# Software Activation on Cisco ISR, Cisco ISR G2, and Cisco ISR 4K

**First Published: October 20, 2009**  
**Last Updated: January 11, 2019**

This document describes the activation process for Cisco software on Cisco Integrated Services Routers (ISRs) and Cisco Integrated Service Routers Generation 2 (ISR G2), and Cisco Integrated Service Routers 4K (ISR 4K). Cisco routers support Cisco IOS software entitlement and enforcement on various platforms. This document supports the following products:

<table>
<thead>
<tr>
<th>Modular ISRs</th>
<th>Fixed ISRs</th>
</tr>
</thead>
<tbody>
<tr>
<td>- Cisco ISR 4400 Series</td>
<td>- Cisco ISR 900 Series</td>
</tr>
<tr>
<td>- Cisco ISR 4300 Series</td>
<td>- Cisco ISR 890 Series</td>
</tr>
<tr>
<td>- Cisco ISR 3900 Series</td>
<td>- Cisco ISR 880 Series</td>
</tr>
<tr>
<td>- Cisco ISR 2900 Series</td>
<td>- Cisco ISR 860 Series</td>
</tr>
<tr>
<td>- Cisco ISR 1900 Series</td>
<td>- Cisco ISR 810 Series</td>
</tr>
</tbody>
</table>

### Finding Support Information for Platforms and Cisco IOS and Catalyst OS Software Images

Use Cisco Feature Navigator to find information about platform support and Cisco IOS image support. To access Cisco Feature Navigator, go to [http://www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.
Contents

This document contains the following topics:

- Before You Begin, page 2
- Cisco IOS Software Releases Supported, page 3
- Information About Software Activation on Cisco ISRs, ISRs G2, and ISR 4K, page 3
- Software Packages and Features, page 5
- Options for Getting and Managing Software Licenses, page 13
- RMA License Transfer, page 47
- Software Activation on Modules, page 49
- Additional References, page 49

Before You Begin

When you order a new router, it is shipped preinstalled with the software image and the corresponding permanent licenses for the packages and features that you specified. You do not need to activate or register the software before use.

The following prerequisites apply if you are upgrading or installing a new Cisco IOS software license on Cisco ISRs:

- Purchase the software package or feature you want to install. You will receive a product activation key (PAK) with your purchase.
- If you do not have a cisco.com username and password, get your username and password by registering at Cisco.com.
- Familiarize yourself with the Cisco software licensing concepts detailed in the Cisco Software Activation Conceptual Overview chapter in Cisco IOS Software Activation Configuration Guide.

Tip

Use the `show license feature` command to view the software packages and features supported on your router. Table 2, Table 3, and Table 5 list the package and feature licenses available for your router.

Tip

Use the `show license` command in privileged EXEC mode to display information about the Cisco IOS software packages and features license level on your router.

Note

Starting from Release 15.4(1)T, the license-level `appxk9` is removed from the `license boot module` command and licensing show commands for the Cisco 3900, 2900, and 1900 Series Routers. The license-level `appxk9` is available for Cisco ISR 4400 and ISR 4300 routers in the `license boot level` command.
Cisco IOS Software Releases Supported

The following Cisco IOS software releases support software activation on Cisco ISRs:

- Cisco 3900 series, 2900 series, and 1900 series ISRs running Cisco IOS Release 15.0(1)M.
  - Cisco 3925E and Cisco 3945E ISR running Cisco IOS Release 15.1(1)T.
- Right to Use license is supported on Cisco IOS Release 15.0(1)M4, 15.1(1)T2, 15.1(2)T2, 15.1(3)T, 15.1(4)M1, or later.
- Cisco 800 series ISRs running Cisco IOS Release 12.4(15)XZ or later support either the non-cryptographic image or the cryptographic image.
- Cisco 800 series ISRs running Cisco IOS Release images earlier than Cisco IOS Release 12.4(15)XZ do not support software activation.
- Cisco One Suite License is supported only on Cisco 3900 series, 2900 series, and 1900 series ISRs running Cisco IOS Release 15.5(1)T.

Information About Software Activation on Cisco ISRs, ISRs G2, and ISR 4K

The Cisco IOS universal image contains all packages and features in one image. You can access the required functionality based on the license installed on your router.

Software Claim Certificate and License Activation

Software Claim Certificates are used for licenses that require software activation. The claim certificate provides the Product Activation Key (PAK) for your license and important information regarding the Cisco End User License Agreement (EULA).

In most cases, Cisco or your Cisco partner will have already activated the licenses ordered at the time of purchase and no Software Claim Certificate is provided. You can determine the licenses activated on your system by issuing the `show license feature` command on the router command-line interface (CLI) or with a Cisco management application such as Cisco CP or Cisco License Manager (CLM). Cisco License Manager is a free software application available at [http://www.cisco.com/go/clm](http://www.cisco.com/go/clm).

Note

SSL VPN may not list in the `show license feature` and `show license detail` commands, however it is a part of the securityk9 technology package license and need not be purchased separately.

Right to Use Notification

When you order a license from Cisco, you will receive a Right to Use Notification. You may begin using the licensed features upon receipt of the Right to Use Notification. Keep the Right to Use Notification for your records as proof of your license purchase.
Universal Device Identifier

The universal device identifier (UDI) has two main components: the product ID (PID) and the serial number (SN). Cisco ISR 4K Series use Route Processor serial number (SN). Cisco 3900 Series platforms, which have field-replaceable unit (FRU) motherboards, use motherboard’s PID and SN. All other platforms use the chassis PID and SN.

The PID and SN are printed on a label located on the back of most Cisco hardware devices or on a label tray visible on the front panel of field-replaceable motherboards. See your router’s Hardware Installation Guide or Read Me First to see the location of the label.

Tip

The UDI can be viewed using the `show license udi` command in privileged Exec mode.

UDI Example for 3900

The following example shows the output from the `show license udi` command on a Cisco 3925 ISR:

```
Router# show license udi
Device# PID SN UDI
*0  C3900-SPE100/K9 FHH13030044 C3900-SPE100/K9:FHH13030044
Router#
```

UDI Example for 4K

The following example shows the output from the `show license udi` command on a Cisco 4400 ISR:

```
Router# show license udi
SlotID PID SN UDI
*6  ISR4451-X/K9 FOC17042FJ9 ISR4451-X/K9:FOC17042FJ9
Router#
```

Evaluation License

Your router comes with the evaluation license, also known as a temporary license, for most packages and features supported on your router. If you want to try a new software package or feature, activate the evaluation license for that package or feature.

Right to Use License

Right to Use licenses are available on Cisco IOS Release 15.0(1)M4, 15.1(1)T2, 15.1(2)T2, 15.1(3)T, 15.1(4)M1, or later. These licenses are available on the honor system.

Permanent License

If you want to permanently activate a software package or feature on your router, you must get a new software license.

Figure 1 shows the steps for software activation.
Figure 1  Steps for Software Activation

1. Purchase a Package or Feature
   - Receive a PAK

2. Obtain a License. A PAK and UDI is required
   - Receive License File
   - Option 1: Cisco License Manager
   - Option 2: Cisco License Portal, Http://www.cisco.com
   - Option 3: Cisco Call Home

3. Install License

You can also activate the license using the **license right-to-use move** command. Perform the following tasks to activate the license:

<table>
<thead>
<tr>
<th>Step</th>
<th>Task</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Purchase License</td>
</tr>
<tr>
<td>2</td>
<td>Activate Evaluation License</td>
</tr>
<tr>
<td>3</td>
<td>Run the <strong>license right-to-use move</strong> command</td>
</tr>
</tbody>
</table>

**Note**
This method is not applicable for HSEC and L1 licenses.

**End User License Agreement**

By accessing or using the Cisco products received with your Cisco ISR, ISR G2 or ISR 4K, you agree that your use of such products is governed by the terms and conditions of the Cisco Software License and any applicable supplemental license agreement. A copy of the terms of the End User License Agreement (EULA) is available at http://www.cisco.com/en/US/docs/general/warranty/English/EU1KEN_.html.

A EULA is presented for acceptance when you activate an evaluation license.

**Software Packages and Features**

The Cisco IOS universal image contains all packages and features in one image. The universal image on the Cisco 1900, 2900, 3900, 4300, and 4400 series ISRs are a superset of Cisco IOS simplified technology packages.

Each package is a grouping of technology-specific features. Multiple technology package licenses can be installed and activated on the Cisco 1900, 2900, 3900, 4300 and 4400 series ISR platforms.

Individual features can be enabled or disabled by license keys. Feature licenses may be subscription-based, uncounted, or count-based licenses.
Use the **show license** feature command to view the technology package licenses and feature licenses supported on your router.

The Cisco ISR 1900, 2900, 3900, 4300, and 4400 series support the following universal images:
- universalk9—offers all IOS features supported by next generation ISRs.
- universalk9_npe—does not support VPN payload and secure voice functionality and satisfies import considerations for CIS countries.

**Table 1** lists the image names for the Cisco 1900, 2900, 3900, 4300, and 4400 series routers.

**Table 1 Universal Image Names for Cisco ISR 1900, 2900, 3900, 4300, and 4400 Series**

</tr>
</tbody>
</table>

1. Supported only on the universalk9_npe image.
2. Supported only on the universalk9 image.
3. Data License (datak9) is EoSed (end-of-sale). It is replaced by App license(appxk9).

Feature Licenses

Enabling a feature license may require that a particular technology package license be installed and enabled on the router.

The following section lists the feature licenses available on the fixed and modular Cisco ISR platforms:

• Table 4—Feature Licenses Supported on Fixed Cisco ISR Platforms, page 9
• Table 5—Feature Licenses Supported on Modular Cisco 1900, 2900, 3900, and 4K Platforms, page 9
Table 4 lists the feature licenses available on the fixed Cisco ISR platforms.

**Table 4  Feature Licenses Supported on Fixed Cisco ISR Platforms**

<table>
<thead>

</tbody>
</table>

1. Cisco model 1905 and 1906c only.
2. The HSEC-K9 features are supported only on the universalk9-mz image.
3. Only 2921 and 2951 routers support the HSEC-K9 feature license.
4. Only 3900 Series (3925, 3945, 3925E and 3945E) and 2951 Series support Lawful Intercept.
5. CUBE is a paper-based license.

**Cisco One Suite Licenses**

Table 7 lists the Cisco One Suite Licenses supported on Cisco 1900, 2900, and 3900 Platforms. See Activating Cisco One Suite License, page 18 for activating Cisco One Suite License.

**Table 6  Cisco One Suite Licenses**

<tr>
<td>AdvUCSuiteK9</td>
<td>Yes</td>
<td>Yes</td>
</tr>
</tbody>
</table>

1. Not all SKUs support Evaluation and RightToUse license for ‘Advanced IP Services’. Some of the 880 SKUs come with Default/Non-enforcement ‘Advanced IP Services’ license and no Evaluation and RightToUse license support for Default/Non-enforcement license.
2. Supported only on the universalk9_npe image.
3. Supported only on the universalk9 image.
4. The HSEC-K9 features are supported only on the universalk9-mz image.
5. Supported only on the universalk9_npe image.
6. Supported only on the universalk9 image.

Management Licenses

Starting from Cisco IOS Release 15.3(3)M, the following management licenses are supported on the Cisco ISR and Cisco ISR G2 routers:

- mgmt-plug-and-play
- mgmt-lifecycle
- mgmt-assurance
- mgmt-onplus
- mgmt-compliance

The management licenses are enabled by default. When these management licenses are installed, they become active and in use.

Resource Allocation with the securityk9 Technology Package License

Table 8 shows how resources such as bandwidth, number of tunnels, and TLS sessions for voice, and IPSec are allocated with a securityk9 technology package license.

<table>
<thead>
<tr>
<th>Client</th>
<th>Tx Bandwidth¹</th>
<th>Rx Bandwidth²</th>
<th>Tunnels³</th>
<th>TLS Sessions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Voice</td>
<td>Necessary bandwidth is reserved or released as needed.</td>
<td>Necessary bandwidth is reserved or released as needed.</td>
<td>Resources are reserved or released as needed.</td>
<td>Resources are reserved or released as needed. Maximum:1000</td>
</tr>
<tr>
<td>IPSec</td>
<td>Dynamically uses available bandwidth.</td>
<td>Dynamically uses available bandwidth.</td>
<td>Resources are reserved or released as needed.</td>
<td>NA</td>
</tr>
</tbody>
</table>

1. The maximum bandwidth in the ingress is 85,000 Kbps.
2. The maximum bandwidth in the egress is 85,000 Kbps.
3. The maximum cumulative tunnels are 225.

To view the resource allocated on your router, use the `show platform cerm-information` command. The following output shows an example of the resource allocation for a securityk9 license:

```
Router#show platform cerm-information
Crypto Export Restrictions Manager(CERM) Information:
CERM functionality: ENABLED

Options for Getting and Managing Software Licenses

There are multiple options for getting and managing the software licenses on your router. Use one of the following options to get and manage software licenses on your router:

- **Cisco License Manager**—software application that lets you get, register, install, and manage software licenses on multiple devices on your network. See the “Cisco License Manager” section on page 13 for details.
- **Cisco Smart Licensing**—simplifies the Cisco software experience and helps you to understand how Cisco software is used across your network. Smart Licensing is the next generation licensing platform for all Cisco software products. See the Cisco Smart Licensing Guide for details.
- **Cisco License Call Home**—lets you interact with the Cisco Product License Registration portal directly from your router to get, install, and manage your license. See the “Cisco License Call Home” section on page 14 for details.
- **Cisco Product License Registration Portal**—lets you manually get and register individual software licenses through a registration portal. See the “Cisco Product License Registration Portal” section on page 15 for details.
- **Cisco IOS CLI**—lets you install and manage licenses using the Cisco IOS command-line interface (CLI). See the “Cisco IOS CLI” section on page 15 for details.
- **RTU Migration**—lets you migrate to an Existing or Lifetime RTU release and recommends steps you must perform before upgrading. See the “RTU Migration” section on page 41 for details.

### Cisco License Manager

For a network-wide deployment, the Cisco License Manager can automate all license-related work flows by securely communicating with the licensing back-end fulfillment systems at Cisco.com and deploying the obtained licenses to managed devices on a network-wide basis. The application also keeps an inventory of deployed licenses and generates license reports.

Cisco License Manager is available at no cost and can be downloaded by registered Cisco.com users from [http://www.cisco.com/go/clm](http://www.cisco.com/go/clm).

Cisco Smart Licensing

Smart Licensing Client feature is a standardized licensing platform that simplifies the Cisco software experience and helps you to understand how Cisco software is used across your network. Smart Licensing is the next generation licensing platform for all Cisco software products. For additional information on Cisco Smart Licensing, see Cisco Smart Licensing Client.

Cisco License Call Home

You can interact directly with the Cisco Product License Registration portal from your device by using the Cisco License Call Home interface. This interface is included with the Cisco Software Activation feature and described in the Cisco Software Activation Conceptual Overview and the Configuring Cisco License Call Home chapters in Cisco IOS Software Activation Configuration Guide.

The License Call Home feature works as a client or server model. Each transaction requires a separate connection to the Cisco licensing infrastructure. The License Call Home feature displays prompts for obtaining required information, converting that information into a defined data structure, and then connecting to the Cisco licensing back-end to interact with the Cisco licensing infrastructure. A request is initiated by a License Call Home EXEC command, and the response is provided by the Cisco licensing infrastructure.

This section contains the following topics:
- Before You Begin, page 14
- Platform Support, page 14
- Installing a License Using License Call Home, page 14

Before You Begin

Your router must have an Internet connection and use HTTPS to connect to the Cisco licensing infrastructure.

Platform Support

Only certain platforms support the Cisco License Call Home function and must run a Cisco IOS crypto K9 image.

For information about platform support, see the Configuring Cisco License Call Home chapter in Cisco IOS Software Activation Configuration Guide.

Installing a License Using License Call Home

Note

Purchase the software feature or package you want to install. You receive a product activation key (PAK) with your purchase.

To install a license using the License Call Home feature, follow these steps:

Step 1

Use the show license call-home pak EXEC command to display the SKU list and features available for the PAK provided.
Step 2 Use the `license call-home install pak` command to install a license by using the Cisco License Call Home function.
   a. Complete the license installation by entering `yes` when prompted to install the license and then entering the information requested.

Cisco Product License Registration Portal

Use the Cisco Product License Registration Portal at [http://www.cisco.com/go/license](http://www.cisco.com/go/license) to manually perform the following licensing tasks:

- Get a license
- Register for an RMA license
- Look-up a license

This section contains the following topic:
- Getting a Permanent License Using Cisco License Portal, page 15

Getting a Permanent License Using Cisco License Portal

To get a permanent license, perform the steps detailed in this section.

Step 1 Enter the appropriate information at [http://www.cisco.com/go/license](http://www.cisco.com/go/license).
Step 2 Download the license file or receive the license file by e-mail.
Step 3 To obtain additional licenses, repeat Step 1 and Step 2.

Cisco IOS CLI

Use the Cisco IOS CLI to install and manage the software licenses on your router. This section contains the following procedures:

- Installing a Permanent License Using Cisco IOS CLI, page 16
- Activating Cisco One Suite License, page 18
- Activating CME-SRST Feature License, page 21
- Activating an Evaluation License, page 22
- Activating a Memory Evaluation License, page 25
- Activating an SNA Switching Feature License, page 27
- Configuring the HSEC-K9 Feature License, page 28
- Clearing an Active Permanent Technology Package License, page 30
- Configuring the EULA, page 35
- Verifying Licenses and Other Licensing Tasks, page 35
Installing a Permanent License Using Cisco IOS CLI

To install a permanent license, perform the steps detailed in this section.

Note
You can install multiple licenses on the Cisco 4400, 4300, 3900, 2900, and 1900 series ISRs.

SUMMARY STEPS

1. `enable`
2. `license install stored-location-url`
3. `reload`

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables privileged EXEC mode.  
• Enter your password if prompted. |
| Example:          | Router> enable |
| **Step 2** license install stored-location-url | Installs a license file. |
| Example:          | Router)# license install flash0:uck9-C3900-SPE150_K9-FHH12250057.xml |
| **Step 3** reload | (Optional) Reloads the router.  
A reload is not required if an evaluation license is active.  
A reload is required to activate a technology package license if an evaluation license is not active.  
To activate the SNASw feature license, perform the steps detailed in the “Activating an SNA Switching Feature License” section on page 27.  
See the “Configuring the HSEC-K9 Feature License” section on page 28 for additional information on configuring the HSEC-K9 feature license.  
See the “Activating a Memory Evaluation License” section on page 25 for additional information on configuring a memory license. |
| Example:          | Router# reload |
Example

The following example shows how to install a license:

Router> `enable`
Router# `license install flash0:uck9-C3900-SPE150_K9-FHH12250057.xml`
Installing licenses from "uck9-C3900-SPE150_K9-FHH12250057.xml"
Installing...Feature:uck9...Successful:Supported
1/1 licenses were successfully installed
0/1 licenses were existing licenses
0/1 licenses were failed to install

Router# configure terminal
Router(config)# license boot suite FoundationSuiteK9

Please read the following terms carefully. Installing the license or license key provided for any Cisco product feature or using such product feature constitutes your full acceptance of the following terms. You must not proceed further if you are not willing to be bound by all the terms set forth herein.

Use of this product feature requires an additional license from Cisco, together with an additional payment. You may use this product feature on an evaluation basis, without payment to Cisco, for 60 days. Your use of the product, including during the 60 day evaluation period, is subject to the Cisco end user license agreement http://www.cisco.com/en/US/docs/general/warranty/English/EUIKEN_.html. If you use the product feature beyond the 60 day evaluation period, you must submit the appropriate payment to Cisco for the license. After the 60 day evaluation period, your use of the product feature will be governed solely by the Cisco end user license agreement (link above), together with any supplements relating to such product feature. The above applies even if the evaluation license is not automatically terminated and you do not receive any notice of the expiration of the evaluation period. It is your responsibility to determine when the evaluation period is complete and you are required to make payment to Cisco for your use of the product feature beyond the evaluation period.

Your acceptance of this agreement for the software features on one product shall be deemed your acceptance with respect to all such software on all Cisco products you purchase which includes the same software. (The foregoing notwithstanding, you must purchase a license for each software feature you use past the 60 days evaluation period, so that if you enable a software feature on 1000 devices, you must purchase 1000 licenses for use past the 60 day evaluation period.)

Activation of the software command line interface will be evidence of your acceptance of this agreement.

### Activating CME-SRST Feature License

The Cisco ISR G2 comes with a 60-day evaluation license. After 60 days, the license changes to “right to use”. The customer is required to pay for the CME-SRST feature license which is valid for 12 years.

#### Note

CME-SRST RTU license is introduced in Cisco IOS release 15.1(3)T and higher.

### Prerequisites

- UCK9 license
- Cisco ISR G2 already accepts UC CLIs
- CME-SRST feature must be configured

### SUMMARY STEPS

1. `configure terminal`
2. `telephony-service`
3. `max-ephones max-phones`
4. `exit`
DETAILED STEPS

Activating an Evaluation License

**Note**
Starting with Cisco IOS Releases 15.0(1)M6, 15.1(1)T4, 15.1(2)T4, 15.1(3)T2, and 15.1(4)M, Evaluation licenses are replaced with Evaluation Right To Use licenses. Evaluation Right to Use licenses automatically become Right to Use licenses after the initial evaluation period. Follow the steps detailed in this section to activate an Evaluation Right to Use license.

To activate an evaluation license in the Cisco 4400, 4300, 3900, 2900, and 1900 series routers, perform the steps detailed in this section.

For ISR G2 routers, evaluation licenses are activated using the `license boot module module-name technology-package package-name` command.

For ISR 4K routers, evaluation licenses are activated using the `license boot level license-level` command.

SUMMARY STEPS

1. enable
2. configure terminal
3. license boot module module-name technology-package package-name
4. exit
5. reload
DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables privileged EXEC mode.  
  • Enter your password if prompted. |
| Example: Router>enable |
| **Step 2** configure terminal | Enters global configuration mode. |
| Example: Router#configure terminal |
| **Step 3** license boot module module-name technology-package package-name | Enables the evaluation license.  
  Use the ? command with the module command to see the module name for your router, and with the technology-package command to see the software packages and features supported on your router. |
| Example: Router(config)#license boot module c3900 technology-package securityk9 |
| **Step 4** exit | Exits global configuration mode. |
| Example: Router(config)#exit |
| **Step 5** reload | Reloads the router. A reload is required to activate the software package. |
| Example: Router#reload |

Example

The following example shows how to activate an evaluation license:

Router> enable  
Router# configure terminal  
Router(config)# license boot module c3900 technology-package data

Activating a Memory Evaluation License

To activate a memory evaluation license in the Cisco 1905 router, perform the steps detailed in this section. Evaluation licenses are activated using the `license feature MEM-1900-256U512MB` command.

**SUMMARY STEPS**

1. `enable`
2. `configure terminal`
3. `license feature MEM-1900-256U512MB`
4. `exit`
5. `reload`

**DETAILED STEPS**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: Router&gt;enable</td>

Router#
Activating an SNA Switching Feature License

*Nov 19 00:14:48.603: %XFR_EXT_MEMORY_LICENSING-6-LICENSE_NOT_ACTIVATED: License MEM-1900-256U512MB will take effect after the system reboot.

*Nov 19 00:14:48.607: %LICENSE-6-INSTALL: Feature MEM-1900-256U512MB 1.0 was installed in this device. UDI=CISCO1921/K9:FCW1345000B; StoreIndex=0:Primary License Storage

**Note**
An SNASw feature license must be activated to configure SNASw.

To activate an evaluation or permanent license for the SNA Switching (SNASw) feature, perform the steps detailed in this section. The SNASw feature license is activated using the `license feature snasw` command.

**SUMMARY STEPS**

1. enable
2. configure terminal
3. license feature snasw
4. exit
5. show license feature

**DETAILED STEPS**

Configuring the HSEC-K9 Feature License

Activating the HSEC-K9 Feature License

No action is required to activate the HSEC-K9 feature license. The HSEC-K9 feature license is active after installation.

Deactivating an Active HSEC-K9 Feature License

To deactivate an active HSEC-K9 feature license, perform the steps detailed in this section.

Note

After the HSEC-K9 feature license is installed, the Crypto Export Restrictions Manager (CERM) is disabled and the show platform cerm-information command output displays the “CERM functionality: DISABLED” message.

SUMMARY STEPS

1. enable
2. configure terminal
3. no license feature HSEC-K9
4. exit
5. reload
6. license clear feature-name
7. show license detail

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** | enable | Enables privileged EXEC mode.  
• Enter your password if prompted. |
| **Example:** | Router>enable |

| **Step 2** | configure terminal | Enters global configuration mode. |
| **Example:** | Router#configure terminal |

| **Step 3** | no license feature HSEC-K9 | Disables the HSEC-K9 feature license. |
| **Example:** | Router(config)#no license feature HSEC-K9 |

| **Step 4** | exit | Exits global configuration mode. |
| **Example:** | Router(config)#exit |

| **Step 5** | reload | Reloads the image.  
A reload is required to disable the feature. |
| **Example:** | Router#reload |

| **Step 6** | license clear feature-name | Clear the feature license from license storage.  
**Note** If you do not clear the HSEC-K9 feature license after disabling it, the HSEC-K9 feature license can be reactivated using the license feature HSEC-K9 command. A reload is not required to activate an HSEC-K9 feature license. |
| **Example:** | Router#license clear HSEC-K9 |

| **Step 7** | show license detail | Verifies that the license has been cleared. |
| **Example:** | Router#show license detail |

**Example**

The following example shows how to deactivate an active license:

Router> enable
Router# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)# no license feature HSEC-K9
% use 'write' command to disable 'HSEC-K9' license on next boot
Router(config)# exit
Router# reload
Clearing an Active Permanent Technology Package License

To clear an active permanent license from the Cisco 4400, 4300, 3900, 2900, and 1900 series routers, perform the following tasks:

1. Disable the Technology Package
2. Clear the License

Disable the Technology Package
To disable a license, perform the steps detailed in this section.

SUMMARY STEPS

1. enable
2. configure terminal
3. license boot module module-name technology-package package-name disable
4. exit
5. reload
6. show version

DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
</table>
| **Step 1** enable | Enables privileged EXEC mode  
  Example:  
  Router>enable  
  • Enter your password if prompted. |
| **Step 2** configure terminal | Enters global configuration mode.  
  Example:  
  Router#configure terminal |
| **Step 3** license boot module module-name technology-package package-name disable | Disables the active license.  
  Example:  
  Router(config)#license boot module c3900 technology-package uck9 disable  
  Note: For ISR 4K routers, evaluation licenses are activated using the license boot level  
  license-level disable command. |
| **Step 4** exit | Exits global configuration mode.  
  Example:  
  Router(config)#exit |
Clear the License
To clear the license, perform the steps detailed in this section.

**SUMMARY STEPS**

1. `license clear feature-name`
2. `configure terminal`
3. `no license boot module technology module-name technology-package package-name disable`
4. `exit`
5. `reload`
6. `show version`

**DETAILED STEPS**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 5 <code>reload</code></td>
<td>Reloads the image. A reload is required to make the software package inactive.</td>
</tr>
<tr>
<td>Example: <code>Router#reload</code></td>
<td></td>
</tr>
<tr>
<td>Step 6 <code>show version</code></td>
<td>Verifies that the technology package has been disabled.</td>
</tr>
<tr>
<td>Example: <code>Router#show version</code></td>
<td></td>
</tr>
</tbody>
</table>

Clear the License
To clear the license, perform the steps detailed in this section.

**SUMMARY STEPS**

1. `license clear feature-name`
2. `configure terminal`
3. `no license boot module technology module-name technology-package package-name disable`
4. `exit`
5. `reload`
6. `show version`

**DETAILED STEPS**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1 <code>license clear feature-name</code></td>
<td>Clears the technology package license from license storage.</td>
</tr>
<tr>
<td>Example: <code>Router#license clear uck9</code></td>
<td></td>
</tr>
<tr>
<td>Step 2 <code>configure terminal</code></td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example: <code>Router#configure terminal</code></td>
<td></td>
</tr>
<tr>
<td>Step 3 <code>no license boot module technology module-name technology-package package-name disable</code></td>
<td>Clears the <code>license boot module module-name technology-package package-name disable</code> command used for disabling the active license.</td>
</tr>
<tr>
<td>Example: <code>Router(config)#no license boot module c3900 technology uck9 disable</code></td>
<td><strong>Note</strong> For ISR 4K routers, evaluation licenses are activated using the <code>license boot level license-level disable</code> command.</td>
</tr>
<tr>
<td>Step 4 <code>exit</code></td>
<td>Exits global configuration mode.</td>
</tr>
<tr>
<td>Example: <code>Router(config)#exit</code></td>
<td></td>
</tr>
</tbody>
</table>
The following example shows how to clear an active license:

```
Router> enable
Router# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)# license boot module c3900 technology-package ?
  datak9      data technology
  securityk9  security technology
  uck9        unified communications technology

Router(config)# license boot module c3900 technology-package uck9 disable
% use 'write' command to make license boot config take effect on next boot

Router(config)# exit

Router# reload

Router# show version

Configuring the EULA

Use the `license accept end user agreement` command in global configuration mode to configure a one-time acceptance of the EULA for all Cisco IOS software packages and features. After the command is issued and the EULA accepted, the EULA is automatically applied to all Cisco IOS software licenses; the EULA is not displayed and the user is not prompted to accept the EULA.

The following example shows how to configure a one-time acceptance of the EULA:

```
Router(config)#license accept end user agreement
```

Use of this product feature requires an additional license from Cisco, together with an additional payment. You may use this product feature on an evaluation basis, without payment to Cisco, for 60 days. Your use of the product, including during the 60 day evaluation period, is subject to the Cisco end user license agreement [http://www.cisco.com/en/US/docs/general/warranty/English/EU1KEN_.html](http://www.cisco.com/en/US/docs/general/warranty/English/EU1KEN_.html)

If you use the product feature beyond the 60 day evaluation period, you must submit the appropriate payment to Cisco for the license. After the 60 day evaluation period, your use of the product feature will be governed solely by the Cisco end user license agreement (link above), together with any supplements relating to such product feature. The above applies even if the evaluation period is not automatically terminated and you do not receive any notice of the expiration of the evaluation period. It is your responsibility to determine when the evaluation period is complete and you are required to make payment to Cisco for your use of the product feature beyond the evaluation period.

Your acceptance of this agreement for the software features on one product shall be deemed your acceptance with respect to all such software on all Cisco products you purchase which includes the same software. (The foregoing notwithstanding, you must purchase a license for each software feature you use past the 60 day evaluation period, so that if you enable a software feature on 1000 devices, you must purchase 1000 licenses for use past the 60 day evaluation period.)

Activation of the software command line interface will be evidence of your acceptance of this agreement.

```
ACCEPT? [yes/no]: yes
```

Verifying Licenses and Other Licensing Tasks

See the “Cisco IOS Software Activation Tasks and Commands” chapter of the Cisco IOS Software Activation Configuration Guide for information about the following topics and more:

- Software activation tasks, such as displaying and verifying licenses
- Software activation processes, such as rehosting and RMA
Use the `show license`, `show license all`, and `show license detail` commands in the privileged EXEC mode to see information about all the Cisco IOS software licenses. The following example is a sample output of the `show license` command:

```
Router# show license
Index 1 Feature: ipbasek9

Router#

Use the show license suites command in the privileged EXEC mode to see information about Cisco One Suite Licenses.

The following example shows the output of the command:

Router#show license suites
Suites Information
RTU Migration

This section describes customer scenarios with regard to migrating to Existing or Lifetime RTU release and recommends actions to take before upgrading.

The initial version of RTU release (Existing RTU) contains built-in evaluation licenses valid for 12 years and Lifetime RTU licenses that are similar to permanent licenses, in that they are built into the IOS image and avoid the overhead of license installation.

---

Note
Permanent licenses are not affected by any IOS release upgrade.

The first course of action is to consider what release your router is running and then follow the recommended actions if any. This section contains the following topics:

- RTU Releases, page 41
- Global EULA Acceptance, page 42
- RTU Migration Paths, page 43
- Lifetime RTU (After Migration), page 46

RTU Releases

The IOS software releases to consider are categorized as follows:

- Preceding RTU
- Existing RTU
- Lifetime RTU

Preceding RTU

Preceding RTU releases are customers’ running IOS releases with 60 days of evaluation licenses. These include the following releases:

- 15.0(1)M; 15.0(1)M1; 15.0(1)M2; 15.0(1)M3
- 15.1(1)T; 15.1(1)T1
- 15.1(2)T; 15.1(2)T1
- Any 12.4T release
Customers running these releases with evaluation licenses and planning to upgrade to Existing or Lifetime RTU releases are affected. They should follow the recommended actions specified under Preceding RTU to Existing/Lifetime migration paths.

**Existing RTU**

Initial RTU support was provided in the Existing RTU releases listed below:

- 15.0(1)M4; 15.0(1)M5
- 15.1(1)T2; 15.1(1)T3
- 15.1(2)T2; 15.1(2)T3
- 15.1(3)T; 15.1(3)T1
- 15.1(4)M

Such arrangement basically provided 12-year evaluation licenses and was intended to be a temporary solution until Lifetime RTU support was available. This temporary RTU solution provided immediate relief for customers facing licensing-related overhead.

If you are running Existing RTU releases and planning to upgrade to Lifetime RTU releases, please follow the recommended actions specified under Existing RTU to Lifetime RTU migration paths.

**Lifetime RTU**

A Lifetime RTU release license includes the following:

1. Initial evaluation period of 60 days
2. Transition to Lifetime RTU license without customer intervention

RTU transition warning/complete Syslogs/Traps are provided 10 days and 5 days before transition and on the actual day of transition.

Customers running the following Lifetime RTU releases are not impacted:

- 15.0(1)M6 or later
- 15.1(1)T4 or later
- 15.1(2)T4 or later
- 15.1(3)T2 or later
- 15.1(4)M1 or later
- 15.2(1)T or later

**Global EULA Acceptance**

Customers migrating to Lifetime RTU are required to accept the global end user license agreement with the Existing RTU release. This is because the Lifetime RTU keys have changed and EULA needs to be accepted again to ensure a smooth transition.

Please perform the following actions when required:

```
Router(config)# license accept end user agreement
```

PLEASE READ THE FOLLOWING TERMS CAREFULLY. INSTALLING THE LICENSE OR LICENSE KEY PROVIDED FOR ANY CISCO PRODUCT FEATURE OR USING SUCH PRODUCT FEATURE CONSTITUTES YOUR FULL ACCEPTANCE OF THE FOLLOWING TERMS. YOU MUST NOT PROCEED FURTHER IF YOU ARE NOT WILLING TO BE BOUND BY ALL THE TERMS SET FORTH HEREIN.
Use of this product feature requires an additional license from Cisco, together with an additional payment. You may use this product feature on an evaluation basis, without payment to Cisco, for 60 days. Your use of the product, including during the 60 day evaluation period, is subject to the Cisco end user license agreement [link here: http://www.cisco.com/en/US/docs/general/warranty/English/EU1KEN_.html]. If you use the product feature beyond the 60 day evaluation period, you must submit the appropriate payment to Cisco for the license. After the 60 day evaluation period, your use of the product feature will be governed solely by the Cisco end user license agreement (link above), together with any supplements relating to such product feature. The above applies even if the evaluation license is not automatically terminated and you do not receive any notice of the expiration of the evaluation period. It is your responsibility to determine when the evaluation period is complete and you are required to make payment to Cisco for your use of the product feature beyond the evaluation period.

Your acceptance of this agreement for the software features on one product shall be deemed your acceptance with respect to all such software on all Cisco products you purchase which includes the same software. (The foregoing notwithstanding, you must purchase a license for each software feature you use past the 60 days evaluation period, so that if you enable a software feature on 1000 devices, you must purchase 1000 licenses for use past the 60 day evaluation period.)

Activation of the software command line interface will be evidence of your acceptance of this agreement.

ACCEPT? [yes/no]: yes

Router# wr
Building configuration... [OK]

**RTU Migration Paths**

There are basically two IOS release migration paths a typical customer must take to upgrade to Existing or Lifetime RTU release.

1. Preceding RTU Release —> Existing/Lifetime RTU Release
2. Existing RTU Release —> Lifetime RTU Release

*Figure 2* shows the steps for migrating to Existing or Lifetime RTU.
**Figure 2**  
*Steps for RTU Migration*

</tbody>
</table>

**Preceding RTU —> Existing/Lifetime RTU Migration Path**

This procedure covers customers running IOS Preceding RTU releases with evaluation licenses that have not expired and wishing to migrate to Existing or Lifetime RTU releases.

The Existing/Lifetime RTU license keys have changed and require re-acceptance of the end user license agreement. A migration performed without the recommended upgrade procedure results in a loss of functionality related to features that relied on the presence of Preceding RTU license.

*Figure 3* shows the migration path from Preceding RTU to Existing/Lifetime RTU releases.
Before upgrading, perform the following steps:

**Step 1** On the Preceding RTU router, save the startup-config to a location of your choice—it could be a compact flash, tftp server, etc. Note: If any other configuration is required before upgrade, this must be completed and the configuration should be saved before proceeding with this step. The example below is for a tftp server.

```
Router# copy startup-config tftp://<tftp_server>/<user_id>/startup-config
```

**Step 2** Edit the startup-config and add the “license accept end user agreement” as shown below in bold right after the “license udi pid ….” entry.

```
license udi pid C3900-SPE250/K9 sn FHH1313001U
license accept end user agreement
```

**Step 3** Copy the startup-config back to the Preceding RTU router. The example below is for tftp a server.

```
Router# copy tftp://<tftp_server>/<user_id>/startup-config startup-config
```

**Step 4** Do _not_ save the configuration.

**Step 5** Reload the router, without saving the configuration, with the upgrade release, either Existing or Lifetime RTU release. After reload, you can see that the configurations related to licenses are rejected.

**Step 6** Do _not_ save the configuration.

**Step 7** Immediately reload again, without saving the configuration, with the same Existing or Lifetime RTU release. After reload, all the configurations are preserved.

**Step 8** Verify license-related configurations and feature functionality.

---

**Existing RTU —> Lifetime RTU Migration Path**

This procedure covers customers running IOS Existing RTU releases with Eval/RTU licenses and wishing to upgrade to Lifetime RTU releases.

The Lifetime RTU license keys have changed and require re-acceptance of the end user license agreement. A migration performed without the recommended upgrade procedure results in a loss of functionality related to features that relied on the presence of Existing RTU release license.

*Figure 4* shows the migration path from Preceding RTU to Existing/Lifetime RTU releases.
Before upgrading, perform the following steps:

**Note** If the global “license accept end user agreement” has already been performed on the Existing RTU release router, then Steps 1 and 2 can be skipped.

**Step 1** On the Existing RTU release router, configure the global end user license agreement:

```
Router#(config) license accept end user agreement
```

**Step 2** Save the configuration.

```
Router# write
```

**Step 3** Upgrade to Lifetime RTU IOS Release.

---

**Lifetime RTU (After Migration)**

Once you migrate to a Lifetime RTU release, as the license keys have changed, the RTU license restarts from time zero. This means that for the first 60 days, the Lifetime RTU license is considered to be in evaluation mode. The show CLI output displays the “EvalRightToUse” for the initial 60 days. An example of this output is shown below.

```
Router# show license
Index 4 Feature: datak9
    Period left:  8 weeks  4 days
    Period Used:  0 minute  0 second
    License Type: EvalRightToUse
    License State: Active, In Use
    License Count: Non-Counted
    License Priority: Low
```

After approximately 60 days, the Lifetime RTU license transitions to “RightToUse” without any further customer intervention. Syslogs and Traps are sent 10 days and 5 days before transition and on the actual day of transition to provide notice of pending/completion of license transition. After the transition, the show CLI output displays “RightToUse” for the License Type. An example of this output is shown below.

```
Router# show license
Index 4 Feature: datak9
    Period left: Life time
```
License Type: RightToUse
License State: Active, In Use
License Count: Non-Counted
License Priority: Low

Simple Network Management Protocol

Software licenses can be installed and managed with network management systems using Simple Network Management Protocol (SNMP). For more information on using SNMP, see Cisco IOS Software Activation Configuration Guide

RMA License Transfer

To transfer a software license from a failed device to a new device, go to the Cisco licensing portal at http://www.cisco.com/go/license.

Note
You need the UDI of the defective as well as the RMA router to initiate an RMA replacement license.

Note
To transfer a software license from a Cisco 3925 or Cisco 3945 ISR, use the SN and PID from the service performance engine (SPE) and not the chassis.

Restoring Configuration Files on RMA Replacement Routers

This section describes the steps for RMA replacement routers if restoration of configuration files is required. This applies to RMA replacement routers received with Lifetime RTU release installed.

Note
An RMA router is the router that is sent back to the manufacturer for RMA, while an RMA replacement router is a new router from the manufacturer.

Restoring configuration files on RMA replacement routers is a two-part process.

• First Part: Restoring Licenses
• Second Part: Restoring Configurations

First Part: Restoring Licenses

Perform the following steps to bring up your RMA replacement router with the required licenses:

Step 1
It is assumed that the startup-config was already saved, for example to a tftp server, compact flash, etc., before the router was sent for RMA. The example shown below is for a tftp server:

Router# copy startup-config tftp://<tftp_server>/<user_id>/startup-config
Step 2  Edit the saved startup-config with any text editor of your choice. Add the “license accept end user agreement” as shown below right after the “license udi pid...” line.

    license accept end user agreement

Step 3  Copy the startup-config to your RMA replacement router as running config. This step is to bring back your configured licenses from the RMA router. Note that some configurations have been thrown out, although the objective here is to restore the licenses only. The example shown below is for a tftp server:

    Router# copy tftp://<tftp_server>/<user_id>/startup-config running-config

Step 4  Save the configuration.

Step 5  Reload the RMA replacement router.

---

Second Part: Restoring Configurations

Perform the following steps to restore the configurations on your RMA replacement router:

Step 1  Copy the startup-config to RMA replacement router as running config. This step will restore all the configurations. The example shown below is for a tftp server:

    Router# copy tftp://<tftp_server>/<user_id>/startup-config running-config

Step 2  Save the configuration.

Step 3  Verify license-related configurations and feature functionality.

For additional information on RMA license transfer, see the Cisco Software Activation Conceptual Overview chapter in Cisco IOS Software Activation Configuration Guide.

Disabling Advanced IP Service License on 880 Series SKUs

Perform the following steps to disable the advanced IP service license on 880 series SKUs:

Step 1  license boot module c880-data level advsecurity

Step 2  write mem

Step 3  reload

Step 4  license clear advipservices

Step 5  no license boot module c880-data level advsecurity

Step 6  write mem

Step 7  reload
Software Activation on Modules

For information on the technology package required to support modules on the Cisco 2900 series and 3900 series ISR, see the Module Support on Cisco Integrated Services Routers Generation 2 document.

For information on software activation and software applications supported on a module, see the documentation set for the module and the software application.

Additional References

The following sections provide references related to the software activation feature.
