NAT and Firewall ALG Support on Cisco ASR 1000 Series Aggregation Services Routers

First Published: February 06, 2009
Last Updated: October 10, 2017

The following tables summarize Network Address Translation (NAT) and Firewall Application Layer Gateway (ALG) feature support on Cisco ASR 1000 Series Aggregation Services Routers in Cisco IOS XE Release 2.1.0 and later releases. Each table lists the features whose support was introduced in the release. NAT and Firewall ALG support is cumulative; features supported in earlier releases continue to be supported in later releases.

This document contains the following tables:

- NAT and Firewall ALG Support on Cisco ASR 1000 Series Routers in Cisco IOS XE Release 3.14.0
- NAT and Firewall ALG Support on Cisco ASR 1000 Series Routers in Cisco IOS XE Release 3.13.0
- NAT and Firewall ALG Support on Cisco ASR 1000 Series Routers in Cisco IOS XE Release 3.11.0
- NAT and Firewall ALG Support on Cisco ASR 1000 Series Routers in Cisco IOS XE Release 3.9.0
- NAT and Firewall ALG Support on Cisco ASR 1000 Series Routers in Cisco IOS XE Release 3.8.0
- NAT and Firewall ALG Support on Cisco ASR 1000 Series Routers in Cisco IOS XE Release 3.7.0

### Application Layer Gateway Features Supported

| RCMD         | ■ Support NAT and FW  
|             | ■ Support rlogin, rsh and rexec  
|             | ■ TCP-only  
|             | ■ Support VRF  
|             | ■ External authentication mechanisms on behaves of peers involved  
| NETBIOS     | ■ Support RFC 1002 under NAT and Firewall configurations  
|             | ■ Support Netbios over IP only  
|             | ■ Support the following services:  
|             | ■ Naming Service  
|             | ■ Session Service  
|             | ■ Datagram Service  
|             | ■ Support protocol conformance under NAT and FW  
|             | ■ Support VRF  
|             | The following are not supported:  
|             | ■ Enforcing user authentication via Active Directory and LDAP to access NetBIOS Name Service.  
|             | ■ Server Message Block Protocol (SMB) messages under NetBIOS Session Service. These messages have TCP port 445.  
|             | ■ TCP segmentation  
| All ALG     | ■ HA Break – HA activities from previous releases will be unpredictable.  

### NAT and Firewall ALG/AIC Support on Cisco ASR 1000 Series Routers in Cisco IOS XE Release 2.5.0

| SIP Extension             | ■ Support RFC 2976 – INFO.  
                             ■ Support RFC 3262 – PRACK.  
                             ■ Support RFC 3265 – SUBSCRIBE/NOTIFY.  
                             ■ Support RFC 3311 – UPDATE.  
                             ■ Support RFC 3428 – MESSAGE.  
                             ■ Support RFC 3515, 3892 – REFER.  
                             ■ Support SIP over TCP.  
                             ■ TCP segmentation is not supported.  
                             ■ FQDN is not supported. |
**Skinny Video**

- Support IP phones with video capability.

  The following two new messages are supported for NAT and Firewall:
  - `OpenMultiMediaReceiveChannelAck`
  - `StartMultiMediaTransmission`
  - Support Cisco Unified Communications Manager (through Release 6.1) and SCCPv8 (or any compatible version)
  - TCP segmentation is not supported.
