Feature History

This chapter summarizes the new and modified features that are supported in Cisco IoT FND 4.10.0 release.

- What's New in 4.10.0, on page 1

What's New in 4.10.0

The table summarizes the new and updated features that are included in this release and tells you where they are documented in the User Guide.

Features	Description
Refresh Router Mesh LFN Key	This feature allows to refresh the mesh keys of the IR8100 for the Limited Functional Nodes (LFN) such as the battery endpoints.
License Support for IR1800 and N2450 devices	Supports license enforcement for IR1800 and N2450 devices in IoT FND.
IR8100 with CAM Module Support	Itron CAM is the hardware module inserted into the IR8100. The integration only applies to IR8100 routers.
Support of PIM for IR1100	P-LTE-450 Mhz or PIM is a third-party LTE module support for private networks, works with 450Mhz frequency. This module will be part of pluggable module in IR1100.
