Pseudowire Group Switchover

The Pseudowire Group Switchover feature allows all pseudowires in a group to be quickly switched over to backup pseudowires. This group switchover is triggered by a single “group down” status message received from a remote peer.

Finding Feature Information

Your software release may not support all the features documented in this module. For the latest caveats and feature information, see Bug Search Tool and the release notes for your platform and software release. To find information about the features documented in this module, and to see a list of the releases in which each feature is supported, see the feature information table.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Prerequisites for Pseudowire Group Switchover

- The remote provider edge (PE) router must be capable of sending group status messages.
- Label Distribution Protocol (LDP) must be implemented on the network.
Restrictions for Pseudowire Group Switchover

This feature is supported on the following attachment circuits:

- Ethernet VLAN
- Asynchronous Transfer Mode (ATM)
- Circuit Emulation (CEM) over MPLS
- The pseudowire group switch over convergence number increments linearly with thousand virtual circuits taking 16 seconds of convergence time.

Information About Pseudowire Group Switchover

Introduction to Pseudowire Group Switchover

The Pseudowire Group Switchover feature allows you to reduce the switchover time from main pseudowires to backup pseudowires when a fault is encountered. The reduced switchover time is achieved by grouping Label Distribution Protocol (LDP) status messages and internal interprocess communication (IPC) messages.

When the remote peer detects an attachment circuit failure, it sends an LDP status message. When this status message is received, the designated backup pseudowires take over. Packets are then routed through the backup pseudowires.

Pseudowires can be grouped together by assigning a group ID. When an LDP status message is received by a pseudowire group, the entire group switches over, thus reducing switchover time.
The Pseudowire Group Switchover feature is enabled by default and cannot be disabled.

**Figure 1: Primary and Backup Pseudowire Groups**

How to Configure Predictive Switchover

Predictive switchover allows switchovers from a main pseudowire to a backup pseudowire with a remote "standby" status, without waiting for an "up" status from the remote peer.

Predictive switchover is configured by enabling redundancy predictive mode in global configuration mode or xconnect configuration mode.

Configuring Predictive Switchover (Global Configuration Mode)

**SUMMARY STEPS**

1. enable
2. configure terminal
3. l2vpn
4. redundancy predictive enabled
5. end

**DETAILED STEPS**

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>enable</td>
</tr>
</tbody>
</table>
### Configuring Predictive Switchover (Xconnect Configuration Mode)

#### SUMMARY STEPS

1. enable
2. configure terminal
3. l2vpn xconnect context context-name
4. redundancy predictive enabled
5. end

#### DETAILED STEPS

<table>
<thead>
<tr>
<th>Command or Action</th>
<th>Purpose</th>
</tr>
</thead>
<tbody>
<tr>
<td><strong>Step 1</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td>enable</td>
<td>Enables privileged EXEC mode.</td>
</tr>
<tr>
<td>Example:</td>
<td>Enter your password if prompted.</td>
</tr>
<tr>
<td>Device&gt; enable</td>
<td></td>
</tr>
<tr>
<td><strong>Step 2</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td>configure terminal</td>
<td>Enters global configuration mode.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device# configure terminal</td>
<td></td>
</tr>
<tr>
<td><strong>Step 3</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td>l2vpn</td>
<td>Enters l2vpn configuration mode.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config)# l2vpn</td>
<td></td>
</tr>
<tr>
<td><strong>Step 4</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td>redundancy predictive enabled</td>
<td>Enables redundancy predictive mode.</td>
</tr>
<tr>
<td>Example:</td>
<td>By default, redundancy predictive mode is disabled.</td>
</tr>
<tr>
<td>Device(config-l2vpn)# redundancy predictive enabled</td>
<td></td>
</tr>
<tr>
<td><strong>Step 5</strong></td>
<td><strong>Purpose</strong></td>
</tr>
<tr>
<td>end</td>
<td>Exits l2vpn configuration mode and returns to privileged EXEC mode.</td>
</tr>
<tr>
<td>Example:</td>
<td></td>
</tr>
<tr>
<td>Device(config-l2vpn)# end</td>
<td></td>
</tr>
</tbody>
</table>
### Step 2

**Command or Action**: `configure terminal`  
**Purpose**: Enters global configuration mode.

**Example**:  
```
Device# configure terminal
```

### Step 3

**Command or Action**: `l2vpn xconnect context context-name`  
**Purpose**: Creates an L2VPN cross-connect context and enters xconnect configuration mode.

**Example**:  
```
Device(config)# l2vpn xconnect context con1
```

### Step 4

**Command or Action**: `redundancy predictive enabled`  
**Purpose**: Enables redundancy predictive mode.

**Example**:  
```
Device(config-xconnect)# redundancy predictive enabled
```

### Step 5

**Command or Action**: `end`  
**Purpose**: Exits xconnect configuration mode and returns to privileged EXEC mode.

**Example**:  
```
Device(config-xconnect)# end
```

## Verifying a Pseudowire Group Switchover Configuration

You can use `show` commands to view information about a pseudowire group switchover configuration.  

The following example shows how to display information about Any Transport over MPLS (AToM) virtual circuits (VCs):

```
Device# show l2vpn atom vc destination 2.1.1.2 group remote 6
```

<table>
<thead>
<tr>
<th>Service</th>
<th>Interface</th>
<th>Dest Address</th>
<th>VC ID</th>
<th>Type</th>
<th>Name</th>
<th>Status</th>
</tr>
</thead>
<tbody>
<tr>
<td>pw100001</td>
<td></td>
<td>2.1.1.2</td>
<td>1234000</td>
<td>p2p</td>
<td>Et1/0.1-1001</td>
<td>UP</td>
</tr>
</tbody>
</table>

The following example shows how to display the status of the pseudowire switching point:

```
Device# show l2vpn atom vc destination 2.1.1.2 group remote 6 detail
```

- pseudowire100001 is up, VC status is up PW type: Ethernet  
- Create time: 5d20h, last status change time: 5d20h  
- Last label PSM state change time: 5d20h  
- Destination address: 2.1.1.2 VC ID: 1234000  
- Output interface: Et0/0, imposed label stack {2001}  
- Preferred path: not configured  
- Default path: active  
- Next hop: 20.0.0.2  
- Member of xconnect service Et1/0.1-1001, group right  
- Associated member Et1/0.1 is up, status is up  
- Interworking type is Ethernet  
- Service id: 0x6d000002  
- Signaling protocol: LDP, peer 2.1.1.2:0 up  
- Targeted Hello: 1.1.1.1(LDP Id) -> 2.1.1.2, LDP is UP  
- Graceful restart: not configured and not enabled  
- Non stop routing: not configured and not enabled  
- PWid FEC (128), VC ID: 1234000  
- Status TLV support (local/remote) : enabled/supported
Troubleshooting a Pseudowire Group Switchover Configuration

Use the `debug platform software atom brief` command to view information about the following configurations:
Pseudowire Group Switchover

- Add Group
- Delete From Group
- Group Switchovers

Note

We recommend that you use the `debug platform software atom brief` command only under Cisco Technical Assistance Center (TAC) supervision.

Configuration Examples for Predictive Switchover

Example: Configuring Predictive Switchover (Global Configuration Mode)

```plaintext
Device> enable
Device# configure terminal
Device(config)# l2vpn
Device(config-l2vpn)# redundancy predictive enabled
Device(config-l2vpn)# end
```

Example: Configuring Predictive Switchover (Xconnect Configuration Mode)

```plaintext
Device> enable
Device# configure terminal
Device(config)# l2vpn xconnect context con1
Device(config-xconnect)# redundancy predictive enabled
Device(config-xconnect)# end
```

Feature Information for Pseudowire Group Switchover

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.
