UTC
Operational data for interface FourHundredGigECtrlr0/0/0/4:

State:
  Administrative state: enabled
  Operational state: Up
  LED state: Green On
  Maintenance: Enabled
  AINS Soak: None
    Total Duration: 0 hour(s) 0 minute(s)
    Remaining Duration: 0 hour(s) 0 minute(s) 0 second(s)
PRBS:
  Status: Locked
  Mode: Source-sink
  Pattern: PN23
  Direction: Line
  Framing: Framed
  Laser Squelch: Disabled
  Insert Idle Ingress: Disabled
  Insert Idle Egress: Disabled

Phy:
  Media type: Not known
