

## Implementing LPTS

Local Packet Transport Services (LPTS) maintains tables describing all packet flows destined for the secure domain router (SDR), making sure that packets are delivered to their intended destinations.

For a complete description of the LPTS commands listed in this module, refer to the LPTS Commands module of *IP Addresses and Services Command Reference for Cisco ASR 9000 Series Routers*.

### Feature History for Implementing LPTS

Release	Modification
Release 5.3.2	NP LPTS Based Policer was introduced.
Release 3.9.0	LPTS was introduced.

## Prerequisites for Implementing LPTS

The following prerequisites are required to implement LPTS:

You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

## Information About Implementing LPTS

To implement LPTS features mentioned in this document you must understand the following concepts:

## LPTS Overview

LPTS uses two components to accomplish this task: the port arbitrator and flow managers. The port arbitrator and flow managers are processes that maintain the tables that describe packet flows for a logical router, known as the Internal Forwarding Information Base (IFIB). The IFIB is used to route received packets to the correct Route Processor or line card for processing.

LPTS interfaces internally with all applications that receive packets from outside the router. LPTS functions without any need for customer configuration. However, LPTS **show** commands are provided that allow customers to monitor the activity and performance of LPTS flow managers and the port arbitrator.

## LPTS Policers

In Cisco IOS XR, the control packets, which are destined to the Route Processor (RP), are policed using a set of ingress policers in the incoming line cards. These policers are programmed statically during bootup by LPTS components. The policers are applied based on the flow type of the incoming control traffic. The flow type is determined by looking at the packet headers. The policer rates for these static ingress policers are defined in a configuration file, which are programmed on the line card during bootup.

You can change the policer values based on the flow types of these set of ingress policers. You are able to configure the rate per policer per node (locally) and globally using the command-line interface (CLI); therefore, overwriting the static policer values.

---

**Note** If two different ACLs with same ACEs are applied to an LPTS Policer, only the first ACL applied takes effect. When the first ACL is removed, the second ACL does not take effect on the LPTS Policer. If you want the second ACL to take effect on the LPTS Policer, reconfigure it on the LPTS Policer.

---

## IP TOS Precedence

By default, router allows all packets into the network. The IP table of service (TOS) precedence feature allows you to classify packets by IP precedence value. The IP precedence value can be configured for every flow. Once configured for a flow type, only packets that match the defined IP precedence value are allowed, and others are rejected.

The precedence value can either be a number or name. This table lists configurable precedence values:

**Table 1: Precedence Values**

Precedence Number	Precedence Name	Description
0	routine	Matches packets with routine precedence.
1	priority	Matches packets with priority precedence.
2	immediate	Matches packets with immediate precedence.
3	flash	Matches packets with flash precedence.
4	flash-override	Matches packets with flash override precedence.

5	critical	Matches packets with critical precedence.
6	internet	Matches packets with internetwork control precedence.
7	network	Matches packets with network control precedence.

## ACL Based Policer

ACL based policer is a session based policer that provides secure network access based on session.

### Note

- The ACL based policer feature is supported only on ASR 9000 Enhanced Ethernet Line Cards, ASR 9000 3rd Generation Line Cards, and ASR 9000 4th Generation Line Cards.
- SNMP is not supported on ASR 9000 4th Generation Line Cards. Therefore, the ACL entries configured based on LPTS are not displayed if the ACLs are configured on ASR 9000 4th Generation Line Cards.
- When multiple ACLs are configured for an LPTS policier, only the first ACL details are displayed in the LPTS statistics command output.

### Benefits

These are the benefits of ACL based policer:

- Rate limit incoming packets based on session.
- Modify policer rate depending on traffic load.
- Block entire traffic based on a specific session without impacting other sessions with same flow.

## Configuring LPTS Policers

This task allows you to configure the LPTS policers.

### SUMMARY STEPS

1. **configure**
2. **lpts pifib hardware police** [**location** *node-id*]
3. **flow** *flow\_type* {**rate** *rate*}
4. **commit**
5. **show lpts pifib hardware police** [**location** {**all** | *node\_id*}]

### DETAILED STEPS

	Command or Action	Purpose
Step 1	configure	

	Command or Action	Purpose
<b>Step 2</b>	<p><b>lpts pifib hardware police</b> [<i>location node-id</i>]</p> <p><b>Example:</b></p> <pre>RP/0/RSP0/CPU0:router(config)# lpts pifib hardware   police location 0/2/CPU0 RP/0/RSP0/CPU0:router(config-pifib-policer-per-node)#  RP/0/RSP0/CPU0:router(config)# lpts pifib hardware   police RP/0/RSP0/CPU0:router(config-pifib-policer-global)#</pre>	<p>Configures the ingress policers and enters pifib policer global configuration mode or pifib policer per node configuration mode.</p> <p>The example shows pifib policer per node configuration mode and global.</p>
<b>Step 3</b>	<p><b>flow</b> <i>flow_type</i> {<i>rate rate</i>}</p> <p><b>Example:</b></p> <pre>RP/0/RSP0/CPU0:router(config-pifib-policer-per-node)#   flow ospf unicast default rate 20000</pre>	<p>Configures the policer for the LPTS flow type. The example shows how to configure the policer for the ospf flow type.</p> <ul style="list-style-type: none"> <li>• Use the <i>flow_type</i> argument to select the applicable flow type. For information about the flow types, see <i>IP Addresses and Services Command Reference for Cisco ASR 9000 Series Routers</i>.</li> <li>• Use the <b>rate</b> keyword to specify the rate in packets per seconds (PPS). The range is from 0 to 4294967295.</li> </ul> <p><b>Note</b> LPTS policy for ntp-default flow type, supports a flow rate of 100 pps on Cisco ASR 9000 Series Router.</p>
<b>Step 4</b>	<b>commit</b>	
<b>Step 5</b>	<p><b>show lpts pifib hardware police</b> [<i>location {all   node_id}</i>]</p> <p><b>Example:</b></p> <pre>RP/0/RSP0/CPU0:router# show lpts pifib hardware   police location 0/2/cpu0</pre>	<p>Displays the policer configuration value set.</p> <ul style="list-style-type: none"> <li>• (Optional) Use the <b>location</b> keyword to display pre-Internal Forwarding Information Base (IFIB) information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.</li> <li>• Use the <b>all</b> keyword to specify all locations.</li> </ul>

## Configuring LPTS Policer with IP TOS Precedence

This task allows you to configure the LPTS policers with IP table of service (TOS) precedence:

### SUMMARY STEPS

1. **configure**
2. **lpts pifib hardware police** [*location node-id*]
3. **flow** *flow\_type*
4. **precedence** {*number | name*}

5. **commit**
6. **show lpts pifib hardware police [location {all | node\_id}]**

### DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<b>configure</b>	
<b>Step 2</b>	<b>lpts pifib hardware police [location node-id]</b> <b>Example:</b> <pre>RP/0/RSP0/CPU0:router(config)# lpts pifib hardware   police location 0/2/CPU0</pre> or <pre>RP/0/RSP0/CPU0:router(config)# lpts pifib hardware   police</pre>	Configures the ingress policers. You can configure per node or all locations. The example shows configuration of pifib policer on an individual node and globally for all nodes respectively.
<b>Step 3</b>	<b>flow flow_type</b> <b>Example:</b> <pre>RP/0/RSP0/CPU0:router(config-pifib-policer-per-node)#   flow telnet default</pre> or <pre>RP/0/RSP0/CPU0:router(config-pifib-policer-global)#   flow telnet default</pre>	Configures the policer for the LPTS flow type. The example shows how to configure the policer for the telnet flow type per node or global mode (all locations). <ul style="list-style-type: none"> <li>• Use the <i>flow_type</i> argument to select the applicable flow type. For information about the flow types, see <i>IP Addresses and Services Command Reference for Cisco ASR 9000 Series Routers</i>.</li> </ul>
<b>Step 4</b>	<b>precedence {number   name}</b> <b>Example:</b> <pre>RP/0/RSP0/CPU0:router(config-pifib-policer-per-node)#   precedence 5 6 7</pre> or <pre>RP/0/RSP0/CPU0:router(config-pifib-policer-global)#   precedence 5 6 7</pre>	Configures IP TOS <b>precedence</b> against a flow type. You can specify either a precedence number or name. For more information about <b>precedence</b> , use the question mark (?) online help function. The example shows how to configure IP TOS <b>precedence</b> 5, 6, and 7 per node or global mode.
<b>Step 5</b>	<b>commit</b>	
<b>Step 6</b>	<b>show lpts pifib hardware police [location {all   node_id}]</b> <b>Example:</b> <pre>RP/0/RSP0/CPU0:router# show lpts pifib hardware   police location 0/2/cpu0</pre>	Displays the policer configuration value set. <ul style="list-style-type: none"> <li>• (Optional) Use the <b>location</b> keyword to display policer value for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.</li> <li>• Use the <b>all</b> keyword to specify all locations.</li> </ul>

## Mapping the LPTS Policer with an ACL

This task allows you to map the LPTS policer with an ACL.

- Note**
- LPTS to ACL map supports only the following values:
    - Source Destination Address
    - Source and destination port
    - Protocol number
    - Object Groups (both network and port groups)
  - When multiple ACLs are configured for an LPTS policier, only the first ACL details are displayed in the LPTS statistics command output.
  - When you are applying an ACL on an LPTS entry, LPTS entry filters and ACL should be defined in the same order. So, if you want to limit incoming traffic from the host 10.10.10.10 to any router ip address you need to define LPTS ACL as permit ip from any to 10.10.10.10.

For example, assume that 10.10.10.10 is the remote address from which traffic should be filtered. The LPTS and ACL should be defined as shown in the following table.

LPTS (local address, port, remote address, port)	ACL
(any,23, 10.10.10.10,65248)	ipv4 access-list lpts 10 permit ipv4 any host 10.10.10.10

- You can configure a maximum of 50 ACLs per LPTS policier.

## SUMMARY STEPS

- configure
- `lpts pifib hardware police acl acl-name1 rate 100 vrf vrfl`
- commit

## DETAILED STEPS

	Command or Action	Purpose
<b>Step 1</b>	<code>configure</code>	
<b>Step 2</b>	<p><code>lpts pifib hardware police acl <i>acl-name1</i> rate 100 vrf <i>vrfl</i></code></p> <p><b>Example:</b></p> <pre>RP/0/RSP0/CPU0:router(config)# lpts pifib hardware police acl <i>acl-name1</i> rate 100 vrf <i>vrfl</i></pre>	Maps the LPTS policier with the ACL by name <i>acl-name1</i> .
<b>Step 3</b>	<code>commit</code>	

# NP Based Policer

Network processor (NP) based policers in LPTS allow rate limit packets based on a specific NP with specific rate.

## Benefits of NP based policer

- Rate limit incoming packets based on a specific NP with specific rate.
- Provides secure network access based on the context of a user or a device.  
For example, if a user does not require specific traffic on a particular NP, then the rate limit can be set to 0.
- Modify policer rate depending on traffic load.
- Full utilization of traffic through each NP depending on traffic.
- Stop or block complete traffic based on a specific NP without impacting other NPs with same flow.

## Supported Features of NP Based Policer

- Supports Cisco ASR 9000 High Density 100GE Ethernet line cards (such as A9K-8x100G-LB-SE and A9K-8x100G-LB-TR) only.
- Supports ACL, global, local, NP based and static policers.  
For sample configurations, see [Configuring ACL, NP, LPTS Local, LPTS Global, and LPTS Static Policers: Example, on page 8](#).
- Supports existing LPTS and LPTS ACL policer features.
- Supports existing scale limits of all protocols.

## Configuring NP Based Policer in LPTS

This task allows you to configure NP based policer in LPTS.

### SUMMARY STEPS

1. **configure**
2. **lpts pifib hardware police** [**location** *node-id*] **np** *np-number*
3. **flow** *flow\_type* {**default** | **known**} {**rate** *rate*}
4. **commit**
5. **show lpts pifib hardware entry np** *np-number* **statistics** [**location** {**all** | *node\_id*}]

### DETAILED STEPS

	Command or Action	Purpose
Step 1	<b>configure</b>	

	Command or Action	Purpose
<b>Step 2</b>	<p><b>lpts pifib hardware police [location node-id ]np np-number</b></p> <p><b>Example:</b></p> <pre>RP/0/RSP0/CPU0:router(config)# lpts pifib hardware   police location 0/1/CPU0 np np3 RP/0/RSP0/CPU0:router(config-pifib-policer-per-node)#</pre>	Configures the NP based ingress policers and enters pifib policer per node configuration mode.
<b>Step 3</b>	<p><b>flow flow_type {default   known} {rate rate}</b></p> <p><b>Example:</b></p> <pre>RP/0/RSP0/CPU0:router(config-pifib-policer-per-node)#   flow ospf multicast known rate 100</pre>	<p>Configures the NP based policer for the LPTS flow type. The example shows how to configure the policer for the OSPF flow type.</p> <ul style="list-style-type: none"> <li>• Use the <i>flow_type</i> argument to select the applicable flow type.</li> <li>• Use the <b>rate</b> keyword to specify the rate in packets per seconds (PPS). The range is from 0 to 4294967295.</li> </ul>
<b>Step 4</b>	<b>commit</b>	
<b>Step 5</b>	<p><b>show lpts pifib hardware entry np np-number statistics [location {all   node_id}]</b></p> <p><b>Example:</b></p> <pre>RP/0/RSP0/CPU0:router# show lpts pifib hardware   entry np np3 statistics location 0/1/cpu0</pre>	<p>Displays statistics of NP based policer in LPTS.</p> <ul style="list-style-type: none"> <li>• (Optional) Use the <b>location</b> keyword to display pre-Internal Forwarding Information Base (IFIB) information for the designated node. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.</li> <li>• Use the <b>all</b> keyword to specify all locations.</li> </ul>

## Configuring ACL, NP, LPTS Local, LPTS Global, and LPTS Static Policers: Example

This topic contains sample configurations and output examples of ACL, NP based, LPTS local, LPTS global, and LPTS static policers.

### ACL Based Policer

The following is a sample ACL based policer configuration. In this example, the ACL is applied to a BGP session.

```
RP/0/RSP1/CPU0:router(config)# ipv4 access-list lpts_acl_1
RP/0/RSP1/CPU0:router(config-ipv4-acl)# 10 permit tcp any host 200.0.0.1
RP/0/RSP1/CPU0:router(config-ipv4-acl)# 20 deny ipv4 any any
RP/0/RSP1/CPU0:router(config-ipv4-acl)# commit
RP/0/RSP1/CPU0:router(config-ipv4-acl)# end
RP/0/RSP1/CPU0:router(config)# lpts pifib hardware police acl lpts_acl_1 rate 1000
RP/0/RSP1/CPU0:router(config)# commit
```

The following is a show command and its sample output for the preceding policer configuration:

RP/0/RSP1/CPU0:router# show lpts pifib hardware entry brief location 0/1/cpu0

Node: 0/1/CPU0:

### LPTS Policer Applied for LC (Local)

The following is a sample configuration for LPTS policer applied for a line card (local):

```
RP/0/RP0/CPU0:router# lpts pifib hardware police location 0/7/CPU0
  flow ospf unicast known rate 30
!
```

The following is a show command and its sample output for the preceding policer configuration:

```
RP/0/RP0/CPU0:router# show lpts pifib hardware police location 0/7/CPU0 | i OSPF

Fri Aug 21 03:51:36.105 UTC
OSPF-mc-known      102      Static  2000      2000      5095      0
                   01234567
OSPF-mc-default    103      Static  1500      1500      0          0
                   01234567
OSPF-uc-known      104      Local   30        2000      36        0
                   01234567
OSPF-uc-default    105      Static  1000      1000      0          0
                   01234567
```

### LPTS Policer (Global)

The following is a sample configuration for LPTS policer applied globally:

```
RP/0/RP0/CPU0:router# lpts pifib hardware police location 0/7/CPU0
  flow ospf unicast known rate 30
!
lpts pifib hardware police
  flow ospf multicast known rate 50
!
```

The following is a show command and its sample output for the preceding policer configuration:

```
RP/0/RP0/CPU0:router# show lpts pifib hardware police location 0/7/CPU0 | i OSPF

Fri Aug 21 03:54:06.678 UTC
OSPF-mc-known      102      Global  50        2000      5111      0
                   01234567
OSPF-mc-default    103      Static  1500      1500      0          0
                   01234567
OSPF-uc-known      104      Local   30        2000      36        0
                   01234567
OSPF-uc-default    105      Static  1000      1000      0          0
                   01234567
```

### LPTS Static Policer

The following is a sample output for LPTS static policer:

```
RP/0/RP0/CPU0:router# show lpts pifib hardware police location 0/7/CPU0 | i OSPF

Fri Aug 21 03:54:06.678 UTC
OSPF-mc-known      102      Global  50        2000      5111      0
                   01234567
OSPF-mc-default    103      Static  1500      1500      0          0
                   01234567
OSPF-uc-known      104      Local   30        2000      36        0
                   01234567
OSPF-uc-default    105      Static  1000      1000      0          0
                   01234567
```

# Configuration Examples for Implementing LPTS Policers

This section provides the following configuration example:

## Configuring LPTS Policers: Example

The following example shows how to configure LPTS policers:

```
configure
lpts pifib hardware police
  flow ospf unicast default rate 200
  flow bgp configured rate 200
  flow bgp default rate 100
!
lpts pifib hardware police location 0/2/CPU0
  flow ospf unicast default rate 100
  flow bgp configured rate 300
!
```

The following is the show command and the sample output:

```
show lpts pifib hardware police location 0/2/CPU0
RP/0/RSP1/CPU0:rtr1#
RP/0/RSP1/CPU0:rtr1# show lpts pifib hardware police location 0/2/CPU0
-----
Node 0/2/CPU0:
-----
Burst = 100ms for all flow types
-----
```

RP/0/RSP1/CPU0:rtr1#

```

## Configuring LPTS policers with IP TOS Precedence: Example

- The following example shows how to configure IP TOS to telnet default flow and allow packets with precedence 3 or 4 at node 0/0/CPU0:

```

configure
lpts pifib hardware police location 0/0/CPU0
flow telnet default
precedence 3 4

```

- The following example shows how to configure IP TOS to telnet known flow to only allow packets with precedence 5 or 6 or 7 at all nodes

```

configure
lpts pifib hardware police
flow telnet known
precedence 5 6 7

```

- The following example shows how to configure IP TOS to telnet known flow to only allow packets with routine and network precedence at all nodes

```

configure
lpts pifib hardware police
flow telnet known
precedence routine network

```
