

Configuring Hierarchical Modular QoS

Hierarchical QoS allows you to specify QoS behavior at multiple policy levels, which provides a high degree of granularity in traffic management.

Line Card, SIP, and SPA Support

Feature	ASR 9000 Ethernet Line Cards	SIP 700 for the ASR 9000
Enhanced Hierarchical Ingress Policing	no	yes
Hierarchical Policing	yes	yes
Hierarchical QoS	yes	yes
Three-Parameter Scheduler	yes	yes

Feature History for Hierarchical QoS on Cisco ASR 9000 Series Routers

Release	Modification
Release 3.7.1	<p>The Hierarchical Policing feature was introduced on Cisco ASR 9000 Series Routers on ASR 9000 Ethernet Line Cards.</p> <p>The Hierarchical QoS feature was introduced on Cisco ASR 9000 Series Routers on ASR 9000 Ethernet Line Cards.</p> <p>The Three-Parameter Scheduler feature was introduced on Cisco ASR 9000 Series Routers on ASR 9000 Ethernet Line Cards.</p>
Release 3.9.0	The Hierarchical QoS feature was supported on the SIP 700 for the ASR 9000. (two-level policies only)

Release 4.0.0	<p>The Enhanced Hierarchical Ingress Policing feature was introduced on Cisco ASR 9000 Series Routers on the SIP 700 for the ASR 9000.</p> <p>The Hierarchical Policing feature was supported on Cisco ASR 9000 Series Routers on the SIP 700 for the ASR 9000.</p> <p>For the Hierarchical QoS feature, support was added for three-level policies on the SIP 700 for the ASR 9000.</p> <p>The Three-Parameter Scheduler feature was supported on the SIP 700 for the ASR 9000.</p>

- [Verifying the Configuration of Hierarchical Policies, on page 23](#)
- [Additional References, on page 23](#)

How to Configure Hierarchical QoS

When configuring hierarchical QoS, consider the following guidelines:

- When defining policies, start at the bottom level of the hierarchy. For example, for a two-level hierarchical policy, define the bottom-level policy and then the top-level policy. For a three-level hierarchical policy, define the bottom-level policy, the middle-level policy, and then the top-level policy.
- Do not specify the input or output keyword in the service-policy command when configuring a bottom-level policy within a top-level policy.
- Configure bottom-level policies only in middle-level and top-level policies.
- When you attach an undefined policy as a child policy, a policy-map (with only class-default) is created.
- On 2nd generation line cards, the maximum supported rate for child-level or flat policy shapers is 4 Gbps for both absolute and percentage configurations.

Service Fragment on LACP

- Supports only physical and bundle interfaces. No support on BVI, Satellite, and BNG.
- All sub interface policies in a port with service-fragment policy must refer to one of the service fragments in port policy.
- You must perform removal of sub-interface policy before port policy.

Port policy configurations - Defining a service fragment

This configuration task explains how to define a service fragment in a port policy. The **service-fragment** command, in the policy map configuration mode helps define the service fragment.

Aspects need to be considered while defining a service-fragment are:

- All service fragment names must be unique in a port policy. However, same names can be reused across policies.

- A class in a port policy which defines a service fragment can only specify shape, BWRR (Budgeted Weighted Round Robin), and child policy actions. Only flat policies are supported at port level.
- In a 2-level policy, only a child policy can define service fragments. A parent policy can not define service fragments and should have one class with only shape actions.

SUMMARY STEPS

1. **configure**
2. **policy-map** *policy-map-name*
3. **class** *class-name*
4. **service-fragment** *name*
5. **exit**
6. Use the **commit** or **end** command.

DETAILED STEPS

Procedure

	Command or Action	Purpose
Step 1	configure Example: RP/0/RSP0/CPU0:router# configure	Enters global configuration mode.
Step 2	policy-map <i>policy-map-name</i> Example: RP/0/RSP0/CPU0:router(config)# policy-map policy1	Enters policy map configuration mode. <ul style="list-style-type: none"> • Creates or modifies a policy map that can be attached to one or more interfaces to specify a service policy.
Step 3	class <i>class-name</i> Example: RP/0/RSP0/CPU0:router(config-pmap)# class class1	Enters policy map class configuration mode. <ul style="list-style-type: none"> • Specifies the name of the class whose policy you want to create or change.
Step 4	service-fragment <i>name</i> Example: RP/0/RSP0/CPU0:router(config-pmap-c)# service-fragment s1	Defines a service-fragment. The defined service fragment (s1) will be referred to for the sub-interface policy configuration.
Step 5	exit Example: RP/0/RSP0/CPU0:router(config-pmap-c)# exit	Returns the router to policy map configuration mode.
Step 6	Use the commit or end command.	commit —Saves the configuration changes, and remains within the configuration session.

	Command or Action	Purpose
		<p>end —Prompts user to take one of these actions:</p> <ul style="list-style-type: none"> • Yes — Saves configuration changes and exits the configuration session. • No —Exits the configuration session without committing the configuration changes. • Cancel —Remains in the configuration mode, without committing the configuration changes.

Configuring sub-interface policy

This configuration task explains configuring sub-interface policy using the **fragment** command. The **fragment** command refers to the previously configured service-fragment and has to be applied on the corresponding port.

Sub-interface policy limitations:

- Sub-interface policies need to refer to a service-fragment in the parent policy in a 2-level sub-interface policy.
- The sub-interface policy actions in a parent policy should not have shape, policy, bandwidth actions in percentages (only in absolute numbers).

SUMMARY STEPS

1. **configure**
2. **policy-map** *policy-map-name*
3. **class** *class-name*
4. **fragment** *name*
5. **exit**
6. Use the **commit** or **end** command.

DETAILED STEPS

Procedure

	Command or Action	Purpose
Step 1	<p>configure</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router# configure</pre>	Enters global configuration mode.
Step 2	<p>policy-map <i>policy-map-name</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config)# policy-map policy1</pre>	<p>Enters policy map configuration mode.</p> <ul style="list-style-type: none"> • Creates or modifies a policy map that can be attached to one or more interfaces to specify a service policy.

	Command or Action	Purpose
Step 3	<p>class <i>class-name</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap)# class class1</pre>	<p>Enters policy map class configuration mode.</p> <ul style="list-style-type: none"> • Specifies the name of the class whose policy you want to create or change.
Step 4	<p>fragment <i>name</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# fragment s1</pre>	<p>Refers to a previously defined service-fragment (here, s1 is the defined service-fragment).</p>
Step 5	<p>exit</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# exit</pre>	<p>Returns the router to policy map configuration mode.</p>
Step 6	<p>Use the commit or end command.</p>	<p>commit —Saves the configuration changes and remains within the configuration session.</p> <p>end —Prompts user to take one of these actions:</p> <ul style="list-style-type: none"> • Yes — Saves configuration changes and exits the configuration session. • No —Exits the configuration session without committing the configuration changes. • Cancel —Remains in the configuration session, without committing the configuration changes.

Applying a service fragment policy on a physical interface

To apply a qos policy on an interface, use the **service-fragment-parent** command. This can be used only after a service-fragment policy is defined on a port.

SUMMARY STEPS

1. **configure**
2. **interface** *interface-path-id*
3. **service-policy** { **input** | **output** | **type** } **service-fragment-parent**
4. Use the **commit** or **end** command.

DETAILED STEPS

Procedure

	Command or Action	Purpose
Step 1	configure Example: RP/0/RSP0/CPU0:router# <code>configure</code>	Enters global configuration mode.
Step 2	interface <i>interface-path-id</i> Example: RP/0/RSP0/CPU0:router (config) # <code>interface gig 0/1/0/22</code>	Specifies the interface for which the service-policy is being defined.
Step 3	service-policy { input output type } service-fragment-parent Example: RP/0/RSP0/CPU0:router (config-if) # <code>service-policy input s1 service-fragment-parent</code>	Applies the service policy on the defined service-fragment.
Step 4	Use the commit or end command.	commit —Saves the configuration changes, and remains within the configuration session. end —Prompts user to take one of these actions: <ul style="list-style-type: none"> • Yes — Saves configuration changes and exits the configuration session. • No —Exits the configuration session without committing the configuration changes. • Cancel —Remains in the configuration mode, without committing the configuration changes.

Configuring the Three-Parameter Scheduler

When configuring the Three-Parameter Scheduler, consider the following guidelines:

- To use the three-parameter scheduler, a queueing class must be enabled. To enable a queueing class, you must configure at least one of the three parameters. When at least one parameter is configured, a queue is assigned to the class.
- If you configure only one parameter, the scheduler uses default values for the other two parameters.
- You can configure all 3 parameters in the same class.
- Minimum bandwidth must be less than maximum bandwidth.
- You can configure the three-parameter scheduler on the second generation of ASR 9000 Series Carrier Ethernet line cards and the third generation of ASR 9000 Series High Density Ethernet line cards.

ASR 9000 Ethernet Line Cards

SUMMARY STEPS

1. **configure**
2. **policy-map** *policy-name*
3. **class** *class-name*
4. **shape average** {**percent** *percentage* | *rate* [*units*]}
5. **exit**
6. **policy-map** *policy-name*
7. **class** *class-default*
8. **bandwidth** {*rate* [*units*] | **percent** *percentage-value*} or **bandwidth remaining** [**percent** *percentage-value* | **ratio** *ratio-value*] or **shape average** {**percent** *percentage* | *rate* [*units*]}
9. **service-policy** *policy-map-name*
10. **end**
11. or **commit**

DETAILED STEPS

Procedure

	Command or Action	Purpose
Step 1	configure Example: RP/0/RSP0/CPU0:router# configure	Enters global configuration mode.
Step 2	policy-map <i>policy-name</i> Example: RP/0/RSP0/CPU0:router(config)# policy-map bottom-child	Creates or modifies the bottom-level policy.
Step 3	class <i>class-name</i> Example: RP/0/RSP0/CPU0:router(config-pmap)# class Bronze	Assigns the traffic class that you specify to the policy map. Enters policy map class configuration mode.
Step 4	shape average { percent <i>percentage</i> <i>rate</i> [<i>units</i>]} Example: RP/0/RSP0/CPU0:router(config-pmap-c)# shape average 1 mbps	Shapes traffic to the indicated bit rate.
Step 5	exit Example:	Exits policy map class configuration mode.

	Command or Action	Purpose
	RP/0/RSP0/CPU0:router(config-pmap-c)# exit	
Step 6	<p>policy-map <i>policy-name</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap)# policy-map Top-Parent</pre>	Creates or modifies the top-level policy.
Step 7	<p>class class-default</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap)# class class-default</pre>	<p>Configures or modifies the parent class-default class.</p> <p>Note</p> <ul style="list-style-type: none"> You can configure only the class-default class in a parent policy. Do not configure any other traffic class.
Step 8	<p>bandwidth {<i>rate [units] percent percentage-value</i>} or bandwidth remaining [<i>percent percentage-value ratio ratio-value</i>] or shape average {<i>percent percentage rate [units]</i>}</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# bandwidth percent 30 or RP/0/RSP0/CPU0:router(config-pmap-c)# bandwidth remaining percent 80 or RP/0/RSP0/CPU0:router(config-pmap-c)# shape average percent 50</pre>	<p>Specifies the minimum bandwidth allocated to a class as a percentage of link bandwidth.</p> <p>Specifies how to allocate excess bandwidth to a class.</p> <p>Specifies maximum bandwidth as a percentage of link bandwidth (when other classes are not using all of their bandwidth share).</p> <p>Note</p> <ul style="list-style-type: none"> You must configure at least one of the three parameters.
Step 9	<p>service-policy <i>policy-map-name</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# service-policy Bottom-Child</pre>	Applies a bottom-level policy to the top-level class-default class.
Step 10	end	
Step 11	<p>or commit</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# end or RP/0/RSP0/CPU0:router(config-pmap-c)# commit</pre>	<p>Saves configuration changes.</p> <ul style="list-style-type: none"> When you issue the end command, the system prompts you to commit changes: Uncommitted changes found, commit them before exiting (yes/no/cancel)? [cancel]: Entering yes saves configuration changes to the running configuration file, exits the configuration session, and returns the router to EXEC mode. Entering no exits the configuration session and returns the router to EXEC mode without committing the configuration changes.

	Command or Action	Purpose
		<p>Entering cancel leaves the router in the current configuration session without exiting or committing the configuration changes.</p> <ul style="list-style-type: none"> Use the commit command to save the configuration changes to the running configuration file and remain within the configuration session.

SIP 700 for the ASR 9000

SUMMARY STEPS

1. **configure**
2. **policy-map** *policy-name*
3. **class** *class-name*
4. **bandwidth** {*rate [units]* | **percent** *percentage-value*} or **bandwidth remaining** {**percent** *percentage-value* | **ratio** *ratio-value*} or **shape average** {**percent** *percentage* | *rate [units]*}
5. **exit**
6. **policy-map** *policy-name*
7. **class** *class-default*
8. **shape average** {**percent** *percentage* | *rate [units]*}
9. **service-policy** *policy-map-name*
10. **end**
11. or **commit**

DETAILED STEPS

Procedure

	Command or Action	Purpose
Step 1	configure Example: RP/0/RSP0/CPU0:router# configure	Enters global configuration mode.
Step 2	policy-map <i>policy-name</i> Example: RP/0/RSP0/CPU0:router(config)# policy-map bottom-child	Creates or modifies the bottom-level policy.
Step 3	class <i>class-name</i> Example: RP/0/RSP0/CPU0:router(config-pmap)# class Bronze	Assigns the traffic class that you specify to the policy map. Enters policy map class configuration mode.

	Command or Action	Purpose
Step 4	<p>bandwidth {<i>rate</i> [<i>units</i>] percent <i>percentage-value</i>} or bandwidth remaining [percent <i>percentage-value</i> ratio <i>ratio-value</i>] or shape average {percent <i>percentage</i> <i>rate</i> [<i>units</i>]}</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# bandwidth percent 30 or RP/0/RSP0/CPU0:router(config-pmap-c)# bandwidth remaining percent 80 or RP/0/RSP0/CPU0:router(config-pmap-c)# shape average percent 50</pre>	<p>Specifies the minimum bandwidth allocated to a class as a percentage of link bandwidth.</p> <p>Specifies how to allocate excess bandwidth to a class.</p> <p>Specifies maximum bandwidth as a percentage of link bandwidth (when other classes are not using all of their bandwidth share).</p> <p>Note</p> <ul style="list-style-type: none"> You must configure at least one of the three parameters.
Step 5	<p>exit</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# exit</pre>	Exits policy map class configuration mode.
Step 6	<p>policy-map <i>policy-name</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap)# policy-map Top-Parent</pre>	Creates or modifies the top-level policy.
Step 7	<p>class <i>class-default</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap)# class class-default</pre>	<p>Configures or modifies the parent class-default class.</p> <p>Note</p> <ul style="list-style-type: none"> You can configure only the class-default class in a parent policy. Do not configure any other traffic class.
Step 8	<p>shape average {percent <i>percentage</i> <i>rate</i> [<i>units</i>]}</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# shape average 1 mbps</pre>	(Optional) Shapes traffic to the indicated bit rate.
Step 9	<p>service-policy <i>policy-map-name</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# service-policy Bottom-Child</pre>	Applies a bottom-level policy to the top-level class-default class.
Step 10	end	
Step 11	<p>or commit</p> <p>Example:</p>	<p>Saves configuration changes.</p> <ul style="list-style-type: none"> When you issue the end command, the system prompts you to commit changes:

	Command or Action	Purpose
	<pre>RP/0/RSP0/CPU0:router(config-pmap-c)# end</pre> <p>or</p> <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# commit</pre>	<p>Uncommitted changes found, commit them before exiting (yes/no/cancel)? [cancel]:</p> <p>Entering yes saves configuration changes to the running configuration file, exits the configuration session, and returns the router to EXEC mode.</p> <p>Entering no exits the configuration session and returns the router to EXEC mode without committing the configuration changes.</p> <p>Entering cancel leaves the router in the current configuration session without exiting or committing the configuration changes.</p> <ul style="list-style-type: none"> • Use the commit command to save the configuration changes to the running configuration file and remain within the configuration session.

Attaching Hierarchical Policies to Physical and Virtual Links

To attach hierarchical policies to interfaces, subinterfaces, virtual circuits, and virtual LANs, use the `service-policy {input | output} policy-map-name` command.

SUMMARY STEPS

1. **configure**
2. **interface** *type interface-path-id*
3. **service-policy** {input | output} *policy-map-name*
4. **end**
5. or **commit**

DETAILED STEPS

Procedure

	Command or Action	Purpose
Step 1	<p>configure</p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router# configure</pre>	Enters global configuration mode.
Step 2	<p>interface <i>type interface-path-id</i></p> <p>Example:</p> <pre>RP/0/RSP0/CPU0:router(config)# interface pos 0/2/0/0</pre>	Specifies the interface to attach the hierarchical policy.

	Command or Action	Purpose
Step 3	service-policy {input output} <i>policy-map-name</i> Example: <pre>RP/0/RSP0/CPU0:router(config-if)# service-policy input All_Traffic</pre>	Attaches the policy map you specify. <ul style="list-style-type: none"> • input—Apply the QoS policy to inbound packets. • output—Apply the QoS policy to outbound packets. • <i>policy-map-name</i>—Name of a previously configured top-level policy map
Step 4	end	
Step 5	or commit Example: <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# end</pre> or <pre>RP/0/RSP0/CPU0:router(config-pmap-c)# commit</pre>	Saves configuration changes. <ul style="list-style-type: none"> • When you issue the end command, the system prompts you to commit changes: Uncommitted changes found, commit them before exiting (yes/no/cancel)? [cancel]: Entering yes saves configuration changes to the running configuration file, exits the configuration session, and returns the router to EXEC mode. Entering no exits the configuration session and returns the router to EXEC mode without committing the configuration changes. Entering cancel leaves the router in the current configuration session without exiting or committing the configuration changes. • Use the commit command to save the configuration changes to the running configuration file and remain within the configuration session.

Configuring Enhanced Hierarchical Ingress Policing

The difference between configuring enhanced hierarchical ingress policing and configuring hierarchical ingress policing is the addition of the `child-conform-aware` command.

When used in the parent policer, the `child-conform-aware` command prevents the parent policer from dropping any ingress traffic that conforms to the maximum rate specified in the child policer.

Restrictions

Enhanced Hierarchical Ingress Policing has the following limitations:

- Sum of all child policer rates cannot be greater than the parent policer rate.
- Single-rate two-color policer (color blind) only.
- Configurations that specify burst size in the **police rate** command are supported; configurations that specify peak burst become single-rate three-color policers and are therefore rejected.
- Configure the **child-conform-aware** command only in the parent policer.

SUMMARY STEPS

1. **configure**
2. **policy-map** *policy-name*
3. **class** *class-name*
4. **service-policy** *policy-map-name*
5. **police rate** {*value [units]* | **percent** *percentage*} [**burst** *burst-size [burst-units]*] [**peak-rate** *value [units]*] [**peak-burst** *peak-burst [burst-units]*]
6. **child-conform-aware**
7. **conform-action** [**drop** | **set options** | **transmit**]
8. **exceed-action** [**drop** | **set options** | **transmit**]
9. **end** or **commit**

DETAILED STEPS

Procedure		
	Command or Action	Purpose
Step 1	configure Example: RP/0/RSP0/CPU0:router# configure	Enters global configuration mode.
Step 2	policy-map <i>policy-name</i> Example: RP/0/RSP0/CPU0:router(config)# policy-map parent	Enters policy map configuration mode. Creates or modifies a policy map that can be attached to one or more interfaces to specify a service policy.
Step 3	class <i>class-name</i> Example: RP/0/RSP0/CPU0:router(config-pmap)# class class-default	Enters policy map class configuration mode. Specifies the name of the class whose policy you want to create or change.
Step 4	service-policy <i>policy-map-name</i> Example: RP/0/RSP0/CPU0:router(config-pmap-c)# service-policy child	Applies the bottom-level policy map to the parent class-default class. Note <ul style="list-style-type: none"> • Do not specify an input or output keyword.
Step 5	police rate { <i>value [units]</i> percent <i>percentage</i> } [burst <i>burst-size [burst-units]</i>] [peak-rate <i>value [units]</i>] [peak-burst <i>peak-burst [burst-units]</i>] Example: RP/0/RSP0/CPU0:router(config-pmap-c)# police rate percent 50	Configures traffic policing and enters policy map police configuration mode.

	Command or Action	Purpose
Step 6	child-conform-aware Example: <pre>RP/0/RSP0/CPU0:router(config-pmap-c-police)# child-conform-aware</pre>	Prevents the parent policer from dropping any ingress traffic that conforms to the maximum rate specified in a child policer.
Step 7	conform-action [drop set options transmit] Example: <pre>RP/0/RSP0/CPU0:router(config-pmap-c-police)# conform-action transmit</pre>	Configures the action to take on packets that conform to the rate limit. The allowed action is: transmit —Transmits the packets.
Step 8	exceed-action [drop set options transmit] Example: <pre>RP/0/RSP0/CPU0:router(config-pmap-c-police)# exceed-action drop</pre>	Configures the action to take on packets that exceed the rate limit. The allowed action is: drop —Drops the packet.
Step 9	end or commit Example: <pre>RP/0/RSP0/CPU0:router(config-pmap-c-police)# end or RP/0/RSP0/CPU0:router(config-pmap-c-police)# commit</pre>	Saves configuration changes. <ul style="list-style-type: none"> When you issue the end command, the system prompts you to commit changes: Uncommitted changes found, commit them before exiting(yes/no/cancel)? [cancel]: Entering yes saves configuration changes to the running configuration file, exits the configuration session, and returns the router to EXEC mode. Entering no exits the configuration session and returns the router to EXEC mode without committing the configuration changes. Entering cancel leaves the router in the current configuration session without exiting or committing the configuration changes. Use the commit command to save the configuration changes to the running configuration file and remain within the configuration session.

Two-Level Hierarchical Queueing Policy: Example

The following example shows a two-level policy applied at the Multilink Frame Relay main interface. The same policy can be applied at Multilink PPP main interface.

```
class-map match-any video
  match precedence 1
end-class-map
!
```

```

class-map match-any premium
  match precedence 2 3
end-class-map
!
class-map match-any voice-ip
  match precedence 0
end-class-map
!
class-map match-any best-effort
  match precedence 4
end-class-map

policy-map parent_shape
  class class-default
    service-policy child_policy
    shape average percent 90
  !
end-policy-map
!

policy-map child_policy
  class voice-ip
    priority level 1
    police rate percent 20
  !
  !
  class video
    bandwidth percent 40
  !
  class premium
    bandwidth percent 10
    random-detect precedence 2 10 ms 100 ms
    random-detect precedence 3 20 ms 200 ms
    queue-limit 200 ms
  !
  class best-effort
    bandwidth percent 20
    queue-limit 200 ms
  !
  class class-default
  !
end-policy-map
!

interface Multilink0/2/1/0/1
  service-policy output parent_shape
  encapsulation frame-relay
  frame-relay intf-type dce

```

Three-Level Hierarchical Queueing Policy: Examples

Three-Level Hierarchical Queueing Policy: Examples

In this example, policy grand-parent is applied to the main Ethernet interface. The grand-parent policy limits all outbound traffic of the interface up to 500 Mbps. The parent policy has class `vlan1` and `vlan2`, and traffic in `vlan1` or `vlan2` is limited to 40 percent of 500 Mbps. The policy `child_policy` classifies traffic based on different services and allocates bandwidth for each class accordingly.

```

class-map match-any video
  match precedence 1

```

```

    end-class-map
    !
    class-map match-any premium
    match precedence 2 3
    end-class-map
    !
    class-map match-any voice-ip
    match precedence 0
    end-class-map
    !
    class-map match-any best-effort
    match precedence 4
    end-class-map

class-map match-any vlan1
match vlan 1
end-class-map

class-map match-any vlan2
match vlan 2
end-class-map

policy-map grand-parent
class class-default
shape average 500 Mbps
service-policy parent
!
end-policy-map

policy-map parent
class vlan1
service-policy child_policy
shape average percent 40
!
class vlan2
service-policy child_policy
shape average percent 40
!
end-policy-map
!

policy-map child_policy
class voice-ip
priority level 1
police rate percent 20
!
!
class video
bandwidth percent 40
!
class premium
bandwidth percent 10
random-detect precedence 2 10 ms 100 ms
random-detect precedence 3 20 ms 200 ms
queue-limit 200 ms
!
class best-effort
bandwidth percent 20
queue-limit 200 ms
!
class class-default
!
end-policy-map

```

```
interface GigabitEthernet0/0/0/9
service-policy output grand-parent
```

SIP 700 for the ASR 9000

In this example, the policy `parent_policy` is applied to the Multilink Frame Relay main interface. The policy `parent_policy` has two classes, which match on Frame Relay DLCIs. The Multilink Frame Relay main interface has two Frame Relay PVCs configured (DLCI 16, DLCI 17).

```
interface Multilink0/2/1/0/1
mtu 1504
service-policy output parent_policy
encapsulation frame-relay
frame-relay intf-type dce
!

policy-map parent_policy
class parentQ_1

Three-Parameter Scheduler: Examples

Three-Parameter Scheduler: Examples

This example shows how to configure a three-parameter scheduler in a two-level hierarchical policy.

```

policy-map Bottom-ChildA
class A1
    shape average 400 kbps
class A2
    shape average 400 kbps

policy-map Bottom-ChildB
class B1
    shape average 250 kbps
class B2
    shape average 450 kbps

policy-map Top-Parent
class parentA
    shape average 500 kbps
    bandwidth percent 30
    bandwidth remaining percent 80
    service-policy Bottom-ChildA
class parentB
    shape average 500 kbps
    bandwidth percent 60
    bandwidth remaining percent 10
    service-policy Bottom-ChildB

```

SIP 700 for the ASR 9000

This example shows how to configure a three-parameter scheduler in a two-level hierarchical policy.

```

policy-map Bottom-Child
class A
    bandwidth percent 30
    bandwidth remaining percent 80
    shape average percent 50
class B
    bandwidth percent 60
    bandwidth remaining percent 10
class class-default
exit

policy-map Top-Parent
class-default
    shape average 1 mbps
    service-policy Bottom-Child

```

Hierarchical Policing: Examples

Hierarchical Policing: Examples

This example shows a two-level policy with police actions at each level. There are two classes in the top level, one for each customer. Aggregated traffic from each customer is subject to a rate limit as specified by the

police rate command in the top level. Traffic in different classes in the bottom level is limited by an additional set of police actions to control different types of traffic for each customer.

```

class-map match-any customera
  match vlan 10-14
class-map match-any customerb
  match vlan 15-19
class-map match-any prec1
  match precedence 1
class-map match-any prec3
  match precedence 3

policy-map parent
  class customera
    service-policy childa
    bandwidth remaining ratio 10
    police rate percent 50
      conform-action transmit
      exceed-action drop
  class customerb
    service-policy childb
    bandwidth remaining ratio 100
    police rate percent 70
      conform-action transmit
      exceed-action drop

policy-map childa
  class prec1
    police rate percent 25
    conform-action transmit
    exceed-action drop
  class prec3
    police rate percent 25
    conform-action transmit
    exceed-action drop

policy-map childb
  class prec1
    police rate percent 30
    conform-action transmit
    exceed-action drop
  class prec3
    police rate percent 30
    conform-action transmit
    exceed-action drop

```

SIP 700 for the ASR 9000

In this example, policers are specified in the policy child in class Prec1 and class Prec3, and also in the class-default in the policy parent. The policers in the child policy, police traffic in class Prec1 at 30 percent (of 50 percent), police traffic in class Prec3 at 60 percent (of 50 percent) and police any other traffic at 10 percent (of 50 percent). Cumulatively, all traffic on the interface is policed at 50 percent of the interface rate by the policer in the parent policy.

```

class-map match-any prec1
  match precedence 1

class-map match-any prec3
  match precedence 3

policy-map parent

```

```

class class-default
  service-policy child
  police rate percent 50
  conform-action transmit
  exceed-action drop
policy-map child
  class prec1
    police rate percent 30
    conform-action transmit
    exceed-action drop
  class prec3
    police rate percent 60
    conform-action transmit
    exceed-action drop
  class class-default
    police rate percent 10
    conform-action transmit
    exceed-action drop

```

Attaching Service Policies to Physical and Virtual Links: Examples

Physical Link: Example

In this example, the p1 policy is applied to a Gigabit Ethernet interface:

```

interface gigabitethernet 0/2/0/0
  service-policy input p1

```

Virtual Link: Example

In this example, the p2 policy is applied to the private virtual circuit (PVC) under a multilink Frame Relay subinterface. A QoS policy can be applied only to a PVC under a Frame Relay subinterface; it cannot be applied directly to a Frame Relay subinterface.

```

interface Multilink0/2/1/0/1.16 point-to-point
  encapsulation frame-relay
  ipv4 address 192.1.1.1 255.255.255.0
  pvc 16
    service-policy output p2
  encaps cisco

```

Service Fragment on LACP: Examples

The following example displays the service-fragment premium being created on LACP.

```

policy-map tsqos-port-policy
  class class-default
    shape 500 mbps
  class dscp1
    shape 1 Gbps
    service-fragment premium
  class dscp0
    shape average 100 mbps
    service-fragment sga

```

This example shows the service-fragment premium being referred (at the sub-interface):

```

policy-map tsqos-subif-policy-premium
class class-default
fragment premium
shape 20 mbps
bandwidth remaining ratio 20
service-policy subif-child
end-policy
exit

```

Service Fragment Configurations: Example

This example shows the service-fragment premium being created.

```

policy-map tsqos-port-policy
class class-default
shape 500 mbps
class dscpl
shape 1 Gbps
service-fragment premium
end-policy
exit

```

This example shows the service-fragment premium being referred (at the sub-interface):

```

policy-map tsqos-subif-policy-premium
class class-default
fragment premium
shape 20 mbps
bandwidth remaining ratio 20
service-policy subif-child
end-policy
exit

```

Enhanced Hierarchical Ingress Policing: Example

This example shows parent and child policies in which two classes are defined in the child policy. In class AF1, the exceed action is set to an action other than to drop traffic.

If the `child-conform-aware` command were not configured in the parent policy, the parent policer would drop traffic that matches the conform rate of the child policer but exceeds the conform rate of the parent policer.

When used in the parent policer, the `child-conform-aware` command prevents the parent policer from dropping any ingress traffic that conforms to the committed rate specified in the child policer.

In this example, class EF in the child policy is configured with a committed rate of 1 Mbps, a conform action and an exceed action. The traffic that is below 1 Mbps is presented to the parent policer with the MPLS EXP bit set to 4, and traffic that exceeds 1 Mbps is dropped.

Class AF1 in the child policy is configured with a committed rate of 1 Mbps, a conform action and an exceed action. The traffic that is below 1 Mbps is presented to the parent policer with the MPLS EXP bit set to 3, and traffic that exceeds 1 Mbps is presented to the parent policer with the MPLS EXP bit set to 2.

With this child policy configuration, the parent policer sees traffic from the child classes as exceeding its committed rate of 2 Mbps. Without the **child-conform-aware** command in the parent policer, the parent polices to 2 Mbps, which can result into dropping some conformed traffic from class EF in the child policy. When the **child-conform-aware** command is configured in the parent policer, the parent policer does not drop any traffic that conforms under the child policy.

```

policy-map parent

```

```

class class-default
  service-policy child
  police rate 2 mbps
  child-conform-aware
  conform-action transmit
  exceed-action drop

policy-map child
  class EF
    police rate 1 mbps
    conform-action set mpls experimental imposition 4
    exceed-action drop
  class AF1
    police rate 1 mbps
    conform-action set mpls experimental imposition 3
    exceed-action set mpls experimental imposition 2

```

Verifying the Configuration of Hierarchical Policies

To verify hierarchical policies, enter any of the following commands in privileged EXEC mode:

<code>show policy-map interface</code>	Displays policy configuration information for all classes configured for all service policies on the specified interface.
<code>show qos interface</code>	Displays QoS information for all classes in the service policy that is attached to the specified interface.
<code>show running-config class-map</code>	Displays the configuration of all class maps configured on the router.
<code>show running-config policy-map</code>	Displays the configuration of all policy maps configured on the router.
<code>show running-config policy-map policy-map-name</code>	Displays the configuration of all classes contained in the policy map you specify.
