

# Dense Wavelength Division Multiplexing Commands

This module provides command line interface (CLI) commands for configuring dense wavelength division multiplexing (DWDM) on the Cisco CRS Router.

To use commands of this module, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using any command, contact your AAA administrator for assistance.

### admin-state

To configure the transport administration state on a DWDM port, use the **admin-state** command in DWDM configuration mode. To return the administration state from a DWDM port to the default, use the **no** form of this command.

|                    | admin-state {in-service   maintenance   out-of-service}   |  |  |  |
|--------------------|---|--|--|--|
| Syntax Description | in-service Places the DWDM port in In Service (IS) state, to support all normal operation.  |  |  |  |
|                    | maintenancePlaces the DWDM port in Out of Service Maintenance (OOS-MT) state to perform<br>configuration, while the laser and G.709 framer remain up.   |  |  |  |
|                    | out-of-service Places the DWDM port in Out of Service (OOS) state. The laser is turned off and all traffic flow is stopped. This is the default.  |  |  |  |
| Command Default    | Out-of-service is the default transport administration state.   |  |  |  |
| Command Modes      | DWDM configuration  |  |  |  |
| Command History    | Release Modification  |  |  |  |
|                    | Release 3.9.0 This command was introduced. It replaced the laser and shutdown (DWDM) commands.  |  |  |  |
|                    | Release 3.9.1 The <b>maintenance</b> keyword was added.   |  |  |  |
| Usage Guidelines   | When you configure <b>admin-state maintenance</b> , the DWDM port is placed in OOS-MT state and any configuration of <b>maintenance disable</b> for the port can be overridden. The laser for the port and the G.709 framing remains enabled, and Fast Re-Route (FRR) is triggered. This form of the command is usually used in FRR context for traffic to move over backup path while maintenance is going on. |  |  |  |
|                    | When you configure <b>admin-state out-of-service</b> , the DWDM port is placed in OOS state. The laser is turne off, traffic flow is stopped, and proactive protection is disabled. However, configuration changes can still b made on the port.  |  |  |  |
| Task ID            | Task Operations<br>ID   |  |  |  |
|                    | dwdm read,<br>write   |  |  |  |
| Examples           | The following example shows how to turn on the laser and place a DWDM port in In Service (IS) state:  |  |  |  |
|                    |   |  |  |  |
| Note               | This is a required configuration beginning in Cisco IOS XR Software Release 3.9.0 and later releases.<br>The DWDM cards will not operate without this configuration.  |  |  |  |

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# controller dwdm 0/1/0/1
RP/0/RP0/CPU0:router(config-dwdm)# admin-state in-service
RP/0/RP0/CPU0:router(config-dwdm)# commit
```

The following example shows how to stop all operation on a DWDM port:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# controller dwdm 0/1/0/1
RP/0/RP0/CPU0:router(config-dwdm)# admin-state out-of-service
```

The following example shows how to enable the out-of-service maintenance transport administration state on a DWDM port:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# controller dwdm 0/1/0/1
RP/0/RP0/CPU0:router(config-dwdm)# admin-state maintenance
```

| Related Commands | Command                         | Description                            |
|------------------|---------------------------------|--|
|                  | maintenance disable, on page 23 | Provisions a maintenance embargo flag. |

### controller dwdm

To configure a DWDM controller, use the **controller dwdm** command in Global Configuration mode. To return to the default state, use the **no** form of this command.

controller dwdm interface-path-id [vtxp-monitor]

| Syntax Description | interface-pat  | h-id Physic   | al interface or virtual interface.  |  |
|--------------------|--|---------------|---|--|
|                    |  | Note          | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.  |  |
|                    | For more information about the syntax for the router, use the question mark (?) online he function.  |               |   |  |
|                    | vtxp-monito  | attribu       | es VTXP (virtual transponder) attribute on the interface. The purpose of VTXP te tagging is to easily identify a set of interfaces (on which VTXP is enabled) and em for further configuration or monitoring. |  |
| Command Default    | No default b   | ehavior or v  | alues   |  |
| Command Modes      | Global Confi   | guration mo   | ode   |  |
| Command History    | Release  | Modificat     | tion  |  |
|                    | Release 3.3.   | 0 This com    | mand was introduced.  |  |
|                    | Release 5.3.   | 0 vtxp-moi    | nitor keyword was introduced.   |  |
| Usage Guidelines   | For the <i>interface-path-id</i> argument, use the following guidelines:   |               |   |  |
| -                  | • If specifying a physical interface, the naming notation is <i>rack/slot/module/port/subport</i> . The slash between values is required as part of the notation. An explanation of each component of the naming notation is as follows: |               |   |  |
|                    | • <i>rack</i> : Chassis number of the rack.  |               |   |  |
|                    | • <i>slot</i> : Physical slot number of the line card.   |               |   |  |
|                    | • module: Module number. A physical layer interface module (PLIM) is always 0.   |               |   |  |
|                    | • <i>port</i> : Physical port number of the interface.   |               |   |  |
|                    | • subport: Physical port number of the sub-interface.  |               |   |  |
|                    | • If specif  | fying a virtu | al interface, the number range varies, depending on interface type.   |  |
| Task ID            | Task ID O  | perations     |   |  |
|                    |  | ad,<br>rite   |   |  |
|                    |  |               |   |  |

|                  | Task ID  | Operations     |                           |  |  |
|------------------|--|----------------|---------------------------|--|--|
|                  | interface  | read,<br>write |                           |  |  |
|                  | sonet-sdh  | read,<br>write |                           |  |  |
| Examples         | This example shows how to configure a DWDM controller in slot 6: |                |                           |  |  |
|                  | RP/0/RP0   | /CPU0:route    | er(config)# cont          | roller dwdm 0/6/0/0  |  |
|                  | RP/0/RP0   | /CPU0:route    | er(config)# <b>cont</b> : | roller dwdm 0/6/0/0 vtxp-monitor   |  |
| Related Commands | Comman   | d              |                           | Description  |  |
|                  | show cor   | ntroller dwdm  | n, on page 46             | Displays optical parameters, G.709 alarms and counters, and register and module information for a DWDM controller. |  |
|                  | show vtx   | p-monitored    | ports, on page 60         | Displays ports on which VTXP attribute is enabled.   |  |

### g709 bdi-to-client-gais

To insert a Generic Alarm Indication Signal (GAIS) pattern to client on the detection of a backward defect indication (BDI), use the **g709 bdi-to-client-gais** command in DWDM configuration mode. To disable this feature, use the **no** form of this command.

#### g709 bdi-to-client-gais

Syntax Description This command has no keywords or arguments.

**Command Default** By default, no GAIS to client is inserted.

Command Modes DWDM configuration

Command History Release Modification

Release 3.4.0 This command was introduced.

**Usage Guidelines** The **g709 bdi-to-client-gais** command is available on the 10-GE DWDM PLIM only.

| Task ID | Task<br>ID | Operations |
|---------|------------|------------|
|         | dwdm       | read,      |
|         |            | write      |

**Examples** 

This example shows how to configure sending a Generic Alarm Indication Signal (GAIS) pattern signal to client when a BDI is received:

RP/0/RP0/CPU0:router(config) # controller dwdm 0/6/0/0
RP/0/RP0/CPU0:router(config-dwdm) # g709 bdi-to-client-gais

| Related Commands | Command                          | Description  |
|------------------|----------------------------------|--|
|                  | show controller dwdm, on page 46 | Displays optical parameters, G.709 alarms and counters, and register and module information for a DWDM controller. |

### g709 disable

To disable the ITU-T G.709 wrapper, use the **g709 disable** command in DWDM configuration mode. To enable the ITU-T G.709 wrapper, use the **no** form of this command.

g709 disable

Syntax Description This command has no keywords or arguments.

**Command Default** The G.709 wrapper is enabled.

Command Modes DWDM configuration

| Command History | Release       | Modification                 |
|-----------------|---------------|------------------------------|
|                 | Release 3.3.0 | This command was introduced. |

write

Usage Guidelines

Note The g709 disable command is available on the 10-GE DWDM PLIM only.

The G.709 wrapper must be enabled to enable forward error correction (FEC) mode on the controller.

To display the G.709 alarms and counters, use the show controller dwdm g709 command.

Task ID Task Operations ID dwdm read,

**Examples** The G 70

The G.709 wrapper is enabled by default. This example shows how to disable the G.709 wrapper on an interface:

RP/0/RP0/CPU0:Router(config) # controller dwdm 0/6/0/0
RP/0/RP0/CPU0:Router(config-dwdm) # g709 disable

If you have disabled the G.709 wrapper using the **g709 disable** command, use the **no g709 disable** command to re-enable it, as shown in the following example:

RP/0/RP0/CPU0:Router(config) # controller dwdm 0/6/0/0
RP/0/RP0/CPU0:Router(config-dwdm) # no g709 disable

| <b>Related Commands</b> | Command              | Description                                      |
|-------------------------|----------------------|--|
|                         | g709 fec, on page 10 | Configures the FEC mode for the DWDM controller. |

## g709 fec

To configure the Forward Error Correction (FEC) mode for the DWDM controller, use the **g709 fec** command in DWDM configuration mode. To return to the default state, use the **no** form of this command.

g709 fec {[disable]| enhanced | standard | ci-bch | high-gain-hd-fec | high-gain-sd-fec | long-haul-hd-fec | long-haul-sd-fec }

| Syntax Description | disable  | Disables FEC.  |  |  |  |
|--------------------|--|--|--|--|--|
|                    | enhanced Enables ITU-T G.975.1 I.7 FEC. This is the default. Enables ITU-T G.975.1 I.4 FEC.  |  |  |  |  |
|                    | standard   | Enables standard FEC mode.   |  |  |  |
|                    | ci-bch   | Continuously Interleaved BCH FEC   |  |  |  |
|                    | high-gain-hd-  | fec 7% HD FEC. The default is T100 staircase FEC.  |  |  |  |
|                    | long-haul-hd-  | fec 20% HD FEC. The default is T100 staircase FEC.   |  |  |  |
| Command Default    | Enhanced FE  | C mode is enabled by default.  |  |  |  |
| Command Modes      | DWDM confi   | guration   |  |  |  |
| Command History    | Release  | Modification   |  |  |  |
|                    | Release 3.3.0  | This command was introduced.   |  |  |  |
|                    | Release 5.3.1 The <b>ci-bch</b> keyword was introduced.  |  |  |  |  |
|                    | Release 5.3.2 The high-gain-hd-fec and long-haul-hd-fec keywords were introduced.  |  |  |  |  |
| Usage Guidelines   |  |  |  |  |  |
| Note               | The enhanced FEC mode supported on the Cisco CRS Router (ITU-T G.975.1 I.7) and the Cisco ASR 90 Series Router (ITU-T G.975.1 I.4) are different and therefore, incompatible. To support interoperability of DWDM between these routers, standard FEC must be configured. The OC-768c/STM-256c DWDM PLI on the Cisco CRS Router supports enhanced FEC mode only. Disabling FEC or enabling standard FEC is supported. The g709 fec command can be used only when the DWDM controller port is not operational. In Cisco IOS 2 releases prior to Cisco IOS XR Release 3.9.0, you stop operation using the shutdown (DWDM) comman Beginning in Cisco IOS XR Release 3.9.0, you stop operation using the admin-state out-of-service command command command command compared to prevent the state out-of-service command command command the DWDM control using the admin-state out-of-service command command command command compared to prevent the state out-of-service command command command command command compared to prevent the DWDM control using the admin-state out-of-service command command command command command compared to prevent the prevent of the cisco IOS XR Release 3.9.0, you stop operation using the admin-state out-of-service command |  |  |  |  |
|                    |  |  |  |  |  |
|                    | The G.709 wi   | rapper must be enabled to enable forward error correction (FEC) mode on the controller.            |  |  |  |
|                    | Enhanced FE  | C is the default mode; therefore, if you use the <b>no g709 fec</b> command, enhanced FEC is used. |  |  |  |
|                    | To display the   | FEC mode, use the <b>show controller dwdm</b> command.   |  |  |  |

I

| Task ID          | Task Operations<br>ID   |  |  |  |  |  |

### g709 odu overhead tti

To configure the Trail Trace Identifier (TTI) level for an Optical Channel Data Unit (ODU), use the **g709 odu overhead tti** command in DWDM configuration mode. To return to the default, use the **no** form of this command.

g709 odu overhead tti {expected | sent} {ascii | hex}tti-string

| Syntax Description | expected Configures the expected TTI string.                          |   |  |  |  |  |
|--------------------|---|---|--|--|--|--|
|                    | sent Configures the transmit TTI                                      | string.   |  |  |  |  |
|                    | ascii Indicates that the string is in                                 | ASCII format.   |  |  |  |  |
|                    | hex Indicates that the string is in                                   | hexidecimal format.   |  |  |  |  |
|                    | format. The ASCII text strin  | n configure the TTI level string in ASCII string format or hexadecimal<br>ng can be a maximum of 64 characters. The hexadecimal string length<br>d can be a maximum of 128 bytes. |  |  |  |  |
| Command Default    | No TTI level string is configured.                                    |   |  |  |  |  |
| Command Modes      | DWDM configuration  |   |  |  |  |  |
| Command History    | Release Modification  |   |  |  |  |  |
|                    | Release 3.6.0 This command was introduced.                            |   |  |  |  |  |
| Usage Guidelines   | No specific guidelines impact the use                                 | of this command.  |  |  |  |  |
| Task ID            | Task Operations<br>ID   |   |  |  |  |  |
|                    | dwdm read,<br>write   |   |  |  |  |  |
| Examples           | The following example shows how to configure the expected TTI string: |   |  |  |  |  |
|                    | RP/0/RP0/CPU0:router(config)# cc<br>RP/0/RP0/CPU0:router(config-dwdm  | ontroller dwdm 0/1/0/0<br>m)# g709 odu overhead tti expected test OTU 5678  |  |  |  |  |
| Related Commands   | Command   | Description   |  |  |  |  |
|                    | show controller dwdm, on page 46                                      | Displays optical parameters, G.709 alarms and counters, and register  |  |  |  |  |

and module information for a DWDM controller.

## g709 odu report disable

To disable the logging of selected Optical Channel Data Unit (ODU) alarms to the console for a DWDM controller, use the **g709 odu report disable** command in DWDM configuration mode. To return to the default state, use the **no** form of this command.

 $g709 \ odu \ report \ \{ais \ \mid bdi \ \mid eoc \ \mid lck \ \mid oci \ \mid ptim \ \mid sd-ber \ \mid sf-ber \ \mid tim \} \ disable$ 

| Syntax Description | ais   | Alarm i  | ndic  | ation sig           | nal repor           | ting stat | us.             |
|--------------------|---|--|-------|---------------------|---------------------|-----------|-----------------|
|                    | bdi   | Backwa   | rd d  | lefect ind          | ication re          | eporting  | status.         |

### g709 otu overhead tti

To configure the OTU Trail Trace Identifier (TTI) buffer for a DWDM controller, use the **g709 otu overhead tti** command in DWDM configuration mode. To return to the default state, use the **no** form of this command.

g709 otu overhead tti {expected | sent} {ascii | hex} tti-string **Syntax Description** expected Configures the expected TTI string. sent Configures the transmit TTI string. ascii Indicates that the string is in ASCII format. hex Indicates that the string is in hexidecimal format. tti-string The TTI string. A maximum of 64 characters is allowed. No TTI string is configured **Command Default** DWDM configuration **Command Modes Command History** Modification Release Release 3.4.0 This command was introduced. To display the TTI strings, use the show controller dwdm g709 command. **Usage Guidelines** Task ID Task Operations ID dwdm read, write **Examples** The following example shows how to configure the expected TTI string: RP/0/RP0/CPU0:router(config) # controller dwdm 0/0/0/0 RP/0/RP0/CPU0:router(config-dwdm) # g709 otu overhead tti expected test OTU 5678 **Related Commands** Command Description show controller dwdm, on page 46 Displays optical parameters, G.709 alarms and counters, and register and module information for a DWDM controller.

# g709 otu report disable

To disable the logging of selected Optical Channel Transport Unit (OTU) alarms to the console for a DWDM controller, use the **g709 otu report disable** command in DWDM configuration mode. To return to the default state, use the **no** form of this command.

| g709 otu report {ais   bdi   eoc   fecmismatch   iae   lof   lom   los   sd-ber   sf-ber   tim} | a disable |

### g709 otu threshold

To configure thresholds for selected Optical Channel Transport Unit (OTU) bit error rate (BER) alarms, use the **g709 otu threshold** command in DWDM configuration mode. To return to the default state, use the **no** form of this command.

g709 otu threshold {sd-ber | sf-ber} bit-error-rate

| Syntax Description | sd-ber bit-error-rateSignal degradation bit error rate (BER) in the range 1 to 9, where bit-error-rate specifies<br>a negative exponent of base 10 (10-bit-error-rate). The default is 6 (10-6). |  |  |  |
|--------------------|--|--|--|--|
|                    | e  | e BER above threshold in the range 1 to 9, where <i>bit-error-rate</i> specifies sponent of base 10 (10– <i>bit-error-rate</i> ). The default is 3 (10–3). |  |  |
| Command Default    | The defalut bit error rate for sd-ber  | • is 6.  |  |  |
|                    | The default bit error rate for sf-ber  | is 3.  |  |  |
| Command Modes      | DWDM configuration   |  |  |  |
| Command History    | Release Modification   |  |  |  |
|                    | Release 3.3.0 This command was   | introduced.  |  |  |
| Usage Guidelines   | No specific guidelines impact the u  | se of this command.  |  |  |
| Task ID            | Task Operations<br>ID  |  |  |  |
|                    | dwdm read,<br>write  |  |  |  |
| Examples           | This example shows how to set the  | signal fail BER rate to be 5:  |  |  |
|                    | RP/0/RP0/CPU0:router(config)#<br>RP/0/RP0/CPU0:router(config-d   | controller dwdm 0/0/0/0<br>wdm)# g709 otu threshold sf-ber 5   |  |  |
| Related Commands   | Command  | Description  |  |  |
|                    | show controller dwdm, on page 46   | Displays optical parameters, G.709 alarms and counters, and register and module information for a DWDM controller.   |  |  |

### g709 tim-to-client-gais

To insert a Generic Alarm Indication Signal (GAIS) on the client side when a Trace Identifier Mismatch (TIM) is detected, use the g709 tim-to-client-gais command in DWDM configuration mode. To disable this feature, use the **no** form of this command.

#### g709 tim-to-client-gais

This command has no keywords or arguments. **Syntax Description** 

By default, no GAIS to client is inserted. **Command Default** 

DWDM configuration **Command Modes** 

Release

**Command History** 

Modification Release 3.6.0 This command was introduced.

### **Usage Guidelines** Note The g709 tim-to-client-gais command is available on the 10-GE DWDM PLIM only. Task ID Task Operations ID dwdm read, write **Examples** The following example shows how to configure a GAIS to client when a TIM is received: RP/0/RP0/CPU0:router(config) # controller dwdm 0/1/0/0 RP/0/RP0/CPU0:router(config-dwdm) # g709 tim-to-client-gais **Related Commands** Command Description

### log signal

**Command History** 

To enable 10 millisecond proactive monitoring of Forward Error Correction-Fast Re-Route (FEC-FRR), use the **log signal** command in DWDM configuration mode. To disable proactive monitoring, use the no form of this command.

log signal file-name

 Syntax Description
 *file-name* Specifies the name of the log file.

**Command Default** No default behavior or values

Command Modes DWDM configuration

ReleaseModificationRelease 3.9.0This command was introduced.

**Usage Guidelines** The proactive feature is used to trigger Forward Error Correction-Fast Re-Route (FEC-FRR).

Note The log signal command is supported on the legacy line cards but does not function on the A9K-8X100GE-SE line cards though it is supported on them.

To see the proactive status, use the show controller dwdm proactive status command.

| Task ID | Task<br>ID | Operations |
|---------|------------|------------|
|         | dwdm       | read,      |
|         |            | write      |

**Examples** The following example shows how to enable 10 millisecond proactive monitoring of Forward Error Correction-Fast Re-Route (FEC-FRR).

RP/0/RP0/CPU0:router# config RP/0/RP0/CPU0:router(config)# controller dwdm 0/1/0/1 RP/0/RP0/CPU0:router(config-dwdm)# log signal LogFile1

| Related Commands Command |                                  | Description  |  |  |
|--------------------------|----------------------------------|--|--|--|
|                          | show controller dwdm, on page 46 | Displays optical parameters, G.709 alarms and counters, and register and module information for a DWDM controller. |  |  |

# loopback (DWDM)

To configure the DWDM controller for loopback mode, use the **loopback** command in DWDM configuration mode. To remove the loopback DWDM command from the configuration file, use the **no** form of this command.

|                    | loopback {internal   line}   |  |  |
|--------------------|--|--|--|
| Syntax Description | internal Specifies that all the packets be looped back to the router.  |  |  |
|                    | line Specifies that the incoming network packets be looped back to the DWDM network.   |  |  |
| Command Default    | This command is disabled by default.   |  |  |
| Command Modes      | DWDM configuration   |  |  |
| Command History    | Release Modification   |  |  |
|                    | Release 3.3.0 This command was introduced.   |  |  |
| Usage Guidelines   | The DWDM controller supports two loopback operation modes for diagnostic purposes: internal and line. The terminal (internal) loopback mode allows the received data from the Layer 2 Framer (for example, a SONET/SDH framer for POS or Ethernet MAC for 10GE) of the PLIM to be looped back to the ingress side of the Framer. This allows the packets to be looped back to the PLIM. The line loopback mode allows the received trunk/DWDM line Rx to be connected to the trunk/DWDM line Tx towards the line. This is used for line diagnostics. |  |  |
| Task ID            | Task Operations<br>ID  |  |  |
|                    | dwdm read,<br>write  |  |  |
| Examples           | In the following example, all packets are looped back to the DWDM controller:  |  |  |
|                    | <pre>RP/0/RP0/CPU0:router(config) # controller dwdm 0/0/0/0 RP/0/RP0/CPU0:router(config-dwdm) # loopback internal</pre>  |  |  |

### maintenance disable

To provision a maintenance embargo flag, use the **maintenance disable** command in interface configuration mode. To remove a maintenance embargo flag, use the no form of this command.

### maintenance disable

Syntax Description This command has no keywords or arguments.

**Command Default** Maintenance embargo flags are not provisioned.

**Command Modes** Interface configuration

### pm optics report enable

To enable Threshold Crossing Alert (TCA) generation on the optics layer, use the **pm optics report enable** command in DWDM configuration mode. To disable TCA reporting, use the **no** form of this command.

pm {15-min | 24-hour} optics report {lbc | opr | opt} {max-tca | min-tca} enable

| Syntax Description | 15-min Configures TCA generation for 15-minute intervals.  |
|--------------------|--|
|                    | 24-hour Configures TCA generation for 24-hour intervals.   |
|                    | lbc Laser bias current.  |
|                    | opr Optical power on the unidirectional port.  |
|                    | opt Transmit optical power in dBm.   |
|                    | max-tca Indicates that the maximum value of the parameter is compared against the threshold to determine if a TCA should be generated. |
|                    | min-tca Indicates that the minimum value of the parameter is compared against the threshold to determine if a TCA should be generated. |
| Command Default    | TCA reporting is not enabled.  |
| Command Modes      | DWDM configuration   |
| Command History    | Release Modification   |
|                    | Release 3.4.0 This command was introduced.   |
| Usage Guidelines   | To display performance monitoring information for the optics, use the <b>show controller dwdm pm optics</b> command.                   |
| Task ID            | Task Operations<br>ID  |

# proactive

To enable automatic triggering of Forward Error Correction-Fast Re-Route (FEC-FRR), use the **proactive** command in DWDM configuration mode. To disable automatic triggering, use the no form of this command.

|                    | proactive   |   |  |  |  |  |  |

## proactive revert threshold

To configure the revert threshold to trigger reverting from the Forward Error Correction-Fast Re-Route (FEC-FRR) route back to the original route, use the **proactive revert threshold** command in DWDM configuration mode. To remove the revert threshold, use the no form of this command.

proactive revert threshold x-coefficient y-power

| Syntax Description | x-coefficien   | t Bit error rate coefficient   | (x of xE-y). The range is 1 to 9. Default is 1.  |  |  |  |
|--------------------|--|--|--|--|--|--|
|                    | y-power  | Bit error rate exponent (y   | y of xE-y). The range is 3 to 9.   |  |  |  |

# proactive revert window

To configure the revert window in which reverting from the Forward Error Correction-Fast Re-Route (FEC-FRR) route back to the original route is triggered, use the **proactive revert window** command in DWDM configuration mode. To remove the revert window, use the **no** form of this command.

proactive revert window window

| Syntax Description | window The length of time (in millist triggered. The range is 2000                                   | econds) of the window in which reverting from FEC-FRR may be to 100000.  |
|--------------------|--|--|
| Command Default    | No default behavior or values  |  |
| Command Modes      | DWDM configuration   |  |
| Command History    | Release Modification   |  |
|                    | Release 3.9.0 This command was intr  | roduced.   |
| Usage Guidelines   | The proactive feature is used to trigge  | r Forward Error Correction-Fast Re-Route (FEC-FRR).  |
| Note               | The <b>proactive revert window</b> comma A9K-8X100GE-SE line cards though                            | and is supported on the legacy line cards but does not function on the it is supported on them.                    |
|                    | To see the proactive status, use the <b>sh</b>   | ow controller dwdm proactive status command.   |

#### proactive trigger window

To configure the trigger window (in milliseconds) in which Fast Re-Route may be triggered, use the **proactive trigger window** command in DWDM configuration mode. To remove the trigger window, use the no form of this command.

proactive trigger window window

**Syntax Description** window The length of time (in milliseconds) of the window in which FEC-FRR may be triggered. The range is 10 to 10000. No default behavior or values **Command Default** DWDM configuration **Command Modes Command History** Release Modification Release 3.9.0 This command was introduced. The proactive feature is used to trigger Forward Error Correction-Fast Re-Route (FEC-FRR). **Usage Guidelines** Note The proactive trigger window command is supported on the legacy line cards but does not function on the A9K-8X100GE-SE line cards though it is supported on them. To see the proactive status, use the **show controller dwdm proactive status** command. Task ID Task Operations ID dwdm read, write **Examples** The following example shows how to configure the trigger window (in milliseconds) in which triggering of Fast Re-Route may happen: RP/0/RP0/CPU0:router# config RP/0/RP0/CPU0:router(config) # controller dwdm 0/1/0/1 RP/0/RP0/CPU0:router(config-dwdm) # proactive trigger window 10000 **Related Commands** Command Description Displays optical parameters, G.709 alarms and counters, and register show controller dwdm, on page 46 and module information for a DWDM controller.

#### rx-los-threshold

To configure the transponder receive power threshold on a DWDM controller, use the **rx-los-threshold** command in DWDM configuration mode. To return the transponder receive power threshold to its default value, use the **no** form of this command.

#### rx-los-threshold power-level

**Syntax Description** power-level Receive power level in units of 0.1 dBm. Values can range from -350 to 50, which corresponds to a LOS threshold range of -35 dBm to 5 dBm. The default power-level is-19.5 dBm. **Command Default** DWDM configuration **Command Modes Command History** Release Modification Release 3.3.0 This command was introduced. It is supported only on the OC-768c/STM-256c DWDM PLIM. Release 3.6.0 The value for the *power-level* argument was changed from -200 to 0, to -350 to 50. The rx-los-threshold command can be used only when the DWDM controller port is not operational. In **Usage Guidelines** Cisco IOS XR releases prior to Cisco IOS XR Release 3.9.0, you stop operation using the shutdown (DWDM) command. Beginning in Cisco IOS XR Release 3.9.0, you stop operation using the admin-state out-of-service command. The **rx-los-threshold** command is applicable only to the OC-768c/STM-256c DWDM PLIM. Task ID Task Operations ID dwdm read. write **Examples** This example shows how to configure the receive power threshold to -10 dBm: RP/0/RP0/CPU0:router(config) # controller dwdm 0/0/0/0 RP/0/RP0/CPU0:router(config-dwdm) # rx-los-threshold -100 **Related Commands** Command Description Configures the transport administration state on a DWDM port. admin-state, on page 3 Displays optical parameters, G.709 alarms and counters, and register show controller dwdm, on page 46 and module information for a DWDM controller.

| Command                    | Description   |
|----------------------------|---|
| transmit-power, on page 64 | Configures the DWDM optics transmit laser power on a DWDM controller. |

#### show controller dwdm

To display optical parameters, G.709 alarms and counters, and register and module information for a DWDM controller, use the **show controller dwdm** command in EXEC mode.

show controller dwdm interface-path-id [ $\{g709 \ [registers] | log | optics \ [registers] | proactive status srlg tdc | wavelength-map \}$ ]

| Syntax Description | interface-path-  | id Physica | al interface or virtual interface.  |  |  |  |
|--------------------|--|------------|---|--|--|--|
|                    |  | Note       | Use the <b>show interfaces</b> command to see a list of all interfaces currently configured on the router.  |  |  |  |
|                    |  |            | For more information about the syntax for the router, use the question mark (?) online help function.   |  |  |  |
|                    | g709   | counter    | (Optional) Displays the G.709 Optical Transport Network (OTN) protocol alarms and counters for bit errors, along with the FEC statistics and threshold-based alerts. g709 mode and g709 fec set to enhanced by default. |  |  |  |
|                    | log  | (Option    | nal) Displays information about signal logging.   |  |  |  |
|                    | optics   |            | nal) Displays optical related information about the interface, such as output power nd wavelength.  |  |  |  |
|                    | registers  | ` <b>1</b> | nal) For <b>g709</b> , displays platform-specific OTN framer registers; for <b>optics</b> , displays onder registers.   |  |  |  |

I

|                  | Release   | Modification  |  |  |  |  |
|------------------|---|---|--|--|--|--|
|                  | Release 5.3.  | 0 The command output was enhanced to capture whether VTXP is enabled on an interface of not.                |  |  |  |  |
| Usage Guidelines | DWDM interfaces with g709 capability(enabled) and FEC(enabled) would report with Threshold Crossing Alerts (TCA) for Error Correction based PREFEC version of SD and SF BER. The thresholds act independent of FRR thresholds. If FRR is also enabled, then PREFEC thresholds are expected to be manually tuned to provide an early warning before the protection is triggered. The information regarding PREFEC_SD and PREFEC_SF are made available for the <b>show controller dwdm interface-path-id g709</b> command. 10 GigE and 40 GigE DWDM interfaces support standard FEC and enhanced i.4 and i.7 FEC modes while 100GigE supports standard FEC. |   |  |  |  |  |

This table describes selected fields from the show controllers dwdm command output.

| Field                       | Description   |
|-----------------------------|---|
| AIS                         | Number of alarm indication signal (AIS) alarms. AIS is a signal sent downstream as an indication that an upstream defect has been detected.                                   |
| Alarm reporting enabled for | Lists the alarms that are enabled for reporting.  |
| Asserted Alarms             | Alarms indicated to be reported by the user.  |
| BDI                         | Number of backward defect indication (BDI) alarms. The BDI is a single bit that conveys information regarding signal failure in the upstream direction.                       |
| BER thresholds              | Values of the configured bit error rate thresholds.   |
| BIP                         | Number of bit interleaved parity alarms. The BIP is comprised of one byte and is used for error detection. It is computed over the entire optical channel payload unit (OPU). |
| Controller State            | Status of the controller.   |
| Detected Alarms             | Alarms detected by the hardware.  |
| EC                          | Corrected code words. This is the number of words corrected by the FEC and is displayed as a per second rate.   |
| FEC Mode                    | Indicates the forward error correction (FEC) mode for the controller. This can be Disabled, Enhanced FEC G.975.1 1.7 (Default), or Standard FEC.                              |
| IAE                         | Number of incoming alignment errors (IAE).  |

Table 1: show controllers dwdm Command Output Field Descriptions

| Field                 | Description   |
|-----------------------|---|
| LCK                   | Number of upstream connection locked alarms. LCK is a signal sent downstream as an indication that upstream the connection is locked, and no signal is passed through.  |
| LOF                   | Number of OTU loss of frame (LOF) alarms.   |
| LOM                   | Number of OTU loss of multiframe (LOM) alarms.  |
| Loopback              | Loopback status. Indicates whether or not loopback is enabled and the type of loopback enabled.   |
| LOS                   | Number of OTU loss of signal (LOS) alarms. The LOS threshold is set using the <b>rx-los-threshold</b> command. If the receive optical power is less than or equal to this defined threshold, the optical LOS alarm is raised. |
| OCI                   | Number of open connection indication alarms. OCI is a signal sent downstream as an indication that upstream the signal is not connected to a trail termination source.  |
| ODU                   | Optical channel data unit alarms.   |
| OTU                   | Optical transport unit overhead alarms.   |
| OTU TTI Expected      | Value of the expected TTI.  |
| OTU TTI Received      | Value of the received TTI.  |
| OTU TTI Sent          | Value of the transmit trail trace identifier (TTI).   |
| PTIM                  | Number of payload type identifier mismatch alarms. This occurs when there is a mismatch between the way the ITU-T G.709 option is configured on the PLIM at each end of the optical span.                                     |
| TDC Info              | Tunable Dispersion Compensator (TDC) information.   |
| Transport Admin State | Current status of the port as set by the <b>admin-state</b> command. Possible values are: IS (In-Service) and OOS (Out-of-Service).   |
| UC                    | Uncorrectable code words. This is a raw counter.  |
| Pre-FEC BER           | Pre - bit error rate (BER) forward error correction (FEC). The pre-FEC BER is calculated using pre-forward error correction (FEC) error counts.   |
| Q                     | The general signal quality bit error rate (BER) per voltage. The Q and Q margin are calculated using the Pre-FEC BER.   |
| Q Margin              | The general signal quality bit error rate (BER) per voltage. The Q and Q margin are calculated using the Pre-FEC BER.   |
| Operational Mode      | Indicates whether the tunable dispersion compensator (TDC) operational mode option is set to Auto or Manual.  |

| Field              | Description  |
|--------------------|--|
| Status             | Indicates whether the tunable dispersion compensator (TDC) is in the acquiring state or locked state. The status is invalid if there is a major alarm.                             |
| Dispersion Setting | Indicates a value between -700 and +700 packets per second (pps). The dispersion setting is read from the optics module after the tunable dispersion compensator (TDC) has locked. |
| Reroute Control    | Not used.  |
| Reroute BER        | Not used.  |

See Table 2: show controllers dwdm optics Command Output Field Descriptions, on page 53 for a description of the optics fields.

The following example shows the output from the show controllers dwdm command with the **g709 registers** keywords:

| Addr       | Name            | Value      |

RP/0/RP0/CPU0:router# show controller dwdm 0/3/0/0 g709 registers

The following example shows the output from the **show controllers dwdm** command with the **optics** keyword on a 10-GE PLIM:

RP/0/RP0/CPU0:router# show controller dwdm 0/3/0/0 optics

Optics Status

```
Optics Type: 10Gb MSA WDM (65km)
Clock Source: Internal
Wavelength Band: C-Band, MSA ITU Channel = 3, Frequency = 196.00 THz,
Wavelength = 1529.553 nm
TX Power = 3.79 dBm
RX Power = -8.83 dBm
```

This table describes selected fields from the **show controllers dwdm** command output with the **optics** keyword.

| Field            | Description   |  |
|------------------|---|--|
| Optics Type      | Indicates the optics type: GE or OC-768c/STM-256c DWDM.   |  |
| Clock Source     | Indicates whether the clock is internal or line.  |  |
| Wavelength Band  | Indicates the wavelength band: C-band or L-band.  |  |
| MSA ITU Channel  | Multi Source Agreement (MSA) ITU channel number.  |  |
| Frequency        | Frequency of the channel in terahertz.  |  |
| Wavelength       | Wavelength corresponding to the channel number in nanometers.   |  |
| TX power         | Value of the transmit power level. This is user configurable on the OC-768c/STM-256c DWDM PLIM using the <b>transmit-power</b> command.   |  |
| RX Power         | Actual optical power at the RX port.  |  |
| RX LOS Threshold | Receive loss of signal threshold. This is user configurable on the OC-768c/STM-256c DWDM PLIM using the <b>rx-los-threshold</b> command. If the receive optical power is less than or equal to this defined threshold, the optical LOS alarm is raised. |  |

Table 2: show controllers dwdm optics Command Output Field Descriptions

This example shows sample output from the **show controllers dwdm** command with the **wavelength-map** keyword on a Gigabit Ethernet controller:

RP/0/RP0/CPU0:router# show controller dwdm 0/5/0/3 wavelength-map

Wavelength band: C-band MSA ITU channel range supported: 3~84

Wavelength map table

| Channel<br>Num | Frequency<br>(THz) | Wavelength<br>(nm) |
|----------------|--------------------|--------------------|
| 03             | 196.00             | 1529.553           |
| 04             | 195.95             | 1529.944           |
| 05             | 195.90             | 1530.334           |
| 06             | 195.85             | 1530.725           |
| 07             | 195.80             | 1531.116           |
|                |                    |                    |

| 08 | 195.75 | 1531.507 |
|----|--------|----------|
|    | 195.70 | 1531.898 |

| 11 | 195.60 | 1532.681 |
| 12 |        | 1533.073 |
|    | 195.50 | 1533.465 |
| 14 | 195.45 | 1533.858 |
|    | 195.40 | 1534.250 |
| 16 | 195.35 | 1534.643 |
| 17 | 195.30 | 1535.036 |
| 18 | 195.25 | 1535.429 |
| 19 | 195.20 | 1535.822 |
| •  |        |          |
| •  |        |          |

This table describes selected fields from the **show controllers dwdm** command output with the **wavelength-map** keyword.

Table 3: show controllers dwdm wavelength Command Output Field Descriptions

| Field              | Description                               |
|--------------------|---|
| channel Num        | Channel number.                           |
| frequency (THz)    | Frequency of the wavelength in terahertz. |
| wavelength<br>(nm) | Wavelength in nanometers.                 |

| <b>Related Commands</b> | Command                      | Description  |
|-------------------------|------------------------------|--|
|                         | admin-state, on page 3       | Configures the transport administration state on a DWDM port.            |
|                         | rx-los-threshold, on page 44 | Configures the transponder receive power threshold on a DWDM controller. |
|                         | transmit-power, on page 64   | Configures the DWDM optics transmit laser power on a DWDM controller.    |

# show controller dwdm pm

To display performance monitoring information for a DWDM controller, use the **show controller dwdm pm** command in EXEC mode.

show controller dwdm *instance* pm history [{15-min | 24-hour | fec | optics | otn}] show controller dwdm *instance* pm interval [{15-min | 24-hour}][{fec | optics | otn}] *index* 

| Syntax Description | <i>instance</i> Physical interface instance. Naming notation is <i>rack/slot/module/port</i> and a slash between values is required as part of the notation.   |  |  |
|--------------------|--|--|--|
|                    | • <i>rack</i> : Chassis number of the rack.  |  |  |
|                    | • <i>slot</i> : Physical slot number of the line card.   |  |  |
|                    | <ul> <li><i>module</i>: Module number. A physical layer interface module (PLIM) is always 0. Shared port adapters (SPAs) are referenced by their subslot number.</li> <li><i>port</i>: Physical port number of the interface.</li> </ul>   |  |  |
|                    | For more information about the syntax for the router, use the question mark (?) online help function.  |  |  |
|                    | history Displays all performance monitoring data.  |  |  |
|                    | interval Displays specific performance monitoring data in a particular interval.   |  |  |
|                    | 15-min Displays performance monitoring data in a 15-minute interval.   |  |  |
|                    | 24-hour Displays performance monitoring data in a 24-hour interval.  |  |  |
|                    | fecDisplays FEC performance parameters, such as bit errors corrected (BIEC) and uncorrectable words.opticsDisplays optics performance parameters, such as optical power.otnDisplays OTN performance parameters, such as path monitoring failure counts (FC-PM) and section<br>monitoring unavailable seconds (UAS-SM). |  |  |
|                    |  |  |  |
|                    |  |  |  |
|                    | index Interval for which to display the performance monitoring information.  |  |  |
| Command Default    | No default behavior or values  |  |  |
| Command Modes      | EXEC mode  |  |  |
| Command History    | Release Modification   |  |  |
|                    | Release 3.4.0 This command was introduced.   |  |  |
| Usage Guidelines   | No specific guidelines impact the use of this command.   |  |  |
| Task ID            | Task ID Operations   |  |  |
|                    | dwdm read  |  |  |
|                    |  |  |  |

| Task ID   | Operations |
|-----------|------------|
| interface | read       |
| sonet-sdh | read       |

Examples

The following example shows the output from the **show controllers dwdm pm** command on a 10-GE DWDM PLIM:

RP/0/RP1/CPU0:Router# show controllers dwdm 0/2/0/0 pm interval 24-hour 0

| 111, 0, 1111, 0100 | 54661 <b>6110</b> |                     | 0, _, 0, 0 pm00  |                |

**Dense Wavelength Division Multiplexing Commands** 

This table describes selected fields from the show controllers dwdm pm command output.

Table 4: show controllers dwdm pm Command Output Field Descriptions

| Field      | Description  |
|------------|--|
| EC-BITS    | Bit errors corrected (BIEC). Indicates the number of bit errors corrected in the DWDM trunk line during the performance monitoring time interval.  |
| UC-WORDS   | Uncorrectable words. This is the number of uncorrectable words detected in the DWDM trunk line during the performance monitoring time interval.  |
| LBC        | Laser bias current.  |
| OPR        | Optical power on the unidirectional port.  |
| OPT        | Transmit optical power in dBm.   |
| MAX        | Indicates the maximum value of the parameter.  |
| AVG        | Indicates the average value of the parameter   |
| MIN        | Indicates the minimum value of the parameter.  |
| THRESHOLD  | Indicates the parameter's configured threshold.  |
| TCA        | Indicates if TCA reporting is enabled or not.  |
| BBE-PM-FE  | Far-end path monitoring background block errors (BBE-PM)—Indicates the number of background block errors recorded in the optical transport network (OTN) path during the performance monitoring time interval. |
| BBE-PM-NE  | Near-end path monitoring background block errors (BBE-PM).   |
| BBE-SM-FE  | Far-end section monitoring background block errors (BBE-SM)—Indicates the number of background block errors recorded in the OTN section during the performance monitoring time interval.                       |
| BBE-SM-NE  | Near-end section monitoring background block errors (BBE-SM).  |
| BBER-PM-FE | Far-end path monitoring background block errors ratio (BBER-PM)—Indicates the background block errors ratio recorded in the OTN path during the performance monitoring time interval.                          |
| BBER-PM-NE | Near-end path monitoring background block errors ratio (BBER-PM).  |
| BBER-SM-FE | Far-end section monitoring background block errors ratio (BBER-SM)—Indicates the background block errors ratio recorded in the OTN section during the performance monitoring time interval.                    |
| BBER-SM-NE | Near-end section monitoring background block errors ratio (BBER-SM).   |
| ES-PM-FE   | Far-end path monitoring errored seconds (ES-PM)—Indicates the errored seconds recorded in the OTN path during the performance monitoring time interval.  |
| ES-PM-NE   | Near-end path monitoring errored seconds (ES-PM).  |

| Field      | Description   |  |
|------------|---|--|
| ES-SM-FE   | Far-end section monitoring errored seconds (ES-SM)—Indicates the errored seconds recorded in the OTN section during the performance monitoring time interval.                                 |  |
| ES-SM-NE   | Near-end section monitoring errored seconds (ES-SM).  |  |
| ESR-PM-FE  | Far-end path monitoring errored seconds ratio (ESR-PM)—Indicates the errored seconds ratio recorded in the OTN path during the performance monitoring time interval.                          |  |
| ESR-PM-NE  | Near-end path monitoring errored seconds ratio (ESR-PM).  |  |
| ESR-SM-FE  | Far-end section monitoring errored seconds ratio (ESR-SM)—Indicates the errored seconds ratio recorded in the OTN section during the performance monitoring time interval.                    |  |
| ESR-SM-NE  | Near-end section monitoring errored seconds ratio (ESR-SM).   |  |
| FC-PM-FE   | Far-end path monitoring failure counts (FC-PM)—Indicates the failure counts recorded in the OTN path during the performance monitoring time interval.   |  |
| FC-PM-NE   | Near-end path monitoring failure counts (FC-PM).  |  |
| FC-SM-FE   | Far-end section monitoring failure counts (FC-SM)—Indicates the failure counts recorded in the OTN section during the performance monitoring time interval.                                   |  |
| FC-SM-NE   | Near-end section monitoring failure counts (FC-SM).   |  |
| SES-PM-FE  | Far-end path monitoring severely errored seconds (SES-PM)—Indicates the severely errored seconds recorded in the OTN path during the performance monitoring time interval.                    |  |
| SES-PM-NE  | Near-end path monitoring severely errored seconds (SES-PM).   |  |
| SES-SM-FE  | Far-end section monitoring severely errored seconds (SES-SM)—Indicates the severely errored seconds recorded in the OTN section during the performance monitoring time interval.              |  |
| SES-SM-NE  | Near-end section monitoring severely errored seconds (SES-SM).  |  |
| SESR-PM-FE | Far-end path monitoring severely errored seconds ratio (SESR-PM)—Indicates the severely errored seconds ratio recorded in the OTN path during the performance monitoring time interval.       |  |
| SESR-PM-NE | Near-end path monitoring severely errored seconds ratio (SESR-PM).  |  |
| SESR-SM-FE | Far-end section monitoring severely errored seconds ratio (SESR-SM)—Indicates the severely errored seconds ratio recorded in the OTN section during the performance monitoring time interval. |  |
| SESR-SM-NE | Near-end section monitoring severely errored seconds ratio (SESR-SM).   |  |
| UAS-PM-FE  | Far-end path monitoring unavailable seconds (UAS-PM)—Indicates the unavailable seconds recorded in the OTN path during the performance monitoring time interval.                              |  |
| UAS-PM-NE  | Near-end path monitoring unavailable seconds (UAS-PM).  |  |

| Field     | Description  |
|-----------|--|
| UAS-SM-FE | Far-end section monitoring unavailable seconds (UAS-SM)—Indicates the unavailable seconds recorded in the OTN section during the performance monitoring time interval. |
| UAS-SM-NE | Near-end section monitoring unavailable seconds (UAS-SM).  |

## show vtxp-monitored ports

To display the list of DWDM controller interfaces on which VTXP attribute is enabled, use the use the **show vtxp-monitored ports** command in Global Configuration mode.

#### show vtxp-monitored ports

| Syntax Description | This comma | and has no keywords or arguments. |
|--------------------|------------|-----------------------------------|
| Command Default    | None       |                                   |
| Command Modes      | Global Con | figuration mode                   |
| Command History    | Release    | Modification                      |
|                    |            |                                   |

**Usage Guidelines** No specific guidelines impact the use of this command.

controller dwdm, on page 5

Configures a DWDM controller.

Description

## transport-mode (WAN/OTN)

To specify the transport mode for a 10-Gigabit Ethernet interface, use the **transport-mode** command in interface configuration mode. To return to the default mode, use the **no** form of this command.

transport-mode {wan | otn bit-transparent {opu1e | opu2e}}

| Syntax Description | wan  | Configures the interface for 10GBASE-W WAN SONET/SDH (9.95328Gb/s) transport.  |  |  |
|--------------------|--|--|--|--|
|                    | otn bit-transparent  | t Configures the interface for 10-Gigabit Ethernet over Optical Transport Network (ITU-T G.709) with 10GBASE-R transparently mapped into OTU-2.                          |  |  |
|                    | opu1e  | Configures the interface for 10GBASE-R over OPU1e without fixed stuffing (11.0491Gb/s).  |  |  |
|                    | opu2e  | Configures the interface for 10GBASE-R over OPU2e with fixed stuffing (11.0957Gb/s)  |  |  |
| Command Default    | The interface is in LA   | The interface is in LAN mode. Neither WAN mode or OTN mode is configured.  |  |  |
| Command Modes      | Interface configuration  |  |  |  |
| Command History    | Release Modi   | fication   |  |  |
|                    | Release 3.9.0 This c   | command was introduced.  |  |  |
| Usage Guidelines   | Three modes are supported for a 10-Gigabit Ethernet interface: LAN, WAN, or OTN on these Ethernet line cards and Modular Port Adaptors (MPAs): |  |  |  |
|                    | • 2-Port 10-Gigabit Ethernet, 20-Port Gigabit Ethernet Combination line card (A9K-2T20GE-B and A9K-2T20GE-L)                                   |  |  |  |
|                    | • 8-Port 10-Gigabit Ethernet line card (A9K-8T-L, -B, or -E)   |  |  |  |
|                    | • 16-Port 10-Gigabit Ethernet SFP+ line card (A9K-16T/8-B and A9K-16T/8-B+AIP)   |  |  |  |
|                    | • 24-Port 10-Gigabit Ethernet line card (A9K-24X10GE-SE/TR)  |  |  |  |
|                    | • 36-Port 10-Gigabit Ethernet line card (A9K-36X10GE-SE/TR)  |  |  |  |
|                    | • 2-Port 10-Gigabit Ethernet Modular Port Adaptor (A9K-MPA-2x10GE)   |  |  |  |
|                    | • 4-Port 10-Gigabit Ethernet Modular Port Adaptor (A9K-MPA-4x10GE)   |  |  |  |
|                    | 8-Port 10-Gigabit Ethernet Modular Port Adaptor (A9K-MPA-8x10GE)   |  |  |  |
|                    | Limitation:  |  |  |  |
|                    |  | interface of Cisco ASR 9000 High Density 100GE Ethernet (8x100G and 4x100G) line<br>e transport mode (OPU1E or OPU2E) on both ends of the interface. Different transport |  |  |

cards, configure same transport mode (OPU1E or OPU2E) on both ends of the interface. Different transport modes at both ends results in flapping of the interface status and the router console displays continuous interface UP/DOWN messages.

If you want to configure the interface for DWDM support, configure the 10-Gigabit Ethernet interface for OTN transport mode.

These 40GE MPAs support LAN and OTU3 modes:

- A9K-MPA-1x40GE
- A9K-MPA-2x40GE

Note

Before Cisco IOS XR Software Release 4.2.0, only **transport-mode wan** was used under the interface configuration mode to set WAN PHY controller. Then, both Operational Mode and Configuration Mode would be changed to WAN Mode.

After Cisco IOS XR Software Release 4.2.0, you can use **transport-mode wan** under the interface configuration mode to use basic function of WAN PHY. In addition, we can use **wanmode on** under the wanphy controller mode to use alarm function and BIP counter.

Note On the Cisco A9K-4T16GE-TR and Cisco A9K-4T16GE-SE line cards, mixed use of LAN and WAN transport modes is not supported due to hardware limitation. In other words, WAN PHY is configured on all the four 10GigE ports to be operated either in LAN mode or WAN mode for 10 GigE ports 16, 17, 18 and 19.

On applying the configuration change from LAN to WAN or back on port 16, the same configuration shall be applied on all the other 10 GigE ports 17, 18, and 19. The ports 17, 18 or 19 cannot be used to make configuration changes using the **transport-mode** command. Also, the running configuration shows the configuration change only on port 16.

Task ID Task ID Operations

interface read, write

Examples

This example shows how to configure the interface for WAN PHY mode:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# interface 10gigabitethernet 0/1/0/1
RP/0/RP0/CPU0:router(config-if)# transport-mode wan
RP/0/RP0/CPU0:router(config-if)# commit
```

The following configuration is needed to operate in WAN PHY mode:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# controller wanphy <>
RP/0/RP0/CPU0:router(config)# wanmode on
RP/0/RP0/CPU0:router(config)# commit
```

This example shows how to configure a DWDM interface using OTN transport:

```
RP/0/RP0/CPU0:router# config
```

L

```
RP/0/RP0/CPU0:router(config)# interface 10gigabitethernet 0/5/0/7/0
RP/0/RP0/CPU0:router(config-if)# transport-mode otn bit-transparent opule
RP/0/RP0/CPU0:router(config-if)# commit
```

The following additional configuration is also needed:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# controller dwdm <>
RP/0/RP0/CPU0:router(config)# admin-state in-service
RP/0/RP0/CPU0:router(config)# commit
```

This example shows how to return the interface configuration to its default LAN mode from OTN or WAN PHY mode:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# interface 10gigabitethernet 0/1/0/1
RP/0/RP0/CPU0:router(config-if)# no transport-mode
RP/0/RP0/CPU0:router(config-if)# commit
```

This configuration example shows how to configure the interface for OTU3 mode:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# controller dwdm <>
RP/0/RP0/CPU0:router(config)# g709 enable
RP/0/RP0/CPU0:router(config)# commit
```

Note

The following QSFP+ Optics is required to support OTU3 mode:

QSFP-40GE-LR4

| Related Commands | Command           | Description  |

## wavelength

To set the wavelength on a DWDM controller to a specific ITU channel or to define a specific frequency or wavelength to a DWDM controller, use the **wavelength** command in DWDM configuration mode. To return the wavelength to its default value, use the **no** form of this command.

wavelength { 50GHz-grid {channel-number | frequency frequency | update wavelength } } | {100MHz-grid frequency frequency }

| Syntax Description | 50GHz-grid   | Specifies 50-GHz frequency grid.  |  |  |
|--------------------|--|---|--|--|
|                    | 100MHz-grid  | Specifies 100-GHz frequency grid.   |  |  |
|                    | channel-number   | ITU channel number. ITU channel numbers have predefined frequencies as defined I<br>Multi Source Agreement (MSA) International Telecommunication Union (ITU) grid |  |  |
|                    |  | • The range is 1 to 89 for conventional band (C-band)   |  |  |
|                    |  | • The range is 106 to 185 for long band (L-band).   |  |  |
|                    | <b>frequency</b> Keyword that specifies the frequency for the DWDM controller. |   |  |  |
|                    | frequency  | Enter the 5-digit frequency value in the range of 19170 to 19610 GHz. For example, enter <b>frequency 19580</b> to specify 195.8 THz.                             |  |  |
|                    | update wavelength  | Keyword that defines a specific wavelength for the DWDM controller.   |  |  |
|                    |  | Enter the 7-digit frequency value in the range of 1528773-1563863 micrometers (mm). For example, enter <b>update 1532290</b> to specifiy 1532.29 nanometers (nm). |  |  |
| Command Default    | The default for OC-768c/STM-256c DWDM PLIM, C-band is 1.                       |   |  |  |
|                    | The default for 10-G   | E PLIM, C-band is 3.  |  |  |
|                    | The default for 10-G   | E PLIM, L-band is 106.  |  |  |
| Command Modes      | DWDM configuration   | on  |  |  |
| Command History    | Release Modi   | fication  |  |  |
|                    | Release 3.3.0 This   | command was introduced.   |  |  |
|                    | Release 5.3.2 50 GHZ or 100 GHz options were introduced.                       |   |  |  |
| Usage Guidelines   | You can set the wave<br>Source Agreement (1                                    | elength to a specific ITU channel, that is represented by a channel number in the Multi MSA) ITU grid.  |  |  |
|                    |  | nnel number for the 10-GE PLIM, C-band is 3, which corresponds to a frequency of d wavelength of 1529.553 nm.   |  |  |
|                    |  | nnel number for the 10-GE PLIM, L-band is 106, which corresponds to a frequency of d wavelength of 1570.83 nm.  |  |  |

• The default channel number for the OC-768c/STM-256c DWDM PLIM, C-band is 1, which corresponds to a frequency of 196.10 and a wavelength of 1528.773.

The spacing between wavelengths is 50 GHZ or 100 GHz. Use the **show controllers dwdm** command with the **wavelength-map** keyword to view the channel numbers and wavelengths that are supported for a particular controller.

The controller must be in the out-of-service state before you can use the wavelength command.
