

Software Upgrade Processes Supported by Cisco ASR 1000 Series Routers

Cisco ASR 1000 Series Aggregation Services Routers support the following software upgrade procedures:

- In-Service Software Upgrades (ISSU) for redundant platforms—The ISSU process allows software to be updated or otherwise modified while packet forwarding continues with minimal interruption. ISSU supports two different software upgrade modes:
 - Consolidated package mode
 - Subpackage mode

The supported platforms include Cisco ASR 1006, ASR 1006-X, ASR 1009-X and Cisco ASR 1013 Routers

- Upgrade process with service impact for non redundant platforms—Non-hardware-redundant chassis models (such as the Cisco ASR 1001 Router, Cisco ASR 1001-X Router, Cisco ASR 1001-HX Router, Cisco ASR 1002 Router, Cisco ASR 1002-X Router, Cisco ASR 1002-HX Router, and Cisco ASR 1004 Router) do not support ISSU upgrade or downgrade. Instead subpackage software upgrade is supported only if the router is running in subpackage mode. Traffic loss cannot be avoided during the installation of the ESP package as a part of ISSU.

If you want to upgrade the ROMMON and IOS at the same time, perform the steps given below:

- Copy the XE image to the router and configure the boot system to point to the new image.
- Copy the ROMMON package to the router and perform the ROMMON upgrade.
- Reload the router and verify that it boots to the IOS prompt on the new XE image.
- Verify that the new ROMMON image was successfully installed using a show platform.

The following table lists Compatibility matrix of the software upgrade process for various Cisco ASR 1000 Series Aggregation Services Router.

Table 1: Software Upgrade Compatibility Matrix for Various Cisco ASR 1000 Series Aggregation Services Router Platforms

Platform	Consolidated Package Upgrade	SubPackage Upgrade
Cisco ASR 1006 Router	Supported	Supported
CiscoASR 1013 Router	Supported	Supported

Prerequisites for Software Upgrade Processes

Platform	Consolidated Package Upgrade	SubPackage Upgrade
CiscoASR 1004 Router	Not Supported	Supported
CiscoASR 1002 Router	Not Supported	Supported
Cisco ASR 1002-X Router	Not Supported	Supported
CiscoASR 1002-F Router	Not Supported	Supported
CiscoASR 1001 Router	Not Supported	Supported
CiscoASR 1001-X Router	Not Supported	Supported
CiscoASR 1006-X Router	Supported	Supported
CiscoASR 1009-X Router	Supported	Supported
CiscoASR 1001-HX Router	Not Supported	Supported
CiscoASR 1002-HX Router	Not Supported	Supported

Finding Support Information for Platforms and Cisco IOS and Catalyst OS Software Images

Use Cisco Feature Navigator to find information about platform support and Cisco IOS and Catalyst OS software image support. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

- [Using ISSU to Upgrade Subpackages on a Cisco ASR 1006 Router or Cisco ASR 1013 Router \(request platform command set\) with MDR, on page 191](#)
- [Additional References, on page 227](#)
- [Feature Information for Software Upgrade Process, on page 228](#)

Prerequisites for Software Upgrade Processes

Be sure to complete the following prerequisites for running the ISSU process based on your chassis model:

- Refer to the ISSU compatibility tables in the *Release Notes for Cisco ASR 1000 Series Aggregation Services Routers*.
- 4 GB of DRAM memory is required for installing software upgrade on a system with RP1 route processor.
- ISSU is supported when the router is running in subpackage mode or in consolidated package mode.

- For the Cisco ASR 1001 Router, Cisco ASR 1001-X Router, ASR1001-HX Router, Cisco ASR 1002-X Router, and ASR1002-HX Router, the Cisco IOS Software redundancy requires 8-GB DRAM and the IOS software redundancy license.

ISSU Upgrade for Redundant Platforms

ISSU represent a full or partial software upgrade of a system from one version to another with minimal outage on the forwarding plane (minimal packet loss) and no outage on the control plane.

Overview of ISSU on the Cisco ASR 1000 Series Routers

For the Cisco ASR 1000 Series Routers, ISSU-compatibility depends on the software subpackage being upgraded and the hardware configuration. Consolidated packages are ISSU-compatible in dual RP configurations only and have other limitations described later in this document. Some RP and ESP software subpackages can be upgraded in service even in single RP or ESP hardware configurations via dual IOS processes running on the RP; others require dual RP or ESP configurations for an ISSU upgrade. The SPA and SIP software subpackages must be upgraded on a per-SPA or per-SIP basis.

If you are updating multiple subpackages, you should also realize that the sequence of the upgrade is important to minimize router downtime for the software upgrade.

The specific procedures in this document represent supported and tested installation sequences. The Cisco IOS XE system software allows other installation sequences for special purposes under the guidance of Cisco customer support representatives, but the steps in this document should be followed otherwise. These steps should be followed completely, as the Cisco ASR 1000 Series Routers are designed to run one version of Cisco IOS XE for all consolidated packages and subpackages on an RP, and running subpackages from different versions of Cisco IOS XE can cause unexpected router behavior.

When performing ISSU upgrades on the Cisco ASR 1000 Series Routers, it is important to remember that minimal interruption upgrades can be performed using either the **issu** command set or the **request platform** command set, and that either command set can be used to perform limited interruption individual consolidated package or subpackage upgrades.

Note

ROMmon images are downloaded separately from Cisco IOS XE images and have their own installation procedures, and are therefore not mentioned as part in this document as part of the ISSU upgrade procedure.

The following table provides a list of the Cisco ASR 1000 Series Routers subpackages and whether or not they can be upgraded without losing any network traffic in single and dual RP and ESP configurations using ISSU.

Table 2: Limited Interruption Upgrade Compatibility Table

Subpackage	Nonredundant RP and ESP	Redundant RP and ESP
Consolidated package (any)	No (Reload required)	Yes (RP switchover)
RPBase	No (RP Reload required)	Yes (RP switchover)
RPControl	Yes (in-service)	Yes (in-service)

Overview of ISSU on the Cisco ASR 1000 Series Routers

Subpackage	Nonredundant RP and ESP	Redundant RP and ESP
RPAcces	Yes (in-service)	Yes (in-service)
RPIOS	Yes ¹ (IOS software switchover)	Yes (RP switchover)
RPBoot	No ² (RP reload required)	Yes (RP reload)
ESPBase	No ³ (ESP reload required)	Yes ⁴ (via ESP switchover)
ESPX86Base	No ⁵ (ESP reload required)	Yes ⁶ (via ESP switchover)
SIPBase ⁷	No (SPAs in SIP do not forward traffic during upgrade)	Yes (With Minimal Disruptive Restart (MDR), traffic is forwarded with minimal interruption)
SIPSPA ⁸	No (SPAs in SIP do not forward traffic during upgrade)	Yes (With MDR, traffic is forwarded with minimal interruption)
ELCBase ⁹	No (Built-in SPAs in an Ethernet Line Card (ELC) do not forward traffic during upgrade)	Yes (With MDR, traffic is forwarded with minimal interruption)
ELCSPA ¹⁰	No (Built-in SPAs in an ELC do not forward traffic during upgrade)	Yes (With MDR, traffic is forwarded with minimal interruption)
NIM SSD ¹¹	No (NIM reload required)	NA
NGWIC T1E1 ¹²	No (T1E1 do not forward traffic during upgrade)	NA

¹ Only supported if software redundancy is configured on the RP.

² Rpboot and Webui packages are introduced from Polaris 16.x.x release.

³ ESP has to reload to complete ESPBase subpackage upgrade. All router traffic will be lost during ESP upgrade.

⁴ An ESP switchover occurs as part of the upgrade, so traffic is forwarded with minimal interruption.

⁵ ESP has to reload to complete ESPBase subpackage upgrade. All router traffic will be lost during ESP upgrade and ESPX86Base is not included in the RP1 bundle.

⁶ An ESP switchover occurs as part of the upgrade, so traffic is forwarded with minimal interruption.ESPX86Base is not included in the RP1 bundle.

⁷ Any SIPBase upgrade will require the SPA interfaces to go down during the upgrade for all the SPAs in the SIP.

⁸ Any SIPSPA upgrade will require the SPA interfaces for that particular SPA to go down during the upgrade.

⁹ Any ELCBase upgrade will require the ELC interfaces to go down during the upgrade for all the SPAs in the SIP. ELCBase is not included in the RP1 bundle

¹⁰ Any ELCSPA upgrade will require the ELC interfaces for that particular SPA to go down during the upgrade. ELCSPA is not included in the RP1 bundle

¹¹ NIM SSD is a built-in module available in ASR 1001-X platform. It is a slot for an extra harddisk, which helps increase the memory.

¹² NGWIC T1E1 is a built-in module available in ASR 1001-X platform, used for serial interface. Any NGWIC T1E1 upgrade will require T1E1 interfaces for that particular SPA to go down during the upgrade.

ISSU Rollback Timer Overview

The Cisco ASR 1000 Series Router ISSU procedure has a rollback timer. Rollback timers are used for ISSU procedures on all Cisco routers that support ISSU, but this section will provide a brief overview of ISSU rollback timers on the Cisco ASR 1000 Series Routers.

During ISSU, the rollback timer begins after the consolidated package or subpackage is loaded. If the upgrade does not move forward in the amount of time specified in the rollback timer, the configuration will automatically “roll back” to the previous configuration and the ISSU upgrade will be cancelled.

Upgrades using the **issu** command set and the **request platform** command set both have the rollback timer option. The **issu** command set always uses a rollback timer; the **request platform** command set does not use a rollback timer unless the **auto-rollback** option is used in the **request platform software package install** command line.

For the **issu** command set, the **issu acceptversion** command can be entered to stop the rollback timer without committing the upgrade during the ISSU upgrade. The **issu commitversion** command can be entered to stop the rollback timer and commit the ISSU upgrade.

For the **request platform** command set, the **request platform software package install rp slot commit** command must be entered to stop the rollback timer only in cases where the **auto-rollback** option is used.

The rollback timer for the **issu** command set can be configured by entering the **issu set rollback-timer** command. The rollback timer when used with the **request platform** command set is specified when you use the **auto-rollback** option when entering the **issu request platform software package install** command.

For ISSU upgrades on Cisco ASR 1000 Series Routers, it may be advisable to set long rollback times when the upgrade is being performed on routers with large configurations.

The amount of time left on the rollback timer during an ISSU upgrade can be checked by entering the **show issu rollback-timer** command.

Software Upgrade with Dual IOS Processes on a Single RP Overview

To complete a software upgrade of an individual subpackage using dual IOS processes on a single RP, SSO must first be enabled.

Software upgrade with dual IOS processes is useful for upgrading the individual RP subpackages that can be upgraded without a router reload. Importantly, note that most subpackage upgrades in a single RP configuration require a hardware reload to complete (whether an RP reload for an RP subpackage, an ESP reload for the ESPBase subpackage, a SIP reload for a SIPBase subpackage, or a SPA reload for the SIPSPA subpackage), so limited interruption upgrades for single RP configurations are not available in most upgrade scenarios.

Cisco IOS XE Software Package Compatibility for ISSU

When upgrading the Cisco IOS XE operating system software using the ISSU process, it is important to determine the compatibility of the upgraded software to your current software and hardware. The ISSU process allows software to be updated or otherwise modified while packet forwarding continues with minimal interruption.

Cisco IOS XE release compatibility using the ISSU process utilizes the SSO functionality to preserve state while software versions on the router differ, as during an upgrade. Most SSO-capable features in each Cisco

Restrictions for ISSU

IOS XE release are ISSU capable. ISSU is only supported if SSO is enabled in the configuration and the system is in a steady state (SSO ready state has been achieved). ISSU compatibility depends on the set of specific feature clients that are in use and whether they support ISSU. All ISSU upgrades include at least one IOS switchover operation. It is important to understand which features are in use and whether these features are ISSU compatible.

Cisco ASR1006, Cisco ASR1006-X, Cisco ASR1009-X, and Cisco ASR 1013 series routers are hardware-redundant chassis. The hardware-redundant chassis has two ESP linecards and two RPs which exchange state using hardware links. The Cisco ASR1002 and ASR1004 Series Routers are not hardware redundant, but are software-redundancy capable. The nonredundant chassis has a single RP and a single ESP, but allows the operation of up to two IOS processes on the single RP to exchange states locally.

Restrictions for ISSU

Restrictions for the ISSU procedures include:

Note Cisco IOS XE software compatibility is between “like” images, for example, *advipservicesk9* to *advipservicesk9*, *adventuresekk9* to *adventuresekk9*, and so on. Cross-image-type upgrades or installations are not supported in the ISSU process. For example, you cannot upgrade *ipbase* to *advipservicesk9* or *advipservices* to *advipservicesk9*.

- Different image types must not be run simultaneously.
- For ATM SPAs on the Cisco ASR1000 Series Routers, ISSU from releases prior to Cisco IOS XE Release 2.5.0 to Cisco IOS XE Release 2.5.0, or from Cisco IOS XE Release 2.5.0 to a release prior to Cisco IOS XE Release 2.5.0, is not supported. If you want to perform ISSU in this environment, you must first remove the configuration from the ATM SPAs on the router, and then shut down the SPAs using the **shutdown** command prior to running the ISSU process.
- Cisco IOS XE releases not listed as compatible in the ISSU compatibility tables must not be run simultaneously (in a Cisco ASR1006 series router or Cisco ASR 1013 series router) or co-installed on any of the Cisco ASR1000 Series Routers since unexpected failures of one or both RPs or state loss can be experienced. Cisco IOS XE releases listed as partially compatible may incur a loss of state. Cisco IOS XE releases listed as requiring an intermediate release are not directly compatible; however, a migration path is available to preserve some or all state by upgrading to a separate intermediate version, as shown in the tables. The tables do not cover nonredundant (software or hardware) environments as no incremental update is possible under those circumstances.
- In Cisco IOS XE Release 3.1S, ISSU upgrade and subpackage software upgrade from Cisco IOS XE Release 2.x.x to Cisco IOS XE Release 3.x.xS, including release 3.1S, are not supported. The ISSU downgrade from Cisco IOS XE Release 3.x.xS, including release 3.1S to 2.x.x, is also not supported. ISSU upgrade and subpackage software upgrade is restarted from Cisco IOS XE Release 3.1S. Therefore, rebuilds and releases after Cisco IOS XE Release 3.1S will support ISSU and software upgrade and downgrade, based on the ISSU compatibility matrix tables.
- ISSU upgrade or downgrade between Cisco IOS XE 3.x.x release and Polaris 16.x.x release is not supported.

Note When you run the software upgrade from Cisco IOS XE Release 2.x.x to Cisco IOS XE Release 3.x.xS, you have to load the new image on both RPs, verify that it is good code, change the boot loader variable, and reboot the whole chassis. Failure to do that results in a "wedged" router and the only remedy is physically pull out one of the RPs, boot on the remaining RP, downgrade its code to the same version as the pulled out RP and start the process over again.

ISSU Upgrade Procedures

This section contains the following topics:

Using ISSU to Perform a Consolidated Package Upgrade in a Dual Route Processor Configuration

Consolidated packages can only be upgraded using ISSU in dual Route Processor configurations. ISSU is not supported for consolidated package upgrades in single Route Processor configurations.

If you want the RPs on your Cisco ASR 1000 Series router to be running using a consolidated package after the ISSU upgrade is complete, use the following instructions:

Note This procedure will only work if the current RPs are already running consolidated packages.

SUMMARY STEPS

1. **ip tftp source-interface gigabitethernet slot/port**
2. **copy tftp: URL-to-target-location**
3. **copy source-file-system:filename standby-destination-filesystem**
4. **dir URL-to-target-location**
5. **issu loadversion rp upgrade-rp-number standby-file-system:filename**
6. **issu runversion**
7. **telnet ip-address port**
8. **issu acceptversion**
9. **issu commitversion**
10. **show version**
11. **hw-module slot RP-slot reload**

DETAILED STEPS

	Command or Action	Purpose
Step 1	ip tftp source-interface gigabitethernet slot/port Example: <pre>Router(config)# ip tftp source-interface gigabitethernet 0</pre>	Specifies the Gigabit Ethernet TFTP source-interface to be configured: slot/port—Specifies the location of the TFTP source-interface.

Using ISSU to Perform a Consolidated Package Upgrade in a Dual Route Processor Configuration

	Command or Action	Purpose
		Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.
Step 2	copy tftp: <i>URL-to-target-location</i> Example: <pre>copy source-file-system:filename standby-destination-filesystem</pre> Example: <pre>Router# copy tftp bootflash:</pre>	Copy the consolidated package onto the active RP.
Step 3	copy source-file-system:filename <i>standby-destination-filesystem</i> Example: <pre>Router# copy bootflash:asr1000rp1-adventureprise9.02.01.01.122-33. XNA1.bin stby-bootflash:</pre>	Copy the consolidated package onto the standby RP.
Step 4	dir <i>URL-to-target-location</i> Example: <pre>dir URL-to-target-stby-location</pre> Example: <pre>Router# dir bootflash:</pre> Example: <pre>Router# dir stby-bootflash:</pre>	(Optional) Display the contents of the target directories to confirm the successful copy of the file package.
Step 5	issu loadversion rp <i>upgrade-rp-number</i> <i>standby-file-system:filename</i> Example: <pre>Router# issu loadversion rp 1 standby-file-system:adventureprise9.02.01.01.122-33.XNA1.bin</pre> Example: <pre>Router# issu loadversion rp 1 standby-file-system:adventureprise9.02.01.01.122-33.XNA1.bin</pre>	Load the target consolidated package onto the standby RP. After you receive the message indicating that the terminal state has been reached, go on to Step 6 .

	Command or Action	Purpose
	Router# issu loadversion rp 1 file stby-bootflash:asr1000rp1-adventureEnterprise9.02.01.01.12 2-33.XNA1.bin	
Step 6	issu runversion Example: Example: <pre>Router# issu runversion</pre>	Run the consolidated package that was loaded in Step 5 . Note If this command is entered before the terminal state is reached, a “ peer is not online ” or “ Standby RP is not in terminal state ” error message will be seen and the issu runversion command will not work. If the issu runversion command does not run for these reasons, wait for the “ terminal state is reached ” message to appear and retry the issu runversion command. You can also monitor the terminal state using the show platform command. After ISSU runversion is completed, a switchover will automatically occur and the standby RP will become the active RP.
Step 7	telnetip-addressport Example: Example: <pre>[unix-server-1 ~]\$ telnet 172.17.52.157 2003</pre> Example: User Access Verification Example: Example: Username: user Example: Password: ***** Example: Example: Router>	Log in to the RP being upgraded, preferably using the RP’s console port, to complete the upgrade. (This is the new active RP, that was the standby RP prior to the ISSU process.) Note Ensure the hostname does not end in “-stby” after logging into the RP, as this indicates that the RP being accessed is still the standby RP. There are many ways to log on to a console port. The example shows access to the console port from a UNIX host using telnet.
Step 8	issu acceptversion	(Optional) Stops the ISSU rollback timer.

Examples

	Command or Action	Purpose
	Example: Example: Router# issu acceptversion	This step is optional as long as Step 9 is completed before the rollback timer expires.
Step 9	issu commitversion Example: Example: Router# issu commitversion	Completes the ISSU upgrade.
Step 10	show version Example: show version active-RP running Example: show version active-RP provisioned Example: show platform Example: show running-configuration	(Optional) Enter the show version , show platform , or show running-configuration commands to confirm that the upgrade completed successfully, as follows: <ul style="list-style-type: none">• show version—Confirm that the correct software version is running on your router and that the RP was booted from the correct file.• show running-configuration—Confirm that the booting configuration, in particular the boot system statements, are correct. <p>Tip Use the show running-config include boot command to display only the boot statements from the show running-configuration output.</p> <ul style="list-style-type: none">• show platform— Confirm that both RP0 and RP1 are correctly running as active and standby.
Step 11	hw-module slot RP-slot reload Example: Example: Router# hw-module slot R0 reload	Reload the new software on the Standby RP.

Examples

The following example shows how to perform consolidated package upgrade in a dual route processor configuration:

```
Router(config)# ip tftp source-interface gigabitethernet 0
Router# copy tftp bootflash:
Address or name of remote host []? 172.17.16.81
Source filename []? /auto/tftp-users/user/asr1000rp1-adventuresek9.02.01.01.122-33.XNA1.bin
```

```

Destination filename [asr1000rp1-adventureprisek9.02.01.01.122-33.XNA1.bin]?

Using ISSU to Upgrade the Subpackages in a Dual Route Processor Configuration

This section provides instructions on performing an ISSU upgrade on a Cisco ASR 1000 Series Router with dual RPs that is currently running individual subpackages.

This section covers the following topics:

Using ISSU to Upgrade the Subpackages on a Cisco ASR 1006 Router, ASR1006-X Router, ASR1009-X Router, or ASR 1013 Router (issu Command Set)

This section provides the instructions for performing an ISSU upgrade using subpackages on a Cisco ASR 1006 Router, ASR1006-X Router, ASR1009-X Router, or ASR 1013 Router with a dual RP setup using the **issu** command set.

This procedure can only be performed if the current ASR 1006 Router, ASR1006-X Router, ASR1009-X Router, or ASR 1013 Router have two active RPs and both RPs are running subpackages.

SUMMARY STEPS

1. **show version**
2. **copy running-config startup-config**
3. **mkdir URL-to-directory-name**
4. **ip tftp source-interface gigabitethernet port**
5. **copy tftp: URL-to-target-location**
6. **request platform software package expand file URL-to-consolidated-package**
7. **dir target-URL**

8. `copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP`
9. `copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-standby-RP`
10. `issu loadversion rp standby-RP file target-standbyRP-URL-for-sub-packages:asr1000rp*version*.pkg force`
11. `hw-module slot standby-RP reload`
12. `issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slotSIP-slot-numberforce`
13. `issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg slotSIP-slot-numberforce`
14. `issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot standby-ESP-slot`
15. `issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp*version*.pkg force`
16. `show version active-RP provisioned`
17. `redundancy force-switchover`
18. `request platform software package clean`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>show version</p> <p>Example:</p> <pre>show version active-rp installed</pre> <p>Example:</p> <pre>dir filesystem: directory</pre> <p>Example:</p> <pre>show platform</pre> <p>Example:</p> <pre>show redundancy states</pre> <p>Example:</p> <pre>Router# show version</pre> <p>Example:</p> <pre>Router# show version r0 installed</pre> <p>Example:</p> <pre>Router# dir bootflash:</pre> <p>Example:</p> <pre>Router# show platform</pre> <p>Example:</p> <pre>Router# show redundancy states</pre>	<p>(Optional) Use the following commands to confirm the current router configuration, as follows:</p> <ul style="list-style-type: none"> • show version and show version active-rp installed—Verify the running version of the Cisco IOS XE software on the router, and which file was used to boot the router, and where that file is stored. • dir—Confirm that the files that were used to boot the router are located in the directory. • show platform—Confirm the current status of the active and standby RPs. • show redundancy states—Confirm the operational and configured redundancy states.

	Command or Action	Purpose
Step 2	copy running-config startup-config Example: Router# copy running-config startup-config	After you have confirmed that the system states are acceptable, save the current configuration to the startup configuration.
Step 3	mkdir URL-to-directory-name Example: Router# mkdir usb0:221subs	Create a directory to store the consolidated package and subpackages. This directory must be created in most cases because the consolidated packages and subpackages have to be separated from the subpackages that booted the router at this step of the procedure.
Step 4	ip tftp source-interface gigabitethernet port Example: Router(config)# ip tftp source-interface gigabitethernet 0	Specifies the Gigabit Ethernet TFTP source-interface to be configured: slot/port—Specifies the location of the TFTP source-interface. Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.
Step 5	copy tftp: URL-to-target-location Example: Router# copy tftp: usb0:221subs	Copy the consolidated package file into the directory created in Step 3 of this procedure. The consolidated package in this step should not be copied into the same directory where the subpackages that are currently running your router are stored (the directory containing the packages.conf provisioning file from which the router was booted). Tip It is recommended that you copy the package onto a usb: or harddisk: file system for space considerations when performing this step of the procedure.
Step 6	request platform software package expand file URL-to-consolidated-package Example: Router# request platform software package expand file usb0:221subs/asr1000rp2-adenterprise19.03.13.00.S.154-3.Sext.bin	Extract the subpackages out of the consolidated package file into the temporary directory. Note Take extra care to extract the subpackages to a temporary subdirectory and do not delete any of the files currently running the router at this point of the procedure. To erase the files that were running on the router before the ISSU upgrade, enter the request platform software package clean command after the ISSU upgrade has been completed.

	Command or Action	Purpose
Step 7	dir target-URL Example: <pre>Router# dir usb0:221subs</pre>	(Optional) Display the directory to confirm that the files were extracted.
Step 8	copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP Example: <pre>copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> Example: <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> Example: <pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> Example: <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> Example: <pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> Example: <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> Example: <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> Example: <pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> Example: <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre>	Copy the subpackages out of the temporary directory into the directory on the router where the subpackages running the active RP are currently stored. Note From Polaris 16.x.x release, the new packages rpboot and webui are introduced, which needs to be copied as well.

Command or Action	Purpose
<p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-tpaccess.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-tpbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-tpcontrol.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-tpios-adenterprise9.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-eldbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre>	

	Command or Action	Purpose
	<pre>Router# copy usb0:221subs/asr1000rp2-elcspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre>	
Step 9	<p>copy file-system:asr1000rp2-espbase.version.pkg <i>URL-to-directory-of-sub-packages-standby-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpassess.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre>	<p>Copy the subpackages out of the temporary directory into the directory on the router where the subpackages running the standby RP are currently stored.</p> <p>Note From Polaris 16.x.x release, the new packages <i>rboot</i> and <i>webui</i> are introduced, which needs to be copied as well.</p>

Command or Action	Purpose
<pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-mpaccess.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-mpbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-mpcontrol.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-mpios-adenterprise9.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-eldbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	

	Command or Action	Purpose
	Example: Router# copy usb0:221subs/asr1000rp2-elcspa.03.13.00.S.154-3.S-ext.pkg stby-bootflash:	
Step 10	issu loadversion rp standby-RP file target-standbyRP-URL-for-sub-packages:asr1000rp*version*.pkg force Example: Router# issu loadversion rp 1 file stby-bootflash:asr1000rp*03.13.00.S.154-3.S-ext*.pkg force	Upgrade the RP subpackages on the standby RP, where the “rp*” wildcard is specified to capture all of the RP subpackages for the desired upgrade release. Note From Polaris 16.x.x release, the image name starts with asr1000rpx86 . Hence, the keyword rpx86* can be used during upgrade or downgrade between Polaris 16.x.x releases.
Step 11	hw-module slot standby-RP reload Example: Router# hw-module slot R1 reload	Reload the standby RP.
Step 12	issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slotSIP-slot-numberforce Example: issu commitversion Example: Router# issu loadversion rp 0 file bootflash:asr1000rp2-{sipbase,sipspa}*03.13.00.S.154-3.S-ext*.pkg slot 0 force	Upgrade the SIP and SPA subpackages for each SIP on the router. Note This step must be completed one SIP at a time, and repeated for each SIP installed on the router before performing the next step. Tip You can use the show ip interface brief command to identify which slots contain SIPs and SPAs. The interfaces with three numbers (in the form SIP-number/SPA-number/interface-number) identify the SIP and SPA locations in the router. Note The <i>pattern</i> options used in this CLI (sipbase and sipspa) were introduced in Cisco IOS XE Release 2.1.2 and are not available in previous Cisco IOS XE Releases. See the “ <i>ISSU Procedures (Prior to Cisco IOS XE Release 2.1.2)</i> ” section for pre-Cisco IOS XE Release 2.1.2 ISSU upgrade procedures.
Step 13	issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg slotSIP-slot-numberforce Example: issu commitversion	Upgrade the ELC and SPA subpackages for each ELC on the router. Note This step must be completed for one ELC at a time, and repeated for each ELC installed on the router before performing the next step.

	Command or Action	Purpose
	<p>Example:</p> <p>Repeat this step for each ELC installed in the router before moving onto the next step.</p> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-{elcbase,elcspa}*03.13.00.S.154-3.S-ext*.pkg slot 0 force</pre>	<p>Tip You can use the show ip interface brief command to identify which slots contain ELCs and SPAs. The interfaces with three numbers (in the form <i>ELC-number/SPA-number/interface-number</i>) identify the ELC and SPA locations in the router.</p> <p>Note The <i>pattern</i> options used in this CLI (elcbase and elcspa) were introduced in Cisco IOS XE Release 3.10S and are not available in previous Cisco IOS XE Releases.</p>
Step 14	<p>issu loadversion rp active-RP file <i>URL-to-active-file-system:asr1000rp2-esp*version*.pkg</i> slot standby-ESP-slot</p> <p>Example:</p> <pre>issu commitversion</pre> <p>Example:</p> <pre>issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot active-ESP-slot</pre> <p>Example:</p> <pre>issu commitversion</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg slot 1</pre> <p>Example:</p> <pre>Router# issu commitversion</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg slot 0</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	<p>Upgrade the ESP Base subpackage on the standby and the active ESPs.</p> <p>After entering the issu loadversion rp command on the active RP, the ESP switchover will occur automatically. Minimal traffic interruption will occur as a result of this switchover.</p>
Step 15	issu loadversion rp active-RP file <i>URL-to-active-file-system:asr1000rp*version*.pkg force</i>	Upgrade all of the subpackages on the active RP.

Examples

	Command or Action	Purpose
	Example: <pre>issu commitversion</pre> Example: <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2*03.13.00.S.154-3.S-ext*.pkg force</pre> Example: <pre>issu commitversion</pre>	Note This step is required to ensure that all subpackages on the router were upgraded as part of this procedure, and might upgrade some subpackages that would otherwise be missed in the process. Note From Polaris 16.x.x release, the image name starts with asr1000rpx86 . Hence, the keyword rpx86* can be used during upgrade or downgrade between Polaris 16.x.x releases.
Step 16	show version active-RP provisioned Example: <pre>show version active-RP installed</pre> Example: <pre>Router# show version r0 provisioned</pre> Example: <pre>Router# show version r0 installed</pre>	(Optional) Confirm that the subpackages are provisioned and installed.
Step 17	redundancy force-switchover Example: <pre>Router# redundancy force-switchover</pre>	Force an RP switchover to complete the upgrade.
Step 18	request platform software package clean Example: <pre>Router# request platform software package clean</pre>	(Optional) Removes all unused subpackages files from the router.

Examples

The following example shows ISSU upgrade using subpackages on a Cisco ASR 1006 router or ASR 1013 router with a dual RP setup using the **issu** command set

```
Router# show version
Cisco IOS Software, IOS-XE Software (X86_64_LINUX_IOSD-ADVENTERPRISEK9-M), Version 15.3(2)S,
RELEASE SOFTWARE (fc1)
<output removed for brevity>
System image file is "bootflash:Active_Dir/packages.conf"
<output removed for brevity>

Using ISSU to Upgrade Subpackages on a Cisco ASR 1006 Router, ASR1006-X Router, ASR1009-X Router, or ASR 1013 Router (request platform command set)

This procedure can only be performed if the current ASR 1006 router or ASR 1013 router has two active RPs and both RPs are running subpackages.

To perform an ISSU upgrade using subpackages on a Cisco ASR 1006 router or ASR 1013 router with a dual RP setup using the **request platform** command set, follow the following instructions.

SUMMARY STEPS

1. **show version**
2. **mkdir URL-to-directory-name**
3. **ip tftp source-interface gigabitethernet port**
4. **copy tftp: URL-to-target-location**
5. **request platform software package expand file URL-to-consolidated-package**
6. **dir target-URL**
7. **copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP**
8. **copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-standby-RP**
9. **request platform software package install rp standby-RP file**
*target-standbyRP-URL-for-sub-packages:asr1000rp*version*.pkg force*
10. **hw-module slot standby-RP reload**
11. **request platform software package install rp active-RP file**
*URL-to-active-file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slotSIP-slot-numberforce*
12. **request platform software package install rp active-RP file**
*URL-to-active-file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg slotELC-slot-numberforce*
13. **request platform software package install rp active-RP file**
*URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot standby-ESP-slot*
14. **request platform software package install rp active-RP file**
*URL-to-active-file-system:asr1000rp*version*.pkg force*

15. **show version active-RP provisioned**
16. **redundancy force-switchover**
17. **request platform software package clean**

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>show version</p> <p>Example:</p> <pre>show version active-rp installed</pre> <p>Example:</p> <pre>show version standby-rp installed</pre> <p>Example:</p> <pre>dir filesystem:<directory></pre> <p>Example:</p> <pre>show platform</pre> <p>Example:</p> <p>Router# show version</p> <p>Example:</p> <pre>Router# show version r0 installed</pre> <p>Example:</p> <pre>Router# show version r1 installed</pre> <p>Example:</p> <pre>Router# dir bootflash:</pre> <p>Example:</p> <pre>Router# show platform</pre>	(Optional) Use the following commands to confirm the current router configuration, as follows: <ul style="list-style-type: none"> • show version and show version active-rp installed—Verify the running version of the Cisco IOS XE software on the router, and which file was used to boot the router, and where that file is stored. • dir—Confirm that the files that were used to boot the router are located in the directory. • show platform—Confirm the current status of the active and standby RPs.
Step 2	<p>mkdir URL-to-directory-name</p> <p>Example:</p> <p>Router# mkdir usb0:221subs</p> <p>Example:</p>	Creates a directory to store the consolidated package and subpackages. This directory must be created in most cases because the consolidated packages and subpackages have to be separated from the subpackages that booted the router at this step of the procedure.

	Command or Action	Purpose
Step 3	ip tftp source-interface gigabitethernet port Example: <pre>Router(config)# ip tftp source-interface gigabitethernet 0</pre>	Specifies the Gigabit Ethernet TFTP source-interface to be configured: slot/port—Specifies the location of the TFTP source-interface. Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.
Step 4	copy tftp: URL-to-target-location Example: Example: <pre>Router# copy tftp: usb0:221subs</pre>	Copies the consolidated package file into the directory created in Step 2 . The consolidated package in this step should not be copied into the same directory where the subpackages that are currently running your router are stored (the directory containing the packages.conf provisioning file from which the router was booted). Tip It is recommended that you copy the package onto a usb: or harddisk: file system for space considerations when performing this step of the procedure.
Step 5	request platform software package expand file URL-to-consolidated-package Example: Example: <pre>Router# request platform software package expand file usb0:221subs/asr1000p2-enterprise19.03.13.00.S.154-3.S-ext.htm</pre> Example:	Extracts the subpackages out of the consolidated package file into the temporary directory. Note Take extra care to extract the subpackages to a temporary subdirectory and do not delete any of the files currently running the router at this point of the procedure. To erase the files that were running on the router before the ISSU upgrade, enter the request platform software package clean command after the ISSU upgrade has been completed.
Step 6	dir target-URL Example: Example: <pre>Router# dir usb0:221subs</pre>	(Optional) Displays the directory to confirm that the files were extracted.

	Command or Action	Purpose
Step 7	<p>copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP</p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p>	Copies the subpackages out of the temporary directory into the directory on the router where the subpackages running the active RP are currently stored.

Command or Action	Purpose
<pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-tpaccess.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-tpbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-tpcontrol.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-tpios-a-enterprise9.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy</pre>	

	Command or Action	Purpose
	<pre>usb0:221subs/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre>	
Step 8	<p>copy file-system:asr1000rp2-espbase.version.pkg <i>URL-to-directory-of-sub-packages-standby-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre>	Copies the subpackages out of the temporary directory into the directory on the router where the subpackages running the standby RP are currently stored.

Command or Action	Purpose
<pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-rpassess.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p>	

Command or Action	Purpose
Example: <pre>Router# copy usb0:221subs/asr1000rp2-rpbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: <pre>Router# copy usb0:221subs/asr1000rp2-rpcontrol.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: <pre>Router# copy usb0:221subs/asr1000rp2-rpics-enterprise9.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: <pre>Router# copy usb0:221subs/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: <pre>Router# copy usb0:221subs/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: <pre>Router# copy usb0:221subs/asr1000rp2-elbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: <pre>Router# copy usb0:221subs/asr1000rp2-rpbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: <pre>Router# copy usb0:221subs/asr1000rp2-rpcontrol.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	

	Command or Action	Purpose
	<p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elcspa.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p>	
Step 9	<p>request platform software package install rp <i>standby-RP file</i></p> <p><i>target-standbyRP-URL-for-sub-packages:asr1000rp*version*.pkg force</i></p> <p>Example:</p> <p>Router# request platform software package install rp 1 file stby-bootflash:asr1000rp*03.13.00.S.154-3.S-ext*.pkg force</p>	<p>Upgrades the RP subpackages on the standby RP, where the “rp*” wildcard is specified to capture all of the RP subpackages for the desired upgrade release.</p> <p>Note From Polaris 16.x.x release, the image name starts with asr1000rpx86. Hence, the keyword rpx86* can be used during upgrade or downgrade between Polaris 16.x.x releases.</p>
Step 10	<p>hw-module slot <i>standby-RP</i> reload</p> <p>Example:</p> <p>Router# hw-module slot R1 reload</p>	Reloads the standby RP.
Step 11	<p>request platform software package install rp <i>active-RP file</i></p> <p><i>URL-to-active-file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slotSIP-slot-numberforce</i></p> <p>Example:</p> <p>Example:</p> <p>Example:</p> <p>Example:</p>	<p>Upgrades the SIP and SPA subpackages for each SIP on the router.</p> <p>Note This step must be completed one SIP at a time, and repeated for each SIP installed on the router before performing the next step.</p> <p>Tip You can use the show ip interface brief command to identify which slots contain SIPs and SPAs. The interfaces with three numbers (in the form SIP-number/SPA-number/interface-number) identify the SIP and SPA locations in the router.</p>

	Command or Action	Purpose
	<pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-{sipbase,sipspa}*03.13.00.S.154-3.S-ext*.pkg slot 2 force</pre> <p>Example:</p>	<p>Note The <i>pattern</i> options used in this CLI (sipbase and sipspa) were introduced in Cisco IOS XE Release 2.1.2 and are not available in previous Cisco IOS XE Releases. See the ISSU Procedures (Prior to Cisco IOS XE Release 2.1.2), on page 65 for pre-Cisco IOS XE Release 2.1.2 ISSU upgrade procedures</p>
Step 12	<p>request platform software package install rp active-RP file <i>URL-to-active-file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg slotELC-slot-numberforce</i></p> <p>Example:</p> <p> </p> <p>Example:</p> <p> </p> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-{elcbase,elcspa}*03.13.00.S.154-3.S-ext*.pkg slot 4 force</pre> <p>Example:</p>	<p>Upgrades the ELC and SPA subpackages for each ELC on the router.</p> <p>Note This step must be completed for one ELC at a time, and repeated for each ELC installed on the router before performing the next step.</p> <p>Tip You can use the show ip interface brief command to identify which slots contain ELCs and SPAs. The interfaces with three numbers (in the form <i>ELC-number/SPA-number/interface-number</i>) identify the ELC and SPA locations in the router.</p>
	<p>request platform software package install rp active-RP file <i>URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot standby-ESP-slot</i></p> <p>Example:</p> <p> </p> <p>Example:</p> <pre>request platform software package install rp active-RP file URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot active-ESP-slot</pre> <p>Example:</p> <p> </p> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg slot 1</pre>	<p>The <i>pattern</i> options used in this CLI (elcbase and elcspa) were introduced in Cisco IOS XE Release 3.10S and are not available in previous Cisco IOS XE Releases</p>
Step 13	<p>request platform software package install rp active-RP file <i>URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot standby-ESP-slot</i></p> <p>Example:</p> <p> </p> <p>Example:</p> <pre>request platform software package install rp active-RP file URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot active-ESP-slot</pre> <p>Example:</p> <p> </p> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg slot 1</pre>	<p>Upgrades the ESP Base subpackage on the standby and the active ESPs.</p> <p>After entering the issu loadversion rp command on the active RP, the ESP switchover will occur automatically. Minimal traffic interruption will occur as a result of this switchover.</p>

	Command or Action	Purpose
	Example: <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg slot 0</pre>	
Step 14	request platform software package install rp active-RP file URL-to-active-file-system:asr1000rp*version*.pkg force Example: Example: <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2*03.13.00.S.154-3.S-ext*.pkg force</pre>	Upgrades all of the sub-packages on the active RP. Note This step is required to ensure that all subpackages on the router were upgraded as part of this procedure, and might upgrade some subpackages that would otherwise be missed in the process. Note From Polaris 16.x.x release, the image name starts with asr1000rpx86 . Hence, the keyword rpx86* can be used during upgrade or downgrade between Polaris 16.x.x releases.
Step 15	show version active-RP provisioned Example: show version active-RP installed Example: Example: <pre>Router# show version r0 provisioned</pre> Example: <pre>Router# show version r0 installed</pre>	(Optional) Confirms the subpackages are provisioned and installed.
Step 16	redundancy force-switchover Example: Example: <pre>Router# redundancy force-switchover</pre>	Forces an RP switchover to complete the upgrade.
Step 17	request platform software package clean	(Optional) Removes all unused subpackage files from the router.

Examples

This example shows ISSU upgrade using subpackages on a Cisco ASR 1006 router or ASR 1013 router with a dual RP setup:

Examples

```

In Service One-Shot Software Upgrade Procedure

In service one-shot software upgrade procedure is an alternate to the standard ISSU procedure that enables you to upgrade or downgrade software using a single command. One-shot ISSU needs minimal user intervention or monitoring. Unlike the standard ISSU procedures, once the upgrade is initiated, the upgrade process cannot be cancelled.

The one-shot upgrade procedure is divided into stages. When a failure occurs, the command execution is stalled and users have to perform the rollback tasks manually. Necessary switchovers are automatically taken care of in one of the upgrade stages. During a switchover, the console and its output are lost. Additional commands are used to connect back to the console.

Note One-shot upgrade does not support multiple upgrades at the same time.

The **request platform software package install node file consolidated file name interface-module-delay secs** command is used for the one-shot ISSU procedure.

interface-module-delay is an optional parameter.

The interface-module-delay option specifies the time in seconds to wait after the first SIP and SPA combination has completed its upgrade or reboot before starting the upgrade of the next SIP and SPA. A minimum value of 60 seconds is recommended to ensure that all of the previously restarted SPAs are operational.

Example:

```
router# request platform software package install node file bootflash interface-module-delay  
60
```

The SIP-delay option enables you to delay the SIP restart duration thus enabling you to choose the restart time to minimize traffic loss.

The **request platform software package install node attach** command enables the users to view the last run log that contains the reports of all the stages of the one-shot upgrade.

The **request platform software package install file mdr** command enables the users to initiate the ISSU procedure using MDR.

ISSU Procedures (Prior to Cisco IOS XE Release 2.1.2)

These instructions should be followed only if you are upgrading using ISSU to a pre-Cisco IOS XE 2.1.2 release. If you are using Cisco IOS XE Release 2.2.1 or later, follow the earlier instructions in this chapter to perform your ISSU upgrade.

This section contains the following topics:

Using ISSU to Perform a Consolidated Package Upgrade in a Dual Route Processor Configuration (Prior to Cisco IOS XE 2.1.2)

This procedure is identical to the procedure used to upgrade post-Cisco IOS XE 2.2 images using ISSU.

Using ISSU to Upgrade Subpackages (Prior to Cisco IOS XE Release 2.1.2)

This procedure will work on single RPAs configured to run two IOS processes or on routers configured with dual RPAs.

Versions of Cisco IOS XE Release 2.1 prior to Cisco IOS XE Release 2.1.2 and versions of Cisco IOS XE Release 2.2 prior to Cisco IOS XE Release 2.2.1 and installations not booted from the RPBase subpackage on Cisco IOS XE Release 2.2.1 or 2.1.2 require a different ISSU upgrade procedure.

SUMMARY STEPS

1. Copy all subpackages other than the **RPBase** subpackage into the same directory.
2. Install the RP subpackages from the directory simultaneously by using a wildcard statement to capture all of the RP subpackages. This command should capture the RPControl, RPAccess, and RPIOS subpackages without capturing the RPBase subpackage and should be done using the standby bay.
3. Wait for the system to reach SSO ready state. The **show platform** command can be used to monitor whether both IOS instances are active, and a system message will indicate SSO state has been reached.
4. Use the **redundancy force-switchover** command to trigger an IOS switchover.
5. Wait for the system to reach SSO ready state. Like in step 3, the state can be monitored by checking system messages or by entering the **show platform** command.
6. Install the RP subpackages from the directory simultaneously by using a wildcard statement to capture all of the RP subpackages. This command should capture the RPControl, RPAccess, and RPIOS subpackages without capturing the RPBase subpackage and should be done using the standby bay.
7. Install the SIPBASE and SIPSPA packages on each SIP:
8. Install the ESPBASE package on the ESP:
9. Copy the RPBase subpackage into the directory, then upgrade all of the RP subpackages simultaneously. This step will upgrade the RPBase subpackage, which is the last remaining subpackage that requires an upgrade:
10. Enter **show version provisioned** to confirm that all of the software has been updated.
11. Reload the router using the **reload** command when appropriate to complete the installation.

DETAILED STEPS

- Step 1** Copy all subpackages other than the **RPBase** subpackage into the same directory.
- Step 2** Install the RP subpackages from the directory simultaneously by using a wildcard statement to capture all of the RP subpackages. This command should capture the RPControl, RPAccess, and RPIOS subpackages without capturing the RPBase subpackage and should be done using the standby bay.
Use the `asr1000rp1-rp*version.pkg` syntax instead of using the `{pattern}` syntax to complete this upgrade:
request platform software package install rp 1 file stby-bootflash:asr1000rp*02.02.01.122-33.XNB1*.pkg bay 1 force
- Step 3** Wait for the system to reach SSO ready state. The **show platform** command can be used to monitor whether both IOS instances are active, and a system message will indicate SSO state has been reached.
- Step 4** Use the **redundancy force-switchover** command to trigger an IOS switchover.
- Step 5** Wait for the system to reach SSO ready state. Like in step 3, the state can be monitored by checking system messages or by entering the **show platform** command.

Step 6 Install the RP subpackages from the directory simultaneously by using a wildcard statement to capture all of the RP subpackages. This command should capture the RPControl, RPAccess, and RPIOS subpackages without capturing the RPBase subpackage and should be done using the standby bay.

Use the “`asr1000rp1-rp*version.pkg` syntax instead of using the `{pattern}` syntax to complete this upgrade:

Example:

```
request platform software package install rp 0 file stby-bootflash:asr1000rp*02.02.01.122-33.XNB1*.pkg  
bay 0 force
```

Step 7 Install the SIPBASE and SIPSPA packages on each SIP:

Example:

```
Router# request platform software package install rp 0 file  
bootflash:asr1000rp1-sip*02.02.01.122-33.XNB1*.pkg slot 4 force  
Router# request platform software package install rp 0 file  
bootflash:asr1000rp1-sip*02.02.01.122-33.XNB1*.pkg slot 1 force  
Router# request platform software package install rp 0 file  
bootflash:asr1000rp1-sip*02.02.01.122-33.XNB1*.pkg slot 2 force
```

Step 8 Install the ESPBASE package on the ESP:

Example:

```
Router# request platform software package install rp 0 file  
bootflash:asr1000rp1-esp*02.02.01.122-33.XNB1*.pkg
```

Step 9 Copy the RPBase subpackage into the directory, then upgrade all of the RP subpackages simultaneously. This step will upgrade the RPBase subpackage, which is the last remaining subpackage that requires an upgrade:

Example:

```
request platform software package install rp 1 file bootflash:asr1000rp*02.02.01.122-33.XNB1*.pkg  
force
```

Step 10 Enter `show version provisioned` to confirm that all of the software has been updated.

Step 11 Reload the router using the `reload` command when appropriate to complete the installation.

Example:

```
Downgrades in versions that do not support the {  
pattern  
} syntax are problematic because an RPBASE package for the downgrade version will always be present  
if an upgrade was previously performed. Removing and restaging all packages will work in this case,  
but they effectively put the system into a state where if the RP reloads prior to the installation  
being completed, the RP may no longer be bootable.
```

Upgrade Process with Service Impact for Nonredundant Platforms

Subpackage software upgrade is supported for nonredundant platforms such as Cisco ASR 1001 Router, Cisco ASR1001-X, Cisco ASR 1002, Cisco ASR 1002-X, and ASR 1004 Routers in subpackage mode. This is because the software upgrade procedure on these chassis types requires an RP reload when upgrading the RPBase subpackage at the last step.

During the software upgrade process, there will be outage on the control plane as the entire platform is rebooted so that access to the router operating system and ROMmon is lost for a period of time.

For non-hardware-redundant chassis types, SIP impact can be mitigated by installing SIPs one slot at a time if SPAs are redundant across SIPs (such as when using Gigabit Etherchannel). ESP redundancy provides similar capability for the ESP allowing hitless upgrade of a chassis from one software release to another. Consolidated package mode does not provide such a per-slot staging option and always incurs a traffic loss equivalent to simultaneous OIR of all SIPs.

Note The Cisco ASR 1002 and ASR 1002-F Routers come by default with 4-GB DRAM. The Cisco ASR 1001 Router comes by default with 4-GB DRAM, and is upgradeable up to 8-GB or 16-GB DRAM.

This section explains how to upgrade subpackages on a Cisco ASR 1001, Cisco ASR 1001-X, Cisco ASR1002, Cisco ASR 1002-X, or Cisco ASR 1004 Router. It contains the following sections:

Configuring SSO on a Cisco ASR 1001, Cisco ASR 1001-X, Cisco ASR 1001-HX, Cisco ASR 1002, Cisco ASR 1002-X, Cisco ASR 1002-HX, or Cisco ASR 1004 Router

The following instructions show how to configure SSO on a Cisco ASR 1001, Cisco ASR 1001-X, Cisco ASR 1001-HX, Cisco ASR 1002, Cisco ASR 1002-X, Cisco ASR 1002-HX, and Cisco ASR 1004 Routers. The standby IOS process is created automatically as part of these configuration steps.

SUMMARY STEPS

1. (Optional) Enter the **show version** command to confirm the amount of DRAM on your router:
2. (Optional) Enter **show redundancy states** to see the current HA configuration:
3. Enter **configure terminal** to enter global configuration mode:
4. Enter the **redundancy** command to enter redundancy configuration mode:
5. Enter **mode sso** to enable SSO, or **mode none** to disable dual software redundancy:
6. Return to privileged EXEC mode using any method, such as entering **Ctrl-Z** or the **exit** command multiple times until you get to the # router prompt:
7. Enter the **show redundancy states** command to confirm the configured redundancy mode changed to your new configuration.
8. Enter the **copy running-config startup-config** command to save the new configuration, and press **enter** to confirm the filename (or change the name, if desired):

9. After the reload is complete, enter the **show redundancy states** command to confirm the operational redundancy mode has changed to the mode that you configured before.
10. The router must be reloaded for the new HA configuration. Enter the **reload** command to reload the router.
11. (Optional) To confirm an active and a standby IOS process exist, and how the processes are numbered, enter the **show platform** command.

DETAILED STEPS

Step 1 (Optional) Enter the **show version** command to confirm the amount of DRAM on your router:

Example:

```
Router# show version
<some output removed for brevity>
32768K bytes of non-volatile configuration memory.
4194304K bytes of physical memory.
921599K bytes of eUSB flash at bootflash:.
39004543K bytes of SATA hard disk at bootflash:.
Configuration register is 0x2102
```

In the example **show version** output, the router has 4 GB of DRAM memory.

If you are using a Cisco ASR 1001, Cisco ASR 1001-X, Cisco ASR 1001-HX, Cisco ASR 1002, Cisco ASR 1002-X, Cisco ASR 1002-HX, or Cisco ASR 1004 Router with less than required DRAM memory on the RP, SSO cannot be configured on your RP.

Step 2 (Optional) Enter **show redundancy states** to see the current HA configuration:

Example:

```
Router# show redundancy states
    my state = 13 -ACTIVE
    peer state = 1 -DISABLED
        Mode = Simplex
        Unit ID = 6
Redundancy Mode (Operational) = Non-redundant
Redundancy Mode (Configured) = Non-redundant
Redundancy State           = Non Redundant
```

In this example, HA for the dual RPs is not configured, as indicated by the nonredundant operational mode.

Step 3 Enter **configure terminal** to enter global configuration mode:

Example:

```
Router# configure terminal
Enter configuration commands, one per line. End with CNTL/Z.
Router(config)#
```

Step 4 Enter the **redundancy** command to enter redundancy configuration mode:

Example:

```
Router(config)# redundancy
Router(config-red)#
```

Step 5 Enter **mode sso** to enable SSO, or **mode none** to disable dual software redundancy:

Example:

```
Router(config-red) # mode sso
Router(config-red) # mode none
```

Step 6

Return to privileged EXEC mode using any method, such as entering **Ctrl-Z** or the **exit** command multiple times until you get to the # router prompt:

Example:

```
Router(config-red) #^Z
Router#
Router(config-red)#exit
Router(config)#exit
Router#
```

Step 7

Enter the **show redundancy states** command to confirm the configured redundancy mode changed to your new configuration.

In the following example, the configured redundancy mode has been changed to SSO. Note that the operation redundancy mode remains unchanged:

Example:

```
Router# show redundancy states
    my state = 13 -ACTIVE
    peer state = 1 -DISABLED
        Mode = Simplex
        Unit ID = 6
Redundancy Mode (Operational) = Non-redundant
Redundancy Mode (Configured) = sso
Redundancy State = Non Redundant
```

Step 8

Enter the **copy running-config startup-config** command to save the new configuration, and press **enter** to confirm the filename (or change the name, if desired):

Example:

```
Router# copy running-config startup-config
Destination filename [startup-config]?
Building configuration...
[OK]
PE25_ASR-1004#
```

Step 9

After the reload is complete, enter the **show redundancy states** command to confirm the operational redundancy mode has changed to the mode that you configured before.

In this example, the operational redundancy mode has changed to SSO:

Example:

```
Router# show redundancy states
    my state = 13 -ACTIVE
    peer state = 8 -STANDBY HOT
        Mode = Duplex
        Unit ID = 6
Redundancy Mode (Operational) = sso
Redundancy Mode (Configured) = sso
Redundancy State = sso
```

Step 10 The router must be reloaded for the new HA configuration. Enter the **reload** command to reload the router:

Example:

```
Router# reload
Proceed with reload? [confirm]
<bootup messages removed for brevity>
```

If you are not using the console port to complete this procedure, your session may be terminated at this point. If your session is terminated, give the router a few minutes to complete the reload and then log into the router.

Example:

Step 11 (Optional) To confirm an active and a standby IOS process exist, and how the processes are numbered, enter the **show platform** command.

In this example, the **show platform** command output reveals that R0/0 is the active IOS process and R0/1 is the standby IOS process:

Example:

```
Router# show platform
Chassis type: ASR1004
Slot      Type           State        Insert time (ago)
-----
0        ASR1000-SIP10   ok          00:52:34
0/0      SPA-2X1GE-V2   ok          00:51:30
0/1      SPA-2XT3/E3    ok          00:51:24
R0       ASR1000-RP1    ok          00:52:34
  R0/0    ok, active    00:52:34
  R0/1    ok, standby   00:51:00
F0       ASR1000-ESP10   ok, active  00:52:34
P0       ASR1004-PWR-AC  ok          00:51:57
P1       ASR1004-PWR-AC  ok          00:51:57
```

Using Subpackages for Software Upgrade on a Cisco ASR 1001 Router, Cisco ASR 1001-X Router, Cisco ASR 1001-HX Router, Cisco ASR 1002-X Router or a ASR 1002-HX Router

This section provides instructions on using software upgrade for Cisco ASR 1001 Router, Cisco ASR 1001-X Router, Cisco ASR 1001-HX Router, Cisco ASR 1002-X Router, or Cisco ASR 1002-HX Router running subpackages.

These instructions assume two IOS processes are active on the RP and that the router is already running using subpackages.

Note

Step 17 does not have to be performed immediately, and should be done at a convenient time.

SUMMARY STEPS

1. **show version**
2. **redundancy**
3. **mkdir URL-to-directory-name**
4. **ip tftp source-interface gigabitethernet port**
5. **copy tftp: URL-to-target-location**
6. **request platform software package expand file URL-to-consolidated-package**
7. **dir target-URL**
8. **copy file-system:asr1001-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP**
9. **issu loadversion rp 0 file file-system :asr1001-{rpaccess,rpios,rpcontrol}* version-string *.pkg bay standby-bay force**
10. **issu commitversion**
11. **redundancy force-switchover**
12. **show platform**
13. **issu loadversion rp 0 file file-system :asr1001-{rpaccess,rpios,rpcontrol}* version-string *.pkg bay standby-bay force**
14. **issu commitversion**
15. **issu loadversion rp 0 file file-system :asr1001-{rpbase,sipbase,sipspa,espbase}* version *.pkg force**
16. **show version installed**
17. **reload**

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>show version</p> <p>Example:</p> <pre>show version installed</pre> <p>Example:</p> <pre>dir filesystem:<directory></pre> <p>Example:</p> <pre>show platform</pre> <p>Example:</p> <pre>show redundancy-states</pre> <p>Example:</p> <pre>Router# show version</pre> <p>Example:</p> <pre>Router# show version r0 installed</pre> <p>Example:</p> <pre>Router# dir bootflash:</pre>	<p>(Optional) Use the following commands to confirm the current router configuration, as follows:</p> <ul style="list-style-type: none"> • show version and show version active-rp installed—Verify the running version of the Cisco IOS XE software on the router, and which file was used to boot the router, and where that file is stored. • dir—Confirm that the files that were used to boot the router are located in the directory. • show platform—Confirm the current status of the active and standby RPs. • show redundancy states—Confirm the operational and configured redundancy states.

	Command or Action	Purpose
	<p>Example:</p> <pre>Router# show platform</pre> <p>Example:</p> <pre>Router# show redundancy-states</pre>	
Step 2	<p>redundancy</p> <p>Example:</p> <pre>mode sso</pre> <p>Example:</p> <pre>Router(config)# redundancy</pre> <p>Example:</p> <pre>Router(config-red)# mode sso</pre>	<p>Configure SSO if it is not already configured.</p> <p>Note Save the configuration after making this configuration step.</p>
Step 3	<p>mkdir URL-to-directory-name</p> <p>Example:</p> <pre>Router# mkdir 221subs</pre>	<p>Create a directory to store the consolidated package and subpackages.</p> <p>This directory must be created in most cases because the consolidated packages and subpackages have to be separated from the subpackages that booted the router at this step of the procedure.</p>
Step 4	<p>ip tftp source-interface gigabitethernet port</p> <p>Example:</p> <pre>Router(config)# ip tftp source-interface gigabitethernet 0</pre>	<p>Specifies the Gigabit Ethernet TFTP source-interface to be configured:</p> <p>slot/port—Specifies the location of the TFTP source-interface.</p> <p>Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.</p>
Step 5	<p>copy tftp: URL-to-target-location</p> <p>Example:</p> <pre>Router# copy tftp: 221subs</pre>	<p>Copy the consolidated package file into the directory created in Step 3.</p> <p>The consolidated package in this step should not be copied into the same directory where the subpackages that are currently running your router are stored (the directory containing the packages.conf provisioning file from which the router was booted).</p> <p>Tip It is recommended that you copy the package onto a usb: or harddisk: file system for space considerations when performing this step of the procedure.</p>

	Command or Action	Purpose
Step 6	<p>request platform software package expand file <i>URL-to-consolidated-package</i></p> <p>Example:</p> <p>(Optional) dir target-URL</p> <p>Example:</p> <pre>Router# request platform software package expand file usb0:221subs/asr1001-universalk9.03.02.01.S.151-1.S1_2.bin</pre> <p>Example:</p> <pre>Router# dir 221subs</pre>	<p>Extract the subpackages out of the consolidated package file into the temporary directory.</p> <p>Note Take extra care to extract the subpackages to a temporary subdirectory and do not delete any of the files currently running the router at this point of the procedure. To erase the files that were running on the router before the ISSU upgrade, enter the request platform software package clean command after the ISSU upgrade has been completed.</p>
Step 7	<p>dir target-URL</p> <p>Example:</p> <pre>Router# dir 221subs</pre>	(Optional) Display the directory to confirm that the files were extracted.
Step 8	<p>copy file-system:asr1001-espbase.version.pkg <i>URL-to-directory-of-sub-packages-active-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1001-rpaccess.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1001-rpbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1001-rpcontrol.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1001-rpios.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1001-sipbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1001-sipspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p>	Copy the subpackages out of the temporary directory into the directory on the router where the subpackages running the active RP are currently stored.

	Command or Action	Purpose
	<pre>Router# copy 221subs/asr1001-espbase.03.02.01.S.151-1.S1_2.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy 221subs/asr1001-rpaccess.03.02.01.S.151-1.S1_2.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy 221subs/asr1001-rpbase.03.02.01.S.151-1.S1_2.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy 221subs/asr1001-rpcontrol.03.02.01.S.151-1.S1_2.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy 221subs/asr1001-rpios-universalk9.03.02.01.S.151-1.S1_2.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy 221subs/asr1001-sipbase.03.02.01.S.151-1.S1_2.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy 221subs/asr1001-sipspa.03.02.01.S.151-1.S1_2.pkg bootflash:</pre>	
Step 9	<pre>issu loadversion rp 0 file file-system :asr1001-{rpaccess,rpios,rpcontrol}* version-string *.pkg bay standby-bay force</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1001-{rpaccess,rpios,rpcontrol}*03.02.01.S.151-1.S1_2*.pkg bay 1 force</pre>	Upgrade the RPAccess, RPIOs, and RPControl subpackages in the standby bay.
Step 10	<pre>issu commitversion</pre> <p>Example: </p>	Once the SSO state is reached, commit the software version.

Using Subpackages for Software Upgrade on a Cisco ASR 1001 Router, Cisco ASR 1001-X Router, Cisco ASR 1001-HX Router, Cisco ASR 1002-X Router or a ASR 1002-HX Router

	Command or Action	Purpose
	Router# issu commitversion	
Step 11	redundancy force-switchover Example: <pre>Router# redundancy force-switchover</pre>	Force a switchover from the active IOS process to the standby IOS process. Note Your connection to the router often drops and is expected behavior at this point of the procedure in many scenarios. If this step drops your connection to the router, wait a few minutes before reconnecting to the router and then continue to Step 12 .
Step 12	show platform Example: <pre>Router# show platform</pre>	(Optional) Monitor system state to ensure both IOS processes are active.
Step 13	issu loadversion rp 0 file file-system :asr1001-{rpaccess,rpios,rpcontrol}* version-string *.pkg bay standby-bay force Example: <pre>Router# issu loadversion rp 0 file bootflash:asr1001-{rpaccess,rpios,rpcontrol}*03.02.01.S.151-1.S1_2*.pkg bay 0 force</pre>	Upgrade the RPAccess, RPIOS, and RPControl subpackages in the standby bay (a different bay than in Step 9).
Step 14	issu commitversion Example: <pre>Router# issu commitversion</pre>	Commit the software version.
Step 15	issu loadversion rp 0 file file-system :asr1001-{rpbase,sipbase,sipspa,espbase}* version *.pkg force Example: <pre>issu loadversion rp 0 file file-system :asr1001-{rpbase,sipbase,sipspa,espbase}*version *.pkg force</pre> Example: For ASR 1001 and ASR 1002-X <pre>Router#issu loadversion rp 0 file bootflash:21sh/asr1001-{rpbase,sipbase,sipspa,espbase}*03.02.01.S.151-1.S1_2*.pkg force</pre>	Upgrade the RP, SIP, SPA, and ESP subpackages for each SIP on the router. Note This step must be completed one SIP at a time, and repeated for each SIP installed on the router before performing the next step. Tip You can use the show ip interface brief command to identify which slots contain SIPs and SPAs. The interfaces with three numbers (in the form <i>SIP-number/SPA-number/interface-number</i>) identify the SIP and SPA locations in the router.

	Command or Action	Purpose
	<p>Example: For ASR 1001-X</p> <pre>issu loadversion rp 0 file file-system :asr1001-{rpbase,sipbase,sipspa,esp,firmware}* version *.pkg force</pre> <p>Example:</p> <pre>Router#issu loadversion rp 0 file bootflash:221subs/asr1001-{rpbase,sipbase,sipspa,esp,firmware}*0820LS15-1S_2dg force</pre> <p>Example: For ASR1001-HX and ASR1002-HX</p> <pre>issu loadversion rp 0 file file-system :asr1000-{rpbase,elcbase,elcspa,espbase}* version *.pkg force</pre> <p>Example: Router# issu loadversion rp 0 file bootflash:221subs/asr1001-{rpbase,elcbase,elcspa,espbase}*16.02.01.SPA.pkg force</p> <p>Example: For upgrade/downgrade between Polaris 16.x.x releases:</p> <p>For ASR1001-HX and ASR1002-HX Routers, issu loadversion rp 0 file file-system :asr1000-{rpbase, rpboot, elcbase, elcspa, espbase} * version *.pkg force</p> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:221subs/asr1001-{rpbase,elcbase,elcspa,espbase}*160201SPA.pkg force</pre> <p>Example: For ASR1001-X, issu loadversion rp 0 file file-system :asr1001-{rpbase, rpboot, sipbase, sipspa, esp, firmware} * version *.pkg force</p> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:221subs/asr1001-{rpbase,elcbase,elcspa,espbase}*160201SPA.pkg force</pre>	<p>Note The <i>pattern</i> options used in this CLI (rpbase, sipbase, sipspa, espbase and firmware) were introduced in Cisco IOS XE Release 2.1.2 and are not available in previous Cisco IOS XE Releases. See the ISSU Procedures (Prior to Cisco IOS XE Release 2.1.2), on page 65 for pre-Cisco IOS XE Release 2.1.2 ISSU upgrade procedures.</p> <p>ASR 1001-HX and ASR1002-HX Routers are introduced from Polaris 16.x.x release only. Polaris 16.x.x release has 2 new packages i.e. rpboot and webui. Include these 2 packages for upgrade/downgrade between Polaris 16.x.x images at this step.</p>
Step 16	show version installed <p>Example:</p> <pre>Router# show version installed</pre>	(Optional) Verify that the subpackages are properly installed.

Examples

	Command or Action	Purpose
Step 17	reload Example: <pre>Router# reload</pre>	<p>(Optional) Reload the RP.</p> <p>Tip The router will continue normal operation even without a reload, so you can reload the router during scheduled maintenance or a slower traffic period. It is highly recommended reload to avoid conflicts in the software base.</p> <p>Note For ASR1001-HX and ASR1002-HX Router, the sipbase and sipspa package will be replaced by elcbase and elcspa package. New packages rpboot and webui are introduced from Polaris 16.x.x release.</p>

Examples

The following example shows the software upgrade for Cisco ASR 1001 Router, Cisco ASR 1001-X Router or Cisco ASR 1002-X Router running subpackages.

```

Using Subpackages for Software Upgrade on a Cisco ASR 1002 Router or Cisco ASR 1004 Router (software upgrade Command Set)

This section provides instructions on using software upgrade for Cisco ASR 1002 or 1004 Router running subpackages. Cisco ASR 1002 Router is not supported on Polaris 16.x.x release.

These instructions assume two IOS processes are active on the RP and that the router is already running using subpackages.

Note Step 17, 18, and 19 does not have to be performed immediately, and can be done at a convenient time.

SUMMARY STEPS

1. **show version**
2. **redundancy**
3. **mkdir URL-to-directory-name**
4. **ip tftp source-interface gigabitethernet port**
5. **copy tftp: URL-to-target-location**
6. **request platform software package expand file URL-to-consolidated-package**
7. **dir target-URL**
8. **copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP**
9. **issu loadversion rp 0 filefile-system:asr1000rp2-{rpaccess,rpios,rpcontrol}*version-string*.pkg baystandby-bayforce**
10. **issu commitversion**
11. **redundancy force-switchover**
12. **show platform**
13. **issu loadversion rp 0 filefile-system:asr1000rp2-{rpaccess,rpios,rpcontrol}*version-string*.pkg baystandby-bayforce**
14. **issu commitversion**
15. **issu loadversion rp 0 file file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slot SIP-slot-number force**
16. **issu loadversion rp 0 file file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg slot SIP-slot-number force**
17. **issu loadversion rp 0 file file-system:asr1000rp2-esp*version*.pkg force**
18. **issu loadversion rp 0 filefile-system:asr1000rp*version*.pkg**
19. **show version installed**
20. **reload**
21. **request platform software package clean**

DETAILED STEPS

	Command or Action	Purpose
Step 1	show version Example: show version installed Example: dir filesystem:<directory> Example: show platform Example:	<p>(Optional) Use the following commands to confirm the current router configuration, as follows:</p> <ul style="list-style-type: none"> • show version and show version active-rp installed—Verify the running version of the Cisco IOS XE software on the router, and which file was used to boot the router, and where that file is stored. • dir—Confirm that the files that were used to boot the router are located in the directory. • show platform—Confirm the current status of the active and standby RPs.

	Command or Action	Purpose
	<p>show redundancy-states</p> <p>Example:</p> <pre>Router# show version</pre> <p>Example:</p> <pre>Router# show version r0 installed</pre> <p>Example:</p> <pre>Router# dir bootflash:</pre> <p>Example:</p> <pre>Router# show platform</pre> <p>Example:</p> <pre>Router# show redundancy-states</pre>	<ul style="list-style-type: none"> • show redundancy states—Confirm the operational and configured redundancy states.
Step 2	<p>redundancy</p> <p>Example:</p> <pre>mode sso</pre> <p>Example:</p> <pre>Router(config)# redundancy</pre> <p>Example:</p> <pre>Router(config-red)# mode sso</pre>	Configure SSO if it is not already configured. <p>Note Save the configuration after making this configuration step.</p>
Step 3	<p>mkdir URL-to-directory-name</p> <p>Example:</p> <pre>Router# mkdir usb0:221subs</pre>	Create a directory to store the consolidated package and subpackages. This directory must be created in most cases because the consolidated packages and subpackages have to be separated from the subpackages that booted the router at this step of the procedure.
Step 4	<p>ip tftp source-interface gigabitethernet port</p> <p>Example:</p> <pre>Router(config)# ip tftp source-interface gigabitethernet 0</pre>	Specifies the Gigabit Ethernet TFTP source-interface to be configured: slot/port—Specifies the location of the TFTP source-interface. <p>Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.</p>

	Command or Action	Purpose
Step 5	<p>copy tftp: <i>URL-to-target-location</i></p> <p>Example:</p> <pre>Router# copy tftp: usb0:221subs</pre>	<p>Copy the consolidated package file into the directory created in Step 3.</p> <p>The consolidated package in this step should not be copied into the same directory where the subpackages that are currently running your router are stored (the directory containing the packages.conf provisioning file from which the router was booted).</p> <p>Tip It is recommended that you copy the package onto a usb: or harddisk: file system for space considerations when performing this step of the procedure.</p>
Step 6	<p>request platform software package expand file <i>URL-to-consolidated-package</i></p> <p>Example:</p> <pre>(Optional) dir target-URL</pre> <p>Example:</p> <pre>Router# request platform software package expand file usb0:221subs/asr1000rp2-adventerprise9.03.13.00.S.154-3.S-ext.bin</pre> <p>Example:</p> <pre>Router# dir usb0:221subs</pre>	<p>Extract the subpackages out of the consolidated package file into the temporary directory.</p> <p>Note Take extra care to extract the subpackages to a temporary subdirectory and do not delete any of the files currently running the router at this point of the procedure. To erase the files that were running on the router before the ISSU upgrade, enter the request platform software package clean command after the ISSU upgrade has been completed.</p>
Step 7	<p>dir target-URL</p> <p>Example:</p> <pre>Router# dir usb0:221subs</pre>	(Optional) Display the directory to confirm that the files were extracted.
Step 8	<p>copy file-system:<i>asr1000rp2-espbase.version.pkg</i> <i>URL-to-directory-of-sub-packages-active-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p>	Copy the subpackages out of the temporary directory into the directory on the router where the subpackages running the active RP are currently stored.

Command or Action	Purpose
<pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-rpaccess.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p>	

Using Subpackages for Software Upgrade on a Cisco ASR 1002 Router or Cisco ASR 1004 Router (software upgrade Command Set)

	Command or Action	Purpose
	<pre>Router# copy usb0:221subs/asr1000rp2-rpbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-rpcontrol.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-rpios-enterprise9.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elospa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre>	
Step 9	<pre>issu loadversion rp 0 filefile-system:asr1000rp2-[rpaccess,rpios,rpcontrol]*version-string*.pkg baystandby-bayforce</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-[rpaccess,rpios,rpcontrol]*03.13.00.S.154-3.S-ext.pkg bay 1 force</pre>	Upgrade the RPAcces, RPIOS, and RPControl subpackages in the standby bay.

	Command or Action	Purpose
Step 10	issu commitversion Example: Router# issu commitversion	Once the SSO state is reached, commit the software version.
Step 11	redundancy force-switchover Example: Example: Router# redundancy force-switchover	Force a switchover from the active IOS process to the standby IOS process. Note Your connection to the router often drops and is expected behavior at this point of the procedure in many scenarios. If this step drops your connection to the router, wait a few minutes before reconnecting to the router and then continue to Step 12 .
Step 12	show platform Example: Router# show platform	(Optional) Monitor system state to ensure both IOS processes are active.
Step 13	issu loadversion rp 0 file file:file-system:asr1000rp2-{rpaccess,rpios,rcpcontrol}*version-string*.pkg bay:standby-bayforce Example: Router# issu loadversion rp 0 file bootflash:asr1000rp2-{rpaccess,rpios,rcpcontrol}*03.13.00.S.154-3.S-ext*.pkg bay 0 force	Upgrade the RAccess, RPIOS, and RPCControl subpackages in the standby bay (a different bay than in Step 9).
Step 14	issu commitversion Example: Router# issu commitversion	Commit the software version.
Step 15	issu loadversion rp 0 file file:file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slot SIP-slot-number force Example: issu commitversion Example: Router# issu loadversion rp 0 file bootFlash:asr1000rp2-{sipspa,sipbase}*03.13.00.S.154-3.S-ext*.pkg slot 0 force Example:	Upgrade the SIP and SPA subpackages for each SIP on the router. Note This step must be completed one SIP at a time, and repeated for each SIP installed on the router before performing the next step. Tip You can use the show ip interface brief command to identify which slots contain SIPs and SPAs. The interfaces with three numbers (in the form SIP-number/SPA-number/interface-number) identify the SIP and SPA locations in the router.

	Command or Action	Purpose
	<p>Router# issu commitversion</p> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-{sipspa,sipbase}*03.13.00.S.154-3.S-ext*.pkg slot 1 force</pre> <p>Example:</p> <pre>Router# issu commitversion</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-{sipspa,sipbase}*03.13.00.S.154-3.S-ext*.pkg slot 2 force</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	<p>Note The <i>pattern</i> options used in this CLI (sipbase and sipspa) were introduced in Cisco IOS XE Release 2.1.2 and are not available in previous Cisco IOS XE Releases. See the ISSU Procedures (Prior to Cisco IOS XE Release 2.1.2), on page 65 for pre-Cisco IOS XE Release 2.1.2 ISSU upgrade procedures.</p>
Step 16	<p>issu loadversion rp 0 file <i>file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg</i> slot SIP-slot-number force</p> <p>Example:</p> <pre>issu commitversion</pre> <p>Example:</p> <p>Repeat this step for each ELC installed in your router before proceeding to the next step.</p> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-{elcspa,elcbase}*03.13.00.S.154-3.S-ext*.pkg slot 0 force</pre> <p>Example:</p> <pre>Router# issu commitversion</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-{elcspa,elcbase}*03.13.00.S.154-3.S-ext*.pkg slot 1 force</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	<p>Upgrade the ELC and SPA subpackages for each ELC on the router.</p> <p>Note This step must be completed for one ELC at a time, and repeated for each ELC installed on the router before performing the next step.</p> <p>Tip You can use the show ip interface brief command to identify which slots contain ELCs and SPAs. The interfaces with three numbers (in the form <i>ELC-number/SPA-number/interface-number</i>) identify the ELC and SPA locations in the router.</p> <p>Note The <i>pattern</i> options used in this CLI (elcbase and elcspa) were introduced in Cisco IOS XE Release 3.10Sand are not available in previous Cisco IOS XE Releases</p>

	Command or Action	Purpose
	<p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-{elcspa,elclose}*03.13.00.S.154-3.S-ext*.pkg slot 2 force</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	
Step 17	issu loadversion rp 0 file <i>file-system:asr1000rp2-esp*version*.pkg force</i> <p>Example:</p> <pre>issu commitversion</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg force</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	Upgrades the ESP Base subpackage and Commits the ESP Base software.
Step 18	issu loadversion rp 0 <i>filefile-system:asr1000rp*version*.pkg</i> <p>Example:</p> <pre>issu commitversion</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp*03.13.00.S.154-3.S-ext*.pkg</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	Upgrades all subpackages, including the RPBase subpackage, which is the last subpackage that needs to be upgraded. <p>Note This step is required to ensure that all subpackages on the router were upgraded as part of this procedure, and might upgrade some subpackages that would otherwise be missed in the process.</p>
Step 19	show version installed <p>Example:</p> <pre>Router# show version installed</pre>	(Optional) Verify that the subpackages are properly installed.
Step 20	reload <p>Example:</p> <pre>Router# reload</pre>	Reload the RP. <p>Tip The router will continue normal operation even without a reload, so you can reload the router during scheduled maintenance or a slower traffic period.</p>

Examples

	Command or Action	Purpose
Step 21	request platform software package clean	(Optional) Removes the unused subpackages from the router.

Examples

The following example shows the software upgrade for Cisco ASR 1002 or 1004 Router running sub-packages:

```

Router# show version
Cisco IOS Software, IOS-XE Software (X86_64_LINUX_IOSD-ADVENTERPRISEK9-M), Version 15.3(2)S,
 RELEASE SOFTWARE (fc1)
<output removed for brevity>
System image file is "bootflash:Active_Dir/packages.conf"
<output removed for brevity>
Router# show platform

Using Subpackages for Software Upgrade on a Cisco ASR 1002 Router or Cisco ASR 1004 Router (request platform Command Set)

This section provides instructions on using software upgrade for Cisco ASR 1002 or 1004 Router running subpackages using the **request platform** command set. Cisco ASR 1002 Router is not supported on Polaris 16.x.x release.

These instructions assume two IOS processes are active on the RP and that the router is already running using subpackages.

Note

Step 17, 18, and 19 does not have to be performed immediately, and can be done at a convenient time.

SUMMARY STEPS

1. **show version**
2. **redundancy**
3. **mkdir URL-to-directory-name**
4. **ip tftp source-interface gigabitethernet port**
5. **copy tftp: URL-to-target-location**
6. **request platform software package expand file URL-to-consolidated-package**

7. `dir target-URL`
8. `copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP`
9. `request platform software package install rp 0`
`filefile-system:asr1000rp2-{rpaccess,rpios,rpcontrol}*version-string*.pkg baystandby-bayforce`
10. `redundancy force-switchover`
11. (Optional) `show platform`
12. `request platform software package install rp 0`
`filefile-system:asr1000rp2-{rpaccess,rpios,rpcontrol}*version-string*.pkg baystandby-bayforce`
13. `request platform software package install rp 0 file`
`file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slot SIP-slot-number force`
14. `request platform software package install rp 0 file`
`file-system:asr1000rp2-{elcase,elcspa}*version*.pkg slot SIP-slot-number force`
15. `request platform software package install rp 0 file file-system:asr1000rp2-esp*version*.pkg force`
16. `request platform software package install rp 0 filefile-system:asr1000rp*version*.pkg`
17. `show version installed`
18. `reload`
19. `request platform software package clean`

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>show version</p> <p>Example:</p> <pre>show version installed</pre> <p>Example:</p> <pre>dir filesystem:<directory></pre> <p>Example:</p> <pre>show platform</pre> <p>Example:</p> <pre>show redundancy-states</pre> <p>Example:</p> <pre>Router# show version</pre> <p>Example:</p> <pre>Router# show version r0 installed</pre> <p>Example:</p> <pre>Router# dir bootflash:</pre> <p>Example:</p> <pre>Router# show platform</pre>	<p>(Optional) Use the following commands to confirm the current router configuration, as follows:</p> <ul style="list-style-type: none"> • show version and show version active-rp installed—Verify the running version of the Cisco IOS XE software on the router, and which file was used to boot the router, and where that file is stored. • dir—Confirm that the files that were used to boot the router are located in the directory. • show platform—Confirm the current status of the active and standby RPs. • show redundancy states—Confirm the operational and configured redundancy states.

	Command or Action	Purpose
	Example: Router# show redundancy-states	
Step 2	redundancy Example: mode sso Example: Router(config)# redundancy Example: Router(config-red)# mode sso	Configure SSO if it is not already configured. Note Save the configuration after making this configuration step.
Step 3	mkdir URL-to-directory-name Example: Router# mkdir usb0:221subs	Create a directory to store the consolidated package and subpackages. This directory must be created in most cases because the consolidated packages and subpackages have to be separated from the subpackages that booted the router at this step of the procedure.
Step 4	ip tftp source-interface gigabitethernet port Example: Router(config)# ip tftp source-interface gigabitethernet 0	Specifies the Gigabit Ethernet TFTP source-interface to be configured: slot/port—Specifies the location of the TFTP source-interface. Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.
Step 5	copy tftp: URL-to-target-location Example: Router# copy tftp: usb0:221subs	Copy the consolidated package file into the directory created in Step 3 . The consolidated package in this step should not be copied into the same directory where the subpackages that are currently running your router are stored (the directory containing the packages.conf provisioning file from which the router was booted). Tip It is recommended that you copy the package onto a usb: or harddisk: file system for space considerations when performing this step of the procedure.
Step 6	request platform software package expand file URL-to-consolidated-package	Extract the subpackages out of the consolidated package file into the temporary directory.

	Command or Action	Purpose
	<p>Example:</p> <pre>Router# request platform software package expand file usb0:221subs/asr1000rp2-adventerprise9.03.13.00.S.154-3.S-ext.bin</pre>	<p>Note Take extra care to extract the subpackages to a temporary subdirectory and do not delete any of the files currently running the router at this point of the procedure. To erase the files that were running on the router before the ISSU upgrade, enter the request platform software package clean command after the ISSU upgrade has been completed.</p>
Step 7	<p>dir target-URL</p> <p>Example:</p> <pre>Router# dir usb0:221subs</pre>	(Optional) Display the directory to confirm that the files were extracted.
Step 8	<p>copy file-system:asr1000rp2-espbase.version.pkg <i>URL-to-directory-of-sub-packages-active-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espx86base.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre>	<p>Copy the subpackages out of the temporary directory into the directory on the router where the subpackages running the active RP are currently stored.</p> <p>Note From Polaris release 16.x.x, two new packages: rpboot and webui are introduced.</p>

Command or Action	Purpose
<pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elcbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elcspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-rpassess.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-rpbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-rpcontrol.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-rios-enterprise.9.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p>	

	Command or Action	Purpose
	<pre>Router# copy usb0:221subs/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy usb0:221subs/asr1000rp2-elospa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre>	
Step 9	request platform software package install rp 0 file[file-system]asr1000rp2-[rpaccess,rpios,rpcontrol]*version-string*.pkg bay[standby-bay]force <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-[rpaccess,rpios,rpcontrol]*03.13.00.S.154-3.S-ext.pkg bay 1 force</pre>	Upgrade the RPAccess, RPIOS, and RPControl subpackages in the standby bay.
Step 10	redundancy force-switchover <p>Example:</p> <pre>Router# redundancy force-switchover</pre>	Force a switchover from the active IOS process to the standby IOS process.
Step 11	(Optional) show platform <p>Example:</p> <pre>Router# show platform</pre>	(Optional) Monitor system state to ensure both IOS processes are active.
Step 12	request platform software package install rp 0 file[file-system]asr1000rp2-[rpaccess,rpios,rpcontrol]*version-string*.pkg bay[standby-bay]force <p>Example:</p>	Upgrade the RPAccess, RPIOS, and RPControl subpackages in the standby bay, which in this context is the opposite bay used in Step 9 .

	Command or Action	Purpose
	<pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-{rpaccess,rpios,rpcontrol}*03.13.00.S.154-3.S-ext*.pkg bay 0 force</pre>	<p>Note The <i>pattern</i> options used in this CLI (rpaccess, rpios, and rpcontrol) were introduced in Cisco IOS XE Release 2.1.2 and are not available in previous Cisco IOS XE Releases. See the ISSU Procedures (Prior to Cisco IOS XE Release 2.1.2), on page 65 for pre-Cisco IOS XE Release 2.1.2 ISSU upgrade procedures.</p>
Step 13	<p>request platform software package install rp 0 file file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slot SIP-slot-number force</p> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-{sipspa,sipbase}*03.13.00.S.154-3.S-ext*.pkg slot 0 force</pre> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-{sipspa,sipbase}*03.13.00.S.154-3.S-ext*.pkg slot 1 force</pre> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-{sipspa,sipbase}*03.13.00.S.154-3.S-ext*.pkg slot 2 force</pre>	<p>Upgrade the SIP and SPA subpackages for each SIP on the router.</p> <p>Note This step must be completed one SIP at a time, and repeated for each SIP installed on the router before performing the next step.</p> <p>Tip You can use the show ip interface brief command to identify which slots contain SIPs and SPAs. The interfaces with three numbers (in the form <i>SIP-number/SPA-number/interface-number</i>) identify the SIP and SPA locations in the router.</p> <p>Note The <i>pattern</i> options used in this CLI (sipbase and sipspa) were introduced in Cisco IOS XE Release 2.1.2 and are not available in previous Cisco IOS XE Releases. See the ISSU Procedures (Prior to Cisco IOS XE Release 2.1.2), on page 65 for pre-Cisco IOS XE Release 2.1.2 ISSU upgrade procedures.</p>
Step 14	<p>request platform software package install rp 0 file file-system:asr1000rp2-{elcase,elcspa}*version*.pkg slot SIP-slot-number force</p> <p>Example:</p> <p>Repeat this step for each ELC installed in your router before proceeding to the next step.</p> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-{elcspa,elbase}*03.13.00.S.154-3.S-ext*.pkg slot 0 force</pre> <p>Example:</p> <pre>Router# request platform software package install rp 0 file</pre>	<p>Upgrade the ELC and SPA subpackages for each ELC on the router.</p> <p>Note This step must be completed for one ELC at a time, and repeated for each ELC installed on the router before performing the next step.</p> <p>Tip You can use the show ip interface brief command to identify which slots contain SIPs and SPAs. The interfaces with three numbers (in the form <i>ELC-number/SPA-number/interface-number</i>) identify the ELC and SPA locations in the router.</p> <p>Note The <i>pattern</i> options used in this CLI (elbase and elcspa) were introduced in Cisco IOS XE Release 3.10S and are not available in previous Cisco IOS XE Releases</p>

Examples

	Command or Action	Purpose
	<pre>bootflash:asr1000rp2-[elcspa,elbase]*03.13.00.S.154-3.S-ext*.pkg slot 1 force</pre> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-[elcspa,elbase]*03.13.00.S.154-3.S-ext*.pkg slot 2 force</pre>	
Step 15	request platform software package install rp 0 file file-system:asr1000rp2-esp*version*.pkg force <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg force</pre>	Upgrade the ESP Base subpackage.
Step 16	request platform software package install rp 0 filefile-system:asr1000rp*version*.pkg <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp*03.13.00.S.154-3.S-ext*.pkg</pre>	Upgrade all subpackages, including the RPBase subpackage, which is the last subpackage that needs to be upgraded. Note This step is required to ensure that all subpackages on the router were upgraded as part of this procedure, and might upgrade some subpackages that would otherwise be missed in the process.
Step 17	show version installed <p>Example:</p> <pre>Router# show version installed</pre>	(Optional) Verify that the subpackages are properly installed.
Step 18	reload <p>Example:</p> <pre>Router# reload</pre>	Reload the RP. Tip The router will continue normal operation even without a reload, so you can reload the router during scheduled maintenance or a slower traffic period.
Step 19	request platform software package clean	(Optional) Removes the unused subpackages from the router.

Examples

The following example shows the software upgrade for Cisco ASR 1002 or 1004 Router running sub-packages:

```
Router# show version
Cisco IOS Software, IOS-XE Software (X86_64_LINUX_IOSD-ADVENTERPRISEK9-M), Version 15.3(2)S,
```

```

Minimal Disruptive Restart ISSU

A software upgrade of a SIP in any mode results in the SIP being reset and the occurrence of minimal outage during the upgrade. Minimal Disruptive Restart (MDR) minimizes traffic disruption during a software upgrade and supports consolidated package software upgrade and subpackage software upgrade for SIP-40.

The software upgrade of a SIP using MDR is supported only on the Cisco ASR 1000 Series Aggregation Services routers running Cisco IOS XE Release 3.8S and later.

**Note**

MDR upgrades (both consolidated and subpackage upgrades) are supported only on hardware-redundant dual route processor (RP) and Enhanced Services Processors (ESP) platforms.

MDR reduces the downtime (time during which the data plane is unavailable) due to ISSU of a SIP and the SPA(s) within it. The downtime is reduced from 100 seconds to not more than 25 seconds on a SIP reload and from 30 seconds to not more than 10 seconds on a SPA reload. The reload time of a SIP or SPA using a MDR or a non-MDR upgrade remains the same.

MDR for a SIP is permitted if following conditions are met:

- Chassis is hardware redundant (dual RP and dual ESP)
- SIP-type supports MDR.
- At least one MDR-compatible SPA in the SIP should be present for the MDR process.
- All the SPAs associated with the SIP support MDR.
- Both the current software version and the upgrade software version must be ISSU and MDR compatible for both the SIPBase and SIPSPA subpackages for each SPA type that is present.

The following SPAs support MDR:

- SPA-2X1GE-V2
- SPA-5X1GE-V2
- SPA-8X1GE-V2
- SPA-10X1GE-V2
- SPA-1X10GE-L-V2

Starting with IOS XE release 3.10S and later, MDR support has been extended to include the following SPAs:

- SPA-2XOC3-POS
- SPA-4XOC3-POS
- SPA-4XOC3-POS-V2
- SPA-8XOC3-POS
- SPA-1XOC12-POS
- SPA-2XOC12-POS
- SPA-4XOC12-POS
- SPA-8XOC12-POS

Effective from Cisco IOS XE Release 3.12S, the Cisco ASR 1000 Series Fixed Ethernet Line Card (ASR1000-2T+20X1GE) supports Minimal Disruptive Restart (MDR) for ELCBase and ELCSPA packages. MDR support for ASR1000-2T+20X1GE is specifically available on the Cisco ASR 1006 Router and the Cisco ASR 1013 Router with Route Processor 2 (RP2).

For more information on the Cisco ASR 1000 Series Fixed Ethernet Line Card (ASR1000-2T+20X1GE), see the following documents:

[Cisco ASR 1000 Series Fixed Ethernet Line Card Hardware Installation Guide](#)

[Cisco ASR 1000 Fixed Ethernet Line Card Software Configuration Guide](#)

Use the **request platform software package verify** and **issu checkversion** commands with the **mdr** option to verify the MDR upgrade compatibility of a consolidated package or an individual subpackage.

When performing an ISSU upgrade, you can specify whether the upgrade should use MDR. If you do not specify this, the ISSU upgrade process will remain unchanged.

Restrictions and Limitations

- MDR is not supported on non-hardware-redundant platforms, such as, Cisco ASR 1001 Router, Cisco ASR 1001-X Router, Cisco ASR 1002 Router, Cisco ASR 1002-X Router, or Cisco ASR 1004 Router, and on hardware-redundant platforms without redundant hardware, such as, Cisco ASR 1006 router, or Cisco ASR 1013 router with only a single RP or ESP.
- MDR is not supported on Polaris 16.x.x release.
- MDR is not supported on SIP10.
- MDR does not support software downgrade.
- To use MDR, both the current software and the upgrade software must be ISSU and MDR compatible.
- If a SIP is performing an MDR upgrade the following events cannot be handled during the upgrade:
 - Fast Reroute (FRR)
 - Automatic protection switching (APS)
 - Ethernet over Multiprotocol Label Switching (EoMPLS) and pseudoWire (PW) down that require an attachment circuit (AC) port to be shut.

- Interface flaps and interface errors
- Interface-specific or linecard-specific configuration changes
- SPA Online Insertion and Removal (OIR)
- Transceiver OIR
- Line alarms
- Statistics—Error counts will be reset

High-Availability Considerations

Any high-availability (HA) failover that occurs during MDR-process terminates the process. This includes failures such as active RP IOS failover during the MDR upgrade process or active RP FRU failure in a chassis with redundant hardware during subpackage upgrade.

For MDR upgrade using consolidated packages, upgrade is initiated by the upgraded active RP after the ESP software has been upgraded.

Using ISSU to Perform a Consolidated Package Upgrade in a Dual Route Processor Configuration with MDR

Consolidated packages can only be upgraded using ISSU in dual Route Processor configurations. ISSU is not supported for consolidated package upgrades in single Route Processor configurations.

If you want the RPs on your Cisco ASR 1000 Series router to be running using a consolidated package with MDR after the ISSU upgrade is complete, use the following instructions:

Note This procedure will only work if the current RPs are already running consolidated packages.

SUMMARY STEPS

1. **ip tftp source-interface gigabitethernet slot/port**
2. **copy tftp: URL-to-target-location**
3. **copy source-file-system:filename standby-destination-filesystem**
4. **dir URL-to-target-location**
5. **issu checkversion rp upgrade-rp-number file URL mdr {force}**
6. **product='kwdname='issu loadversion rp upgrade-rp-number file standby-file-system:filename mdr {force}'**
7. **issu runversion**
8. **telnetip-addressport**
9. **issu acceptversion**
10. **issu commitversion**
11. **show version**
12. **hw-module slot RP-slot reload**

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>ip tftp source-interface gigabitethernet slot/port</p> <p>Example:</p> <pre>Router(config)# ip tftp source-interface gigabitethernet 0</pre>	<p>Specifies the Gigabit Ethernet TFTP source-interface to be configured:</p> <p>slot/port—Specifies the location of the TFTP source-interface.</p> <p>Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.</p>
Step 2	<p>copy tftp: URL-to-target-location</p> <p>Example:</p> <pre>copy source-file-system:filename standby-destination-filesystem</pre> <p>Example:</p> <pre>Router# copy tftp bootflash:</pre>	Copy the consolidated package onto the active RP.
Step 3	<p>copy source-file-system:filename standby-destination-filesystem</p> <p>Example:</p> <pre>Router# copy bootflash:asr1000rp2-adventerprisek9.03.13.00.S.154-3.S-ext.bin stby-bootflash:</pre>	Copy the consolidated package onto the standby RP.
Step 4	<p>dir URL-to-target-location</p> <p>Example:</p> <pre>dir URL-to-target-stby-location</pre> <p>Example:</p> <pre>Router# dir bootflash:</pre> <p>Example:</p> <pre>Router# dir stby-bootflash:</pre>	(Optional) Display the contents of the target directories to confirm the successful copy of the file package.

Using ISSU to Perform a Consolidated Package Upgrade in a Dual Route Processor Configuration with MDR

	Command or Action	Purpose
Step 5	<pre>issu checkversion rp <i>upgrade-rp-number</i> file <i>URL</i> mdr {force}</pre> <p>Example:</p> <pre> </pre> <p>Example:</p> <pre>Router#issu checkversion rp 1 file stdby bootflash:asr1000rp2-adenterprise9.03.13.00.S.154-3.S<bin mdr</pre>	Checks the ISSU MDR software packaging compatibility on the standby Route Processor (RP).
Step 6	<pre>product='kwdname='issu loadversion rp <i>upgrade-rp-number</i> file <i>standby-file-system:filename</i> mdr {force}</pre> <p>Example:</p> <pre> </pre> <p>Example:</p> <pre>Router# issu loadversion rp 1 file stdby bootflash:asr1000rp2-adenterprise9.03.13.00.S.154-3.S<bin mdr</pre>	Load the target consolidated package onto the standby RP. After you receive the message indicating that the terminal state has been reached continue with Step 7.
Step 7	<pre>issu runversion</pre> <p>Example:</p> <pre> </pre> <p>Example:</p> <pre>Router# issu runversion</pre>	Run the consolidated package that was loaded in Step 6 . <p>Note If this command is entered before the terminal state is reached, a “ peer is not online ” or “ Standby RP is not in terminal state ” error message will be seen and the issu runversion command will not work. If the issu runversion command does not run for these reasons, wait for the “ terminal state is reached ” message to appear and retry the issu runversion command. You can also monitor the terminal state using the show platform command.</p> <p>After ISSU runversion is completed, a switchover will automatically occur and the standby RP will become the active RP.</p>
Step 8	<pre>telnet <i>ip-address</i> <i>port</i></pre> <p>Example:</p> <pre> </pre> <p>Example:</p> <pre>[unix-server-1 ~]\$ telnet 172.17.52.157 2003</pre> <p>Example:</p>	Log in to the RP being upgraded, preferably using the RP’s console port, to complete the upgrade. (This is the new active RP, that was the standby RP prior to the ISSU process.) <p>Note Ensure the hostname does not end in “ -stby ” after logging into the RP, as this indicates that the RP being accessed is still the standby RP.</p>

	Command or Action	Purpose
	<p>User Access Verification</p> <p>Example:</p> <p>Example:</p> <p>Username: user</p> <p>Example:</p> <p>Password: *****</p> <p>Example:</p> <p>Example:</p> <p>Router></p>	There are many ways to log on to a console port. The example shows access to the console port from a UNIX host using telnet.
Step 9	issu acceptversion	(Optional) Stops the ISSU rollback timer. This step is optional as long as Step 10 is completed before the rollback timer expires.
Step 10	issu commitversion	Completes the ISSU upgrade.
Step 11	<p>show version</p> <p>Example:</p> <pre>show version active-RP running</pre> <p>Example:</p> <pre>show version active-RP provisioned</pre> <p>Example:</p> <pre>show platform</pre> <p>Example:</p> <pre>show running-configuration</pre>	<p>(Optional) Enter the show version, show platform, or show running-configuration commands to confirm that the upgrade completed successfully, as follows:</p> <ul style="list-style-type: none"> • show version—Confirm that the correct software version is running on your router and that the RP was booted from the correct file. • show running-configuration—Confirm that the booting configuration, in particular the boot system statements, are correct. <p>Tip Use the show running-config include boot command to display only the boot statements from the show running-configuration output.</p>

Examples

	Command or Action	Purpose
		<ul style="list-style-type: none"> • show platform— Confirm that both RP0 and RP1 are correctly running as active and standby.
Step 12	hw-module slot RP-slot reload Example: Example: <pre>Router# hw-module slot R0 reload</pre>	Reload the new software on the Standby RP.

Examples

The following example shows how to perform consolidated package upgrade in a dual route processor configuration:

```
Router(config)# ip tftp source-interface gigabitethernet 0
Router#copy tftp: bootflash:
:
Address or name of remote host []? 172.17.26.81
Source filename []? asr1000rp2-adventureprisek9.03.12.01.S.154-2.S1.bin

Using ISSU to Upgrade the Subpackages on a Cisco ASR 1006 Router and Cisco ASR 1013 Router (issu Command Set) with MDR

SUMMARY STEPS

1. **show version**
2. **copy running-config startup-config**
3. **mkdir URL-to-directory-name**
4. **ip tftp source-interface gigabitethernet port**
5. **copy tftp: URL-to-target-location**
6. **request platform software package expand file URL-to-consolidated-package**
7. **dir target-URL**
8. **copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP**
9. **copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-standby-RP**
10. **product="kwdname="issu checkversion rp standby-RP product="name="> file**
standy-file-system:asr1000rp*version*.pkg mdr {force}
11. **issu loadversion rp standby-RP file target-standbyRP-URL-for-sub-packages:asr1000rp*version*.pkg**
product="name=">force
12. **hw-module slot standby-RP reload**
13. **issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg**
slotSIP-slot-number product="name=">mdr {force}
14. **issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg**
slotELC-slot-number mdr product="name=">{force}
15. **issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot**
standby-ESP-slot
16. **issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp*version*.pkg force**
17. **show version active-RP provisioned**
18. **redundancy force-switchover**
19. **request platform software package clean**

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>show version</p> <p>Example:</p> <pre>show version active-rp installed</pre> <p>Example:</p> <pre>dir filesystem: directory</pre> <p>Example:</p> <pre>show platform</pre> <p>Example:</p> <pre>show redundancy states</pre> <p>Example:</p> <p>Router# show version</p> <p>Example:</p> <pre>Router# show version r0 installed</pre> <p>Example:</p> <pre>Router# dir bootflash:</pre> <p>Example:</p> <pre>Router# show platform</pre> <p>Example:</p> <pre>Router# show redundancy states</pre>	(Optional) Use the following commands to confirm the current router configuration, as follows: <ul style="list-style-type: none"> • show version and show version active-rp installed—Verify the running version of the Cisco IOS XE software on the router, and which file was used to boot the router, and where that file is stored. • dir—Confirm that the files that were used to boot the router are located in the directory. • show platform—Confirm the current status of the active and standby RPs. • show redundancy states—Confirm the operational and configured redundancy states.
Step 2	<p>copy running-config startup-config</p> <p>Example:</p> <p>Router# copy running-config startup-config</p>	After you have confirmed that the system states are acceptable, save the current configuration to the startup configuration.
Step 3	<p>mkdir URL-to-directory-name</p> <p>Example:</p> <p>Router# mkdir URL-to-directory-name</p> <p>Example:</p> <p>Router# mkdir URL-to-directory-name</p>	Create a directory to store the consolidated package and subpackages. This directory must be created in most cases because the consolidated packages and subpackages have to be

	Command or Action	Purpose
	<pre>Router# mkdir bootflash:tmp</pre> Example:	separated from the subpackages that booted the router at this step of the procedure.
Step 4	ip tftp source-interface gigabitethernet port Example: <pre>Router(config)# ip tftp source-interface gigabitethernet 0</pre>	<p>Specifies the Gigabit Ethernet TFTP source-interface to be configured: slot/port—Specifies the location of the TFTP source-interface.</p> <p>Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.</p>
Step 5	copy tftp: URL-to-target-location Example: Example: <pre>Router# copy tftp: bootflash:tmp</pre>	<p>Copy the consolidated package file into the directory created in Step 3.</p> <p>The consolidated package in this step should not be copied into the same directory where the subpackages that are currently running your router are stored (the directory containing the packages.conf provisioning file from which the router was booted).</p> <p>Note type="tip" It is recommended that you copy the package onto a usb: or harddisk: file system for space considerations when performing this step of the procedure.</p>
Step 6	request platform software package expand file URL-to-consolidated-package Example: Example: <pre>Router# request platform software package expand file bootflash:tmp/asr1000p2-adenterprisek.9.03.13.00.S.1543.Sext.bin</pre> Example:	<p>Extract the subpackages out of the consolidated package file into the temporary directory.</p> <p>Note Take extra care to extract the subpackages to a temporary subdirectory and do not delete any of the files currently running the router at this point of the procedure. To erase the files that were running on the router before the ISSU upgrade, enter the request platform software package clean command after the ISSU upgrade has been completed.</p>
Step 7	dir target-URL Example: Example:	(Optional) Display the directory to confirm that the files were extracted.

	Command or Action	Purpose
	Router# dir bootflash:tmp	
Step 8	<p>copy file-system:asr1000rp2-espbase.version.pkg <i>URL-to-directory-of-sub-packages-active-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espx86base.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Router# copy</p>	Copy the subpackages out of the temporary directory into the directory on the router where the subpackages running the active RP are currently stored.

	Command or Action	Purpose
	<pre data-bbox="290 280 915 340">bootflash:/tmp/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p data-bbox="290 354 393 386">Example:</p> <pre data-bbox="290 424 915 513">Router# copy bootflash:/tmp/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p data-bbox="290 528 393 559">Example:</p> <pre data-bbox="290 597 915 656">Router# copy bootflash:/tmp/asr1000rp2-mpaccess.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p data-bbox="290 787 393 819">Example:</p> <pre data-bbox="290 857 915 916">Router# copy bootflash:/tmp/asr1000rp2-mpbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p data-bbox="290 1047 393 1079">Example:</p> <pre data-bbox="290 1199 915 1288">Router# copy bootflash:/tmp/asr1000rp2-mpcontrol.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p data-bbox="290 1303 393 1334">Example:</p> <pre data-bbox="290 1455 915 1543">Router# copy bootflash:/tmp/asr1000rp2-mpcse-enterprise9.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p data-bbox="290 1558 393 1590">Example:</p> <pre data-bbox="290 1668 915 1778">Router# copy bootflash:/tmp/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre>	

	Command or Action	Purpose
	<p>Example:</p> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-elbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-elcspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre>	
Step 9	<p>copy file-system:asr1000rp2-espbase.version.pkg <i>URL-to-directory-of-sub-packages-standby-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpx86base.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p>	Copy the subpackages out of the temporary directory into the directory on the router where the subpackages running the standby RP are currently stored.

Command or Action	Purpose
<pre data-bbox="290 276 910 361">copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre data-bbox="290 382 910 487">copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre data-bbox="290 508 910 614">copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre data-bbox="290 635 910 741">copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre data-bbox="290 762 910 846">copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <p>Examples:</p> <p>Example:</p> <pre data-bbox="290 1142 910 1227">Router# copy bootflash:tmp/asr1000rp2-esbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <p>Example:</p> <pre data-bbox="290 1396 910 1480">Router# copy bootflash:tmp/asr1000rp2-esprobase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <p>Example:</p> <pre data-bbox="290 1649 910 1733">Router# copy bootflash:tmp/asr1000rp2-rpaccess.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p>	

Command or Action	Purpose
Example: <pre>Router# copy bootflash:/tmp/asr1000rp2-rpbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: Example: <pre>Router# copy bootflash:/tmp/asr1000rp2-rpcontrol.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: Example: <pre>Router# copy bootflash:/tmp/asr1000rp2-rpics-enterprise.03.13.00.S.154-3.S-ext.pkg</pre>	
Example: Example: <pre>Router# copy bootflash:/tmp/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: Example: <pre>Router# ccopy bootflash:/tmp/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example: Example: <pre>Router# copy bootflash:/tmp/asr1000rp2-eldbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Example:	

	Command or Action	Purpose
	Example: Router# ccopy bootflash:tmp/asr1000rp2-elospa.03.13.00.S.154-3.S-ext.pkg stby-bootflash:	
Step 10	product="kwdname="issu checkversion rp standby-RP product="name="> file standby-file-system:asr1000rp*version*.pkg mdr {force} Example: Example: Example: Router# issu checkversion rp 1 file stby-bootflash:asr1000rp2-*03.13.00.S.154-3.S-ext*pkg mdr	Checks the ISSU MDR software packaging compatibility on the standby Route Processor (RP).
Step 11	issu loadversion rp standby-RP file target-standbyRP-URL-for-sub-packages:asr1000rp*version*.pkg product="name=">force Example: Example: Router# issu loadversion rp 1 file stby-bootflash:asr1000rp2-*03.13.00.S.154-3.S-ext*pkg force	Upgrade the RP subpackages on the standby RP, where the “rp*” wildcard is specified to capture all of the RP subpackages for the desired upgrade release.
Step 12	hw-module slot standby-RP reload Example: Example: Router# hw-module slot R1 reload	Reload the standby RP.
Step 13	issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-(sipbase,sipspa)*version*.pkg slotSIP-slot-number product="name=">mdr {force} Example: issu commitversion	Upgrade the SIP and SPA subpackages for each SIP on the router using MDR. Note This step must be completed one SIP at a time, and repeated for each SIP installed on the router before performing the next step.

	Command or Action	Purpose
	<p>Example:</p> <p>Example:</p> <p>Example:</p> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-{sipbase,sipspa}*03.13.00*pkg mdr</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	<p>Note type="tip"</p> <p>You can use the show ip interface brief command to identify which slots contain SIPs and SPAs. The interfaces with three numbers (in the form <i>SIP-number/SPA-number/interface-number</i>) identify the SIP and SPA locations in the router.</p> <p>Note The <i>pattern</i> options used in this CLI (sipbase and sipspa) were introduced in Cisco IOS XE Release 2.1.2 and are not available in previous Cisco IOS XE Releases.</p>
Step 14	<p>issu loadversion rp active-RP file <i>URL-to-active-file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg</i> slotELC-slot-number mdr product="name=">{force}</p> <p>Example:</p> <pre>issu commitversion</pre> <p>Example:</p> <p>Example:</p> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-{elcbase,elcspa}*03.13.00.S.154-3.S-ext*pkg mdr</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	<p>Upgrade the Ethernet Line Card (ELC) and SPA subpackages for each ELC on the router using MDR.</p> <p>Note This step must be completed one ELC at a time, and repeated for each ELC installed on the router before performing the next step.</p> <p>Note type="tip"</p> <p>You can use the show ip interface brief command to identify which slots contain ELCs and SPAs. The interfaces with three numbers (in the form <i>ELC-number/SPA-number/interface-number</i>) identify the ELC and SPA locations in the router.</p> <p>Note The <i>pattern</i> options used in this CLI (elcbase and elcspa) were introduced in Cisco IOS XE Release 3.10S and are not available in previous Cisco IOS XE Releases.</p>
Step 15	<p>issu loadversion rp active-RP file <i>URL-to-active-file-system:asr1000rp2-esp*version*.pkg</i> slot standby-ESP-slot</p> <p>Example:</p> <pre>issu commitversion</pre> <p>Example:</p> <pre>issu loadversion rp active-RP file URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot active-ESP-slot</pre>	<p>Upgrade the ESP Base subpackage on the standby and the active ESPs.</p> <p>After entering the issu loadversion rp command on the active RP, the ESP switchover will occur automatically. Minimal traffic interruption will occur as a result of this switchover.</p>

	Command or Action	Purpose
	<p>Example:</p> <pre>issu commitversion</pre> <p>Example:</p> <pre> </pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*pkg slot 1</pre> <p>Example:</p> <pre>Router# issu commitversion</pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*pkg slot 0</pre> <p>Example:</p> <pre>Router# issu commitversion</pre>	
Step 16	<p>issu loadversion rp <i>active-RP</i> file <i>URL-to-active-file-system:asr1000rp*version*.pkg force</i></p> <p>Example:</p> <pre> </pre> <p>Example:</p> <pre>Router# issu loadversion rp 0 file bootflash:asr1000rp2*03.13.00.S.154-3.S-ext*pkg force</pre>	<p>Upgrade all of the subpackages on the active RP.</p> <p>Note This step is required to ensure that all subpackages on the router were upgraded as part of this procedure, and might upgrade some subpackages that would otherwise be missed in the process.</p>
Step 17	<p>show version <i>active-RP</i> provisioned</p> <p>Example:</p> <pre>show version active-RP installed</pre> <p>Example:</p> <pre> </pre> <p>Example:</p> <pre>Router# show version r0 provisioned</pre> <p>Example:</p>	(Optional) Confirm that the subpackages are provisioned and installed.

Examples

	Command or Action	Purpose
	Router# show version r0 installed	
Step 18	redundancy force-switchover Example: Example: Router# redundancy force-switchover	Force an RP switchover to complete the upgrade.
Step 19	request platform software package clean Example: Example: Router# request platform software package clean	(Optional) Removes all unused subpackages files from the router.

Examples

The following example shows ISSU upgrade using subpackages on a Cisco ASR 1006 router or ASR 1013 router with a dual RP setup using the **issu** command set

```

Router# show version
Cisco IOS Software, IOS-XE Software (X86_64_LINUX_IOSD-ADVENTERPRISEK9-M), Version 15.3(2)S,
 RELEASE SOFTWARE (fc1)
<output removed for brevity>

Using ISSU to Upgrade Subpackages on a Cisco ASR 1006 Router or Cisco ASR 1013 Router (request platform command set) with MDR

This procedure can only be performed if the current ASR 1006 router or ASR 1013 router has two active RPs and both RPs are running subpackages.

To perform an ISSU upgrade with MDR using subpackages on a Cisco ASR 1006 router or ASR 1013 router with a dual RP setup using the **request platform** command set, follow the following instructions.

SUMMARY STEPS

1. **show version**
2. **mkdir URL-to-directory-name**
3. **ip tftp source-interface gigabitethernet port**
4. **copy tftp: URL-to-target-location**
5. **request platform software package expand file URL-to-consolidated-package**
6. **dir target-URL**
7. **copy file-system:asr1000rp2-espbasic.version.pkg URL-to-directory-of-sub-packages-active-RP**
8. **copy file-system:asr1000rp2-espbasic.version.pkg URL-to-directory-of-sub-packages-standby-RP**
9. **product="name=>request platform software package verify rp slot file URL mdr {force}**
10. **request platform software package install rp standby-RP file**
target-standbyRP-URL-for-sub-packages:asr1000rp*version*.pkg force
11. **hw-module slot standby-RP reload**
12. **request platform software package install rp active-RP file**
URL-to-active-file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slotSIP-slot-number
product="name=>mdr {force}
13. **request platform software package install rp active-RP file**
URL-to-active-file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg slotELC-slot-number mdr
product="name=>{force}
14. **request platform software package install rp active-RP file**
URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot standby-ESP-slot
15. **request platform software package install rp active-RP file**
URL-to-active-file-system:asr1000rp*version*.pkg force
16. **show version active-RP provisioned**
17. **redundancy force-switchover**
18. **request platform software package clean**

DETAILED STEPS

	Command or Action	Purpose
Step 1	<p>show version</p> <p>Example:</p> <pre>show version active-rp installed</pre> <p>Example:</p> <pre>show version standby-rp installed</pre> <p>Example:</p> <pre>dir filesystem:<directory></pre> <p>Example:</p> <pre>show platform</pre> <p>Example:</p> <pre>Router# show version</pre> <p>Example:</p> <pre>Router# show version r0 installed</pre> <p>Example:</p> <pre>Router# show version r1 installed</pre> <p>Example:</p> <pre>Router# dir bootflash:</pre> <p>Example:</p> <pre>Router# show platform</pre>	(Optional) Use the following commands to confirm the current router configuration, as follows: <ul style="list-style-type: none"> • show version and show version active-rp installed—Verify the running version of the Cisco IOS XE software on the router, and which file was used to boot the router, and where that file is stored. • dir—Confirm that the files that were used to boot the router are located in the directory. • show platform—Confirm the current status of the active and standby RPs.
Step 2	<p>mkdir URL-to-directory-name</p> <p>Example:</p> <pre>Router# mkdir bootflash:tmp</pre>	Creates a directory to store the consolidated package and subpackages. This directory must be created in most cases because the consolidated packages and subpackages have to be separated from the subpackages that booted the router at this step of the procedure.
Step 3	<p>ip tftp source-interface gigabitethernet port</p> <p>Example:</p> <pre>Router(config)# ip tftp source-interface gigabitethernet 0</pre>	Specifies the Gigabit Ethernet TFTP source-interface to be configured: slot/port—Specifies the location of the TFTP source-interface.

	Command or Action	Purpose
		<p>Note To copy a file using TFTP through the Management Ethernet interface, the ip tftp source-interface GigabitEthernet 0 command must be entered before entering the copy tftp command.</p>
Step 4	<p>copy tftp: <i>URL-to-target-location</i></p> <p>Example:</p> <pre>Router# copy tftp: bootflash:tmp</pre>	<p>Copies the consolidated package file into the directory created in Step 2.</p> <p>The consolidated package in this step should not be copied into the same directory where the subpackages that are currently running your router are stored (the directory containing the packages.conf provisioning file from which the router was booted).</p> <p>Tip It is recommended that you copy the package onto a usb: or harddisk: file system for space considerations when performing this step of the procedure.</p>
Step 5	<p>request platform software package expand file <i>URL-to-consolidated-package</i></p> <p>Example:</p> <pre>Router# request platform software package expand file bootflash:tmp/asr1000rp2-enterprise9.03.13.00.S.154-3.S-ext-bin</pre>	<p>Extracts the subpackages out of the consolidated package file into the temporary directory.</p> <p>Note Take extra care to extract the subpackages to a temporary subdirectory and do not delete any of the files currently running the router at this point of the procedure. To erase the files that were running on the router before the ISSU upgrade, enter the request platform software package clean command after the ISSU upgrade has been completed.</p>
Step 6	<p>dir target-URL</p> <p>Example:</p> <pre>Router# dir bootflash:tmp</pre>	(Optional) Displays the directory to confirm that the files were extracted.
Step 7	<p>copy file-system:asr1000rp2-espbase.version.pkg <i>URL-to-directory-of-sub-packages-active-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p>	Copies the subpackages out of the temporary directory into the directory on the router where the subpackages running the active RP are currently stored.

Using ISSU to Upgrade Subpackages on a Cisco ASR 1006 Router or Cisco ASR 1013 Router (request platform command set) with MDR

Command or Action	Purpose
<pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-active-RP</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-rpaccess.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p>	

	Command or Action	Purpose
	<pre>Router# copy bootflash:/tmp/asr1000rp2-rpbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-rpcontrol.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-rpics-adenterprise.03.12.01.S.154-2.S1.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-elbase.03.13.00.S.154-3.S-ext.pkg bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-elcspa.03.13.00.S.154-3.S-ext.pkg bootflash:</pre>	
Step 8	<p>copy file-system:asr1000rp2-espbase.version.pkg <i>URL-to-directory-of-sub-packages-standby-RP</i></p> <p>Example:</p> <pre>copy file-system:asr1000rp2-espx86base.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpaccess.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre>	Copies the subpackages out of the temporary directory into the directory on the router where the subpackages running the standby RP are currently stored.

Command or Action	Purpose
<p>Example:</p> <pre>copy file-system:asr1000rp2-rpbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpcontrol.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-rpios.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-sipspa.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcbase.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>copy file-system:asr1000rp2-elcspa.version.pkg URL-to-directory-of-sub-packages-standby-RP</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-espbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-mpaccess.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	

	Command or Action	Purpose
	<p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-rpbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# ccopy bootFlash:/tmp/asr1000rp2-rpcontrol.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-rios-enterprise9.03.13.00.S.154-3.S-ext.pkg</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-sipbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-sipspa.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-elcbase.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre> <p>Example:</p> <pre>Router# copy bootflash:/tmp/asr1000rp2-elcspa.03.13.00.S.154-3.S-ext.pkg stby-bootflash:</pre>	
Step 9	<p>product="name=">request platform software package verify rp slot file URL mdr {force}</p> <p>Example:</p> <pre>Router# request platform software package verify rp 1 file</pre>	Verifies the RP subpackages on the standby RP, where the “rp*” wildcard is specified to capture all of the RP subpackages for the desired upgrade release.

	Command or Action	Purpose
	stby-bootflash:asr1000rp2-*03.13.00.S.154-3.S-ext*.pkg mdr	
Step 10	request platform software package install rp standby-RP file <i>target-standbyRP-URL-for-sub-packages:asr1000rp*version*.pkg force</i> Example: <pre>Router# request platform software package install rp 1 file stby-bootflash:asr1000rp2-*03.13.00.S.154-3.S-ext*.pkg force</pre>	Upgrades the RP subpackages on the standby RP, where the “rp*” wildcard is specified to capture all of the RP subpackages for the desired upgrade release.
Step 11	hw-module slot standby-RP reload Example: <pre>Router# hw-module slot R1 reload</pre>	Reloads the standby RP.
Step 12	request platform software package install rp active-RP file <i>URL-to-active-file-system:asr1000rp2-{sipbase,sipspa}*version*.pkg slotSIP-slot-number product="name">mdr {force}</i> Example: <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-{sipbase,sipspa}*03.13.00.S.154-3*pkg mdr</pre>	Upgrades the SIP and SPA subpackages for each SIP on the router using MDR. <p>Note This step must be completed one SIP at a time, and repeated for each SIP installed on the router before performing the next step.</p> <p>Tip You can use the show ip interface brief command to identify which slots contain SIPs and SPAs. The interfaces with three numbers (in the form <i>SIP-number/SPA-number/interface-number</i>) identify the SIP and SPA locations in the router.</p> <p>Note The <i>pattern</i> options used in this CLI (sipbase and sipspa) were introduced in Cisco IOS XE Release 2.1.2 and are not available in previous Cisco IOS XE Releases.</p>
Step 13	request platform software package install rp active-RP file <i>URL-to-active-file-system:asr1000rp2-{elcbase,elcspa}*version*.pkg slotELC-slot-number mdr product="name">{force}</i> Example: <pre>Router# request platform software package</pre>	Upgrades the ELC and SPA subpackages for each ELC on the router using MDR. <p>Note This step must be completed for one ELC at a time, and repeated for each ELC installed on the router before performing the next step.</p>

	Command or Action	Purpose
	<pre>install rp 0 file bootflash:asr1000rp2-{elcbase,elcspa}*03.13.00.S.154-3*.pkg mdr</pre>	<p>Tip You can use the show ip interface brief command to identify which slots contain ELCs and SPAs. The interfaces with three numbers (in the form <i>ELC-number/SPA-number/interface-number</i>) identify the ELC and SPA locations in the router.</p> <p>Note The <i>pattern</i> options used in this CLI (elcbase and elcspa) were introduced in Cisco IOS XE Release 3.10S and are not available in previous Cisco IOS XE Releases.</p>
Step 14	<p>request platform software package install rp active-RP file <i>URL-to-active-file-system:asr1000rp2-esp*version*.pkg</i> slot standby-ESP-slot</p> <p>Example:</p> <pre>request platform software package install rp active-RP file URL-to-active-file-system:asr1000rp2-esp*version*.pkg slot standby-ESP-slot</pre> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg slot 1</pre> <p>Example:</p> <pre>Router# request platform software package install rp 0 file bootflash:asr1000rp2-esp*03.13.00.S.154-3.S-ext*.pkg slot 0</pre>	<p>Upgrades the ESP Base subpackage on the standby and the active ESPs.</p> <p>After entering the issu loadversion rp command on the active RP, the ESP switchover will occur automatically. Minimal traffic interruption will occur as a result of this switchover.</p>
Step 15	<p>request platform software package install rp active-RP file <i>URL-to-active-file-system:asr1000rp*version*.pkg</i> force</p> <p>Example:</p> <pre>request platform software package install rp 0 file bootflash:asr1000rp2-*03.13.00.S.154-3.S-ext*.pkg force</pre>	<p>Upgrades all of the sub-packages on the active RP.</p> <p>Note This step is required to ensure that all subpackages on the router were upgraded as part of this procedure, and might upgrade some subpackages that would otherwise be missed in the process.</p>
Step 16	<p>show version active-RP provisioned</p> <p>Example:</p>	(Optional) Confirms the subpackages are provisioned and installed.

Examples

	Command or Action	Purpose
	show version active-RP installed Example: Router# show version r0 provisioned Example: Router# show version r0 installed	
Step 17	redundancy force-switchover Example: Router# redundancy force-switchover	Forces an RP switchover to complete the upgrade.
Step 18	request platform software package clean	(Optional) Removes all unused subpackage files from the router.

Examples

This example shows ISSU upgrade using subpackages on a Cisco ASR 1006 router or ASR 1013 router with a dual RP setup:

```

Router# show version
Cisco IOS Software, IOS-XE Software (X86_64_LINUX_IOSD-ADVENTERPRISEK9-M), Version 15.3(2)S,
  RELEASE SOFTWARE (fc1)
<output removed for brevity>
System image file is "bootflash:Active_Dir/packages.conf"

Technical Assistance

Description	Link
The Cisco Support website provides extensive online resources, including documentation and tools for troubleshooting and resolving technical issues with Cisco products and technologies.	http://www.cisco.com/cisco/web/support/index.html
To receive security and technical information about your products, you can subscribe to various services, such as the Product Alert Tool (accessed from Field Notices), the Cisco Technical Services Newsletter, and Really Simple Syndication (RSS) Feeds.	
Access to most tools on the Cisco Support website requires a Cisco.com user ID and password.	

Feature Information for Software Upgrade Process

[Table 3: Feature Information for Software Upgrade Process, on page 228](#) lists the release history for this feature on the Cisco ASR 1000 Series Routers.

For information on a feature in this technology that is not documented here, see the [Cisco ASR 1000 Series Aggregation Services Routers Documentation Roadmap](#).

Use Cisco Feature Navigator to find information about platform support and software image support. Cisco Feature Navigator enables you to determine which Cisco IOS XE software images support a specific software release, feature set, or platform. To access Cisco Feature Navigator, go to <http://www.cisco.com/go/cfn>. An account on Cisco.com is not required.

**Note**

[Table 3: Feature Information for Software Upgrade Process, on page 228](#) lists only the Cisco IOS XE software releases that introduced support for a given feature in a given Cisco IOS XE software release train. Unless noted otherwise, subsequent releases of that Cisco IOS XE software release train also support that feature.

Table 3: Feature Information for Software Upgrade Process

Feature Name	Releases	Feature Information
MDR Support for Cisco ASR 1000 Series Fixed Ethernet Line Card	Cisco IOS XE Release 3.12S	This feature was introduced. Added MDR support for the Cisco ASR 1000 Series Fixed Ethernet Line Card (ASR1000-2T+20X1GE).

Feature Name	Releases	Feature Information
Cisco ASR1000 Series Fixed Ethernet Line Card	Cisco IOS XE Release 3.10S	<p>This feature was introduced.</p> <p>Added support for the Cisco ASR 1000 Series Fixed Ethernet Line Card.</p>
Minimal Disruptive Restart ISSU	Cisco IOS XE Release 3.8S	<p>This feature was introduced.</p> <p>Added support for the following GigabitEthernet SPAs to the Minimal Disruptive Restart (MDR) feature on Cisco ASR 1000 Series Router with SIP40:</p> <ul style="list-style-type: none"> -SPA-2X1GE-V2 -SPA-5X1GE-V2 -SPA-8X1GE-V2 -SPA-10X1GE-V2 -SPA-1X10GE-L-V2
Software Upgrade Process	Cisco IOS XE Release 2.6	<p>This feature was introduced.</p> <p>Cisco ASR 1000 Series Routers support the following software upgrade procedures:</p> <ul style="list-style-type: none"> • In Service Software Upgrades (ISSU) for redundant platforms • Upgrade process with service impact for nonredundant platforms.
