## New and Changed Telemetry Features

Feature	Description	Changed in Release	Where Documented
Support for telemetry dark bandwidth	Model-driven telemetry supports MPLS dark bandwidth with the polling interval reduced to 10 seconds. The dark bandwidth is the total interface bandwidth utilization in the data plane, excluding the RSVP-TE bandwidth.	Release 6.4.1	<i>Configuring RSVP-TE Bandwidth Accounting</i> topic in <i>Implementing MPLS Traffic Engineering</i> chapter in MPLS Configuration Guide for Cisco ASR 9000 Series Routers.
Support for Event-driven telemetry through NETCONF notification for Link Layer Discovery Protocol (LLDP) events	NETCONF client is configured to receive event notifications from a NETCONF server through a subscription.	Release 6.4.1	<i>Configure Model-driven Telemetry</i> chapter <a href="#">Example: Configure Event-driven Telemetry for LLDP</a>
