

## **Introduction to License Reservation**

### **Table 1: Feature History**

Feature Name	Release Information	Feature Description
License Reservation for Smart Licensing	Cisco IOS XE Cupertino 17.8.1	Routers using Smart Licensing share information at regular intervals with Cisco Smart Software Manager (CSSM). License reservation allows you to use Smart Licensing without the need to share license information. By reserving node-locked licenses, you can deploy smart licensed routers in highly secure and air-gapped networks.
		Two kinds of License Reservation are available:
		• Permanent License Reservation—Perpetual (Golden key) reserved license.
		• Specified License Reservation—Specific reserved licenses and term licenses.

License reservation offers two kinds of licensing:

- Permanent License Reservation
  - Provides an unlimited quantity of licenses.
  - Activates all the functionalities of the router with single universal license.
  - Does not require periodic access to the License Authority.
- Specific License Reservation

- Allows selection of licenses.
- Requires one-time authorization and configuration with CSSM.

For more information see, Cisco Licensing cisco.com/go/licensingguide.

- Prerequisites for License Reservation, on page 2
- Permanent License Reservation, on page 2
- Specific License Reservation, on page 2
- Obtaining License Reservation Code, on page 3
- Enabling License Reservation, on page 3
- Reserving Licenses using CSSM, on page 4
- Register the Device Using the Authorization Code, on page 10
- Verifyig License Registration Status with Authorization Code, on page 10
- Upgrading Licenses with Specific License Reservation, on page 11
- Removing License Authorization Code, on page 15
- Removing the Authorization Code Post Factory Reset, on page 17

## **Prerequisites for License Reservation**

Before you start, ensure that you have the following:

- Active Cisco.com account
- User or admin access to a Smart account (To request access to a Smart account, refer to How to Request Access to an Existing Smart Account.)
- Understanding of products supporting Specific License Reservation. See How to Identify Products That Support SLR

## **Permanent License Reservation**

Permanent License Reservation offers a single "Universal" license that authorizes all possible product functionalities. It also includes an unlimited quantity of counted licenses.

Permanent licenses do not require periodic access to the License Authority. You can purchase the license, and install the license key for Prime Access Registrar.

Permanent license reservation (PLR) enables you to deploy permanent software license on a router without communicating license information to CSSM.

## **Specific License Reservation**

Specific License Reservation (SLR) is a functionality that enables you to deploy a software license on a device without communicating usage information to Cisco. This functionality is especially used in highly secure networks, and it is supported on platforms that have Smart Licensing enabled.

SLR lets you reserve a license for your product instance from the CSSM. These reserved licenses need not be renewed or reauthorized unless there is a license usage change on the device.

License enforcement is a mechanism that prevents a feature from being used without first obtaining a license. The following enforcement mechanisms are available:

- Hard enforcement: Hard enforcement is applicable only for enforced licenses . If you do not authorize the required licenses by installing the authorization code, the license cannot be used, and the feature is disabled.
- Soft enforcement: When you do not authorize the required licenses by installing the authorization code, you can continue to use the license. The system displays an appropriate syslog message and the license status is "Not Authorized".

Note

SLR is not enabled by default, and you must specifically request for this functionality. See How to Reserve Licenses

## **Obtaining License Reservation Code**

To obtain the license reservation code to the Smart Account in Cisco Smart Software Manager (CSSM).

- **1.** Go to Support Case Manager.
- 2. Click OPEN NEW CASE
- 3. Select Software Licensing

For more information see, How to Reserve Licenses (SLR)

## **Enabling License Reservation**

### Procedure

Step 1	enable
	Example:
	Router# enable
	Enables privileged EXEC mode.
Step 2	configure terminal
	Enters global configuration mode.
	Example:
	Router# configure terminal
Step 3	license smart reservation
	Enables License Reservation. Use the no form of this command to disable License Reservation.
	Example:

	Router(cc	onfig)# license smart reservation
Step 4	exit	
	Exits conf	iguration mode, and returns the device to the global configuration mode.
Step 5	license sm	art enable
	Enables ba	asic Smart Licensing.
	Example:	
	Router(cc	onfig)# license smart enable
Step 6	license sm	art reservation request local
	Generates	a request code for the device to be entered in the Cisco Smart Software Manager.
	Note	To cancel the License Reservation request, execute the <b>license smart reservation cancel</b> command.
	Example:	
	Router# 1	icense smart reservation request local

## **Reserving Licenses using CSSM**

## Procedure

**Step 1** Log in to Cisco Smart Software Manager at https://software.cisco.com/# using the Cisco provided username and password..

Step 2 Click the Inventory tab. From the Virtual Account drop-down list, select the smart account.

**Step 3** From the Licenses tab, click License Reservation.

The system displays the Smart License Reservation wizard.

**Step 5** Install the authorization code file on the router by registering the device. See Register the Device Using the Authorization Code, on page 10

## **Register the Device Using the Authorization Code**

After you get the authorization code from CSSM, execute the following commands to complete the license reservation procedure:

### Procedure

### Step 1 enable

Enables privileged EXEC mode.

Enter your password, if prompted.

### **Step 2** license smart reservation install file bootflash:<authfile.txt>

This command registers the device. The authorization code you copied as a file is used to activate smart licensing reservation for your device. When you run the show license tech support command, the system displays the details of the reserved licenses.

## Example: Installing the Authorization Code

This example shows how to install the authorization code on the router.

```
Router# license smart reservation install file bootflash:AuthorizationCode_SN_FOX1947P1J5
.txt
Reservation install file successful
Last Confirmation code UDI: PID:ASR-903,SN:FOX1947P1J5
Confirmation code: 24cbda5f
```

## Verifyig License Registration Status with Authorization Code

Verify the license status after registration, using the **show license reservation** command:

```
Router# show license reservation
License reservation: ENABLED
Overall status:
  Active: PID:ASR-903, SN:FOX1947P1J5
      Reservation status: SPECIFIC INSTALLED on Feb 17 06:05:40 2022 UTC
      Last Confirmation code: 24cbda5f
Specified license reservations:

## Upgrading Licenses with Specific License Reservation

Registered devices can be upgraded new features licenses or licenses.

### Procedure

Step 1	Log in to Cisco Smart Software Manager at https://software.cisco.com/# using the Cisco provided username
	and password.
Step 2	Click the Inventory tab. From the Virtual Account drop-down list, select your smart account.
Step 3	From the <b>Product Instances</b> tab, for the device that you want to update, click <b>Actions</b> .

				Download as File	Copy to Clipboard	Enter Confirmation Code	Close	

**Step 9** To Install the downloaded file on the router, run the **license smart reservation install file** command.

### license smart reservation install file bootflash:<authfile.txt>

This command registers the device with the new authorization code.

Example:

```
Router# license smart reservation install file
bootflash:AuthorizationCode_SN_FOX1947P1J5.txt
Reservation install file successful
Last Confirmation code UDI:PID:ASR-903,SN:FOX1947P1J5
c64da523
```

Note the confirmation code that is displayed in the output.

Step 10In CSSM, from the Authorization Code tab, click the Enter Confirmation Code button.Enter the confirmation code that is displayed on the router.

Step 11

# **Removing License Authorization Code**

Deregistering devices requires the removal of the authorization code. Installed Authorization codes must be returned to CSSM. The router moves into Eval mode on returning the code.

## Procedure

- **Step 1** Log in to the router to generate a return code for the instance.
- **Step 2** Run the **license smart reservation return local** command to generate the code.

	Router# license smart reservation return local
	This command will remove the license reservation authorization code and the device will
	transition back to the unregistered state. Some reatures may not function properly.
	Enter this return code in Cisco Smart Software Manager portal.
	inter this retain code in croco smart bortware handger portar.
	UDI: PID:ASR-903,SN:FOX1741P5P8
	CiFaL1-uFvouy-baod31-V9S6EZ-YoFfMD-2YFHro-Tywy77-FkzFF2-LMq
Sten 3	Log in to Cisco Smart Software Manager at https://software.cisco.com/#
Step 5	$\log \sin \omega \cos \omega \sin \omega$
	You must log in to the portal using the Cisco provided username and password.
Sten 4	Click the <b>Inventory</b> tab. From the <b>Virtual Account</b> dron-down list select your smart account
	chek die inventory do. Hom die virtuar recount drop down hist, select your smalt decount.
Step 5	From the <b>Product Instances</b> tab, select the device to remove license reservation, click <b>Actions</b> .

×

## **Remove Product Instance**

To remove a Product Instance that has reserved licenses and make those licenses once again available to other Product Instances, enter in the Reservation Return Code generated by the Product Instance. If you cannot generate a Reservation Return Code, contact Cisco Support

## **Removing the Authorization Code Post Factory Reset**

Before performing a factory reset, you must generate the reservation return code to the Cisco Global Licensing Operations (GLO).

**Note** The router may go into Unregistered state if you fail to return the code, and CSSM displays the product instance.

To remove the router instance from CSSM, do one of the following:

- Check if authorization code is available post factory reset. Use the **license smart reservation return authorization file** *autho\_code\_file* command to generate return code for the router. Use this return code to remove the instance from the CSSM. See Removing License Authorization Code, on page 15.
- Contact Cisco Support to remove the router instance from CSSM.
