

Troubleshooting Deployment Issues

If you experience any errors when you deploy the Cisco Catalyst 8000V instance and want to perform some basic troubleshooting steps:

1. Check the status of your instance and the available IP public address.
2. Go to the console and access the console log.
3. Check the snapshot of the bootlog.
4. Navigate to the file in the `/tmp/bootstrap` folder to access the logs and check for errors, if any.

For generic issues related to Cisco Catalyst 8000V, see the [Troubleshooting Guide for Cisco Catalyst 8000V Edge Software](#).
