Preface

This preface describes the objectives, audience, organization, and conventions of this guide and describes related documents that have additional information. The sections are:

- Preface, on page 1

Objective

This guide provides an overview and explains how to install and connect the Cisco IR1101.

Audience

This guide is intended for people who have a high level of technical ability, although they may not have experience with Cisco software.

Conventions

This section describes the conventions used in this guide.

NOTE: Means reader take note. Notes contain helpful suggestions or references to additional information and material.

CAUTION: This symbol means reader be careful. In this situation, you might do something that could result in equipment damage or loss of data.

TIP: Means the following information will help you solve a problem. The tip information might not be troubleshooting or even an action, but could be useful information.

WARNING: IMPORTANT SAFETY INSTRUCTIONS Means danger. You are in a situation that could cause bodily injury. Before you work on any equipment, be aware of the hazards involved with electrical circuitry and be familiar with standard practices for preventing accidents. Use the statement number provided at the end of each warning to locate its translation in the translated safety warnings that accompanied this device.

**Upozorenje**

**VAŽNE SIGURNOSNE NAPOMENE**

Ovaj simbol upozorenja predstavlja opasnost. Nalazite se u situaciji koja može prouzrokovati tjelesne ozljede. Prije rada s bilo kojim uređajem, morate razumjeti opasnosti vezane uz električne sklopopove, te biti upoznati sa standardnim načinima izbjegavanja nesreća. U prevedenim sigurnosnim upozorenjima, priloženima uz uređaj, možete prema broju koji nalazi uz pojedino upozorenje pronaći i njegov prijevod.

**SAČUVAJTE OVE UPUTE**

**Upozornění**

**DŮLEŽITÉ BEZPEČNOSTNÍ POKyny**

Tento upozorňující symbol označuje nebezpečí. Jste v situaci, která by mohla způsobit nebezpečí úrazu. Před prací na jakémkoliv vybavení si uvědomte nebezpečí související s elektrickými obvody a seznámte se se standardními opatření pro předcházení úrazů. Podle čísla na konci každého upozornění vyhledejte jeho překlad v přeložených bezpečnostních upozorněních, která jsou přiložena k zařízení.

**USCHOVEJTE TÝTO POKyny**

**Преиздотоиша**

**ΣΗΜΑΝΤΙΚΕΣ ΟΔΗΓΙΕΣ ΑΣΦΑΛΕΙΑΣ**

Αυτό το προειδοποιητικό σύμβολο σημαίνει κίνδυνο. Βρίσκονται σε κατάσταση που μπορεί να προκαλέσει τραυματισμό. Πριν εργαστεί σε οποιοδήποτε ηλεκτρικό, να έχετε υπόψη σας το κίνδυνο που σχετίζονται με τα ηλεκτρικά κυκλώματα και να έχετε εξοικειωθεί με τις συνήθεις πρακτικές για την αποφυγή στυχημάτων. Χρησιμοποιήστε τον αριθμό δηλώσεως που παρέχεται τέλος κάθε προειδοποίησης, για να εντοπίσετε τη μεταφρασή της στής μεταφρασμένες προειδοποιητικές οδηγίες που συνοδεύουν τη συσκευή.

**ΦΥΛΑΞΤΕ ΑΥΤΕΣ ΤΙΣ ΟΔΗΓΙΕΣ**

**بصائح الشروط**

参阅第此条款。它概述了所有有关电器设备的相关标准。如果你atries to use electriκ tools, please make sure they are safe for use and follow the correct procedures. Unplug them before handling them to avoid accidents. Discuss with your friend who is working on the same equipment to ensure safety and correctness.

**Σημαντικές Οδηγίες Ασφαλείας**

**Opomena**

**ВАЖНИЕ БЕЗБЕДНОСНИ НАПАТСТВИЈА**

Симбол за предупредување значи опасност. Се наоѓа во ситуација што се наоѓа во крај на секое предупредување за да го најдете неговото период во предвидено безбедно предупредување што се испорачани со уредот.

<td>Read the installation instructions before connecting the system to the power source. <strong>Statement 1004</strong></td>
</tr>
</tbody>
</table>
Warning: To avoid electric shock, do not connect safety extra-low voltage (SELV) circuits to telephone-network voltage (TNV) circuits. LAN ports contain SELV circuits, and WAN ports contain TNV circuits. Some LAN and WAN ports both use RJ-45 connectors. Use caution when connecting cables. **Statement 1021**

Warning: This equipment must be grounded. Never defeat the ground conductor or operate the equipment in the absence of a suitably installed ground conductor. Contact the appropriate electrical inspection authority or an electrician if you are uncertain that suitable grounding is available. **Statement 1024**

Warning: Connect the unit only to DC power source that complies with the safety extra-low voltage (SELV) requirements in IEC 60950 based safety standards. **Statement 1033**

Warning: When installing or replacing the unit, the ground connection must always be made first and disconnected last. **Statement 1046**

Warning: Do not locate the antenna near overhead power lines or other electric light or power circuits, or where it can come into contact with such circuits. When installing the antenna, take extreme care not to come into contact with such circuits, because they may cause serious injury or death. For proper installation and grounding of the antenna, please refer to national and local codes (for example, U.S.:NFPA 70, National Electrical Code, Article 810, Canada: Canadian Electrical Code, Section 54). **Statement 1052**

Warning: No user-serviceable parts inside. Do not open. **Statement 1073**

Warning: Installation of the equipment must comply with local and national electrical codes. **Statement 1074**

Warning: Only trained and qualified personnel should be allowed to install, replace, or service this equipment. **Statement 1030**

Warning: Ultimate disposal of this product should be handled according to all national laws and regulations. **Statement 1040**
Warning: The covers are an integral part of the safety design of the product. Do not operate the unit without the covers installed. **Statement 1077**

Warning: Hot surface. **Statement 1079**

**Related Documentation**

All of the IR1101 documentation can be found online here:

**Searching Cisco Documents**

To search an HTML document using a web browser, press **Ctrl-F** (Windows) or **Cmd-F** (Apple). In most browsers, the option to search whole words only, invoke case sensitivity, or search forward and backward is also available.

To search a PDF document in Adobe Reader, use the basic Find toolbar (**Ctrl-F**) or the Full Reader Search window (**Shift-Ctrl-F**). Use the Find toolbar to find words or phrases within a specific document. Use the Full Reader Search window to search multiple PDF files simultaneously and to change case sensitivity and other options. Adobe Reader’s online help has more information about how to search PDF documents.
Product Overview

This chapter provides an overview of the features available for the Cisco IR1101 Industrial Integrated Services Router and its Expansion Module. It contains the following sections:

- Product Overview, on page 9

Note

Prior to installing this device read the Regulatory Compliance and Safety Information.

General Description

The Cisco IR1101 Industrial Integrated Services Router is a next generation modular industrial router which has a base module with additional Pluggable Modules that can be added. The Pluggable Module provides the flexibility of adding different interfaces to the IR1101 platform, for example, a cellular module.

The IR1101 ISR also has an Expansion Module that adds key capabilities such as dual LTE Pluggables, mSATA SSD FRU, SFP, and Digital GPIO connections.
SKU Information

Table 1 lists the different SKUs available for the Cisco IR 1101.

Cisco IR1101 Series Platform Features

This section describes the different components of the router.

Cisco IR1101 Base Router

The following lists the hardware platform features for the Cisco IR1101.

- **External Power Entry**
  - Nominal: 12 to 48VDC
  - Absolute min/max: 9.6 to 60VDC
  - Typical current: 0.82A to 0.22A
  - Maximum current: 0.91A to 0.28A
  - 4-pin 3.8 mm EURO power connector

- **External Reset/Recovery Push Button**
- **Gigabit Ethernet Combo RJ45+SFP connector.**
  - RJ45 connector will support IEEE802.3 Ethernet over copper wiring standards of 10Base-T, 100Base-TX, and 1000Base-T
  - SFP port will support 1000Base-X or 100Base-FX Fiber Ethernet standard SFP (see the supported list of SFP’s here: SFP Module, page 26)

- **LAN Ports**
  - 4x RJ45 10/100 Fast Ethernet

- **Serial Port**
  - 1 x RJ45 RS232 Port (DTE)

- **USB Ports**
  - 1x USB 2.0 Type A Host Port
  - 1x USB 2.0 mini USB Type B console port

- **Compliance**
  - Class A EMC or better
  - IP30 compliant when vertical and ports downward
  - Industrial temperature [-40°C to +60°C, 13.8Kft (operating), 15Kft (non-operating)]
  - One alarm input

*Figure 2* Shows the IR1101 ISR base router.

**Cisco IRM-1100-SPMI Expansion Module**

Figure 5 shows the IR-1100-SPMI Expansion Module.
The following lists the hardware platform features for the Cisco IR-1100-SPMI:

- 1 GE SFP (see the supported list of SFP’s here: SFP Module, page 26)
- 1 Pluggable slot
- 1 Digital I/O connector
- 1 mSATA SSD slot
Digital I/O Connector

The Digital I/O connector has 4 GPIO connections plus 1 Return connection. The Digital I/O supports Both Dry and Wet contacts up to 60 Volts.

- Dry contact is isolated from a voltage source (or “No Volt”), with an embedded relay function (NPN transistor), usually used to indicate an event. For example: open/close, alarm.
- Wet contact is a contact with external power (+3.3V to +60V, max 150mA of current allowed at high voltage) applied, usually used to energize something. For example: solenoid, light.

Figure 7 shows the connector.

Note

Digital I/O is only supported on IOS-XE version 16.12.1 and above.

Note

The default state of the Digital I/O is input, the open-collector is open (off).

The pinouts for the Digital I/O are described in Table 2.

<table>

</table>

Common features of the Digital I/O are:

- Withstands up to 60V applied at the terminal.
- Reverse voltage protected and causes no damage to the equipment.
- Digital input and output can coexist on different channel.
- LED Indicator: provision-able, On: Active, Off: Non-active.
- Electrical isolation: 2000 VDC.
- 4kV Surge protected (IEC 61000-4-5).
IR-1100-SPMI Expansion Module LEDs

There are 6 LEDs in the Expansion Module. Four LEDs show the status of digital input and output. One LED shows the SFP port status and one LED shows the mSATA status. The LED behavior is shown in Table 5.

Cisco IR-1100-SP Expansion Module

The IR-1100-SP Expansion Module is the same as the IR-1100-SPMI module, without the Digital I/O and mSATA components.

The following lists the hardware platform features for the Cisco IR-1100-SP:

- 1 GE SFP (see the supported list of SFP’s here: SFP Module, page 26)
- 1 Pluggable slot

Cisco Pluggable Module

The Pluggable Module provides the flexibility of adding different interfaces to the IR1101 platform, for example, a cellular module.

Pluggable LTE Module

Highlights of the LTE Pluggable Module are:

- All Cellular interfaces are supported through a Pluggable Module
- Micro-Sim, 3FF size. Cisco recommends Industrial Temp micro SIMs that are rated from -40C to +105C.

Figures Figure 8 and Figure 9 show an example of a Pluggable Module. In this case, the LTE Pluggable Module.

Figure 8: LTE Pluggable Module (front)

<table>
<thead>

<th>LTE-Main SMA</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>GPS SMA</td>
</tr>
</tbody>
</table>
### mSATA Module

Mini-SATA, or mSATA, is a low-profile interface connector that enables more effective Serial ATA (SATA) integration in small form-factor drives roughly the size of a business card, such as solid state disks (SSDs). The mSATA Pluggable Module plugs into the IR-1100-SPMI Expansion Module. Figure 10 shows the mSATA Pluggable Module.

*Figure 9: LTE Pluggable Module (with antennas)*
Figure 10: mSATA Pluggable Module

Highlights of the mSATA Pluggable Module are:

- Provides an additional 100GB of additional flash memory storage
- Main purpose is to provide space to store application data for IOx
- Field Replaceable unit, but is not hot-swappable.

Front Panel Icons and LEDs

The IR1100 Series uses icons to show the different features of the device. Table 6 shows Icons and their associated LEDs with descriptions. Table 7 shows the Icons without associated LEDs and their descriptions.

Memory

The Cisco IR1101 uses flash memory and main memory. The flash memory contains the Cisco OS software image and the boot flash contains the ROMMON boot code. The memory includes:

- 4 GB DRAM (soldered down)
- 4 GB onboard flash memory

Reset Button

The Reset button resets the router configuration to the default configuration set by the factory. To restore the router configuration to the default configuration set by the factory, use a standard size #1 paper clip with wire gauge 0.033 inch or smaller and simultaneously press the reset button while applying power to the router.

Supported Cisco Antennas and Antenna Accessories

The IR1101 must have a Pluggable Module with antenna ports installed in order to connect antennas. The base unit does not have any wireless capabilities on its own.

The Antenna Selection and Installation chapter lists the supported Antennas and Accessories for the Cisco IR1101 with a wireless Pluggable Module. For detailed information about Cisco Antennas for the Industrial Routers, please refer to the following guide:

Cisco Industrial Routers and Industrial Wireless Access Points Antenna Guide:

Modem Support

The Cisco IR1101 wireless Pluggable Module uses the Sierra Wireless series modems. The software download page can be found here:

Table 8 and Table 9 shows the technology details for the modems.

</tr>
</tbody>
</table>

**Note**
- Supported only in the IR1101 Base Unit. Not supported in the IRM-1100 Expansion Module.
- GPS or GNSS are not supported on the CAT18 module.
### Power Supply

The Cisco IR1101 comes with an external DC power connector. The 4-pin power entry connector (receptacle) is mounted to the unit. The 4-pin power entry mating connector (plug) is attached to the receptacle. It is removed during installation and used to connect to the DC power source, then reattached to provide power to the unit.

Refer to [Figure 11](#) for the location and values of the power connector.

**SFP Module**

**Warning:** Class 1 laser product. **Statement 1008**

The IR1101 Ethernet SFP module provides connections to other devices. These field-replaceable transceiver modules provide the uplink interfaces. Local connectors (LCs) provide the fiber-optic connection. RJ-45 connectors allow copper connections. You can use any combination of the supported SFP modules listed in the table that follows.

**Note:** The IR1101 is designed to operate in the Industrial temperature range (-40C to +85C internal component temperature range) and therefore cannot support commercial rated SFPs.

Installing the Router

This chapter describes the equipment and the procedures for successfully installing the Cisco IR1101 ISR. There is a separate section for installing the IR1101 with an Expansion Module.

- Installing the Router, on page 27

This section contains the following sections:

CAUTION: Do not install the router or power supplies next to a heat source of any kind, including heating vents.

WARNING: Read the installation instructions before connecting the system to the power source. Statement 1004

WARNING: Only trained and qualified personnel should be allowed to install, replace, or service this equipment. Statement 1030

WARNING: Ultimate disposal of this product should be handled according to all national laws and regulations. Statement 1040

WARNING: Do not locate the antenna near overhead power lines or other electric light or power circuits, or where it can come into contact with such circuits. When installing the antenna, take extreme care not to come into contact with such circuits, because they may cause serious injury or death. For proper installation and grounding of the antenna, please refer to national and local codes (for example, U.S.:NFPA 70, National Electrical Code, Article 810, Canada: Canadian Electrical Code, Section 54). Statement 1052

WARNING: No user-serviceable parts inside. Do not open. Statement 1073

WARNING: This product is not intended to be directly connected to the Cable Distribution System. Additional regulatory compliance and legal requirements may apply for direct connection to the Cable Distribution System. This product may connect to the Cable Distribution System ONLY through a device that is approved for direct connection. Statement 1078

WARNING: A minimum of 1 inch clearance is required on all sides of the product when mounting in either horizontal or vertical orientation. Stacking heat-dissipating objects on top of the router is not allowed. I/O
side clearance is needed as it is required to access the cable connections. Clearance is required to attach, mount
the DIN rail bracket, and Wall mount bracket.

Equipment, Tools, and Connections

This section describes the equipment, tools, and connections necessary for installing your Cisco IR1101.

Note

No antenna is shipped with the IR1101 by default.

Items Shipped with your Router

Unpack the box and verify that all items listed on the invoice were shipped with the Cisco IR1101.

The following items are shipped with your router:

• Getting Started/Product Document of Compliance
• Grounding Lug Kit
• Power Connector

Additional Items

The following items are not shipped with the router but are required for installation:

• ESD-preventive cord and wrist strap.
• Wire crimer for chassis grounding.
• Wire for connecting the chassis to an earth ground.
• Ethernet cables for connecting to the Fast Ethernet (FE) WAN and LAN ports.
• Ratcheting torque flathead screwdriver that exerts up to 15 in-lb (1.69 N-m) of pressure.
• A number-2 Phillips screwdriver.

Ethernet Devices

Identify the Ethernet devices that you will connect to the router: hub, servers, and workstations or PCs. Ensure
that each device has a network interface card (NIC) for connecting to Ethernet ports.

Installing the Router

This section describes how to install the Cisco IR1101. This router can be installed in the following ways:

• Table top
• Flat horizontal surface
• Mounted on a wall
• Using a DIN rail

Warnings

WARNING: For NEC-compliant grounding, use size 16awg (1.5mm2) or larger copper wire and a ring
terminal with an inner diameter of 1/4 in. (6 to 7mm).
Mounting on a Wall, Table, or Other Flat Surface

The Cisco IR1101 can be mounted in a vertical or horizontal orientation. It can be mounted to a wall or other flat surface, and can also be mounted to a DIN rail.

---

Note

See the Installing the Router, on page 27 for limitations on mounting with the IRM-1100 attached.

---

Tip

When choosing a location for wall-mounting the router, consider cable limitations and wall structure.

**WARNING:** Read the wall-mounting instructions carefully before beginning installation. Failure to use the correct hardware or to follow the correct procedures could result in a hazardous situation to people and damage to the system. Statement 378

**WARNING:** A minimum of 1 inch clearance is required on all sides of the product when mounting to allow for proper air flow.

The wall mounting kit contains the following:

- Mounting brackets (x2)
- Mounting screws (x4)

To mount the router on a wall or other flat surface, follow these steps:

---

Step 1

Attach the mounting brackets to the bottom of the router. Refer to Figure 13: Cisco IR1101 Mounting Bracket, on page 30 for guidance.
Step 2 Align the mounting brackets (1) over the mounting holes (3) so that the larger holes on the brackets extend out over the router.

Step 3 Attach the brackets to the router with the 4 screws (2) provided using a Phillips head driver. Torque to 13-15 in. lbs.

Step 4 Mount the router with the attached brackets in a proper wall structure to carry the weight of the device. See Figure 14: Wall/Floor mounting hole dimensions with mounting brackets attached, on page 31 and Figure 15: Wall/Floor mounting clearance and overall dimensions with mounting brackets attached, on page 32 for the dimensions of the mounting holes with the brackets attached to the router.
Figure 14: Wall/Floor mounting hole dimensions with mounting brackets attached

**Note**  Four #10-32 screws are recommended when mounting the unit with these brackets attached to the neighboring surface.
Step 5 Route the cables so that they do not put a strain on the connectors or mounting hardware.

Installing a DIN Rail

The DIN Rail kit is ordered separately.
The DIN Rail can be installed on the Base IR1101 in two different orientations, horizontally and vertically. If the Base IR1101 has an Expansion Module attached, horizontal DIN mounting is not supported.

To attach the DIN rail bracket to the Cisco IR1101, follow these steps.

**Mounting the DIN Rail Bracket on the Router**

**Step 1**
First, attach the DIN rail bracket to the back of the router. The DIN rail bracket mounts in two different ways, depending on the orientation you wish to use. See the following two figures for vertical orientation, and for horizontal orientation.

*Figure 16: Attaching the DIN Rail Bracket for vertical mounting*

*Note*  
Position the router with the ground lug facing down for vertical mounting.
Figure 17: Attaching the DIN Rail Bracket for horizontal mounting

**Note**  Position the router with the front ports facing down for horizontal mounting.

**Step 2**  Attach the DIN mounting bracket (1) to the router using the two screws provided in the kit (2). Position the bracket over the two mounting holes (3) that correspond to your orientation. Then use 13-15 in. lbs. of torque to screw the bracket onto the router.

**Step 3**  Once the bracket is attached to the router, it can be mounted onto the DIN Rail.

**Attaching the Bracket onto the DIN Rail**

To attach the Cisco IR101 with the bracket to a DIN rail, follow these steps. Refer to the following figure for details.
Step 1 Position the router so that the lower edge and spring of the Din clip (1) engages with the bottom section of the Din rail (2).

Step 2 Push up on the router so that the spring of DIN clip (1) compresses against the lower section of DIN rail (2) and then rotate the router so that the top hook of the DIN clip (1) clamps to the top section of DIN rail (2).

Step 3 To remove the router from the DIN Rail, simply reverse the procedure.

What to do next

Note The procedure to attach the unit to the rail is the same with both orientations.
In order to prevent excessive side to side movement of the unit it is advised to install DIN rail stop plates such as Mouser part Numbers 653-PFP-M, 651-1201662 or 845-CA402. These stop plates can be installed on one or both sides of the unit to limit excessive side to side movement that typically occurs in high vibration environments.

---

**Installing the Router Ground Connection**

The router must be connected to a reliable earth ground. Install the ground wire in accordance with local electrical safety standards. There are separate grounding points on the Base IR1101 and the Expansion Module.

- For NEC-compliant grounding, use size 16awg (1.5mm2) or larger copper wire and a ring terminal with an inner diameter of 1/4 in. (6 to 7mm).
- For EN/IEC 60950-compliant grounding, use size 18 AWG (1 mm2) or larger copper wire.

**WARNING:** This equipment must be grounded. Never defeat the ground conductor or operate the equipment in the absence of a suitably installed ground conductor. Contact the appropriate electrical inspection authority or an electrician if you are uncertain that suitable grounding is available. Statement 1024

**CAUTION:** Cable distribution system should be grounded (earthed) in accordance with ANSI/NFPA 70, the National Electrical Code (NEC), in particular Section 820.93, Grounding of Outer Conductive Shield of a Coaxial Cable.

To install the ground connection, follow these steps:

---

**Step 1** Locate the grounding lug (1) attached to the side of the Cisco IR1101. It will be attached underneath two screws. Remove the screws holding it to the router and set it aside for reuse.

**Step 2** Strip one end of the ground wire to the length required for the terminal.

**Step 3** Crimp the ground wire to the grounding lug using the wire crimper.

**Step 4** Attach the grounding lug (1) to the chassis using the screws set aside in step 1. Tighten the screw to a torque of 8 to 10 inch-pound (0.9 to 1.1 newton meter). (See Figure 19: Chassis Ground Connection Points, on page 37.)
**Step 5** Connect the other end of the ground wire to a known reliable earth ground point at your site.

**Step 6** If you are using this router in a vehicle, attach the ring terminal to the chassis using one of the screws provided and the green or green and yellow striped wire. Connect the other end of the wire to the vehicle ground.

---

**What to do next**

After you install and properly ground the router, you can connect the power wiring, the LAN cables, and the cables for administrative access as required for your installation.

---

**Pluggable Module**

The Pluggable Module provides the IR1101 with a number of different configuration options. In this section the modular cellular modem Pluggable Module remove and replace option is shown.

The IR1101 may have a blank plate covering the Pluggable Module slot. This will need to be removed prior to installing the cellular modem module. The following example shows the LTE Pluggable Module.

---

**Step 1** Remove the blank plate by unscrewing the latch lock screw(1) that holds the plate secure. See Figure 20: Latch Lock Screw, on page 38.
Step 2  Slide the blank plate out of the device.

Step 3  Prepare the cellular modem module by inserting the micro sims applicable for your modems into the device. Remove the screw (1) holding the access plate in place that covers the sim slots. It is located on the side of the module, as shown in the figure.
Step 4  Install your sims as shown in Figure 22: Sim Installation, on page 39. Make note of the proper slot number and sim orientation.

**Figure 22: Sim Installation**

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Micro SIMs</td>
</tr>
<tr>
<td>2</td>
<td>SIM 0 (towards the device)</td>
</tr>
</tbody>
</table>
### Step 5
Push in each SIM until it clicks into place. When the SIMs are installed, re-attach the access plate previously removed with a screwdriver. Torque to 2.8 to 3.8 inch-lbs (0.9-1.1 newton meter).

**Note**: Ensure the cover is properly aligned with the screw hole.

### Step 6
If your Pluggable Module is the type that has a USB port, make sure that the USB cover is properly installed. Place the USB cover (1) with the plug indentation against the USB port (2). The half circle of the USB cover fits behind the latch lock screw. See *Figure 23: USB Port Cover Installation, on page 40* for details.

*Figure 23: USB Port Cover Installation*

### Step 7
Tighten the latch lock screw to a torque of 2.8 to 3.8 inch-lbs (0.3 to 0.4 newton meter). Refer to *Figure 24: USB Cover Finished Installation, on page 41* for a finished USB cover installation.
Step 8

Slide the Pluggable Module into the device as shown in Figure 25: Pluggable Module Insert, on page 42. The latch lock screw (1) aligns with the screw hole (2) on the front of the device. Push the Pluggable Module all the way into the device until you feel it seat, and then torque the latch lock screw 8-10 inch-pound (0.9 to 1.1 newton meter).
**Step 9**  
Attach your antennas to the ports on the pluggable module. There are different instructions for each antenna type, be sure to consult the antenna documentation for proper orientation and torque to install them.

**Step 10**  
If no antennas are being installed on a port, make sure the caps are installed on the connector.
Antenna Selection and Installation

This chapter contains the following sections:

- Antenna Selection and Installation, on page 43

Antenna Selection and Installation

**NOTE:** Before you install the Cisco IR1101 Integrated Services Router on a table, wall, or DIN rail, install the antennas on the Pluggable Module. It is difficult to install the antennas after the router is installed.

The following section contains information for installing antennas with the base IR1101 router with or without the Expansion Modules, using P-LTE-xx or P-LTEA-xx cellular modules. There are three RF SMA(f) connectors on the Pluggable Module. Two connectors, Main and Div (diversity) are used to connect to the 4G/LTE modem. The third connector is used for GPS. The Diversity port may also be referred to as an Aux connector.

Antenna Installation Best Practices

The optimal site location for antennas for 4G routers and cellular modules plays a significant role in determining overall cellular link performance. Routers located at the farthest coverage points might have 10 to 50 percent of the bandwidth available compared to routers located closer to the cellular base station tower, away from obstructions, and with an unobstructed view of the cellular tower.

Because antennas transmit and receive radio signals over the air, the signal propagation and antenna performance may be adversely affected by the surrounding environment, including physical obstructions. Radio frequency (RF) interference may also occur between wireless systems located close to each other, especially if the antennas of these systems are located close to each other. Interference may also occur when the antenna is in close proximity to cable clutter or other sources of radio interference.

Follow these guidelines to ensure the best possible performance:

- When you use any cellular antennas such as 3G UMTS, 4G/LTE, 4G/LTEA (LTE Advanced) with a modular router and a pluggable module, try to mount the antenna a certain distance away from the router. For example, in indoor deployments, an appropriate extension cable and antenna stand can be utilized. For outdoor installations, choose a suitable outdoor antenna, and mount it away from obstructions that ideally have a direct view of the cellular tower. The antenna performance, and therefore that of the router, will not be optimal if mounted directly on a pluggable module. Primary reasons for possible degradation of performance include:
• Obstruction of the router antenna view of the cellular base station tower by Ethernet cables, power cables, USB cables, and walls.
• Possible coupling of digital noise from inside the router to the antenna when unshielded Ethernet cables are used.

• Keep antennas away from electrical and signal cable clutter. Metal conductors inside cables may block antenna view of the base station. Additionally, unshielded (and even shielded cables in some cases) may radiate signals that interfere with RF signal reception.
• It is recommended that all cellular antennas for the IR1101 are oriented vertically to ensure polarization match. While polarization of the signal may change as it is reflected from obstructions, when the view is unobstructed - vertical polarization is optimal.
• When installing the IR1101 with or without the Expansion Modules, the following note is important:

Note: When cellular FDD Band 5 is deployed with 3G WCDMA, 4G/LTE or 4G/LTE C/A, such as with P-LTE-US or P-LTEA-EA pluggable modules on certain carriers, ensure that both Main and Aux cellular antennas are physically separated from the IR1101 chassis by a minimum of 5 feet (1.5 meters). This note only affects P-LTE-xx receiver operation in Band 5 in a narrow 875 MHz frequency range. No significant effect on the P-LTE-xx cellular Band 5 receiver has been measured when antennas are separated from the chassis by more than 5 feet (1.5 meters). This note does not apply when the receive signal does not overlap 875 MHz, such as when operating on other bands, or other frequencies within FDD Band 5.

• For optimal MIMO performance, space cellular Main and Aux antennas apart by at least 17 inches (43 cm). At the lowest LTE frequency of 700 MHz, 17 inches represents 1 wavelength. Spacing of half (or 0.5) wavelength or 8.5 inch (22.5cm) results in good MIMO performance.
• Spacing Main and Aux LTE antennas less than 8.5 inches may result in significantly reduced MIMO performance.
• Spacing antennas too close to each other (e.g. 3 inches) results in antennas significantly detuning from their original designed performance due to antenna coupling.
• Wherever possible, mount the IR1101 router with the pluggable LTE module and antenna where the cellular base station or tower are within sight and without physical obstructions. Barriers along the line of sight between the router and the local base station will degrade the wireless radio signals. Install the IR1101, pluggable modules and antennas above floor level in office environments or near the ceiling for better performance because most obstructions tend to be near the floor level.
• The density of the materials used in a building's construction determines the number of walls the signal must pass through while still maintaining adequate coverage. Consider the following before choosing the location for installing the antenna:

• Paper and vinyl walls have very little effect on signal penetration.
• Solid and precast concrete walls limit signal penetration to one or two walls without degradation of coverage.
• Concrete and wood block walls limit signal penetration to three or four walls.
• A signal can penetrate five or six walls constructed of drywall or wood.
• A thick metal wall or wire-mesh stucco wall causes signals to reflect back and causes poor penetration.

• Avoid mounting the antenna next to a column or vertical support that could create a shadow zone and reduce the coverage area.
• Keep the antenna away from reflective metal objects such as heating and air-conditioning ducts, large ceiling trusses, building superstructures, and major power cabling runs. If necessary, use an extension cable to relocate the antenna away from these obstructions.
**Supported Antennas for the IR1101**

All of the currently supported antennas are broken down by functional groups.

### Cellular 2G/3G/4G Antennas

<table>

CHAPTER 5

Installing the IRM-1100 Expansion Module

This chapter describes the equipment and the procedures for successfully installing the Cisco IRM-1100 Expansion Module onto the IR1101, and contains the following sections:

- Installing the IRM-1100 Expansion Module, on page 51

Installing the IRM-1100 Expansion Module

This chapter describes the equipment, and the procedures for successfully installing the Cisco IRM-1100 Expansion Module onto the IR1101. There are two different Expansion Modules available:

- IRM-1100-SPMI
- IRM-1100-SP

Details on both Expansion Modules can be found in the Product Overview chapter.

This chapter contains the following sections:

Items Shipped with your Expansion Module

Unpack the box and verify that all items listed on the invoice were shipped with the Cisco IRM-1100.

The following items are shipped with your Expansion Module:

- 4 mating screws to connect the IRM-1100 to the IR1101

Installing the Expansion Module

This section describes how to install the Cisco IRM-1100. The Expansion Module attaches to the IR1101 ISR using 4 mating screws, and is connected through a mating connector. The Expansion Module is grounded and powered through the connection to the IR1101.

To attach the IRM-1100 to the IR1101, perform the following steps:

Step 1  Remove the protective cover from the mating connector on the IR1101 by unscrewing the two Phillips head screws. Refer to Figure 26: Protective Cover, on page 52.
Step 2  
After removing the protective connector cover from the IR1101, carefully align the Expansion Module to the IR1101 so that both mating connectors engage. See Figure 27: Mounting the Expansion Module, on page 53. Once properly seated, install the four mating screws to fully secure the Expansion Module to the IR1101.
**Step 3**

Tighten the screws to a torque of 13-15 in. lbs (1.5-1.7) newton meter). When complete, the two devices form a single assembly as shown in Figure 28: Completed Assembly, on page 54.
Mounting the IR1101 Router with the IRM-1100 Expansion Module Attached

After the Cisco IRM-1100 is attached to the IR1101, it can be mounted in the following ways:

- On a DIN Rail
- Using mounting brackets

**Note:** For the remainder of these instructions, we will refer to the combined IR1101/IRM-1100 as the “Device”.

**Mounting the Device Using Mounting Brackets**

**TIP:** When choosing a location for wall-mounting the Device, consider cable limitations and wall structure.

**WARNING:** Read the wall-mounting instructions carefully before beginning installation. Failure to use the correct hardware or to follow the correct procedures could result in a hazardous situation to people and damage to the system. **Statement 378**

**WARNING:** A minimum of 1 inch clearance is required on all sides of the Device when mounting to allow for proper air flow.

The wall mounting kit contains the following:

- Mounting brackets (x2)
- Mounting screws (x4)

The Device can be mounted on the top of a flat surface as shown in **Figure 29: Table Mounting, on page 55**, but cannot be mounted upside down.
The device can also be mounted vertically on a wall in 4 orientations as shown in Figure 30: Wall Mounting, on page 55.

To mount the Device on a wall or other flat surface, follow these steps:

**Step 1**  
Attach the mounting brackets to the bottom of the Device. Refer to Figure 31: Mounting Brackets, on page 56 for guidance.
Mounting the Device Using Mounting Brackets

Step 2  Align the mounting brackets (1) over the mounting holes (3) so that the larger holes on the brackets extend out over the Device.

Step 3  Attach the brackets to the Device with the 4 screws (2) provided using a Phillips head driver. Torque to 13-15 in. lbs (1.5-1.7 newton meter).

Step 4  Mount the Device with the attached brackets in a proper wall structure to carry the weight of the device, which is a combined 3.85 lbs. See Figure 32: Wall/Floor mounting hole dimensions with mounting brackets attached, on page 57 and Figure 33: Wall/Floor mounting clearance and overall dimensions with mounting brackets attached, on page 58 for the dimensions of the mounting holes with the brackets attached to the Device.
Figure 32: Wall/Floor mounting hole dimensions with mounting brackets attached

**Note:** Four #10-32 screws are recommended when mounting the Device with these brackets attached to the neighboring surface.
Step 5  Route the cables so that they do not put a strain on the connectors or mounting hardware.

Installing a DIN Rail

The DIN Rail kit is ordered separately. The Device can only be mounted vertically, with the ground lug on the bottom side as shown in Installing a DIN Rail, on page 58.

Figure 34: Device Orientation
Mounting the DIN Rail Bracket on the Device

Step 1  First, attach the DIN rail brackets to the back of the Device. There are two separate mounting brackets. One attaches to the IR1101, and the other attaches to the IRM-1100. The combined DIN rail brackets mount in the vertical orientation only. See Figure 35: Attaching the DIN Rail Brackets, on page 59.

Figure 35: Attaching the DIN Rail Brackets

Step 2  Attach the IR1101 DIN mounting bracket (1) to the Device using the two screws (3) provided in the kit. Position the bracket over the two mounting holes, then use 13-15 in. lbs. (1.5-1.7 newton meter) of torque to screw the bracket onto the Device.

Step 3  Attach the IRM-1100 DIN mounting bracket (2) to the Device using the screw (4) provided in the kit. Position the bracket over the single mounting hole, then use 13-15 in. lbs. (1.5-1.7 newton meter) of torque to screw the bracket onto the Device.

Step 4  Once the two brackets are attached to the Device, it can be mounted onto the DIN Rail.

Attaching the Bracket Onto the DIN Rail

To attach the Device with the brackets to a DIN rail, follow these steps. Refer to Figure 36: Attaching the Brackets to the DIN Rail, on page 60 for details.
Step 1  Position the Device so that the lower edge and spring of the Din clips (1) engages with the bottom section of the Din rail (2).

Step 2  Push up on the Device so that the spring of DIN clips (1) compresses against the lower section of DIN rail (2) and then rotate the Device so that the top hook of the DIN clips (1) clamps to the top section of DIN rail (2).

Step 3  To remove the Device from the DIN Rail, simply reverse the procedure.
NOTE: In order to prevent excessive side to side movement of the unit it is advised to install DIN rail stop plates such as Mouser part Numbers 653-PFP-M, 651-1201662 or 845-CA402. These stop plates can be installed on one or both sides of the unit to limit excessive side to side movement that typically occurs in high vibration environments.

Step 4  If you are using this Device in a vehicle, attach the ring terminal to the chassis using one of the screws provided and the green or green and yellow striped wire. Connect the other end of the wire to the vehicle ground.

---

What to do next

After you install and properly ground the Device, you can connect the power wiring, the LAN cables, and the cables for administrative access as required for your installation.

---

**Pluggable Module**

The Pluggable Module provides the IRM-1100 with a number of different configuration options. The installation of the Pluggable Module into the Expansion Module is the same as installing it into the IR1101. See that section at Pluggable Module, on page 37.

---

**Digital I/O Connections**

The wired Digital I/O connector is show as (1) in Digital I/O Connector, on page 15.
The Digital I/O connector has 4 GPIO connections plus 1 Return connection. The default state of the Digital I/O is input, the open-collector is open (off). Further details on the Digital I/O connector can be found at Digital I/O Connector, on page 15.

Wiring the Alarm Connections

To wire the alarm connections on your Cisco IR1101 Expansion Module, follow these steps:

---

**Step 1**  
Locate the alarm connector on the router front panel.

**Step 2**  
Identify the connectors.

**Step 3**  
Using a wire-stripping tool, strip each of the alarm wires to 0.25 inch (6.3 mm) ± 0.02 inch (0.5 mm). Do not strip more than 0.27 inch (6.8 mm) of insulation from the wire. Stripping more than the recommended amount of wire can leave exposed wire from the connector after installation.

**Step 4**  
Remove the two captive screws that attach the alarm connector to the Expansion Module, and remove the connector.
Step 5  On the alarm connector, insert the exposed part of the wire into the connection. Make sure that you cannot see any wire lead. Only wire with insulation should extend from the connector. See Figure 38: Alarm Connector Captive Screws, on page 63.

*Figure 38: Alarm Connector Captive Screws*

Step 6  Use a ratcheting torque flathead screwdriver to torque the power connector captive screws (above the installed wire leads) to 2 in-lb (0.23 N-m).

Step 7  Connect the other end of the wires to the alarm source, and re-attach the alarm connector to the Expansion Module.

---

**Installing the mSATA SSD**

Mini-SATA, or mSATA, is a low-profile interface connector that enables more effective Serial ATA (SATA) integration in small form-factor drives roughly the size of a business card, such as solid state disks (SSDs).

This section provides an overview of the mSATA SSD available for the Cisco IRM-1100 Expansion Module.

**mSATA Installation Instructions**

*Note:* Ensure that you are using proper static discharge techniques such as a wrist strap and static mat.

*Caution:* Ensure the device is powered down before performing any removal or installation of a module.

The mSATA SSD module plugs into the slot shown in Figure 39: Cisco IRM-1100-SPMI Front Panel, on page 64.
Perform the following steps in order to install the module.

**Step 1**  
Remove the two screws (2) holding the cover of the mSATA Slot.

**Step 2**  
Insert the mSATA SSD module into the slot on the IRM-1100-SPMI. Refer to Figure 40: Module Placement, on page 64 for guidance.

**Step 3**  
After the module is properly inserted, tighten the module plate to the IRM-1100-SPMI with the two screws (2). The screws should be torqued to 2-3 in-lb (0.2-0.3 newton meter).

**Step 4**  
The installation is now complete.
CHAPTER 6

Connecting the Router

This chapter describes how to connect the IR1101 to Ethernet devices and a network. The chapter contains the following sections:

• Connecting the Router, on page 65

Connecting the Router

This chapter describes how to connect the IR1101 to Ethernet devices and a network. The chapter contains the following sections:

Preparing to Connect the Router

Before you connect the router to the devices, install the router according to the instructions in Installing the Router, on page 27.

Preventing Damage to the Router

To prevent damage to your router, turn off power to the devices and to the router until all connections are completed.

Caution

Do not turn on the devices until after you have completed all connections to the router.

Connecting a PC, Server, or Workstation

To connect a PC (or other Ethernet devices) to an Ethernet switch port, follow these steps:

1. Connect one end of the Ethernet cable to an Ethernet switch port on the router.
2. Connect the other end of the cable to the RJ-45 port on the network interface card (NIC) that is installed in the PC, server, or workstation.
3. (Optional) Connect additional servers, PCs, or workstations to the other Ethernet switch ports.
Connecting a PC to the Console Port

Connect a PC to the Console port either to configure the software by using the CLI or to troubleshoot problems with the router. To connect a terminal or PC to the console port on the router and access the CLI, follow these steps:

**Note**
On earlier models of the device, the console port speed was set at 115200. Later models had the console port speed switched to 9600.

**Step 1**
Connect the mini-USB console cable to the console port on the router. The following figure shows the console location on the router.

*Figure 41: Console Connection*

**Step 2**
Connect the opposite end of the mini-USB cable to the USB port on your laptop or PC.

**Step 3**
To communicate with the router, wait for your laptop or PC to discover the new device.

**Step 4**
If your laptop or PC warns you that you do not have the proper drivers to communicate with the router, you can obtain them from your computers manufacturer, or go here:
https://www.silabs.com/products/mcu/Pages/USBtoUARTBridgeVCPDrivers.aspx

Connecting to DC Power

**Warning**
This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that the protective device is rated not greater than 60 VDC minimum, 5A maximum. **Statement 1005**
Warning

Connect the unit only to DC power source that complies with the safety extra-low voltage (SELV) requirements in IEC 60950 based safety standards. **Statement 1033**

Warning

This product requires short-circuit (overcurrent) protection, to be provided as part of the building installation. Install only in accordance with national and local wiring regulations. **Statement 1045**

Plugs and Pin-Outs

The IR1101 ships with a DC power accessory kit.

The power entry receptacle is on the IR1101. The pin-outs are shown in the following figure.

*Figure 42: Power Connector Pin-outs*

![Power Connector Pin-outs](image)

**Table 20: Power connector Descriptions**

<table>
<thead>
<tr>
<th>Pin Number</th>
<th>Name</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>DC In +</td>
<td>DC Power Positive Input</td>
</tr>
<tr>

<td>DC In -</td>
<td>DC Power Return (GND-)</td>
</tr>
<tr>
<td>3</td>
<td>AC</td>
<td>Alarm Common</td>
</tr>
<tr>
<td>4</td>
<td>AI</td>
<td>Alarm Input</td>
</tr>
</tbody>
</table>

Wiring the DC Power

To connect the DC power on your Cisco IR1101, follow these steps:
1. Locate the power and alarm connector on the router front panel.  
**NOTE:** Your connector may not have the labels V RT A A.  
In the labeled connector, the pins are:  
V—Positive DC power connection  
RT—Return DC power connection  
A—Alarm Common  
A—Alarm Input

2. Identify the connector positive and return DC power connections. The connections left to right are:  
   - 1—Positive DC power connection  
   - 2—Return DC power connection  
   - 3—Alarm Common  
   - 4—Alarm Input

3. Measure two strands of twisted-pair copper wire (18-to-20 AWG) long enough to connect to the DC power source.

4. Using an 18-gauge wire-stripping tool, strip each of the two twisted pair wires coming from each DC-input power source to 0.25 inch (6.3 mm) ± 0.02 inch (0.5 mm). Do not strip more than 0.27 inch (6.8 mm) of insulation from the wire. Stripping more than the recommended amount of wire can leave exposed wire from the power connector after installation.

5. Remove the two captive screws that attach the power and alarm connector to the router, and remove the connector.
6. On the power and alarm connector, insert the exposed part of the positive wire into the connection labeled "V" and the exposed part of the return wire into the connection labeled "RT". Make sure that you cannot see any wire lead. Only wire with insulation should extend from the connector.  
**NOTE:** Use the same method for wiring the alarm connections.

7. Use a ratcheting torque flathead screwdriver to torque the power connector captive screws (above the installed wire leads) to 2 in-lb (0.23 N-m).

8. Connect the other end of the positive wire to the positive terminal on the DC power source, and connect the other end of the return wire to the return terminal on the DC power source. Connect the other end of the Alarm wires to your alarm source.

---

## Serial Port Cable

One of the more common causes for tech support calls to Cisco is improper pinouts for serial port cables. This section will describe the different components that make up the serial cabling for the IoT routers.

**Note:** The most common type of serial connector found is the DB9. That will be the focus for this section.

One of the popular ways to build a serial cable is through the use of a RJ-45 to DB9 adapter. These adapters can be ordered from numerous sources Online, or purchased in electronics stores. They typically come as a fixed RJ-45 female connector with loose wires, which can be inserted into a DB9 connector to match the pinouts that you need. See Figure 43: RJ-45 to DB9 Adapter, on page 70.
Make note of the front side versus the back side of the connector. This is important when pinning the wires into the connector. In Figure 43: RJ-45 to DB9 Adapter, on page 70 above, the front of the DB9 connector is present. When it is pinned, it becomes the male side of the connector.

**DB9 Adapter Side**

The loose side of the adapter is the DB9 side.

See Figure 44: RS-232 DB9 Male connector Male View, on page 70 for an example of a typical DB9 connector with the signal names.

Figure 44: RS-232 DB9 Male connector Male View

A common cause of confusion when building a connector is the perspective of how you are viewing the pinouts. The pinouts are different from the male versus female views when building the connector. See Figure 45: DB9 Pinout Views, on page 71.
RJ-45 Adapter Side

The RJ-45 female side of the connector, as previously mentioned, has fixed wires on the connector. Refer to Figure 46: RJ-45 Female Pinouts, on page 72 for the pinouts, as well as the wire colors.

Note: White can also be Gray, depending on the adapter manufacturer.
Now that both sides of the adapter have been explained, the next step is to place the pins into the proper holes of the DB9 side of the connector. This is done with the use of a pinning tool. An example of a common pinning tool is found in Figure 47: Pinning Tool, on page 73.
There is a very good video on the use of a pinning tool that is found [here](#).

The proper pinouts for a serial port are found in Table 21: RJ45 to DB9 Male Adapter, on page 73 and Table 22: RJ45 to DB9 Female Null Modem Adapter, on page 74.

**Table 21: RJ45 to DB9 Male Adapter**

<table>
<thead>
<tr>
<th>RJ-45 Pins</th>
<th>Wire Color</th>
<th>DB9 Pins</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Blue</td>
<td>6</td>
</tr>
<tr>
<td>2</td>
<td>Orange</td>
<td>1</td>
</tr>
<tr>
<td>3</td>
<td>Black</td>
<td>4</td>
</tr>
<tr>
<td>4</td>
<td>Red</td>
<td>5</td>
</tr>
<tr>
<td>5</td>
<td>Green</td>
<td>2</td>
</tr>
</tbody>
</table>
Table 21: RJ45 to DB9 Male Adapter, on page 73 describes the pinouts for a RJ45 to DB9 (male) Adapter. This allows connection from a local RJ45 DTE port to a far-end DCE DB9 port.

Table 22: RJ45 to DB9 Female Null Modem Adapter

Table 22: RJ45 to DB9 Female Null Modem Adapter, on page 74 describes the pinouts for a RJ45 to DB9 (female) Null Modem Adapter. This allows connection from a local RJ45 DTE port to a far-end DTE DB9 port.

Place the pins into their proper sockets using the pinning tool, and when that is complete you should have a connector that looks similar to the picture in Figure 48: Completed Pinning, on page 75.
Snap the DB9 side of the adapter into place on the plastic connector holding the RJ-45 side of the connector. When this is complete, your connector is ready to use.
Verifying Connections

To verify that all devices are properly connected to the router, first turn on all the connected devices, then check the LEDs. To verify router operation, refer to the Front Panel Icons and LEDs, on page 19.
CHAPTER 7

Technical Specifications

This appendix provides router, port, cabling specifications, and power adapters for the IR1101.

- Technical Specifications, on page 77

Technical Specifications

This appendix provides router and modem information for the IR1101 series.

Complete specifications for the IR1101 series can be found in the marketing data sheet.

Note

Complete Regulatory Compliance and Safety Information is found online.

Router Specifications

Operating the router outside of the limits specified is not supported.

IR1101 Base Unit

The following table lists the Base Unit specifications:

<table>
<thead>
<tr>
<th>Description</th>
<th>Design Specification</th>

### Modem Specifications

The EM74XX series modems have different performance numbers than the WP7600 series modems do. The EM74XX series will experience reduced (throttled) performance in conditions where the ambient temperature reaches high levels. Refer to the following table for details on temperature/airflow and performance throughput.

<table>
<thead>
