Licensing the OC-3 and OC-12 Interface Modules

The Cisco Software License Activation feature is a set of processes and components to activate Cisco IOS software feature sets by obtaining and validating fee-based Cisco software licenses.

For information on software license activation and concepts, see the Cisco IOS Software Activation Conceptual Overview.

For information on obtaining and installing licenses, see Configuring the Cisco IOS Software Activation Feature.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release.

Use Cisco Feature Navigator to find information about platform support and Cisco IOS, Catalyst OS, and Cisco IOS XE software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn. An account on Cisco.com is not required.

- Restrictions for Licensing the Ports on the OC-3 and OC-12 Interface Module, page 3
- Information About Licensing the Cisco ASR 900 Series Routers, page 3
- Installing and Upgrading Licenses on the OC-3 and OC-12 Interface Modules, page 5
- Verifying the Licenses, page 9

Restrictions for Licensing the Ports on the OC-3 and OC-12 Interface Module

- The 1 OC12 port license can only be enabled on port 0 of the OC-3 or OC-12 interface module.

Information About Licensing the Cisco ASR 900 Series Routers

For information on software activation and license procedures, see Software Activation Configuration Guide, Cisco IOS XE Release 3S (Cisco ASR 903).
Licensing the OC-3 and OC-12 Interface Modules

The optical modules 4-Port OC3/STM-1 or 1-Port OC12/STM-4 delivers four active ports of OC-3 interface module (IM) or Synchronous Transport Module level 1 (STM-1) connectivity, or one active port of OC-12 IM or STM-4 connectivity, on the Cisco ASR 903 Router. Licensing is applicable to these ports on the interface modules.

The benefits of licensing these ports are:

- Pay-as-you-grow model to enhance the ports by purchasing licenses as required.
- Ability to shift license from one port to another.
- Ability to release a license when the interface module is removed from a slot and reinstall the license when inserted again.
- Support for high availability and OIR of interface modules.

For more information on installing the OC-3 and OC-12 interface modules, see the Cisco ASR 903 Series Aggregation Services Router Hardware Installation Guide.

These are guidelines for licensing the ports:

- Two types of licenses are available for the OC-3 and OC-12 IMs.
- Each port can have only one license at a given point of time.
- Each port needs one license and each license can be used for any of the ports.
- If the card type is changed from OC-3 to OC-12 or vice versa, the license installed on the card is automatically released and the new card type uses the license.

Note: The OC-12 port license works only on the first port of the IM. Unless there is a license enabled on the port, no configuration can be performed on the port.

<table>
<thead>
<tr>
<th>License Type</th>
<th>Description</th>
<th>Usability</th>
</tr>
</thead>
<tbody>
<tr>
<td>1 OC3 port license</td>
<td>Single OC3/STM-1 port</td>
<td>STM-1 on OC-3 port</td>
</tr>
<tr>
<td>1 OC12 port license</td>
<td>Single OC12/STM-4 port</td>
<td>STM-1 on OC-3 port</td>
</tr>
</tbody>
</table>
Licenses are not mapped to any port. All the licenses are in a pool. Licenses can be used to enable any port as long as there are sufficient number of licenses.

Moving Licenses Across Ports
The licenses are not tied to a port and can moved across the ports and interface modules.

For example, if there are four licenses, and we have two interface modules (IM) and four ports, the licenses are distributed to the first IM on slot 0 and second IM on slot 1.

```
Platform enable controller sonet 0/0/0
Platform enable controller sonet 0/0/1
Platform enable controller sonet 0/1/0
Platform enable controller sonet 0/1/1
```

OC-3 and OC-12 Interface Module Online Insertion and Removal (OIR)
If an OIR is performed on the enabled port or controller of the interface module, the license used by the interface module is released. When the interface module is inserted again, the license which was valid before the OIR is re-enabled (assuming that there are non-zero usable ports).

OC-3 and OC-12 Interface Module Stateful Switchover (SSO)
If the license is installed on an active port and enabled on the active RSP module, the license information is synchronized with the standby RSP module. On SSO, the license ports enabled on the active RSP are activated on the standby RSP module.

An port license ISSU upgrade from an unsupported release to a supported release may impact the traffic flow on the router. If the controllers before the ISSU are in UP state, after an upgrade the controllers might remain in DOWN state, until the license in installed and enabled on the ports

Reload of Cisco ASR 903
A router reload may not be required after the license in installed on the ports. However, if the router is reloaded, the ports that are enabled prior to the reload will retain the license and configuration.

Installing and Upgrading Licenses on the OC-3 and OC-12 Interface Modules

Before You Begin
Read and understand the license activation process concepts in the in the “Cisco IOS Software Activation Conceptual Overview” module.

To install or upgrade a license by using the `license install` command, you must have already received the license file from the Cisco Product License Registration portal at [http://www.cisco.com/go/license](http://www.cisco.com/go/license) (or you already backed up the license by using the `license save` command).

If you use Microsoft Entourage and receive the license file from Cisco in an e-mail attachment, the license file will contain UTF-8 marking. These extra bytes in the license file cause it to be unusable during license installation. To work around this issue, you can use a text editor to remove the extra characters and then install
the license file. For more information about UTF-8 encoding, go to this URL: http://www.w3.org/International/questions/qa-utf8-bom.

**Note**
The installation process does not install duplicate licenses. This message appears when duplicate licenses are detected:

```plaintext
Installing...Feature:xxx-xxx-xxx...Skipped:Duplicate
```

**Note**
A standby device reboots twice when there is a mismatch of licenses.

### SUMMARY STEPS

1. enable
2. show license udi
3. Convert the PAK to a license by entering the PAK and the UDI into the Cisco Product License Registration portal: http://www.cisco.com/go/license.
4. **license install** `stored-location-url`
5. **show license detail**
6. **end**

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example: <code>Device&gt; enable</code></td>
<td></td>
</tr>
<tr>
<td><strong>Step 2</strong> show license udi</td>
<td>Displays all the UDI values that can be licensed in a system.</td>
</tr>
<tr>
<td>Example: <code>Device# show license udi</code></td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> Convert the PAK to a license by entering the PAK and the UDI into the Cisco Product License Registration portal: <a href="http://www.cisco.com/go/license">http://www.cisco.com/go/license</a>.</td>
<td>After entering the appropriate information, you will receive an e-mail containing the license information that you can use to install the license:</td>
</tr>
<tr>
<td></td>
<td>• Copy the license file received from the Cisco Product License Registration portal to the appropriate file system on the device.</td>
</tr>
<tr>
<td></td>
<td>• Click the <strong>Install</strong> button on the web page.</td>
</tr>
</tbody>
</table>
Licensing the OC-3 and OC-12 Interface Modules

### Enabling Ports on the Slot

After installing and verifying the licenses on the router, enable the ports on the router.

**Note**

The `no platform enable controller` disables the ports on the interface module.

### SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `platform enable controller controller-type slot/subslot/port`
4. `controller sonet controller controller-type slot/subslot/port`
5. `no shutdown`
6. `end`

### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong> enable</td>
<td>Enables privileged EXEC mode. Enter your password if prompted.</td>
</tr>
<tr>
<td>Example: <code>Router&gt; enable</code></td>
<td></td>
</tr>
</tbody>
</table>

---

### PurposeCommand or Action

<table>
<thead>
<tr>
<th>Step 4</th>
<th><code>license install stored-location-url</code></th>
<th>Installs the license. Accept the end-user license agreement if prompted.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example: <code>Router# license install bootflash:*.lic</code></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Step 5</th>
<th><code>show license detail</code></th>
<th>Displays the license information and verifies the number of licenses obtained.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example: <code>Router# show license detail</code></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Step 6</th>
<th><code>end</code></th>
<th>Returns to privileged EXEC mode.</th>
</tr>
</thead>
<tbody>
<tr>
<td>Example: <code>Router# end</code></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>
### Purpose

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
</tbody>
</table>

### Step 2 Example:
```
Router# configure terminal
```

### Step 3

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>platform enable controller controller-type slot/subslot/port</td>
<td>Enables the ports on slot where the interface is present. <strong>Note</strong> The slot number for the controller sonet is always zero on the Cisco ASR 903 Router.</td>
</tr>
</tbody>
</table>

**Example:**
```
Router(config)# platform enable controller sonet 0/1/2
```

### Step 4

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>controller sonet controller controller-type slot/subslot/port</td>
<td>Selects the controller to configure and enters controller configuration mode.</td>
</tr>
</tbody>
</table>

**Example:**
```
Router(config)# controller sonet 0/1/2
```

### Step 5

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>no shutdown</td>
<td>Enables the controller.</td>
</tr>
</tbody>
</table>

**Example:**
```
Router(config-controller)# no shutdown
```

### Step 6

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>end</td>
<td>Returns to privileged EXEC mode.</td>
</tr>
</tbody>
</table>

**Example:**
```
Router# end
```

---

### Uninstalling the License on OC-3 and OC-12 Interface Modules

#### SUMMARY STEPS

1. `enable`
2. `configure terminal`
3. `no platform enable controller controller-type slot/subslot/port`
4. `license clear feature-name`
5. `end`

#### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><code>enable</code></td>
<td>Enables privileged EXEC mode.</td>
</tr>
</tbody>
</table>
### Licensing the OC-3 and OC-12 Interface Modules

#### Verifying the Licenses

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Example:</strong> Router&gt; enable</td>
<td>Enter your password if prompted.</td>
</tr>
<tr>
<td><strong>Step 2</strong> configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong> no platform enable controller controller-type slot/subslot/port</td>
<td>Uninstalls the licenses on the controllers for the feature.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router# no platform enable controller sonet 0/1/2</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong> license clear feature-name</td>
<td>Removes a license entry from license storage once it has been verified that the license is valid and was explicitly installed.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router# license clear oc3</td>
<td></td>
</tr>
<tr>
<td><strong>Step 5</strong> end</td>
<td>Returns to privileged EXEC mode.</td>
</tr>
<tr>
<td><strong>Example:</strong> Router# end</td>
<td></td>
</tr>
</tbody>
</table>

#### Verifying the Licenses

- **show license detail**
  Use the `show license detail` command to view the license on the ports.

  ```
  Router# show license detail
  Index: 4 Feature: oc3 Version: 1.0
  License Type: Permanent
  License State: Active, Not in Use
  License Count: 13/0/0 (Active/In-use/Violation)
  License Priority: Medium
  Store Index: 2
  Store Name: Primary License Storage
  ```

- **show license udi**
  Use the `show license udi` command to view the UDI details of the license.

  ```
  Router# show license udi
  SlotID PID SN UDI
  *6 ASR-903 FOX1637P0UB ASR-903:FOX1637P0UB
  ```
Verifying the Licenses
Right To Use Licensing

The Cisco Software License Activation feature is a set of processes and components to activate Cisco IOS software feature sets by obtaining and validating fee-based Cisco software licenses.

For information on software license activation and concepts, see the Cisco IOS Software Activation Conceptual Overview.

For information on obtaining and installing licenses, see Configuring the Cisco IOS Software Activation Feature.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest feature information and caveats, see the release notes for your platform and software release.

Use Cisco Feature Navigator to find information about platform support and Cisco IOS, Catalyst OS, and Cisco IOS XE software image support. To access Cisco Feature Navigator, go to http://www.cisco.com/go/cfn. An account on Cisco.com is not required.

• Restrictions for using RTU Licenses, page 11
• Information About Licensing the Cisco ASR 900 Series Routers, page 12
• Configuring the Right to Use License, page 13
• Activating the Right to Use License, page 14
• Verifying the RTU Licenses, page 15

Restrictions for using RTU Licenses

• 1588 feature license is not supported with RTU.

• OC-3 and OC-12 port licenses are not supported with RTU. We recommend that you go with Pay As You Grow model and purchase the license to use the feature.
Information About Licensing the Cisco ASR 900 Series Routers

For information on software activation and license procedures, see Software Activation Configuration Guide, Cisco IOS XE Release 3S (Cisco ASR 903).

Right to Use License Support for Cisco ASR 900 Series Routers

The RTU license starts as an evaluation license with a 60-day trial period and changes into a perpetual "Right-To-Use" license after the expiry of the trial period.

The RTU license is shipped with the IOS software image, as a built-in evaluation license (60 days). Once the trial usage period expires and license automatically is converted, you are required to accept the EULA (End User License Agreement) while activating the license. You can verify the license change by executing the `show license` command.

Syslog messages are generated on the 50th, 55th and 60th day of usage as a warning at the end of the evaluation period and conversion to an RTU license.

Permanent licenses have precedence over RTU licenses and node-locked licenses have precedence over RTU licenses.

In a HA setup, to move licenses to the Standby RSP from the active, enable the `standby console enable` command.

```
Router(config)# configure terminal
Router(config)# redundancy
Router(config-red)# main-cpu
Router(config-r-mc)# standby console enable
Router(config-r-mc)# end
```

Advantages of RTU Licenses

- Offers simplified licensing approach.
- Licenses are converted to permanent licenses after the trial period.

Right To Use Licenses for Cisco ASR 900 Series

<table>
<thead>
<tr>
<th>License Type</th>
<th>RTU</th>
</tr>
</thead>
<tbody>
<tr>
<td>Base License</td>
<td></td>
</tr>
<tr>
<td>Metro Services</td>
<td>Yes</td>
</tr>
<tr>
<td>Metro IP Services</td>
<td>Yes</td>
</tr>
<tr>
<td>Metro Aggregation Services</td>
<td>Yes</td>
</tr>
<tr>
<td>Feature Licenses</td>
<td></td>
</tr>
</tbody>
</table>
### Migration of Existing Licenses to RTU Licenses

When you upgrade to RTU licenses, EULA acceptance prompts for fresh license activation. After the trial period, the license is converted to a permanent license.

<table>
<thead>
<tr>
<th>License Type</th>
<th>Migration to RTU License</th>
</tr>
</thead>
<tbody>
<tr>
<td>Permanent license is installed</td>

<td>• Enter your password if prompted.</td>
</tr>
<tr>
<td>2</td>
<td><code>configure terminal</code></td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td></td>
<td><code>Router# configure terminal</code></td>
<td></td>
</tr>
</tbody>
</table>

---

License Type | RTU  
---|---
ATM | Yes  
1588 | No  
OC-3 and OC-12 Port License | No
Activating the Right to Use License

SUMMARY STEPS

1. enable
2. configure terminal
3. license boot level {metroaggrservices | metroipservices | metroservices}
4. end

 Configuration Example

Router# license right-to-use move metroipservices

% End User License Agreement is not accepted
PLEASE READ THE FOLLOWING TERMS CAREFULLY. INSTALLING THE LICENSE OR LICENSE KEY PROVIDED FOR ANY CISCO PRODUCT FEATURE OR USING SUCH PRODUCT FEATURE CONSTITUTES YOUR FULL ACCEPTANCE OF THE FOLLOWING TERMS. YOU MUST NOT PROCEED FURTHER IF YOU ARE NOT WILLING TO BE BOUND BY ALL THE TERMS SET FORTH HEREIN.

Use of this product feature requires an additional license from Cisco, together with an additional payment. You may use this product feature on an evaluation basis, without payment to Cisco, for 60 days. Your use of the product, including during the 60 day evaluation period, is subject to the Cisco end user license agreement http://www.cisco.com/en/US/docs/general/warranty/English/EU1KEN_.html
If you use the product feature beyond the 60 day evaluation period, you must submit the appropriate payment to Cisco for the license. After the 60 day evaluation period, your use of the product feature will be governed solely by the Cisco end user license agreement (link above), together with any supplements relating to such product feature. The above applies even if the evaluation license is not automatically terminated and you do not receive any notice of the expiration of the evaluation period. It is your responsibility to determine when the evaluation period is complete and you are required to make payment to Cisco for your use of the product feature beyond the evaluation period.

Your acceptance of this agreement for the software features on one product shall be deemed your acceptance with respect to all such software on all Cisco products you purchase which includes the same software. (The foregoing notwithstanding, you must purchase a license for each software.)
## DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td></td>
</tr>
<tr>

### Verifying the RTU Licenses

- **show license right-to-use**

  Use the `show license right-to-use` command to view the RTU licenses.

  ```
  Router# show license right-to-use
  Index 1 Feature: metroaggrservices
  Period left: Life time
  License Type: RightToUse
  License State: Active, In Use
  License Count: Non-Counted
  License Priority: Low
  Index 2 Feature: metroipservices
  Period left: Life time
  License Type: RightToUse
  License State: Active, Not in Use, EULA accepted
  License Count: Non-Counted
  License Priority: Low
  Index 3 Feature: metroservices
  Period left: Life time
  License Type: RightToUse
  License State: Active, Not in Use, EULA accepted
  License Count: Non-Counted
  License Priority: Low
  Index 4 Feature: atm
  Period left: Life time
  License Type: RightToUse
  License State: Active, Not in Use, EULA accepted
  License Count: Non-Counted
  License Priority: Low
  ```
• show license detail metroaggrservices

Use the show license detail metroaggrservices command for a detailed view of the licenses.

```
Router# show license detail metroaggrservices
Index: 1  Feature: metroaggrservices  Version: 1.0
License Type: RightToUse
License State: Active, In Use
Lock type: Non Node locked
Vendor info: <UDI><PID>NOTLOCKED</PID><SN>NOTLOCKED</SN></UDI><T>RTU</T>
License Addition: Additive
License Generation version: 0x8200000
License Count: Non-Counted
License Priority: Low
Store Index: 0
Store Name: Built-In License Storage
```

• show license detail standby

Use the show license detail standby command to view the licenses on the Standby RSP.

```
Note  If the license accept end user agreement exists, then the EULA agreement is not displayed.

Router# show license detail standby
