Verifying That MPLS TE over BDI Is Operational

To verify that MPLS TE over BDI can function, perform the following task.

**SUMMARY STEPS**

1. `enable`
2. `show mpls traffic-eng tunnels brief`
3. `show mpls traffic-eng tunnels summary`
4. `show mpls traffic-eng tunnels tunnel1`

**DETAILED STEPS**

**Step 1**
- `enable`  
  Enables privileged EXEC mode.

**Step 2**
- `show mpls traffic-eng tunnels brief`  
  Use this command to monitor and verify the state of the tunnels.

**Step 3**
- `show mpls traffic-eng tunnels summary`  
  Use this command to monitor and verify the state of the tunnels.

**Step 4**
- `show mpls traffic-eng tunnels tunnel1`  
  Use this command to verify that tunnels are up and using BDI.

**Troubleshooting Tips**

This section describes how you can use the `show mpls traffic-eng tunnels tunnel5` to check for issues.

```
Router# show mpls traffic-eng tunnels tunnel5
Name: router_t5 (Tunnel5) Destination: 3.3.3.3
Status:
  Admin: up     Oper: up     Path: valid     Signalling: connected
  path option 1, type dynamic (Basis for Setup, path weight 2)
Config Parameters:
```
Configuration Example for MPLS Traffic Engineering over BDI

The following example enables the BDI on the router:

Router(config)#interface bdi30
Router(config-if)#mpls traffic-eng tunnels

Configuring Interface Tunnel Example

The following example configures an interface tunnel

interface Tunnel1
ip unnumbered Loopback0
tunnel source Loopback0
tunnel mode mpls traffic-eng
tunnel destination 4.4.4.4
tunnel mpls traffic-eng path-option 1 dynamic

Configuring RSVP Bandwidth Example

The following example configures RSVP bandwidth

ip rsvp bandwidth [ interface-kbps] [single-flow-kbps]

Router(config-if)# ip rsvp bandwidth 500 500
