New and Changed Telemetry Features

Feature	Description	Changed in Release
Push Cached Generic Counters Data for Telemetry	This feature streams telemetry data for generic counters using the data producer to push data from the source using the telemetry push library. This push mechanism ensures that any change to the cache streams the latest data to the collector as an event-driven telemetry notification. This feature introduces support for the following sensor path: Cisco-IOS-XR-infra-statsd-oper:infrastatistics/ interfaces/interface/cache/generic-counters	Release 7.5.1
