

MPLS Traffic Engineering Commands

This module describes the commands used to configure Multiprotocol Label Switching (MPLS) Traffic Engineering (TE) on the Cisco IOS XR Software.

Your network must support the following Cisco features before you can enable MPLS-TE:

- MPLS
- IP Cisco Express Forwarding (CEF)
- Intermediate System-to-Intermediate System (IS-IS) or Open Shortest Path First (OSPF) routing protocol
- Resource Reservation Protocol (RSVP)

MPLS Label Distribution Protocol (LDP), Resource Reservation Protocol (RSVP), and Universal Control Plane (UCP) command descriptions are documented separately.

For detailed information about MPLS concepts, configuration tasks, and examples, see *Cisco IOS XR MPLS Configuration Guide for the Cisco CRS-1 Router*.

adjustment-threshold (MPLS-TE)

To configure the tunnel bandwidth change threshold to trigger an adjustment, use the **adjustment-threshold** command in MPLS-TE automatic bandwidth interface configuration mode. To disable this feature, use the **no** form of this command.

adjustment-threshold *percentage* [**min** *minimum bandwidth*]
no adjustment-threshold *percentage* [**min** *minimum bandwidth*]

Syntax Description		
<i>percentage</i>		Bandwidth change percent threshold to trigger an adjustment if the largest sample percentage is higher or lower than the current tunnel bandwidth. The range is from 1 to 100. The default is 5.
min <i>minimum bandwidth</i>		(Optional) Configures the bandwidth change value to trigger an adjustment. The tunnel bandwidth is changed only if the largest sample is higher or lower than the current tunnel bandwidth, in kbps. The range is from 10 to 4294967295. The default is 10.

Command Default	
	<i>percentage</i> : 5 <i>minimum bandwidth</i> : 10

Command Modes	
	MPLS-TE automatic bandwidth interface configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If you configure or modify the adjustment threshold while the automatic bandwidth is already running, the next band-aids application is impacted for that tunnel. The new adjustment threshold determines if an actual bandwidth takes place.

Examples

The following example configures the tunnel bandwidth change threshold to trigger an adjustment:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# auto-bw
RP/0/RP0/CPU0:router(config-if-tunte-autobw)# adjustment-threshold 20 min 500
```

Related Commands	Command	Description
	application (MPLS-TE), on page 17	Configures the application frequency, in minutes, for the applicable tunnel.

Command	Description
auto-bw (MPLS-TE), on page 27	Configures automatic bandwidth on a tunnel interface and enters MPLS-TE automatic bandwidth interface configuration mode.
bw-limit (MPLS-TE), on page 44	Configures the minimum and maximum automatic bandwidth to set on a tunnel.
collect-bw-only (MPLS-TE), on page 62	Enables only the bandwidth collection without adjusting the automatic bandwidth.
overflow threshold (MPLS-TE), on page 160	Configures tunnel overflow detection.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

admin-weight

To override the Interior Gateway Protocol (IGP) administrative weight (cost) of the link, use the **admin-weight** command in MPLS-TE interface configuration mode. To return to the default behavior, use the **no** form of this command.

admin-weight *weight*
no admin-weight *weight*

Syntax Description

weight Administrative weight (cost) of the link. Range is 0 to 4294967295.

Command Default

weight: IGP Weight (default OSPF 1, ISIS 10)

Command Modes

MPLS-TE interface configuration

Command History

Release	Modification
Release 2.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To use MPLS the **admin-weight** command for MPLS LSP path computations, path-selection metric must be configured to TE.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to override the IGP cost of the link and set the cost to 20:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface POS 0/7/0/0
RP/0/RP0/CPU0:router(config-mpls-te-if)# admin-weight 20
```

Related Commands

Command	Description
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

Command	Description
path-selection metric (interface), on page 181	Specifies an MPLS-TE tunnel path-selection metric type.

affinity

To configure an affinity (the properties the tunnel requires in its links) for an MPLS-TE tunnel, use the **affinity** command in interface configuration mode. To disable this behavior, use the **no** form of this command.

```
affinity {affinity-value mask mask-value | exclude name| exclude-all| ignore|include name| include-strict name}
```

```
no affinity {affinity-value mask mask-value | exclude name| exclude-all| ignore| include name| include-strict name}
```

Syntax Description

<i>affinity-value</i>	Attribute values that are required for links to carry this tunnel. A 32-bit decimal number. Range is from 0x0 to 0xFFFFFFFF, representing 32 attributes (bits), where the value of an attribute is 0 or 1.
mask <i>mask-value</i>	Checks the link attribute. A 32-bit decimal number. Range is 0x0 to 0xFFFFFFFF, representing 32 attributes (bits), where the value of an attribute mask is 0 or 1.
exclude <i>name</i>	Configures a particular affinity to exclude.
exclude-all	Excludes all affinities.
ignore	Ignore affinity attributes.
include <i>name</i>	Configures the affinity to include in the loose sense.
include-strict <i>name</i>	Configures the affinity to include in the strict sense.

Command Default

affinity-value: 0X00000000

mask-value: 0x0000FFFF

Command Modes

Interface configuration

Command History

Release	Modification
Release 2.0	This command was introduced.
Release 3.4.0	Support was added for the Name-Based Affinity Constraint scheme.
Release 3.7.0	Affinity colors definition for MPLS-TE was added.
Release 5.2.2	Support was added to start a 5 minute timer to allow reoptimization when affinity failure occurs.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Affinity determines the link attributes of the tunnel (that is, the attributes for which the tunnel has an affinity). The attribute mask determines which link attribute the router should check. If a bit in the mask is 0, the attribute

value of a link or that bit is irrelevant. If a bit in the mask is 1, the attribute value of that link and the required affinity of the tunnel for that bit must match.

A tunnel can use a link if the tunnel affinity equals the link attributes and the tunnel affinity mask.

If there is an affinity failure, a 5 minute timer is started at the LSP headend. If the tunnel is not able to reoptimize within the time frame, it is torn down. However, if you execute the **mpls traffic-eng reoptimize disable affinity-failure** command, no timer is started and the tunnel is not torn down. Note that, at a subsequent time, other triggers for reoptimization may start the timer for the LSPs with affinity failure.

Any properties set to 1 in the affinity should be 1 in the mask. The affinity and mask should be set as follows:

```
tunnel_affinity=tunnel_affinity and tunnel_affinity_mask
```

You can configure up to 16 affinity constraints under a given tunnel. These constraints are used to configure affinity constraints for the tunnel:

Include

Specifies that a link is considered for constrained shortest path first (CSPF) if it contains all affinities associated with the include constraint. An acceptable link contains more affinity attributes than those associated with the include statement. You can have multiple include statements under a tunnel configuration.

Include-strict

Specifies that a link is considered for CSPF if it contains only the colors associated with the include-strict statement. The link cannot have any additional colors. In addition, a link without a color is rejected.

Exclude

Specifies that a link satisfies an exclude constraint if it does not have all the colors associated with the constraint. In addition, a link that does not have any attribute satisfies an exclude constraint.

Exclude-all

Specifies that only the links without any attribute are considered for CSPF. An exclude-all constraint is not associated with any color; whereas, all other constraint types are associated with up to 10 colors.

Ignore

Ignores affinity attributes while considering links for CSPF.

You set one bit for each color; however, the sample output shows multiple bits at the same time. For example, you can configure red and black colors on GigabitEthernet0/4/1/3 from the **interface** command. The sample output from the [show mpls traffic-eng link-management interfaces, on page 261](#) command shows that the Attributes field is set to 0x21, which means that there are 0x20 and 0x1 bits on the link.

Task ID

Task ID	Operations
---------	------------

mpls-te	read, write
---------	----------------

Examples

This example shows how to configure the tunnel affinity and mask:

```
RP/0/RP0/CPU0:router# configure
```

```
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity 0101 mask 303
```

This example shows that a link is eligible for CSPF if the color is red. The link can have any additional colors.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity include red
```

This example shows that a link is eligible for CSPF if it has at least red and black colors. The link can have any additional colors.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity include red black
```

This example shows how to configure a tunnel to ignore the affinity attributes on links.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity ignore
```

This sample output shows that the include constraint from the **show mpls traffic-eng tunnels** command is 0x20 and 0x1:

```
Name: tunnel-te1 Destination: 0.0.0.0
Status:
  Admin:    up Oper: down Path: not valid Signalling: Down
  G-PID: 0x0800 (internally specified)

Config Parameters:
  Bandwidth:      0 kbps (CT0) Priority: 7 7
  Number of configured name based affinity constraints: 1
  Name based affinity constraints in use:
  Include bit map      : 0x21
  Metric Type: TE (default)
  AutoRoute: disabled LockDown: disabled
  Loadshare:          0 equal loadshares
  Auto-bw: disabled(0/0) 0 Bandwidth Requested:      0
  Direction: unidirectional
  Endpoint switching capability: unknown, encoding type: unassigned
  Transit switching capability: unknown, encoding type: unassigned

Reason for the tunnel being down: No destination is configured
History:
```

This example shows that a tunnel can go over a link that contains red or black affinity. A link is eligible for CSPF if it has a red color or a black color. Thus, a link with red and any other colors and a link with black and other additional colors must meet the constraint.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity include red
```

```
RP/0/RP0/CPU0:router(config-if)# affinity include black
```

This sample output shows that the include constraint from the **show mpls traffic-eng tunnels** command is 0x20 or 0x1:

```
Name: tunnel-te1 Destination: 0.0.0.0
Status:
  Admin:    up Oper: down Path: not valid Signalling: Down
  G-PID: 0x0800 (internally specified)

Config Parameters:
  Bandwidth:    0 kbps (CT0) Priority:  7  7
  Number of configured name based affinity constraints: 2
  Name based affinity constraints in use:
    Include bit map      : 0x1
    Include bit map      : 0x20
  Metric Type: TE (default)
  AutoRoute: disabled LockDown: disabled
  Loadshare:    0 equal loadshares
  Auto-bw: disabled(0/0) 0 Bandwidth Requested:    0
  Direction: unidirectional
  Endpoint switching capability: unknown, encoding type: unassigned
  Transit switching capability: unknown, encoding type: unassigned

Reason for the tunnel being down: No destination is configured
History:
```

This example shows that a link is eligible for CSPF if it has only red color. The link must not have any additional colors.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity include-strict red
```

This example shows that a link is eligible for CSPF if it does not have the red attribute:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity exclude red
```

This example shows that a link is eligible for CSPF if it does not have red and blue attributes. Thus, a link that has only a red attribute or only a blue attribute is eligible for CSPF.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity exclude red blue
```

This example shows that a link is eligible for CSPF if it does not have either a red or a blue attribute:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# affinity exclude red
RP/0/RP0/CPU0:router(config-if)# affinity exclude blue
```

Related Commands	Command	Description
	affinity-map, on page 15	Assigns a numerical value to each affinity name.
	attribute-names, on page 21	Configures attribute names for the interface.
	interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
	show mpls traffic-eng affinity-map, on page 218	Displays the color name-to-value mappings configured on the router.
	show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

affinity-map

To assign a numerical value to each affinity name, use the **affinity-map** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
affinity-map affinity name {affinity value|bit-position value}
no affinity-map affinity name {affinity value|bit-position value}
```

Syntax Description

<i>affinity name</i>	Affinity map name-to-value designator (in hexadecimal, <i>0-ffffff</i>).
<i>affinity value</i>	Affinity map value designator. Range is from 1 to 80000000.
bit-position	Configures the value of an affinity map for the bit position of the 32-bit number.
<i>value</i>	Bit position value. Range is from 0 to 255.

Command Default

No default behavior or values

Command Modes

MPLS-TE configuration

Command History

Release	Modification
Release 3.4.0	This command was introduced.
Release 3.9.0	The following command syntax was enhanced: <ul style="list-style-type: none"> • The <i>affinity value</i> argument range was changed to 1 to 80000000. • The bit-position keyword and <i>value</i> argument were added. • Sample output was added to show how to configure the value for the bit position.
Release 5.1.1	The bit-position value range was changed to 1 to 255 that enables to assign up to 256 names for extended admin groups (EAGs).

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

The name-to-value mapping must represent a single bit of a 32-bit value.

Repeat the affinity-map command to define multiple colors up to a maximum of 256 colors.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to assign a numerical value to each affinity name:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# affinity-map red 1
RP/0/RP0/CPU0:router(config-mpls-te)# affinity-map blue 2
```

The following example shows how to configure the value of 15 for an affinity map by bit position:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# affinity-map red2 bit-position 15
```

Related Commands

Command	Description
affinity, on page 10	Configures affinity (the properties that the tunnel requires in its links) for an MPLS-TE tunnel.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
show mpls traffic-eng affinity-map, on page 218	Displays the color name-to-value mappings configured on the router.

application (MPLS-TE)

To configure the application frequency, in minutes, for the applicable tunnel, use the **application** command in MPLS-TE automatic bandwidth interface configuration mode. To disable this feature, use the **no** form of this command.

application *minutes*
no application *minutes*

Syntax Description	<i>minutes</i> Frequency, in minutes, for the automatic bandwidth application. The range is from 5 to 10080 (7 days). The default is 1440.				
Command Default	<i>minutes</i> : 1440 (24 hours)				
Command Modes	MPLS-TE automatic bandwidth interface configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.8.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.8.0	This command was introduced.
Release	Modification				
Release 3.8.0	This command was introduced.				
Usage Guidelines	<p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>If you configure and modify the application frequency, the application period can reset and restart for that tunnel. The next bandwidth application for the tunnel happens within the specified minutes.</p>				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>mpls-te</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	mpls-te	read, write
Task ID	Operations				
mpls-te	read, write				
Examples	<p>The following example shows how to configure application frequency to 1000 minutes for MPLS-TE interface 1:</p> <pre>RP/0/RP0/CPU0:router# configure RP/0/RP0/CPU0:router(config)# interface tunnel-te 1 RP/0/RP0/CPU0:router(config-if)# auto-bw RP/0/RP0/CPU0:router(config-if-tunte-autobw)# application 1000</pre>				
Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>adjustment-threshold (MPLS-TE), on page 6</td> <td>Configures the tunnel-bandwidth change threshold to trigger an adjustment.</td> </tr> </tbody> </table>	Command	Description	adjustment-threshold (MPLS-TE), on page 6	Configures the tunnel-bandwidth change threshold to trigger an adjustment.
Command	Description				
adjustment-threshold (MPLS-TE), on page 6	Configures the tunnel-bandwidth change threshold to trigger an adjustment.				

Command	Description
auto-bw (MPLS-TE), on page 27	Configures automatic bandwidth on a tunnel interface and enters MPLS-TE automatic bandwidth configuration mode.
bw-limit (MPLS-TE), on page 44	Configures the minimum and maximum automatic bandwidth to set on a tunnel.
collect-bw-only (MPLS-TE), on page 62	Enables only the bandwidth collection without adjusting the automatic bandwidth.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
overflow threshold (MPLS-TE), on page 160	Configures tunnel overflow detection.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

attribute-flags

To configure attribute flags for an interface, use the **attribute-flags** command in MPLS-TE interface configuration mode. To return to the default behavior, use the **no** form of this command.

attribute-flags *attribute-flags*
no attribute-flags *attribute-flags*

Syntax Description	<i>attribute-flags</i> Links attributes that are compared to the affinity bits of a tunnel during selection of a path. Range is 0x0 to 0xFFFFFFFF, representing 32 attributes (bits) where the value of an attribute is 0 or 1.
---------------------------	---

Command Default	<i>attributes</i> : 0x0
------------------------	-------------------------

Command Modes	MPLS-TE interface configuration
----------------------	---------------------------------

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **attribute-flags** command assigns attributes to a link so that tunnels with matching attributes (represented by their affinity bits) prefer this link instead of others that do not match.

The interface attribute is flooded globally so that it can be used as a tunnel headend path selection criterion.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to set attribute flags to 0x0101:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface POS 0/7/0/0
RP/0/RP0/CPU0:router(config-mpls-te-if)# attribute-flags 0x0101
```

Related Commands	Command	Description
	admin-weight, on page 8	Overrides the IGP administrative weight of the link.

Command	Description
affinity, on page 10	Configures affinity (the properties that the tunnel requires in its links) for an MPLS-TE tunnel.
attribute-names, on page 21	Configures the attribute names for the interface.
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

attribute-names

To configure attributes for the interface, use the **attribute-names** command in MPLS-TE interface configuration mode. To return to the default behavior, use the **no** form of this command.

attribute-names *attribute name*
no attribute-names *attribute name*

Syntax Description	<i>attribute name</i> Attribute name expressed using alphanumeric or hexadecimal characters. Up to 32 attribute-names can be assigned.
	index Specifies an entry index for attribute names.
	<i>index-number</i> Specifies the index number. Range is from 1 to 8.

Command Default No default behavior or values

Command Modes MPLS-TE interface configuration

Command History	Release	Modification
	Release 3.4.0	This command was introduced.
	Release 5.1.1	Support was added to assign up to 32 names per attribute-set and index for extended admin groups. The index <i>index-value</i> keyword and argument were added to support extended admin groups (EAG) configuration.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The name-to-value mapping must represent a single bit of a 256-bit value.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to assign an attribute name (in this case, red) to a TE link:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface pos 0/2/0/1
RP/0/RP0/CPU0:router(config-mpls-te-if)# attribute-name red
```

Related Commands

Command	Description
affinity, on page 10	Configures affinity (the properties that the tunnel requires in its links) for an MPLS-TE tunnel.
attribute-flags, on page 19	Configures attribute flags for the interface.
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

attribute-set

To configure attribute-set for auto-backup tunnels, use the **attribute-set** command in MPLS-TE configuration mode.

```
attribute-set auto-backup attribute-set-name {affinity {affinity-value mask mask-value|exclude
name|exclude-all|include name|include-strict name}|logging events lsp-status
{reoptimize|state}|policy-class {range|default}|priority setup-range hold-range|record-route}
```

To configure attribute-set for auto-mesh tunnels, use the **attribute-set** command in MPLS-TE configuration mode.

```
attribute-set auto-mesh attribute-set-name {affinity {affinity-value mask mask-value|exclude
name|exclude-all|include name|include-strict name}|auto-bw collect-bw-only|autoroute
announce|bandwidth bandwidth|fast-reroute [protect {bandwidth node|node bandwidth}]|logging
events lsp-status {insufficient-bandwidth|reoptimize|reroute|state}|policy-class {range|default}|priority
setup-range hold-range|record-route|signalled-bandwidth bandwidth [class-type cl]|soft-preemption}
```

To configure attribute-set for a path-option, use the **attribute-set** command in MPLS-TE configuration mode.

```
attribute-set path-option attribute-set-name {affinity {affinity-value mask mask-value|exclude
name|exclude-all|include name|include-strict name}|signalled-bandwidth bandwidth [class-type cl]}
```

To specify an attribute set for LSP diversity for GMPLS UNI, use the **attribute-set** command in MPLS-TE configuration mode.

```
attribute-set xro attribute-set-name
```

To disable this behavior, use the **no** form of this command.

```
no attribute-set
```

Syntax	Description
auto-backup	Specifies the values of an attribute set for the auto-backup group.
auto-mesh	Specifies the values of an attribute set for the auto-mesh group.
path-option	Specifies the values of an attribute set for the path option.
xro	Specifies that the attribute-set is used to define an XRO.
<i>attribute-set-name</i>	A 32-bit character string, specifies the name of the attribute-set template.
<i>affinity-value</i>	Attribute values that are required for links to carry this tunnel. A 32-bit decimal number, representing 32 attributes (bits), where the value of an attribute is 0 or 1. Range is from 0x0 to 0xFFFF.

mask <i>mask-value</i>	Checks the link attribute. A 32-bit decimal number, representing 32 attributes (bits), where the value of an attribute mask is 0 or 1. Range is from 0x0 to 0xFFFF.
exclude <i>name</i>	Configures a specific affinity that is to be excluded.
exclude-all	Excludes all affinities.
include <i>name</i>	Configures the affinity to include in the loose sense.
include-strict <i>name</i>	Configures the affinity to include in the strict sense.
logging	Per-interface logging configuration.
events	Per-interface logging events.
lsp-status	Enables interface LSP state change alarms.
reoptimize	Enables interface LSP REOPT change alarms.
state	Enables interface LSP UP/DOWN change alarms.
policy-class	Specifies class for policy-based tunnel selection.
<i>range</i>	Tunnel policy class range 1 to 7.
default	Default class for policy-based tunnel selection.
priority	Specifies the tunnel priority.
<i>setup-range</i>	Specifies setup priority. Range is 0 to 7.
<i>hold-range</i>	Specifies hold priority. Range is 0 to 7.
record-route	Records the route used by the tunnel.
signalled-bandwidth	Specifies the tunnel bandwidth requirement to be signalled.
<i>bandwidth</i>	Bandwidth required for an MPLS-TE tunnel, specified in kilobits per second. By default, bandwidth is reserved in the global pool. Range is from 0 to 4294967295.
class-type <i>ct</i>	(Optional) Configures the class type of the tunnel bandwidth request. Range is 0 to 1. Class-type 0 is equivalent to global-pool. Class-type 1 is equivalent to subpool.
soft-preemption	Enables the soft-preemption feature on this tunnel.

Command Default*affinity-value: 0x0*

mask-value: 0xFFFF

Command Modes MPLS TE configuration

Command History	Release	Modification
	Release 4.2.0	This command was introduced. The sub-pool keyword is not supported.
	Release 4.2.1	Support for configuring attribute-set for auto-backup tunnels was added. The policy-class keyword was added for auto-mesh attribute-set.
	Release 4.3.0	The xro keyword was added in support of GMPLS UNI feature.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The values specified for an attribute within a **path-option attribute-set** does not prevent the configuration of the same attribute at the tunnel level. However, only one level is taken into consideration. The configuration at the **path-option** level is considered more specific than the one at the level of the tunnel, and is therefore used.

Attributes that are **not** specified within an **attribute-set** picks their default values, as usual, from the configuration at the tunnel level, the configuration at the global mpls level, or default values.

An XRO attribute-set can be specified as part of the path-option, if required. An empty XRO attribute set results in the GMPLS tunnel being signaled with no exclusions, and therefore no XRO.

Task ID	Task	Operation
	mpls-te	read, write
	ouni	read, write

This example shows how to configure an attribute-set to a TE interface for an auto-backup tunnel:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface GigabitEthernet 0/1/0/3
RP/0/RP0/CPU0:router(config-mpls-te-if)# auto-tunnel backup
RP/0/RP0/CPU0:router(config-mpls-te-if-auto-backup)# attribute-set ab
RP/0/RP0/CPU0:router(config-mpls-te-if-auto-backup)#
```

This example shows how to configure an attribute-set to a TE interface for an auto-mesh tunnel:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# auto-tunnel mesh
RP/0/RP0/CPU0:router(config-te-auto-mesh)# group 1
RP/0/RP0/CPU0:router(config-te-mesh-group)# attribute-set aml
```

```
RP/0/RP0/CPU0:router(config-te-mesh-group)# destination-list d11
```

This example shows how to configure the attribute-set for auto-backup tunnels:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# attribute-set auto-backup ab
RP/0/RP0/CPU0:router(config-te-attribute-set)# affinity 0x1 mask 0x1
RP/0/RP0/CPU0:router(config-te-attribute-set)# priority 3 3
RP/0/RP0/CPU0:router(config-te-attribute-set)# policy-class 6
RP/0/RP0/CPU0:router(config-te-attribute-set)# logging events lsp-status reoptimize
RP/0/RP0/CPU0:router(config-te-attribute-set)# logging events lsp-status state
RP/0/RP0/CPU0:router(config-te-attribute-set)# policy-class default
RP/0/RP0/CPU0:router(config-te-attribute-set)# record-route
```

This example shows how to configure the attribute-set for auto-mesh tunnels:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# attribute-set auto-mesh mesh1
RP/0/RP0/CPU0:router(config-te-attribute-set)# affinity include red blue
RP/0/RP0/CPU0:router(config-te-attribute-set)# affinity include-strict yellow green
RP/0/RP0/CPU0:router(config-te-attribute-set)# affinity exclude black
RP/0/RP0/CPU0:router(config-te-attribute-set)# affinity exclude-all
RP/0/RP0/CPU0:router(config-te-attribute-set)# policy-class default
```

This example shows how to configure the tunnel affinity and signalled-bandwidth for a path-option:

```
RP/0/RP0/CPU0:router# config
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# attribute-set path-option myset
RP/0/RP0/CPU0:router(config-te-attribute-set)# affinity 0x3 mask 0x3
RP/0/RP0/CPU0:router(config-te-attribute-set)# signalled-bandwidth 2000
```

The following example shows how to configure attribute set attr01:

```
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# attribute-set xro attr01
RP/0/RP0/CPU0:router(config-te-attribute-set)#
```

Related Commands

Command	Description
affinity-map, on page 15	Assigns a numerical value to each affinity name.
attribute-names, on page 21	Configures attribute names for the interface.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.

show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

auto-bw (MPLS-TE)

To configure automatic bandwidth on a tunnel interface and to enter MPLS-TE automatic bandwidth interface configuration mode, use the **auto-bw** command in MPLS-TE interface configuration mode. To disable the automatic bandwidth on that tunnel, use the **no** form of this command.

auto-bw
no auto-bw

Syntax Description This command has no arguments or keywords.

Command Default By default, automatic bandwidth is not enabled.

Command Modes MPLS-TE interface configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **auto-bw** command to enter MPLS-TE automatic bandwidth interface configuration mode.

The **auto-bw** and **load-share unequal** commands should not be used together.

The **load-share unequal** command determines the load-share for a tunnel based on the bandwidth. However, the MPLS-TE automatic bandwidth feature changes the bandwidth around. If you are configuring both the **load-share unequal** command and the MPLS-TE automatic bandwidth feature, we recommend that you specify an explicit load-share value configuration under each MPLS-TE automatic bandwidth tunnel.

The following automatic bandwidth scenarios are described:

- If you configure the automatic bandwidth on a tunnel, the automatic bandwidth is enabled on that tunnel. If no other configuration is specified, defaults for the various parameters are used, the operation stops.
- The automatic operation (for example, output rate collection) starts as soon as the automatic bandwidth is enabled on one tunnel. If automatic bandwidth is disabled from all tunnels, the operation stops.
- If the output rate collection is already active when the automatic bandwidth is configured on a tunnel, the statistics collection for that tunnel starts at the next collection configuration.

Note Because the collection timer is already running, the first collection event for that tunnel happens in less than C minutes (for example, on an average of C/2 minutes).

Task ID	Task Operations ID
	mpls-te read, write

Examples

The following example shows how to enter MPLS-TE automatic bandwidth interface configuration mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# auto-bw
RP/0/RP0/CPU0:router(config-if-tunte-autobw)#
```

Related Commands

Command	Description
adjustment-threshold (MPLS-TE), on page 6	Configures the tunnel-bandwidth change threshold to trigger an adjustment.
application (MPLS-TE), on page 17	Configures the application frequency, in minutes, for the applicable tunnel.
bw-limit (MPLS-TE), on page 44	Configures the minimum and maximum automatic bandwidth to set on a tunnel.
collect-bw-only (MPLS-TE), on page 62	Enables only the bandwidth collection without adjusting the automatic bandwidth.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
overflow threshold (MPLS-TE), on page 160	Configures tunnel overflow detection.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

auto-bw collect frequency (MPLS-TE)

To configure the automatic bandwidth collection frequency, use the **auto-bw collect frequency** command in MPLS-TE configuration mode. To reset the automatic bandwidth frequency to its default value, use the **no** form of this command.

```
auto-bw collect frequency minutes
no auto-bw collect frequency minutes
```

Syntax Description	<i>minutes</i> Interval between automatic bandwidth adjustments, in minutes. The range is from 1 to 10080. The default is 5.				
Command Default	<i>minutes: 5</i> In addition, the no form of this command resets to the default.				
Command Modes	MPLS-TE configuration

Task ID	Operations				
mpls-te	read, write				
Examples	<p>The following example configures a tunnel for an automatic bandwidth adjustment of 100 minutes:</p> <pre>RP/0/RP0/CPU0:router# configure RP/0/RP0/CPU0:router(config)# mpls traffic-eng RP/0/RP0/CPU0:router(config-mpls-te)# auto-bw collect frequency 100</pre>				

Related Commands

Command	Description
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
mpls traffic-eng auto-bw apply (MPLS-TE), on page 139	Configures the highest bandwidth available on a tunnel without waiting for the current application period to end.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

autoroute announce

To specify that the Interior Gateway Protocol (IGP) should use the tunnel (if the tunnel is up) in its enhanced shortest path first (SPF) calculation, use the **autoroute announce** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

```
autoroute announce [include-ipv6] [metric value]
no autoroute announce
```

Syntax Description	include-ipv6 (Optional) Announces the MPLS-TE tunnel to IS-IS IGP for IPv6 routing.						
	metric value (Optional) Specify the MPLS-TE tunnel metric that the Interior Gateway Protocol (IGP) enhanced Shortest Path First (SPF) calculation uses.						
Command Default	Announces IPv4 tunnel						
Command Modes	Interface configuration						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 5.1.1</td> <td>The include-ipv6 and metric keywords were added to support MPLS-TE tunnel announcements to IS-IS.</td> </tr> </tbody> </table>	Release	Modification	Release 2.0	This command was introduced.	Release 5.1.1	The include-ipv6 and metric keywords were added to support MPLS-TE tunnel announcements to IS-IS.
Release	Modification						
Release 2.0	This command was introduced.						
Release 5.1.1	The include-ipv6 and metric keywords were added to support MPLS-TE tunnel announcements to IS-IS.						

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When more than one IGP is configured, the tunnel is announced as autoroute to the IGP that is used to compute the TE tunnel path.

When the **autoroute announce** command is configured, the route metric of the tunnel path to the destination equals the route metric of the shortest IGP path to that destination.

The **autoroute announce metric** configuration overrides the [autoroute metric, on page 34](#) configuration, if present.

Note IS-IS is the only IGP supporting ipv6 MPLS-TE tunnel announcements.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

This example shows how to configure IGP to use the tunnel in its enhanced SPF calculation when the tunnel is up:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# autoroute announce
```

This example show how to make IPv6 announcements for MPLS-TE tunnel to the IGP:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#interface tunnel-te 65534
RP/0/RP0/CPU0:router(config-if)#autoroute announce
RP/0/RP0/CPU0:router(config-if-tunte-aa)#include-ipv6
```

Related Commands

Command	Description
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.

autoroute destination

To install multiple static routes in the routing information base (RIB) per MPLS TE tunnel, use the **autoroute destination** command in interface TE tunnel configuration mode. To disable autoroute destination, use the **no** form of this command.

```
autoroute destination ip-address
no autoroute destination ip-address
```

Syntax Description	<i>ip-address</i> Specifies the host address of the route to be installed in the RIB. A maximum of six routes can be specified apart from the default route.				
Command Default	Autoroute destination is disabled.				
Command Modes	Interface Tunnel TE				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 5.1.1</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 5.1.1	This command was introduced.
Release	Modification				
Release 5.1.1	This command was introduced.				
Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>mpls-te</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operation	mpls-te	read, write
Task ID	Operation				
mpls-te	read, write				

This example shows how to configure installing four routes in RIB for TE tunnel 10:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#interface tunnel-te 10
RP/0/RP0/CPU0:router(config-if)# autoroute destination 192.168.1.2
RP/0/RP0/CPU0:router(config-if)# autoroute destination 192.168.2.2
RP/0/RP0/CPU0:router(config-if)# autoroute destination 192.168.3.2
RP/0/RP0/CPU0:router(config-if)# autoroute destination 192.168.4.2
```

autoroute metric

To specify the MPLS-TE tunnel metric that the Interior Gateway Protocol (IGP) enhanced Shortest Path First (SPF) calculation uses, use the **autoroute metric** command in interface configuration mode. If no specific metric is to be specified, use the **no** form of this command.

autoroute metric {**absolute** | **relative**} *value*
no autoroute metric {**absolute** | **relative**} *value*

Syntax Description	absolute Enables the absolute metric mode; you can enter a positive metric value.
	relative Enables the relative metric mode; you can enter a positive, negative, or zero value.
	<i>value</i> Metric that the IGP enhanced SPF calculation uses. Relative value range is from -10 to 10. Absolute value range is from 1 to 2147483647.

Command Default The relative value is 0.

Command Modes Interface configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.9.0	The absolute value range is defined from 1 to 2147483647.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **autoroute metric** command overwrites the default tunnel route metric of the shortest IGP path to the destination.

Note The [autoroute announce, on page 31](#) configuration overrides the **autoroute metric** configuration, if present.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to configure the IGP enhanced SPF calculation using MPLS-TE tunnel metric as relative negative 1:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# interface tunnel-te 1
```

```
RP/0/RP0/CPU0:router(config-if)# autoroute metric relative -1
```

Related Commands

Command	Description
autoroute announce, on page 31	Instructs the IGP to use the tunnel (if it is up) in its enhanced SPF calculation.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
show mpls traffic-eng autoroute, on page 222	Displays the tunnels announced to the IGP, including interface, destination, and bandwidth.

auto-tunnel pcc

To enable auto-tunnel stateful PCE client configuration mode, use the **auto-tunnel pcc** command in MPLS TE configuration mode. To disable auto-tunnel stateful PCE client configuration, use the **no** form of this command.

auto-tunnel pcc
no auto-tunnel pcc

This command has no keywords or arguments.

Command Default	Auto-tunnel stateful PCE client mode is disabled.
------------------------	---

Command Modes	MPLS TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 5.1.1	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task ID	Operation
	mpls-te	read, write

This example shows how to enable auto-tunnel stateful PCE client configuration mode:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#auto-tunnel pcc
RP/0/RP0/CPU0:router(config-te-auto-pcc)#
```

auto-tunnel backup (MPLS-TE)

To automatically build next-hop (NHOP) and next-next-hop (NNHOP) backup tunnels, and to enter auto-tunnel backup configuration mode, use the **auto-tunnel backup** command in MPLS-TE configuration mode. To clear the NHOP and NNHOP backup tunnels, use the **no** form of this command.

auto-tunnel backup
no auto-tunnel backup

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes MPLS-TE configuration

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The range of *tunnel-ID* is required to be mentioned for the auto-tunnel backup tunnels; otherwise, none of the tunnels are created.

The **no** form of this command deletes both NHOP and NNHOP backup tunnels that are configured using either the **auto-tunnel backup** command or the **nhop-only** command.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example automatically builds NHOP and NNHOP backup tunnels:

```
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# auto-tunnel backup
```

Related Commands	Command	Description
	clear mpls traffic-eng auto-tunnel backup unused, on page 51	Clears the unused automatic backup tunnels.

Command	Description
mpls traffic-eng <i>interface-path-id</i> auto-tunnel backup	Configures the automatic backup tunnel for a specific interface.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.
tunnel-id (auto-tunnel backup), on page 363	Configures range of tunnel interface numbers for automatic backup tunnels.

backup-bw

To configure the backup bandwidth for an MPLS-TE backup tunnel (that is used to protect a physical interface), use the **backup-bw** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

```
backup-bw {backup bandwidth {any-class-type|class-type ct}|global-pool
{bandwidth|unlimited}}|sub-pool {bandwidth|unlimited}}|unlimited {any-class-type|class-type ct}}
no backup-bw {backup bandwidth {any-class-type|class-type ct}|global-pool
{bandwidth|unlimited}}|sub-pool {bandwidth|unlimited}}|unlimited {any-class-type|class-type ct}}
```

Syntax Description		
<i>backup bandwidth</i>		Backup bandwidth in any-pool provided by an MPLS-TE backup tunnel. Bandwidth is specified in kilobits per second (kbps). Range is 1 to 4294967295.
any-class-type		Displays the backup bandwidth assigned to any class-type protected tunnels.
class-type ct		Displays the class type of the backup bandwidth. Range is 0 to 1.
global-pool <i>bandwidth</i>	(In Prestandard DS-TE with RDM)	Displays the backup bandwidth in global pool provided by an MPLS-TE backup tunnel. Bandwidth is specified in kilobits per second. Range is 1 to 4294967295.
unlimited		Displays the unlimited bandwidth.
sub-pool <i>bandwidth</i>	(In Prestandard DS-TE with RDM)	Displays the backup bandwidth in sub-pool provided by an MPLS-TE backup tunnel. Bandwidth is specified in kilobits per second. Range bandwidth is 1 to 4294967295. Only label switched paths (LSPs) using bandwidth from the sub-pool can use the backup tunnel.

Command Default Any class-type unlimited.

Command Modes Interface configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Backup bandwidth can be limited or unlimited or specific to a global pool, sub-pool, or non-specific any-pool. Backup with backup-bw in global-pool protects global-pool LSPs only; backup-bw in sub-pool protects sub-pool LSPs only.

Backup tunnels configured with limited backup bandwidth (from any/global/sub pool) are not assigned to protect LSPs configured with zero signaled bandwidth.

Backup bandwidth provides bandwidth protection for fast reroute (FRR). Bandwidth protection for FRR supports DiffServ-TE with two bandwidth pools (class-types).

Class-type 0 is strictly equivalent to global-pool; class-type 1 is strictly equivalent to sub-pool bandwidth using the Russian Doll Model (RDM).

Task ID	Task Operations ID
	mpls-te read, write

Examples

The following example shows how to configure backup tunnel 1 for use only by LSPs that take their bandwidth from the global pool (class-type 0 tunnels). Backup tunnel 1 does not provide bandwidth protection.

```
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# backup-bw global-pool unlimited
```

or

```
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# backup-bw unlimited class-type 0
```

In the following example, backup tunnel 2 is used by LSPs that take their bandwidth from the sub-pool (class-type 1 tunnels) only. Backup tunnel 2 provides bandwidth protection for up to 1000 units.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 2
RP/0/RP0/CPU0:router(config-if)# backup-bw sub-pool 1000
```

or

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 2
RP/0/RP0/CPU0:router(config-if)# backup-bw 1000 class-type 1
```

Related Commands

Commands	Description
backup-path tunnel-te, on page 41	Assigns one or more backup tunnels to a protected interface.
fast-reroute, on page 79	Enables FRR protection for an MPLS-TE tunnel.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.

backup-path tunnel-te

To set an MPLS-TE tunnel to protect a physical interface against failure, use the **backup-path tunnel-te** command in MPLS-TE interface configuration mode. To return to the default behavior, use the **no** form of this command.

backup-path tunnel-te *tunnel-number*
no backup-path tunnel-te *tunnel-number*

Syntax Description	<i>tunnel-number</i> Number of the tunnel protecting the interface. Range is 0 to 65535.
---------------------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	MPLS-TE interface configuration
----------------------	---------------------------------

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When the protected interface is down (shut down or removed), the traffic it was carrying (for the other label switched paths [LSPs], referred to as the protected LSPs) is rerouted, using fast reroute (FRR) onto the backup tunnels.

The following guidelines pertain to the FRR process:

- Multiple (backup) tunnels can protect the same interface by entering this command multiple times for different tunnels. The same (backup) tunnel can protect multiple interfaces by entering this command for each interface.
- The backup tunnel used to protect a physical interface must have a valid IP address configured.
- The backup tunnel cannot pass through the same interface that it is protecting.
- TE tunnels that are configured with the FRR option, cannot be used as backup tunnels.
- For the backup tunnel to provide protection to the protected LSP, the backup tunnel must have a terminating-end node in the path of a protected LSP.
- The source IP address of the backup tunnel and the merge point (MP) address (the terminating-end address of the backup tunnel) must be reachable.

Note You must configure record-route on TE tunnels that are protected by multiple backup tunnels merging at a single node.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to protect PoS interface 0/7/0/0 using tunnel 100 and tunnel 150:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface POS 0/7/0/0
RP/0/RP0/CPU0:router(config-mpls-te-if)# backup-path tunnel-te 100
RP/0/RP0/CPU0:router(config-mpls-te-if)# backup-path tunnel-te 150
```

Related Commands

Command	Description
backup-bw, on page 39	Configures backup bandwidth for bandwidth protection.
fast-reroute, on page 79	Enables FRR protection for an MPLS-TE tunnel.
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

bidirectional

To configure a bidirectional LSP for a MPLS TE tunnel and define other parameters for the LSP, use the **bidirectional** command in the MPLS-TE interface configuration mode.

bidirectional association {**id** *value*|**source-address** *IP address*|**global-id** *value*|**type** **co-routed**|**fault-oam**}

Syntax Description	Command	Description
	bidirectional	Configures a bidirectional LSP.
	association	Specifies association parameters for the bidirectional LSP.
	id <i>value</i>	Value number that identifies the association. Range is 0 to 65535.
	source-address <i>value</i>	Specifies the source IP address of the LSP from which a reverse path is required.
	global-id <i>value</i>	Value number that identifies the global ID. Range is 0 to 4294967295. The default value is 0.
	co-routed	Configures co-routed LSPs with bidirectional CSPF.
	fault-oam	Configures fault OAM for the bidirectional co-routed LSPs.

Command Default Tunnel interfaces are disabled.

Command Modes Interface configuration mode

Command History	Release	Modification
	Release 5.2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

This example shows you how to configure an associated bidirectional co-routed MPLS-TE tunnel.

```
RP/0/RSP0/CPU0:router# configure
RRP/0/RSP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RSP0/CPU0:router(config-if)# bidirectional
RP/0/RSP0/CPU0:router(config-if-bidir)# association id 1 source-address 11.0.0.1
RP/0/RSP0/CPU0:router(config-if-bidir)#association type co-routed
```

bw-limit (MPLS-TE)

To configure the minimum and maximum automatic bandwidth to be set on a tunnel, use the **bw-limit** command in MPLS-TE automatic bandwidth interface configuration mode. To disable this feature, use the **no** form of this command.

```
bw-limit min bandwidth {max bandwidth}
no bw-limit
```

Syntax Description

min <i>bandwidth</i>	Configures the minimum automatic bandwidth, in kbps, on a tunnel. The range is from 0 to 4294967295. The default is 0.
max <i>bandwidth</i>	Configures the maximum automatic bandwidth, in kbps, on a tunnel. The range is from 0 to 4294967295. The default is 4294967295.

Command Default

```
min: 0
max: 4294967295
```

Command Modes

MPLS-TE automatic bandwidth interface configuration

Command History

Release	Modification
Release 3.8.0	This command was introduced.
Release 5.0.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Both the **min** and **max** keywords must be configured.

The **bw-limit** command automatically sets the minimum bandwidth to the default value of 0, or the **bw-limit** command automatically sets the maximum to the default value of 4294967295 kbps.

If the value of the **min** keyword is greater than the **max** keyword, the **bw-limit** command is rejected. If you configure and modify the minimum or maximum bandwidth while the automatic bandwidth is already running, the next bandwidth application for that tunnel is impacted. For example, if the current tunnel requested bandwidth is 30 Mbps and the minimum bandwidth is modified to 50 Mbps, the next application sets the tunnel bandwidth to 50 Mbps.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to configure the minimum and maximum bandwidth for the tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# auto-bw
RP/0/RP0/CPU0:router(config-if-tunte-autobw)# bw-limit min 30 max 80
```

Related Commands

Command	Description
adjustment-threshold (MPLS-TE), on page 6	Configures the tunnel-bandwidth change threshold to trigger an adjustment.
application (MPLS-TE), on page 17	Configures the application frequency, in minutes, for the applicable tunnel.
auto-bw (MPLS-TE), on page 27	Configures automatic bandwidth on a tunnel interface and enters MPLS-TE automatic bandwidth interface configuration mode.
collect-bw-only (MPLS-TE), on page 62	Enables only the bandwidth collection without adjusting the automatic bandwidth.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
overflow threshold (MPLS-TE), on page 160	Configures tunnel overflow detection.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

capabilities (MPLS-TE)

To enable stateful PCE capabilities, use the **capabilities** command in MPLS-TE stateful PCE configuration mode. To disable the stateful PCE capabilities, use the **no** form of this command.

```
capabilities {instantiation|update}
no capabilities {instantiation|update}
```

Syntax Description	
instantiation	Enables stateful instantiate capability.
update	Enables stateful update capability.

Command Default Stateful PCE capabilities are disabled.

Command Modes MPLS-TE Stateful PCE

Command History	Release	Modification
	Release 5.1.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When the stateful-client configuration is added to the node, it will close all existing PCEP peer connections, and add the stateful capabilities TLV to the OPEN object it exchanges during PCEP session establishment.

When the stateful-client configuration is removed from the node, it will delete all PCE instantiated tunnels, close all existing PCEP connections, and no longer add the stateful capabilities TLV to the OPEN object it exchanges during PCEP session establishment.

Task ID	Task ID	Operation
	mpls-te	read, write

This example shows how to enable stateful-client instantiation capabilities:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#pce stateful-client
RP/0/RP0/CPU0:router(config-mpls-te-pce-stateful)#capabilities instantiation
```

This example shows how to enable stateful-client update capabilities:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#pce stateful-client
```

```
RP/0/RP0/CPU0:router(config-mpls-te-pce-stateful)#capabilities update
```

clear mpls lmp

To clear Link Management Protocol (LMP) management hello settings, use the **clear mpls lmp** command in EXEC mode.

clear mpls lmp

Syntax Description This command has no arguments or keywords.

Command Modes EXEC

Command History	Release	Modification
	Release 3.3.0	This command was introduced
	Release 3.8.0	This command was moved under Cisco support.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to clear all LMP management hello settings:

```
RP/0/RP0/CPU0:router# clear mpls lmp
```

clear mpls traffic-eng auto-bw (MPLS-TE EXEC)

To clear automatic bandwidth sampled output rates and to restart the application period for the specified tunnel, use the **clear mpls traffic-eng auto-bw** command in EXEC mode.

```
clear mpls traffic-eng auto-bw {all | internal | tunnel-te tunnel-number}
```

Syntax Description	all	Clears the automatic bandwidth sampled output rates for all tunnels.
	internal	Clears all the automatic bandwidth internal data structures.
	tunnel-te <i>tunnel-number</i>	Clears the automatic bandwidth sampled output rates for a specific tunnel. The <i>tunnel-number</i> argument is the tunnel ID used to clear the sampled output rates.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If no tunnel is specified, the **clear mpls traffic-eng auto-bw** command clears all the automatic bandwidth enabled tunnels.

For each tunnel in which the automatic bandwidth adjustment is enabled, information is maintained about the sampled output rates and the time remaining until the next bandwidth adjustment. The application period is restarted and values such as the largest collected bandwidth get reset. The tunnel continues to use the current bandwidth until the next application.

Task ID	Task ID	Operations
	mpls-te	execute

Examples

The following example displays the information for the automatic bandwidth for tunnel number 0 from the **show mpls traffic-eng tunnels auto-bw brief** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels 0 auto-bw brief
```

Tunnel	LSP Name	Last appl ID	Requested BW (kbps)	Signalled BW (kbps)	Highest BW (kbps)	Application BW (kbps)	Time Left
tunnel-te0		278	100	100	100	150	12m 38s

The following example shows how to clear the automatic bandwidth sampled output rates for tunnel number 0:

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng auto-bw tunnel-te 0
```

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels 0 auto-bw brief
```

Tunnel	LSP Name	Last appl ID	Requested BW (kbps)	Signalled BW (kbps)	Highest BW (kbps)	Application BW (kbps)	Time Left
tunnel-te0		278	100	100	100	0	24m 0s

Related Commands

Command	Description
clear mpls traffic-eng counters signaling, on page 56	Clears the automatic bandwidth configuration in a tunnel.
show mpls traffic-eng tunnels auto-bw brief, on page 331	Displays the list of automatic-bandwidth-enabled tunnels, and indicates if the current signaled bandwidth of the tunnel is identical to the bandwidth that is applied by the automatic bandwidth.

clear mpls traffic-eng auto-tunnel backup unused

To remove unused automatic backup tunnels, use the **clear mpls traffic-eng auto-tunnel backup unused** command in global configuration mode.

```
clear mpls traffic-eng auto-tunnel backup unused {all|tunnel-te tunnel-number}
```

Syntax Description	all	Clears all the unused automatic backup tunnels.
	tunnel-te <i>tunnel-number</i>	Clears a specific unused automatic backup tunnel.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **unused** auto-tunnel backup tunnel is the tunnel that is not assigned to protect any FRR tunnel.

The behavior of this command is the same as the expiration of the **timers removal unused** command in which, when the timeout value is reached, the automatic backup tunnel is removed.

Task ID	Task ID	Operation
	mpls-te	execute

Example

The following example displays the information for the unused backup automatic tunnels from the **show mpls traffic-eng tunnels unused** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels unused
```

The following example shows how to clear the unused backup automatic tunnels:

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng auto-tunnel backup unused all
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels unused
```

Related Commands	Command	Description
	show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

clear mpls traffic-eng auto-tunnel mesh

To clear all unused auto-tunnel mesh destinations, use the **clear mpls traffic-eng auto-tunnel mesh** command in EXEC mode.

```
clear mpls traffic-eng auto-tunnel mesh unused {all|tunnel-te}
```

Syntax Description	
all	Clears all applicable unused auto-tunnel destinations.
tunnel-te <i>id</i>	Clears an unused auto-tunnel destinations identified by a tunnel identifier.

Command Default	None
------------------------	------

Command Modes	EXEC
----------------------	------

Command History	Release	Modification
	Release 4.1.1	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task ID	Operations
	mpls-te	execute

Examples	This is sample output from the clear mpls traffic-eng auto-tunnel mesh command:
-----------------	--

```
clear mpls traffic-eng auto-tunnel mesh
```

clear mpls traffic-eng counters auto-tunnel mesh

To clear all auto-tunnel mesh counters, use the **clear mpls traffic-eng counters auto-tunnel mesh** command in EXEC mode.

clear mpls traffic-eng counters auto-tunnel mesh

This command has no arguments or keywords.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 4.1.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	execute

Examples This is sample output from the **clear mpls traffic-eng counters auto-tunnel mesh** command:

```
RP/0/RP0/CPU0:routerclear mpls traffic-eng counters auto-tunnel mesh
```

clear mpls traffic-eng counters auto-tunnel backup

To clear MPLS-TE automatic tunnel backup counters, use the **clear mpls traffic-eng counters auto-tunnel backup** command in EXEC mode.

clear mpls traffic-eng counters auto-tunnel backup

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	mpls-te	execute

Example

The following example removes all counters for the automatic backup tunnels:

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng counters auto-tunnel backup
```

Related Commands	Command	Description
	show mpls traffic-eng counters auto-tunnel backup	Displays the MPLS-TE automatic tunnel backup counters.
	show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

clear mpls traffic-eng counters global

To clear the internal MPLS-TE tunnel counters, use the **clear mpls traffic-eng counters global** command in EXEC mode.

clear mpls traffic-eng counters global

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	execute

Examples The following example shows how to clear the internal MPLS-TE tunnel counters:

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng counters global
```

clear mpls traffic-eng counters signaling

To clear (set to zero) the MPLS tunnel signaling counters, use the **clear mpls traffic-eng counters signaling** command in EXEC mode.

clear mpls traffic-eng counters signaling {all[({heads | mids | tails})]name *name* | summary}

Syntax Description

all	Clears counters for all MPLS-TE tunnels.
heads	(Optional) Displays tunnels with their heads at this router.
mids	(Optional) Displays tunnels with their midpoints at this router.
tails	(Optional) Displays tunnels with their tails at this router.
name <i>name</i>	Clears counters for an MPLS-TE tunnel with the specified name.
summary	Clears the counter's summary.

Command Default

No default behavior or values

Command Modes

EXEC

Command History

Release	Modification
Release 2.0	This command was introduced as clear mpls traffic-eng counters tunnels .
Release 3.5.0	Support was added for the middles keyword.
Release 3.8.0	The clear mpls traffic-eng counters tunnels command was replaced by clear mpls traffic-eng counters signaling command.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **clear mpls traffic-eng counters signaling** command to set all MPLS counters to zero so that changes can be seen easily.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to clear all counters:

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng counters signaling all
```

Related Commands

Command	Description
show mpls traffic-eng counters signaling, on page 232	Displays tunnel signaling statistics.

clear mpls traffic-eng counters soft-preemption

To clear (set to zero) the counters for soft-preemption statistics, use the **clear mpls traffic-eng counters soft-preemption** command in EXEC mode.

clear mpls traffic-eng counters {all| soft-preemption}

Syntax Description	all	Clears counters for all MPLS-TE tunnels.
	soft-preemption	Clears the statistics for soft preemption counters.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 4.2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When all counters are cleared using the **clear mpls traffic-eng counters all** command, the counters for soft-preemption statistics are automatically cleared.

Task ID	Task ID	Operations
	mpls-te	execute

Examples This example shows how to clear all counters:

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng counters signaling all
```

Related Commands	Command	Description
	show mpls traffic-eng counters signaling, on page 232	Displays tunnel signaling statistics.

clear mpls traffic-eng fast-reroute log

To clear the log of MPLS fast reroute (FRR) events, use the **clear mpls traffic-eng fast-reroute log** command in EXEC mode.

clear mpls traffic-eng fast-reroute log

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History

Release	Modification
Release 2.0	This command was introduced.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows sample output before clearing the log of FRR events:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng fast-reroute log
```

Node	Protected LSPs Interface	Rewrites	When	Switching Time (usec)
0/0/CPU0	PO0/1/0/1 1	1	Feb 27 19:12:29.064000	147
0/1/CPU0	PO0/1/0/1 1	1	Feb 27 19:12:29.060093	165
0/2/CPU0	PO0/1/0/1 1	1	Feb 27 19:12:29.063814	129
0/3/CPU0	PO0/1/0/1 1	1	Feb 27 19:12:29.062861	128

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng fast-reroute log
```

clear mpls traffic-eng link-management statistics

To clear all the MPLS-TE admission control statistics, use the **clear mpls traffic-eng link-management statistics** command in EXEC mode.

clear mpls traffic-eng link-management statistics

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to clear all the MPLS-TE statistics for admission control:

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng link-management statistics
```

clear mpls traffic-eng pce

To clear the path computation element (PCE) statistics, use the **clear mpls traffic-eng pce** command in EXEC mode.

```
clear mpls traffic-eng pce [peer ipv4 address]
```

Syntax Description	peer	(Optional) Clears the statistics for one peer.
	ipv4 address	(Optional) Configures the IPv4 address for PCE.

Command Default Clears statistics for all the PCE peers.

Command Modes EXEC

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	execute

Examples The following example shows how to clear the statistics for the PCE:

```
RP/0/RP0/CPU0:router# clear mpls traffic-eng pce
```

Related Commands	Command	Description
	show mpls traffic-eng pce peer, on page 277	Displays the status of the PCE peer address and state.

collect-bw-only (MPLS-TE)

To configure only the bandwidth collection without adjusting the bandwidth automatically, use the **collect-bw-only** command in MPLS-TE automatic bandwidth interface configuration mode. To disable this feature, use the **no** form of this command.

collect-bw-only
no collect-bw-only

Syntax Description	This command has no arguments or keywords.
Command Default	Bandwidth collection is either enabled or disabled.
Command Modes	MPLS-TE automatic bandwidth interface configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If you enable the **collect-bw-only** command while the automatic bandwidth is already running on a tunnel, the bandwidth application is disabled from that moment. Before you enable the actual bandwidth application, you can get the status of the automatic bandwidth behavior.

If you disable the **collect-bw-only** command on a tunnel from which the automatic bandwidth is already running, the actual bandwidth application takes place on the tunnel at the next application period.

It is also possible to manually activate a bandwidth application regardless of the collect bandwidth only flag that is being specified on a tunnel. To activate the bandwidth application, use the [mpls traffic-eng auto-bw apply \(MPLS-TE\), on page 139](#) command in EXEC mode.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to enable only the bandwidth collection without adjusting the automatic bandwidth:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# auto-bw
RP/0/RP0/CPU0:router(config-if-tunte-autobw)# collect-bw-only
```

Related Commands

Command	Description
adjustment-threshold (MPLS-TE), on page 6	Configures the tunnel-bandwidth change threshold to trigger an adjustment.
application (MPLS-TE), on page 17	Configures the application frequency, in minutes, for the applicable tunnel.
auto-bw (MPLS-TE), on page 27	Configures automatic bandwidth on a tunnel interface and enters MPLS-TE automatic bandwidth interface configuration mode.
bw-limit (MPLS-TE), on page 44	Configures the minimum and maximum automatic bandwidth to set on a tunnel.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
overflow threshold (MPLS-TE), on page 160	Configures tunnel overflow detection.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

delegation

To enable stateful path computation element (PCE) delegation on an interface, use the **delegation** command in the interface configuration mode. To remove this configuration, use the **no** form of this command.

delegation
no delegation

This command has no keywords or arguments.

Command Default No default behavior or values

Command Modes Interface configuration

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines No specific guidelines impact the use of this command.

Task ID	Task ID	Operation
	mpls-te	read

Example

The following example shows how to enable PCE delegation on the tunnel-te interface:

```
RP/0/0/CPU0:ios#configure
RP/0/0/CPU0:ios(config)# interface tunnel-te 100
RP/0/0/CPU0:ios(config-if)#pce delegation
```

destination (MPLS-TE)

To configure the destination address of a TE tunnel, use the **destination** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

destination *ip-address*
no destination *ip-address*

Syntax Description

ip-address Destination address of the MPLS-TE router ID.

Command Default

No default behavior or values

Command Modes

Interface configuration

Command History

Release	Modification
Release 2.0	This command was introduced.
Release 3.9.0	The Point-to-Multipoint (P2MP) TE tunnel destination configuration was added.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

The tunnel destination address must be a unique MPLS-TE router ID; it cannot be an MPLS-TE link address on a node.

Use the **interface tunnel-mte** command to configure destinations for the Point-to-Multipoint (P2MP) TE tunnel and to enter P2MP destination interface configuration mode. The maximum number of destinations, which are configured under P2MP tunnels, is 500.

For P2MP tunnels, the **destination** command acts as a configuration mode. The **path-option** command is under the destination for P2MP; whereas, it is under the tunnel-te interface configuration mode for P2P tunnels.

For Point-to-Point (P2P) tunnels, the **destination** command is used as a single-line command.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to set the destination address for tunnel-te1 to 10.10.10.10:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te1
```

```
RP/0/RP0/CPU0:router(config-if)# destination 10.10.10.10
```

The following example shows how to set the destination address for tunnel-mte 10 to 150.150.150.150:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-mte10
RP/0/RP0/CPU0:router(config-if)# destination 150.150.150.150
RP/0/RP0/CPU0:router(config-if-p2mp-dest)#
```

Related Commands

Command	Description
interface tunnel-mte, on page 102	Configures an MPLS-TE P2MP tunnel interface.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
path-option (P2MP TE), on page 169	Configures the primary or fallback path setup option for an P2MP TE tunnel.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

direction (GMPLS)

To configure a bidirectional optical tunnel for GMPLS, use the **direction** command in interface tunnel-gte configuration mode. To return to the default behavior, use the **no** form of this command.

```
direction bidirectional
no direction bidirectional
```

Syntax Description

bidirectional Enables bidirectional tunneling.

Command Default

Default is unidirectional.

Command Modes

Interface tunnel-gte configuration

Command History

Release	Modification
Release 3.3.0	This command was introduced.
Release 3.8.0	GMPLS interfaces were supported under the tunnel-gte interface type.
Release 3.9.0	This command was removed.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

The LMP and GMPLS-NNI features are not supported on x86 RPs.

There are two types of MPLS-TE tunnels:

- Generic packet MPLS-TE tunnels
- Optical MPLS-TE tunnel (GMPLS tunnel)

At the configuration level, you cannot tell the difference between a packet MPLS or a GMPLS-TE tunnel. The packet TE tunnels are unidirectional, whereas GMPLS tunnels are bidirectional; therefore, you can identify the optical GMPLS tunnel by identifying the bidirectional configuration.

The GMPLS-TE tunnel requires that you specify the endpoint and transit switching capability so that the path computation module can determine the links that the tunnel can traverse.

The transit switching capability describes the switching capability of the LSP region that the tunnel crosses. The endpoint switching capability describes the switching capability and encoding required for the tunnel interface associated with the two ends of the bidirectional tunnel (namely, active, and passive side).

Finally, for GMPLS functionality to work, you must configure the **direction** and **switching** commands.

Note

Bidirectional tunnel support is available on optical (GMPLS) tunnels only.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to change the tunnel direction from the default (unidirectional) to bidirectional:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-gte 99
RP/0/RP0/CPU0:router(config-if)# direction bidirectional
```

Related Commands

Command	Description
flooding-igp (GMPLS), on page 84	Floods selected GMPLS Traffic Engineering links.
interface tunnel-gte, on page 100	Configures an MPLS-TE tunnel interface for GMPLS interfaces.
lmp hello (GMPLS), on page 122	Configures LMP IPCC management hello settings.
match (GMPLS), on page 134	Configures or matches active and passive tunnels.
passive (GMPLS), on page 162	Configures passive GMPLS tunnels.
remote (GMPLS), on page 206	Configures remote TE links.
switching (GMPLS), on page 351	Configures TE-link switching attributes.

disable (explicit-path)

To prevent the path from being used by MPLS-TE tunnels while it is configured, use the **disable** command in explicit path configuration mode. To return to the default behavior, use the **no** form of this command.

disable
no disable

Syntax Description This command has no arguments or keywords.

Command Default Explicit path is enabled.

Command Modes Explicit path configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to disable explicit path 200:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# explicit-path identifier 200
RP/0/RP0/CPU0:router(config-expl-path)# disable
```

Related Commands	Command	Description
	index exclude-address, on page 91	Specifies the next IP address to exclude from the explicit path.
	index next-address, on page 94	Specifies path entries at a specific index.
	show explicit-paths, on page 215	Displays the configured IP explicit paths.

disable (P2MP TE)

To disable the given destination for the Point-to-Multipoint (P2MP) tunnel interface, use the **disable** command in P2MP destination interface configuration mode. To return to the default behavior, use the **no** form of this command.

disable
no disable

Syntax Description This command has no arguments or keywords.

Command Default None

Command Modes P2MP destination interface configuration

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If the **disable** command is not configured, the destination is enabled.

We recommend that you disable those destinations about which you have prior knowledge. This is because those destinations do not have valid MPLS-TE paths; therefore these destinations can be excluded from the P2MP tree computation.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to disable destination 140.140.140.140:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-mte 10
RP/0/RP0/CPU0:router(config-if)# destination 140.140.140.140
RP/0/RP0/CPU0:router(config-if-p2mp-dest)# disable
```

Related Commands	Command	Description
	destination (MPLS-TE), on page 65	Configures the destination address of a TE tunnel.
	interface tunnel-mte, on page 102	Configures an MPLS-TE P2MP tunnel interface.

ds-te bc-model

To enable a specific bandwidth constraint model (Maximum Allocation Model or Russian Doll Model) on the entire label switched router (LSR), use the **ds-te bc-model** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

ds-te bc-model mam
no ds-te bc-model mam

Syntax Description

mam Enables the Maximum Allocation Model (MAM) bandwidth constraints model.

Command Default

RDM is the default bandwidth constraint model.

Command Modes

MPLS-TE configuration

Command History

Release	Modification
Release 3.7.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You can configure both the MAM and RDM bandwidth values on a single interface before swapping to an alternate global MPLS-TE BC model.

If you configure bandwidth constraints without configuring the corresponding bandwidth constraint values, the router uses default bandwidth constraint values.

MAM is not supported in prestandard DS-TE mode. MAM and RDM are supported in IETF DS-TE mode; RDM is supported in prestandard DS-TE mode.

Note

Changing the bandwidth constraints model affects the entire router and may have a major impact on system performance as nonzero-bandwidth tunnels are torn down.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to enable the MAM bandwidth constraints model:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
```

```
RP/0/RP0/CPU0:router(config-mpls-te)# ds-te bc-model mam
```

Related Commands

Command	Description
ds-te mode, on page 73	Configures standard DS-TE mode.
ds-te te-classes, on page 75	Enters DS-TE te-class map configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
show mpls traffic-eng ds-te te-class, on page 238	Displays the Diff-Serv TE-class map in use.

ds-te mode

To configure standard differentiated-service TE mode (DS-TE), use the **ds-te mode** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
ds-te mode ietf
no ds-te mode ietf
```

Syntax Description

ietf Enables IETF standard mode.

Command Default

Prestandard DS-TE is the default differentiated service mode.

Command Modes

MPLS-TE configuration

Command History

Release	Modification
Release 3.3.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The following two DS-TE modes are supported:

- Prestandard mode
 - The Cisco proprietary mechanism for IGP and RSVP signalling are used and DS-TE does not interoperate with third-party vendor equipment.
- IETF mode
 - Standard defined extensions are used for IGP and RSVP signalling and DS-TE in this mode interoperates with third-party equipment.
 - IETF mode supports two bandwidth constraint models: the Russian Doll Model (RDM) and Maximum Allocation Model (MAM).
 - RDM is the default model.
 - Router advertises variable-length bandwidth constraints, max-reservable- bandwidth, and unreserved bandwidths in TE-classes.
 - tunnels must have valid class-type and priority configured as per TE-class map in use; otherwise, tunnels remain down.
 - TE-class map (a set of tunnel priority and class-type values) is enabled to interpret unreserved bandwidth values advertised in IGP; therefore, TE-class map must be identical on all nodes for TE tunnels to be successfully established

For DS-TE to function properly, DS-TE modes must be configured identically on all MPLS-TE nodes.

If you need to change the DS-TE mode, you must bring down all tunnel interfaces and after the change, you should flood the updated bandwidth values through the network.

Note Changing the DS-TE mode affects the entire LSR and can have a major impact on system performance when tunnels are torn down.

Task ID

Task ID **Operations**

mpls-te read,
write

Examples

The following example shows how to enable IETF standard mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# mpls traffic-eng
RP/0/RP0/CPU0:router (config-mpls-te)# ds-te mode ietf
```

Related Commands

Command	Description
ds-te bc-model, on page 71	Enables a specific bandwidth constraint model (Maximum Allocation Model or Russian Doll Model) on the LSR.
ds-te te-classes, on page 75	Configures MPLS DS-TE TE-class maps.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
mpls traffic-eng fast-reroute promote, on page 141	Configures the router to assign new or more efficient backup MPLS-TE tunnels to protected MPLS-TE tunnels.
show mpls traffic-eng ds-te te-class, on page 238	Displays the Diff-Serv TE-class map in use.

ds-te te-classes

To enter DS-TE te-class map configuration mode, use the **ds-te te-classes** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
ds-te te-classes te-class te_class_index {class-type class_type_number {priority pri_number}|unused}
no ds-te te-classes te-class te_class_index {class-type class_type_number {priority pri_number}|unused}
```

Syntax Description

te-class	Configures the te-class map.
<i>te_class_index</i>	TE class-map index. Range is 0 to 7.
class-type	Configures the class type.
<i>class_type_number</i>	Class type value in the te-class map. Range is 0 to 1.
priority	Configures the TE tunnel priority.
<i>pri_number</i>	TE tunnel priority value. Range is 0 to 7.
unused	Marks the TE-class as unused.

Command Default

The following default te-class maps are used in IETF DS-TE mode:

te-class index	class-type	priority
0	0	7
1	1	7
2	UNUSED	—
3	UNUSED	—
4	0	0
5	1	0
6	UNUSED	—
7	UNUSED	—

Note The default mapping has 4 TE-classes used with 2 class-types and, 4 TE-classes are unused. TE-class map is not used in prestandard DS-TE mode.

Command Modes

MPLS-TE configuration

Command History	Release	Modification
	Release 3.3.0	This command was introduced.
	Release 3.8.0	The unused keyword was added.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

In IETF DS-TE mode, modified semantic of the unreserved bandwidth TLV is used. Each of the eight available bandwidth values advertised in the IGP corresponds to a TE class. Because IGP advertises only eight bandwidth values, only eight TE-Classes can be supported in a IETF DS-TE network. The TE-Class mapping must be configured the same way on every router in a DS-TE domain. There is, however, no method to automatically detect or enforce this required consistency.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure a TE-class 7 parameter:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# ds-te te-classes te-class 7 class-type 0 priority 4
```

Related Commands

Command	Description
ds-te bc-model, on page 71	Enables a specific bandwidth constraint model (Maximum Allocation Model or Russian Doll Model) on the LSR.
ds-te mode, on page 73	Configures standard DS-TE mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
show mpls traffic-eng ds-te te-class, on page 238	Displays the Diff-Serv TE-class map in use.

exclude srlg (auto-tunnel backup)

To specify that automatic backup tunnels should avoid Shared Risk Link Groups (SRLGs) of protected interface, use the **exclude srlg** command in auto-tunnel backup configuration mode. To disable this feature, use the **no** form of this command.

```
exclude srlg [preferred]
no exclude srlg [preferred]
```

Syntax Description	preferred (Optional) Causes the backup tunnel to avoid SRLGs of its protected interface(s); however, the backup tunnel is created if SRLGs are not avoided.
---------------------------	--

Command Default	Strict SRLG
------------------------	-------------

Command Modes	Auto-tunnel backup configuration
----------------------	----------------------------------

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Strict SRLG configuration of this command means that the path computed for the backup tunnel that is automatically created, must not contain any links that are part of the excluded SRLG groups. If such a path cannot be found, the backup tunnel does not come up.

Configuration of the preferred option allows the automatic backup tunnel to come up even if a path that excludes SRLGs can not be found.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

In the following example, automatic backup tunnels must avoid SRLGs of the protected interface.

```
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface pos 0/1/0/1
RP/0/RP0/CPU0:router(config-mpls-te-if)# auto-tunnel backup
RP/0/RP0/CPU0:router(config-mpls-te-if-auto-backup)# exclude srlg preferred
```

 exclude srlg (auto-tunnel backup)

Related Commands

Command	Description
auto-tunnel backup (MPLS-TE), on page 37	Builds automatic next-hop and next-next-hop tunnels, and enters auto-tunnel configuration mode.

fast-reroute

To enable fast-reroute (FRR) protection for an MPLS-TE tunnel, use the **fast-reroute** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

fast-reroute
no fast-reroute

Syntax Description This command has no arguments or keywords.

Command Default FRR is disabled.

Command Modes Interface configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When a protected link used by the fast-reroutable label switched path (LSP) fails, the traffic is rerouted to a previously assigned backup tunnel. Configuring FRR on the tunnel informs all the nodes that the LSP is traversing that this LSP desires link/node/bandwidth protection.

You must allow sufficient time after an RP switchover before triggering FRR on standby RPs to synchronize with the active RP (verified using the **show redundancy** command). All TE tunnels must be in the recovered state and the database must be in the ready state for all ingress and egress line cards. To verify this information, use the **show mpls traffic-eng tunnels** and **show mpls traffic-eng fast-reroute database** commands.

Note Wait approximately 60 seconds before triggering FRR after verifying the database state.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to enable FRR on an MPLS-TE tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# fast-reroute
```

Related Commands

Command	Description
fast-reroute protect, on page 81	Configures node and bandwidth protection for an MPLS-TE tunnel.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
show mpls traffic-eng forwarding, on page 240	Displays the contents of the FRR database.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

fast-reroute protect

To enable node and bandwidth protection for an MPLS-TE tunnel, use the **fast-reroute protect** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

```
fast-reroute protect {bandwidth | node}
no fast-reroute protect
```

Syntax Description	
bandwidth	Enables bandwidth protection request.
node	Enables node protection request.

Command Default FRR is disabled.

Command Modes Interface configuration

Command History	Release	Modification
	Release 3.6.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task Operations ID
	mpls-te read, write

Examples The following example shows how to enable bandwidth protection for a specified TE tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)#interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# fast-reroute protect bandwidth
```

Related Commands	Command	Description
	fast-reroute, on page 79	Enables FRR protection for an MPLS-TE tunnel.
	interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
	show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

fast-reroute timers promotion

To configure how often the router considers switching a protected MPLS-TE tunnel to a new backup tunnel if additional backup-bandwidth or a better backup tunnel becomes available, use the **fast-reroute timers promotion** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

fast-reroute timers promotion *interval*
no fast-reroute timers promotion

Syntax Description	<i>interval</i> Interval, in seconds, between scans to determine if a label switched path (LSP) should use a new, better backup tunnel. Range is 0 to 604800. A value of 0 disables backup tunnel promotions.				
Command Default	<i>interval</i> : 300				
Command Modes	MPLS-TE configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 2.0	This command was introduced.
Release	Modification				
Release 2.0	This command was introduced.				

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Setting the interval to a low value puts more load on the CPU because it has to scan all protected LSPs more frequently. It is not recommended that the timer be configured below the default value of 300 seconds.

Pacing mechanisms have been implemented to distribute the load on the CPU when backup promotion is active. Because of this, when a large number of protected LSPs are promoted, some delay is noticeable in backup promotion. If the promotion timer is configured to a very low value (depending on the number of protected LSPs) some protected LSPs may never get promoted.

To disable the timer, set the value to zero.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to specify that LSPs are scanned every 600 seconds (10 minutes) to determine if they should be promoted to a better backup tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# fast-reroute timers promotion 600
```

Related Commands

Command	Description
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
mpls traffic-eng fast-reroute promote, on page 141	Configures the router to use a new or more efficient backup MPLS-TE tunnel when a current tunnel is overloaded.

flooding-igp (GMPLS)

To flood the GMPLS Traffic Engineering link into a specific OSPF area and instance, use the **flooding-igp** command in MPLS-TE interface configuration mode. To return to the default behavior, use the **no** form of this command.

```

flooding-igp ospf instance area area
no flooding-igp ospf instance area area
    
```

Syntax Description	ospf	Floods the interface into an OSPF instance
	<i>instance</i>	Name of the OSPF instance into which the GMPLS link is to be flooded.
	area area	Displays the area into which the GMPLS link is to be flooded (where TE is configured).

Command Default No default behavior or values

Command Modes MPLS-TE interface configuration

Command History	Release	Modification
	Release 3.3.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note The LMP and GMPLS-NNI features are not supported on x86 RPs.

A GMPLS link won't be flooded into any IGP topology unless this command is used.

Note The **flooding-igp** command is valid for GMPLS-TE only.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to flood the optical GMPLS link on POS 0/1/0/0 into area 0 of OSPF instance “optical”:

```

RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface pos0/1/0/0
RP/0/RP0/CPU0:router(config-mpls-te-if)# flooding-igp ospf optical area 0

```

Related Commands

Command	Description
destination (MPLS-TE), on page 65	Configures bidirectional optical tunnels.
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
lmp hello (GMPLS), on page 122	Configures LMP IPCC management hello settings.
match (GMPLS), on page 134	Configures or matches active and passive tunnels.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
passive (GMPLS), on page 162	Configures passive GMPLS tunnels.
remote (GMPLS), on page 206	Configures remote TE links.
switching (GMPLS), on page 351	Configures TE-link switching attributes.

flooding threshold

To set the reserved bandwidth thresholds for a link as a percentage of the total bandwidth change, use the **flooding threshold** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
flooding threshold {up | down} percent
no flooding thresholds {up | down} percent
```

Syntax Description	
up	Configures the upward flooding threshold as a percentage of the total link bandwidth change.
down	Configures the downward flooding threshold as a percentage of the total link bandwidth change.
<i>percent</i>	Bandwidth threshold level. Range is 0 to 100 .

Command Default No default behavior or values.

Command Modes MPLS-TE configuration

Command History	Release	Modification
	Release 5.3.4	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **flooding threshold** command to set the up and down thresholds as a percentage of the total bandwidth change. If the **flooding threshold** command is configured, flooding occurs only if the change from the previous flooding is greater than the configured thresholds.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to set the reserved bandwidth thresholds as a percentage of the total bandwidth change. Flooding occurs only if the change from the previous flooding is greater than the configured thresholds. In this example, the up and down thresholds are configured as 10 percent. That means, if the last flooded bandwidth percentage is 50 percent, then the flooding occurs only if the bandwidth goes below 40 percent, or if the bandwidth goes above 60 percent.

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# flooding threshold up 10 down 10
```

flooding thresholds

To set the reserved bandwidth thresholds for a link, use the **flooding thresholds** command in MPLS-TE interface configuration mode. To return to the default behavior, use the **no** form of this command.

```
flooding thresholds {down | up} percent [{percent1 percent2 percent3 ... percent 15}]
no flooding thresholds {down | up}
```

Syntax Description	down	Configures the threshold for decreased resource availability.
	up	Configures the threshold for increased resource availability.
	percent [percent]	Bandwidth threshold level. Range is 0 to 100 for all 16 levels.

Command Default	down: 100, 99, 98, 97, 96, 95, 90, 85, 80, 75, 60, 45, 30, 15 up: 5, 30, 45, 60, 75, 80, 85, 90, 95, 97, 98, 99, 100
-----------------	---

Command Modes	MPLS-TE interface configuration
---------------	---------------------------------

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines	<p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p>
------------------	--

You can configure up to 16 flooding threshold values. The first value is mandatory; the next 15 are optional. When a threshold is crossed, MPLS-TE link management advertises updated link information. If no thresholds are crossed, changes can be flooded periodically unless periodic flooding was disabled.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to set the reserved bandwidth threshold for the link for decreased resource availability (down) and for increased resource availability (up) thresholds:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface POS 0/7/0/0
RP/0/RP0/CPU0:router(config-mpls-te-if)# flooding thresholds down 100 75 25
RP/0/RP0/CPU0:router(config-mpls-te-if)# flooding thresholds up 25 50 100
```

Related Commands

Command	Description
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
link-management timers periodic-flooding, on page 116	Sets the length of the interval used for periodic flooding.
show mpls traffic-eng link-management advertisements, on page 251	Displays local link information currently being flooded by MPLS-TE link management into the global TE topology.
show mpls traffic-eng link-management bandwidth-allocation, on page 254	Displays current local link information.

forwarding-adjacency

To configure an MPLS-TE forwarding adjacency, use the **forwarding-adjacency** command in interface configuration mode. By configuring forwarding adjacency, the MPLS-TE tunnels are considered to be links by the IGP. If no forwarding adjacency is to be defined, use the **no** form of this command.

```
forwarding-adjacency [holdtime time][include-ipv6]
no forwarding-adjacency [holdtime time][include-ipv6]
```

Syntax Description	<p>holdtime <i>time</i> (Optional) Configures the hold time value, in milliseconds, that is associated with each forwarding-adjacency LSP. The hold time is the duration after which the state change of LSP is advertised to IGP. The default value is 0.</p> <p>include-ipv6 (Optional) Announces the MPLS-TE tunnel as an IPv6 forwarding adjacency.</p>						
Command Default	holdtime <i>time</i> : 0						
Command Modes	Interface configuration						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.4.0</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 5.1.1</td> <td>The include-ipv6 keyword was added to support IPv6 forwarding adjacency announcements.</td> </tr> </tbody> </table>	Release	Modification	Release 3.4.0	This command was introduced.	Release 5.1.1	The include-ipv6 keyword was added to support IPv6 forwarding adjacency announcements.
Release	Modification						
Release 3.4.0	This command was introduced.						
Release 5.1.1	The include-ipv6 keyword was added to support IPv6 forwarding adjacency announcements.						
Usage Guidelines	<p>To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.</p> <p>If you do not specify a holdtime <i>time</i> value, a delay is introduced with the following results:</p> <ul style="list-style-type: none"> • When forwarding-adjacency is configured on a tunnel that is up, TE notifies IGP without any additional delay. • When forwarding-adjacency is configured on a tunnel that is down, TE does not notify IGP. • When a tunnel on which forwarding-adjacency has been configured comes up, TE holds the notification to IGP for the period of holdtime (assuming non-zero holdtime). When the holdtime elapses, TE notifies IGP if the tunnel is still up. <p>The paths that traffic is taking to the destination can be manipulated by adjusting the forwarding adjacency link metric. To do that, use the bandwidth command. The unit of possible bandwidth values is in kbps.</p>						
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>mpls-te</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	mpls-te	read, write		
Task ID	Operations						
mpls-te	read, write						
Examples	This example shows how to configure forwarding adjacency with a holdtime value of 60 milliseconds:						

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 888
RP/0/RP0/CPU0:router(config-if)# forwarding-adjacency holdtime 60
```

This example shows how to announce MPLS-TE tunnel as an IPv6 forwarding adjacency:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#interface tunnel-te 65534
RP/0/RP0/CPU0:router(config-if)#forwarding-adjacency
RP/0/RP0/CPU0:router(config-if-tunte-fwadaj)#include-ipv6
```

Related Commands

Command	Description
bandwidth (RSVP)	Configures RSVP bandwidth on an interface using prestandard DS-TE mode.
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
show mpls traffic-eng forwarding-adjacency, on page 243	Displays forwarding-adjacency information.

index exclude-address

To exclude an address from a tunnel path entry at a specific index, use the **index exclude-address** command in explicit path configuration mode. To return to the default behavior, use the **no** form of this command.

```
index index-id exclude-address { ipv4 unicast IP address }
no index index-id
```

Syntax Description	<i>index-id</i>	Index number at which the path entry is inserted or modified. Range is 1 to 65535.
	ipv4 unicast <i>IP address</i>	Excludes the IPv4 unicast address.

Command Default No default behavior or values

Command Modes Explicit path configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.2	Support for the ipv4 unicast keyword was added.
	Release 3.4.0	The index (explicit path) command was modified to create two separate commands: index exclude-address and index next-address .

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You cannot include or exclude addresses from an IP explicit path unless explicitly configured using the **exclude-address** keyword.

Use the **exclude-address** keyword only after entering the explicit path configuration mode.

If you use the **exclude-address** keyword and specify the IP address of a link, the constraint-based routine does not consider that link when it sets up MPLS-TE paths. If the excluded address is a flooded MPLS-TE router ID, the constraint-based shortest path first (SPF) routine does not consider that entire node.

Note The person who performs the configuration must know the IDs of the routers, as it may not be apparent if the value refers to the link or to the node.

MPLS-TE accepts IP explicit paths composed of all excluded addresses configured using the **exclude-address** keyword.

Task ID	Task ID	Operations
		mpls-te read, write

Examples

The following example shows how to exclude address 192.168.3.2 at index 3 of the explicit path 200:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# explicit-path identifier 200
RP/0/RP0/CPU0:router(config-expl-path)# index 3 exclude-address ipv4 unicast 192.168.3.2
```

Related Commands

Command	Description
index next-address, on page 94	Specifies path entries at a specific index.
show explicit-paths, on page 215	Displays the configured IP explicit paths.

index exclude-srlg

To exclude an address to get SRLGs from a tunnel path entry at a specific index, use the **index exclude-srlg** command in explicit path configuration mode. To return to the default behavior, use the **no** form of this command.

index *index-id* **exclude-srlg** **ipv4 unicast** *IP address*

no index *index-id*

Syntax Description	<i>index-id</i>	Index number at which the path entry is inserted or modified. Range is 1 to 65535.
	exclude-srlg	Specifies an IP address to get SRLG values from for exclusion.
	ipv4 unicast <i>IP address</i>	Excludes the IPv4 unicast address.

Command Default No default behavior or values

Command Modes Explicit path configuration

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to exclude the SRLG values from the IP address 192.168.3.2 at index 1 of the explicit path 100:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# explicit-path identifier 100
RP/0/RP0/CPU0:router(config-expl-path)# index 1 exclude-srlg ipv4 unicast 192.168.3.2
```

index next-address

To include a path entry at a specific index, use the **index next-address** command in explicit path configuration mode. To return to the default behavior, use the **no** form of this command.

```
index index-id next-address [{loose | strict}] ipv4 unicast IP-address
no index index-id
```

Syntax Description		
	<i>index-id</i>	Index number at which the path entry is inserted or modified. Range is 1 to 65535.
	ipv4 unicast <i>IP-address</i>	Includes the IPv4 unicast address (strict address).
	loose ipv4 unicast <i>IP-address</i>	(Optional) Specifies the next unicast address in the path as a loose hop.
	strict ipv4 unicast <i>IP-address</i>	(Optional) Specifies the next unicast address in the path as a strict hop.

Command Default No default behavior or values

Command Modes Explicit path configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.2	Support for the ipv4 unicast keyword was added.
	Release 3.4.0	The index (explicit path) command was added to create two separate commands: index exclude-address and index next-address . Support was added for loose and strict keywords for the index next-address command.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You cannot include addresses from an IP explicit path unless explicitly configured using the **next-address** keyword.

Use the **next-address** keyword only after entering the explicit path configuration mode.

Note The person who performs the configuration must know the IDs of the routers, as it may not be apparent if the value refers to the link or to the node.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to insert the **next-address** 192.168.3.2 at index 3 of the explicit path 200:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# explicit-path identifier 200
RP/0/RP0/CPU0:router(config-expl-path)# index 3 next-address ipv4 unicast 192.168.3.2
```

Related Commands

Command	Description
index exclude-address, on page 91	Specifies the next IP address to exclude from the explicit path.
show explicit-paths, on page 215	Displays the configured IP explicit paths.

interface (MPLS-TE)

To enable MPLS-TE on an interface and to enter MPLS-TE interface configuration mode, use the **interface** command in global configuration mode. To return to the default behavior, use the **no** form of this command.

```
interface type interface-path-id
no interface type interface-path-id
```

Syntax Description

type Interface type. For more information, use the question mark (?) online help function.

interface-path-id Physical interface or virtual interface.

Note Use the **show interfaces** command to see a list of all possible interfaces currently configured on the router.

For more information about the syntax for the router, use the question mark (?) online help function.

Command Default

No default behavior or values

Command Modes

Global configuration

Command History

Release	Modification
Release 2.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You must enter MPLS-TE interface mode to configure specific interface parameters on physical interfaces.

Configuring MPLS-TE links or a tunnel TE interface begins the TE-control process on RP.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to enter the MPLS-TE interface configuration mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface POS 0/7/0/1
```

The following example shows how to remove an interface from the MPLS-TE domain:

```
RP/0/RP0/CPU0:router# configure  
RP/0/RP0/CPU0:router(config)# mpls traffic-eng  
RP/0/RP0/CPU0:router(config-mpls-te)# no interface POS 0/7/0/1
```

interface (SRLG)

To enable Shared Risk Link Groups (SRLGs) on an interface and to enter SRLG interface configuration mode, use the **interface** command in SRLG configuration mode. To return to the previous configuration mode, use the **no** form of this command.

```
interface type interface-path-id
no interface type interface-path-id
```

Syntax Description	<i>type</i> Interface type. For more information, use the question mark (?) online help function.				
	<i>interface-path-id</i> Physical interface or virtual interface.				
	Note Use the show interfaces command to see a list of all possible interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.				
Command Default	No default behavior or values

Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>mpls-te</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operation	mpls-te	read, write
Task ID	Operation				
mpls-te	read, write				

Example

The following example shows how to enter SRLG interface configuration mode:

```
RP/0/RP0/CPU0:router(config)# srlg
RP/0/RP0/CPU0:router(config-srlg)# interface POS 0/1/0/1
RP/0/RP0/CPU0:router(config-srlg-if)# value 10
RP/0/RP0/CPU0:router(config-srlg-if)#value 50
```

Related Commands

Command	Description
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

interface tunnel-gte

To configure an MPLS-TE tunnel interface for GMPLS interfaces, use the **interface tunnel-gte** command in global configuration mode. To return to the default behavior, use the **no** form of this command.

```
interface tunnel-gte tunnel-id
no interface tunnel-gte tunnel-id
```

Syntax Description	<i>tunnel-id</i> Tunnel number. Range is 0 to 65535.
---------------------------	--

Command Default	Tunnel interfaces are disabled.
------------------------	---------------------------------

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Note	The LMP and GMPLS-NNI features are not supported on x86 RPs.
-------------	--

You cannot have two tunnels using the same encapsulation mode with exactly the same source and destination address. The workaround is to create a loopback interface and use the loopback interface address as the source address of the tunnel.

Configuring MPLS-TE links or a tunnel TE interface begins the TE-control process on RP.

The **interface tunnel-gte** command indicates that the tunnel interface is for an MPLS-TE tunnel and enables the various tunnel MPLS-TE GMPLS tunnel interface options.

Task ID	Task ID	Operations
	interface	read, write

Examples	The following example shows how to configure tunnel-gte interface 1:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# interface tunnel-gte 1
```

Related Commands

Command	Description
match (GMPLS), on page 134	Matches an active tunnel to a passive tunnel.
passive (GMPLS), on page 162	Configures passive GMPLS tunnels.
switching endpoint (GMPLS), on page 353	Specifies the switching capability and encoding types for all endpoint TE links used to signal the optical tunnel that is mandatory to set up the GMPLS LSP.
switching transit (GMPLS), on page 355	Specifies the switching capability and encoding types for all transit TE links used to signal the optical tunnel to configure an optical LSP.

interface tunnel-mte

To configure an MPLS-TE P2MP tunnel interface, use the **interface tunnel-mte** command in global configuration mode. To return to the default behavior, use the **no** form of this command.

```
interface tunnel-mte tunnel-id
no interface tunnel-mte tunnel-id
```

Syntax Description	<i>tunnel-id</i> Tunnel number. Range is from 0 to 65535.
---------------------------	---

Command Default	Tunnel interfaces are disabled.
------------------------	---------------------------------

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Configuring MPLS-TE links or tunnel-te, tunnel-gte, or tunnel-mte interfaces begins the TE-control process on route processor (RP).

The **interface tunnel-mte** command indicates that the tunnel interface is for an MPLS-TE P2MP tunnel and enables these MPLS-TE P2MP configuration options.

Note	You must configure record-route on TE tunnels that are protected by multiple backup tunnels merging at a single node.
-------------	---

To use the P2MP tunnels, you must configure a Loopback address and use the **ipv4 unnumbered** command for the Loopback interface type.

Task ID	Task ID Operations
	interface read, write

Examples	This example shows how to configure tunnel interface 1:
-----------------	---

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-mte 1
RP/0/RP0/CPU0:router(config-if)# ipv4 unnumbered loopback0
```

Related Commands	Command	Description
	affinity, on page 10	Configures affinity (the properties that the tunnel requires in its links) for an MPLS-TE tunnel.
	backup-bw, on page 39	Configures backup bandwidth for FRR.
	fast-reroute, on page 79	Enables FRR protection for an MPLS-TE tunnel.
	path-selection metric (interface), on page 181	Configures a path selection metric—TE or IGP.
	priority (MPLS-TE), on page 202	Configures setup and reservation priority for an MPLS-TE tunnel.
	record-route, on page 204	Configures record-route on an MPLS-TE tunnel.
	signalled-bandwidth, on page 340	Configures the bandwidth required for an MPLS-TE tunnel.
	signalled-name, on page 342	Configures the name of the tunnel required for an MPLS-TE tunnel.

interface tunnel-te

To configure an MPLS-TE tunnel interface, use the **interface tunnel-te** command in Global Configuration mode. To return to the default behavior, use the **no** form of this command.

```
interface tunnel-te tunnel-id
no interface tunnel-te tunnel-id
```

Syntax Description	<i>tunnel-id</i> Tunnel number. Range is 0 to 65535.
---------------------------	--

Command Default	Tunnel interfaces are disabled.
------------------------	---------------------------------

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.7.0	Policy-based tunnel selection example was added.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

You cannot have two tunnels using the same encapsulation mode with exactly the same source and destination address. The workaround is to create a loopback interface and to use the loopback interface address as the source address of the tunnel.

Configuring MPLS-TE links or Tunnel-TE interface begins the TE-control process on RP.

The **interface tunnel-te** command indicates that the tunnel interface is for an MPLS-TE tunnel and enables the various tunnel MPLS configuration options.

Note	You must configure record-route on TE tunnels that are protected by multiple backup tunnels merging at a single node.
-------------	---

Task ID	Task ID Operations
	interface read, write

Examples	The following example shows how to configure tunnel interface 1:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# ipv4 unnumbered loopback0
```

The following example shows how to set the tunnel-class attribute to map the correct traffic class to the tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# policy-class 1
```

Related Commands	Command	Description
	affinity, on page 10	Configures affinity (the properties that the tunnel requires in its links) for an MPLS-TE tunnel.
	autoroute metric, on page 34	Instructs the IGP to use the tunnel in its enhanced SPF calculation, if the tunnel is in an up state.
	backup-bw, on page 39	Configures backup bandwidth for FRR.
	fast-reroute, on page 79	Enables FRR protection for an MPLS-TE tunnel.
	path-option (MPLS-TE), on page 164	Configures a path option for an MPLS tunnel.
	path-selection metric (interface), on page 181	Configures a path selection metric—TE or IGP.
	policy-class	Configures PBTS to direct traffic into specific TE tunnels.
	priority (MPLS-TE), on page 202	Configures setup and reservation priority for an MPLS-TE tunnel.
	record-route, on page 204	Configures record-route on an MPLS-TE tunnel.

ipcc interface (MPLS-TE)

To configure an interface-bound IP based control channel to a specific LMP neighbor with the option to specify a custom destination address that is useful for GigabitEthernet interfaces, use the **ipcc interface** command in MPLS-TE neighbor configuration mode. To disable this feature, use the **no** form of this command.

```
ipcc interface type interface-path-id [dest ipv4 address]
no ipcc interface type interface-path-id [dest ipv4 address]
```

Syntax Description	<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
	<i>interface-path-id</i>	Physical interface or virtual interface.
	Note	Use the show interfaces command to see a list of all interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.
	dest	(Optional) Configures the remote endpoint address.
	ipv4 address	(Optional) Configures the IPv4 address.

Command Default No default behavior or values

Command Modes MPLS-TE neighbor configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to configure the IPCC interface for Loopback0:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# lmp neighbor OXC1
RP/0/RP0/CPU0:router(config-mpls-te-nbr-OXC1)# ipcc interface Loopback0
```

Related Commands

Command	Description
ipcc routed (MPLS-TE), on page 108	Configures an IPCC that is routable.
lmp neighbor (MPLS-TE), on page 124	Configures or updates an LMP neighbor and its associated parameters and enters MPLS-TE neighbor configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
show mpls traffic-eng lmp, on page 268	Displays information about the LMP.

ipcc routed (MPLS-TE)

To configure a routed IP-based control channel for a specific LMP neighbor, use the **ipcc routed** command in MPLS-TE neighbor configuration mode. To return to the default behavior, use the **no** form of this command.

ipcc routed
no ipcc routed

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes MPLS-TE neighbor configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure a routed IPCC for neighbor router1 in which the destination IP address is the node ID of the neighbor router1 on an interface determined dynamically by an IP routing protocol:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# lmp neighbor router1
RP/0/RP0/CPU0:router(config-mpls-te-nbr-router1)# ipcc routed
```

Related Commands

Command	Description
ipcc interface (MPLS-TE), on page 106	Configures an IPCC.
lmp neighbor (MPLS-TE), on page 124	Configures or updates an LMP neighbor and its associated parameters and enters MPLS-TE neighbor configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

Command	Description
show mpls traffic-eng lmp, on page 268	Displays information about the LMP.

ipv4 unnumbered (MPLS)

To specify the MPLS-TE tunnel Internet Protocol Version 4 (IPv4) address, use the **ipv4 unnumbered** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

```
ipv4 unnumbered type interface-path-id
no ipv4 unnumbered type interface-path-id
```

Syntax Description	<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
	<i>interface-path-id</i>	Physical interface or virtual interface.
	Note	Use the show interfaces command to see a list of all interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.

Command Default	No IP address is set.
------------------------	-----------------------

Command Modes	Interface configuration
----------------------	-------------------------

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
	Tunnel-te is not signaled until an IP address is configured on the tunnel interface; therefore, the tunnel state stays down without IP address configuration.
	Loopback is commonly used as the interface type.

Task ID	Task ID	Operations
	network	read, write

Examples

The following example shows how to configure the MPLS-TE tunnel to use the IPv4 address used on loopback interface 0:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# ipv4 unnumbered loopback0
```

ipv4 unnumbered mpls traffic-eng

To specify the Internet Protocol Version 4 (IPv4) address, use the **ipv4 unnumbered mpls traffic-eng** command in global configuration mode. To remove the IPv4 address, use the **no** form of this command.

```
ipv4 unnumbered mpls traffic-eng interface-path-id
no ipv4 unnumbered mpls traffic-eng
```

Syntax Description

interface-path-id Physical interface or virtual interface.

Note Use the **show interfaces** command to see a list of all interfaces currently configured on the router.

Command Default

No default behavior or values.

Command Modes

Global configuration.

Command History

Release	Modification
Release 4.0.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID Operations

network	read, write
---------	----------------

Examples

The following example shows how to specify unnumbered IPv4 address for a GigabitEthernet interface:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# ipv4 unnumbered mpls traffic-eng GigabitEthernet 0/1/0/1
```

The following example shows how to specify unnumbered IPv4 address for an MPLS-TE tunnel with tunnel ID 200:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# ipv4 unnumbered mpls traffic-eng tunnel-te 200
```

Related Commands

Command	Description
ipv4 unnumbered (MPLS), on page 110	Specifies the MPLS-TE tunnel Internet Protocol Version 4 (IPv4) address

keychain

To configure keychain based authentication for a path computation client (PCC), use the **keychain** command in MPLS-TE pce configuration mode.

keychain *keychain-name*

Syntax Description	<i>keychain-name</i> Specifies the name of the keychain. The name can have a maximum of 32 characters.
---------------------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	MPLS-TE pce configuration
----------------------	---------------------------

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines	No specific guidelines impact the use of this command.
-------------------------	--

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to configure keychain based authentication for a PCC for an IPv4 peer:

```
RP/0/0/CPU0:ios#configure
RP/0/0/CPU0:ios(config)#mpls traffic-eng pce
RP/0/0/CPU0:ios(config-mpls-te-pce)#peer ipv4 192.168.0.2 keychain foo
```

link-management timers bandwidth-hold

To set the length of time that bandwidth is held for a Resource Reservation Protocol (RSVP) Path (setup) message to wait for the corresponding RSVP Resv message to return, use the **link-management timers bandwidth-hold** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

link-management timers bandwidth-hold *holdtime*
no link-management timers bandwidth-hold *holdtime*

Syntax Description	<i>holdtime</i> Number of seconds that bandwidth can be held. Range is 1 to 300. Default is 15.
---------------------------	---

Command Default	<i>holdtime</i> : 15
------------------------	----------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

The **link-management timers bandwidth-hold** command determines the time allowed for an RSVP message to return from a neighbor RSVP node.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to set the bandwidth to be held for 10 seconds:
-----------------	---

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# link-management timers bandwidth-hold 10
```

Related Commands	Command	Description
	link-management timers periodic-flooding, on page 116	Sets the length of the interval used for periodic flooding.
	mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

Command	Description
show mpls traffic-eng link-management bandwidth-allocation, on page 254	Displays current local link information and bandwidth hold time.

link-management timers periodic-flooding

To set the length of the interval for periodic flooding, use the **link-management timers periodic-flooding** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

link-management timers periodic-flooding *interval*
no link-management timers periodic-flooding

Syntax Description	<i>interval</i> Length of the interval, in seconds, for periodic flooding. Range is 0 to 3600. A value of 0 turns off periodic flooding. The minimum value is 30.
---------------------------	---

Command Default	<i>interval</i> : 180
------------------------	-----------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

The **link-management timers periodic-flooding** command advertises the link state information changes that do not trigger immediate action, such as a change to the allocated bandwidth that does not cross a threshold.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to set the interval length for periodic flooding to 120 seconds:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# link-management timers periodic-flooding 120
```

Related Commands	Command	Description
	flooding thresholds, on page 87	Sets the reserved bandwidth flooding thresholds for a link.
	link-management timers bandwidth-hold, on page 114	Sets the length of time that bandwidth is held for a RSVP Path (setup) message to wait for the corresponding RSVP Resv message to return.

Command	Description
mpls traffic-eng , on page 138	Enters MPLS-TE configuration mode.
show mpls traffic-eng link-management summary , on page 266	Displays the current periodic flooding interval.

link-management timers preemption-delay

To set the length of the interval for delaying LSP preemption, use the **link-management timers preemption-delay** command in MPLS-TE configuration mode. To disable this behavior, use the **no** form of this command.

link-management timers preemption-delay bundle-capacity *sec*

Syntax Description	bundle-capacity <i>sec</i> Specifies the bundle-capacity preemption timer value in seconds.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 4.2.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

The value *0* as bundle-capacity value in the **link-management timers preemption-delay** command disables this timer. This means there is no delay before preemption sets in when the bundle capacity goes down.

Task ID	Task	Operation
		mpls-te

This example shows how to set the interval length for preemption-delay:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# link-management timers preemption-delay bundle-capacity
180
```

load-share

To determine load-sharing balancing parameters for a specified interface, use the **load-share** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

load-share *value*
no load-share

Syntax Description	<i>value</i> Load-share value, equivalent to the bandwidth in kbps (that is, the same value in configuration). Range is 1 to 4294967295. Default is 0.
---------------------------	--

Command Default	The default load-share for tunnels with no explicit configuration is the configured signalled bandwidth. <i>value</i> : 0 (if no value is assigned)
------------------------	--

Command Modes	Interface configuration
----------------------	-------------------------

Command History	Release	Modification
	Release 3.5.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Configuration schemas are supported for load balancing.

To enable the **load-share** command, you must enable unequal load balancing using the **load-share unequal** command.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure load-sharing parameters on a specified interface:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 100
RP/0/RP0/CPU0:router(config-if)# load-share 100
```

Related Commands	Command	Description
	load-share unequal, on page 121	Enables unequal load-sharing.
	interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.

Command	Description
signalled-bandwidth, on page 340	Configures the bandwidth required for an MPLS-TE tunnel.

load-share unequal

To configure unequal load-sharing for an MPLS-TE tunnel, use the **load-share unequal** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

load-share unequal
no load-share unequal

Syntax Description	This command has no arguments or keywords.				
Command Default	By default, unequal load-balancing is disabled and equal load-balancing occurs.				
Command Modes	MPLS-TE configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.5.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 3.5.0	This command was introduced.
Release	Modification				
Release 3.5.0	This command was introduced.				

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **auto-bw** and **load-share unequal** commands should not be used together.

The **load-share unequal** command determines the load-share for a tunnel based on the bandwidth. However, the MPLS-TE automatic bandwidth feature changes the bandwidth around. If you are configuring both the **load-share unequal** command and the MPLS-TE automatic bandwidth feature, we recommend that you specify an explicit load-share value configuration under each MPLS-TE automatic bandwidth tunnel.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to enable unequal load-sharing:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# load-share unequal
```

Related Commands	Command	Description
	load-share, on page 119	Configures load-sharing balancing parameters for a specified interface.
	mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
	signalled-bandwidth, on page 340	Configures the bandwidth required for an MPLS-TE tunnel.

Imp hello (GMPLS)

To configure Link Management Protocol (LMP) IPCC management hello settings, use the **imp hello** command in global MPLS-TE neighbor lmp configuration mode. To return to the default behavior, use the **no** form of this command.

imp hello *hello-send-interval hello-dead-interval*
no imp hello *hello-send-interval hello-dead-interval*

Syntax Description	
<i>hello-send-interval</i>	Time, in milliseconds, between sending hello keep alive message. Range is 100 to 21845.
<i>hello-dead-interval</i>	Time, in milliseconds, to wait without receiving a hello from the neighbor before declaring the IPCC down again. Range is 100 to 21845.

Command Default No default behavior or values

Command Modes MPLS-TE neighbor lmp configuration mode

Command History	Release	Modification
	Release 3.3.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You can disable hellos using the **imp static** command.

Note The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure Link Management Protocol (LMP) IPCC management hello settings:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# lmp neighbor lmp
RP/0/RP0/CPU0:router(config-mpls-te-nbr-lmp)# lmp hello 400 1200
```

Related Commands

Command	Description
destination (MPLS-TE), on page 65	Configures bidirectional optical tunnels.
imp neighbor (MPLS-TE), on page 124	Configures or updates an LMP neighbor and its associated parameters and enters MPLS-TE neighbor configuration mode.
match (GMPLS), on page 134	Configures or matches active and passive tunnels.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
passive (GMPLS), on page 162	Configures passive GMPLS tunnels.
remote (GMPLS), on page 206	Configures remote TE links.
switching (GMPLS), on page 351	Configures TE-link switching attributes.

Imp neighbor (MPLS-TE)

To configure or update an LMP neighbor with its associated identifier and enter MPLS-TE neighbor configuration mode, use the **imp neighbor** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

imp neighbor *name*
no imp neighbor *name*

Syntax Description	<i>name</i> Text string representing the name of the LMP neighbor.
---------------------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Note	The LMP and GMPLS-NNI features are not supported on x86 RPs.
-------------	--

Task ID	Task ID	Operations
	mpls-te read, write	

Examples	The following example shows how to enter MPLS-TE neighbor configuration mode for router1:
-----------------	---

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# imp neighbor router1
RP/0/RP0/CPU0:router(config-mpls-te-nbr-router1)#
```

Related Commands	Command	Description
	imp hello (GMPLS), on page 122	Configures LMP management hello settings.
	mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

Command	Description
show mpls traffic-eng lmp, on page 268	Displays information about the LMP.

Imp router-id (MPLS-TE)

To configure the router ID for the optical instance using the LMP protocol, use the **imp router-id** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
imp router-id {ipv4 address type interface-path-id}
no imp router-id {ipv4 address type interface-path-id}
```

Syntax Description

ipv4 address Router ID expressed as an IPv4 address.

type Interface type. For more information, use the question mark (?) online help function.

interface-path-id Physical interface or virtual interface.

Note Use the **show interfaces** command to see a list of all interfaces currently configured on the router.

For more information about the syntax for the router, use the question mark (?) online help function.

Command Default

No default behavior or values

Command Modes

MPLS-TE configuration

Command History

Release	Modification
Release 3.3.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how configure the LMP router ID for IPv4 address 172.24.20.164:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
```

```
RP/0/RP0/CPU0:router(config-mpls-te)# imp router-id router 127.0.0.1
```

Related Commands

Command	Description
clear mpls lmp, on page 48	Clears LMP management hello settings.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

logging events link-status (MPLS-TE)

To enable the logging events so that the software sends a log message when a tunnel goes up or goes down, use the **logging events link-status** command in tunnel-mte interface configuration mode. To disable this feature, use the **no** form of this command.

logging events link-status
no logging events link-status

Syntax Description This command has no arguments or keywords.

Command Default By default, no logs are sent out.

Command Modes Tunnel-mte interface configuration

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **logging events link-status** command enables the configuration to be notified of tunnel state changes through log messages.

In addition, the **logging events link-status** command applies to both tunnel-mte and tunnel-te interfaces.

Task ID	Task ID	Operation
	interface	read, write

The following example shows how to enable logging events for the interface and line-protocol state change alarms:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-mte 10
RP/0/RP0/CPU0:router(config-if)# logging events link-status
```

Related Commands

Command	Description
interface tunnel-mte, on page 102	Configures an MPLS-TE P2MP tunnel interface
logging events lsp-status (MPLS-TE), on page 130	Sends out a log message when LSP events occur.

Command	Description
logging events sub-lsp-status state (MPLS-TE), on page 132	Sends out a log message when a point-to-multipoint sub-lsp goes up or goes down when the software is enabled.

logging events lsp-status (MPLS-TE)

To send out a log message when LSP events occur, use the **logging events lsp-status** command in tunnel-mte interface configuration mode. To disable this feature, use the **no** form of this command.

```
logging events lsp-status {reoptimize | reroute | state | switchover}
nologging events lsp-status {reoptimize | reroute | state | switchover}
```

Syntax Description

reoptimize	Sends out the log message when the tunnel LSP is reoptimized when the software is enabled.
reroute	Sends out the log message when the tunnel LSP is rerouted due to an FRR event when the software is enabled. Note Only FRR tunnels are applicable.
state	Sends out the log message when the tunnel LSP goes up or down when the software is enabled.
switchover	Sends out the log message when the tunnel LSP switches to the standby LSP due to a path protection event when the software is enabled. Note Only applicable to path protected tunnels.

Command Default

By default, no logs are sent out.

Command Modes

Tunnel-mte interface configuration

Command History

Release	Modification
Release 3.9.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **logging events lsp-status** command can be configured to notify the various LSP status changes through log messages. One or several of these LSP status changes can be enabled at once.

In addition, the **logging events lsp-status** command applies to both tunnel-mte and tunnel-te interfaces.

Task ID

Task ID	Operation
mpls-te	read, write

The following example shows how to enable the interface LSP state change alarms for reoptimization:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-mte 10
```

```
RP/0/RP0/CPU0:router(config-if)# logging events lsp-status reoptimize
```

Related Commands

Command	Description
interface tunnel-mte, on page 102	Configures an MPLS-TE P2MP tunnel interface
logging events link-status (MPLS-TE), on page 128	Enables the logging events so that the software sends a log message when a tunnel goes up or goes down.
logging events sub-lsp-status state (MPLS-TE), on page 132	Sends out a log message when a point-to-multipoint sub-lsp goes up or goes down when the software is enabled.

logging events sub-lsp-status state (MPLS-TE)

To send out a log message when a point-to-multipoint sub-lsp goes up or goes down when the software is enabled, use the **logging events sub-lsp-status state** command in tunnel-mte interface configuration mode. To disable this feature, use the **no** form of this command.

logging events sub-lsp-status state

Syntax Description This command has no arguments or keywords.

Command Default By default, no logs are sent out.

Command Modes Tunnel-mte interface configuration

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **logging events sub-lsp-status state** command can be configured to notify the state changes per-destination for the P2MP tunnel.

logging events sub-lsp-status state command applies only to the tunnel-mte interface.

Task ID	Task ID	Operation
	mpls-te	read, write

The following example shows how to enable the console logging for sub-lsp events to change the alarms state:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-mte 10
RP/0/RP0/CPU0:router(config-if)# logging events sub-lsp-status state
```

Related Commands	Command	Description
	interface tunnel-mte, on page 102	Configures an MPLS-TE P2MP tunnel interface.
	logging events link-status (MPLS-TE), on page 128	Enables the logging events so that the software sends a log message when a tunnel goes up or goes down.

Command	Description
logging events lsp-status (MPLS-TE), on page 130	Sends out a log message when LSP events occur.

match (GMPLS)

To match an active tunnel to a passive tunnel, use the **match** command in interface tunnel-gte configuration mode. To return to the default behavior, use the **no** form of this command.

match identifier *tunnel-number*
no match identifier *tunnel-number*

Syntax Description	identifier Configures the identifier of the active tunnel to match with this passive tunnel.
	<i>tunnel-number</i> Tunnel number. Range is 0 to 65535.

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	Interface tunnel-gte configuration
----------------------	------------------------------------

Command History	Release	Modification
	Release 3.3.0	This command was introduced.
	Release 3.8.0	GMPLS interfaces were supported under the tunnel-gte interface type.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Note	The LMP and GMPLS-NNI features are not supported on x86 RPs.
-------------	--

GMPLS interfaces are used under the tunnel-gte interface type.

You must enter the hostname for the head router then underscore `_t`, and the tunnel number for the head router. If tunnel-gte1 is configured on the head router with a hostname of `gmpls1`, CLI is `match identifier gmpls1_t1`.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to match the active tunnel ID to the passive tunnel:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-gte 1
RP/0/RP0/CPU0:router(config-if)# match identifier gmpls1_t1
```

Related Commands

Command	Description
destination (MPLS-TE), on page 65	Configures bidirectional optical tunnels.
interface tunnel-gte, on page 100	Configures an MPLS-TE tunnel interface for GMPLS interfaces.
lmp hello (GMPLS), on page 122	Configures LMP IPCC management hello settings.
passive (GMPLS), on page 162	Configures passive GMPLS tunnels.
remote (GMPLS), on page 206	Configures remote TE links.
switching (GMPLS), on page 351	Configures TE-link switching attributes.

maxabs (MPLS-TE)

To specify the maximum number of MPLS-TE tunnels that can be configured, use the **maxabs** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

maxabs tunnels tunnel-limit destinations dest-limit
no maxabs tunnels tunnel-limit destinations dest-limit

Syntax Description	tunnels Configures all tunnels for MPLS-TE.
	tunnel-limit Maximum number of tunnel TE interfaces. Range is 1 to 65536.
	destinations Configures all destinations for MPLS-TE.
	dest-limit Maximum total number of destinations that can be configured. Range is 1 to 65536.

Command Default	<i>tunnel-limit: 4096</i> <i>dest-limit: 4096</i>
------------------------	--

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced.
	Release 3.9.0	This command was removed.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to set the tunnel-te configuration limit to 1000:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# maxabs tunnels 1000 destinations 1000
```

Related Commands

Command	Description
show mpls traffic-eng maximum tunnels, on page 272	Displays the configuration of the maximum tunnel-te interfaces allowed.

mpls traffic-eng

To enter MPLS-TE configuration mode, use the **mpls traffic-eng** command in global configuration mode.

mpls traffic-eng

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes Global configuration

Command History	Release	Modification
	Release 3.3.0	This command was introduced.

Usage Guidelines No specific guidelines impact the use of this command.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to enter MPLS-TE configuration mode:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# mpls traffic-eng
RP/0/RP0/CPU0:router (config-mpls-te) #
```

mpls traffic-eng auto-bw apply (MPLS-TE)

To apply the highest bandwidth collected on a tunnel without waiting for the current application period to end, use the **mpls traffic-eng auto-bw apply** command in EXEC mode.

```
mpls traffic-eng auto-bw apply {all|tunnel-te tunnel-number}
```

Syntax Description	all	Applies the highest bandwidth collected instantly on all the automatic bandwidth-enabled tunnels.
	tunnel-te tunnel-number	Applies the highest bandwidth instantly to the specified tunnel. The range is from 0 to 65535.
Command Default	No default behavior or values	
Command Modes	EXEC	
Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **mpls traffic-eng auto-bw apply** command can forcefully expire the current application period on a specified tunnel and immediately apply the highest bandwidth recorded so far instead of waiting for the application period to end on its own.

Note The predefined threshold check still applies on the configuration, and if the delta is not significant enough, the automatic bandwidth functionality overrides this command.

The bandwidth application is performed only if at least one output rate sample has been collected for the current application period.

To guarantee the application of a specific signaled bandwidth value when triggering a manual bandwidth application, follow these steps:

1. Configure the minimum and maximum automatic bandwidth to the bandwidth value that you want to apply by using the [bw-limit \(MPLS-TE\), on page 44](#) command.
2. Trigger a manual bandwidth application by using the **mpls traffic-eng auto-bw apply** command.
3. Revert the minimum and maximum automatic bandwidth value back to their original value.

Task ID	Task ID	Operations
	mpls-te	execute

Examples

The following example applies the highest bandwidth to a specified tunnel:

```
RP/0/RP0/CPU0:router# mpls traffic-eng auto-bw apply tunnel-te 1
```

Related Commands

Command	Description
auto-bw collect frequency (MPLS-TE), on page 29	Configures the automatic bandwidth collection frequency and controls the manner in which the bandwidth for a tunnel collects output rate information, but does not adjust the tunnel bandwidth.
show mpls traffic-eng tunnels auto-bw brief, on page 331	Displays the list of automatic-bandwidth-enabled tunnels, and indicates if the current signaled bandwidth of the tunnel is identical to the bandwidth that is applied by the automatic bandwidth.

mpls traffic-eng fast-reroute promote

To configure the router to assign new or more efficient backup MPLS-TE tunnels to protected MPLS-TE tunnels, use the **mpls traffic-eng fast-reroute promote** command in EXEC mode. To return to the default behavior, use the **no** form of this command.

mpls traffic-eng fast-reroute promote
no mpls traffic-eng fast-reroute promote

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 3.2	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to initiate backup tunnel promote and assignment:

```
RP/0/RP0/CPU0:router# mpls traffic-eng fast-reroute promote
```

Related Commands	Command	Description
	fast-reroute, on page 79	Enables FRR protection for an MPLS-TE tunnel.

mpls traffic-eng level

To configure a router running Intermediate System-to-System (IS-IS) MPLS-TE at IS-IS Level 1 and Level 2, use the **mpls traffic-eng level** command in router configuration mode. To return to the default behavior, use the **no** form of this command.

mpls traffic-eng level *isis-level*
no mpls traffic-eng level *isis-level*

Syntax Description	<i>isis-level</i> IS-IS level (1, 2, or both) where MPLS-TE is enabled.
---------------------------	---

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	Router configuration
----------------------	----------------------

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.4.0	Support was added to enable MPLS Traffic Engineering in both IS-IS Level 1 and Level 2.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

The **mpls traffic-eng level** command is supported for IS-IS and affects the operation of MPLS-TE only if MPLS-TE is enabled for that routing protocol instance.

Task ID	Task ID	Operations
	isis	read, write

Examples	The following example shows how to configure a router running IS-IS MPLS to flood TE for IS-IS level 1:
-----------------	---

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# router isis 1
RP/0/RP0/CPU0:router(config-isis)# address-family ipv4 unicast
RP/0/RP0/CPU0:router(config-isis-af)# mpls traffic-eng level 1
RP/0/RP0/CPU0:router(config-isis-af)# metric-style wide
```

Related Commands

Command	Description
mpls traffic-eng router-id (MPLS-TE router), on page 154	Specifies that the TE router identifier for the node is the IP address associated with a given interface.

mpls traffic-eng link-management flood

To enable immediate flooding of all the local MPLS-TE links, use the **mpls traffic-eng link-management flood** command in EXEC mode. To return to the default behavior, use the **no** form of this command.

mpls traffic-eng link-management flood
no mpls traffic-eng link-management flood

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note If there is no change in the LSA since last flooding, IGP may dampen the advertisement.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to initiate flooding of the local MPLS-TE links:

```
RP/0/RP0/CPU0:router# mpls traffic-eng link-management flood
```

Related Commands	Command	Description
	show mpls traffic-eng link-management advertisements , on page 251	Displays MPLS-TE link-management advertisements.

mpls traffic-eng path-protection switchover gmpls

To trigger a manual switchover for path protection for a GMPLS optical LSP, use the **mpls traffic-eng path-protection switchover gmpls** command in EXEC mode. To disable this feature, use the **no** form of this command.

```
mpls traffic-eng path-protection switchover gmpls tunnel name
no mpls traffic-eng path-protection switchover gmpls tunnel name
```

Syntax Description	<i>tunnel name</i> Name of the tunnel that is used for a switchover.
---------------------------	--

Command Default	No manual path protection is invoked on either the head or tail router.
------------------------	---

Command Modes	EXEC
----------------------	------

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **mpls traffic-eng path-protection switchover gmpls** command is used for the following functions:

- Runs on both tunnel head and tunnel tail at the same time.
- Configures both head and tail router of the GMPLS LSP to achieve the complete path switchover at both ends.

Note The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID	Task ID	Operations
	mpls-te	execute

Examples

The following example triggers the switchover for path-protection for GMPLS:

```
RP/0/RP0/CPU0:router# mpls traffic-eng path-protection switchover gmpls
```

Related Commands

Command	Description
path-option (MPLS-TE), on page 164	Configures a path option for an MPLS-TE tunnel.

mpls traffic-eng pce activate-pcep

To force idle peers to be reestablished without waiting for a timer, use the **mpls traffic-eng pce activate-pcep** command in EXEC mode. To return to the default behavior, use the **no** form of this command.

```
mpls traffic-eng pce activate-pcep {address | all}
no mpls traffic-eng pce activate-pcep {address | all}
```

Syntax Description

address Address of the idle peer.

all Activates all the idle peers.

Command Default

No default behavior or values

Command Modes

EXEC

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task Operations ID

mpls-te read, write, execute

Examples

The following example shows how to trigger a path computation client (PCC) or PCE to activate an idle path computation element protocol (PCEP) session:

```
RP/0/RP0/CPU0:router# mpls traffic-eng pce activate-pcep all
```

Related Commands

Command	Description
mpls traffic-eng pce reoptimize, on page 149	Triggers reoptimization manually either for all tunnels or a specific PCE-based tunnel.

mpls traffic-eng pce redelegate

To manually redelegate all tunnels to the available explicit peer, use the **mpls traffic-eng pce redelegate** command in EXEC mode.

```
mpls traffic-eng pce redelegate [peer {ipv4 address |node-id name}]
```

Syntax Description	
peer	(Optional) Redelegates all static tunnels to the specific peer.
ipv4 address	Specifies the peer IPv4 address in A.B.C.D format.
node-id name	Specifies the peer node ID name.

Command Default No default behavior or values

Command Modes EXEC mode

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines If the IPv4 address or the node-id is not specified, the **pce redelegate** command delegates all the tunnels to the peer with the best precedence. If the peer is specified by an IP address or a node ID, all tunnels will be delegated to the specified peer.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how manually redelegate all tunnels to the available explicit peer:

```
RP/0/0/CPU0:ios#mpls traffic-eng pce redelegate
```

The following example shows how to manually redelegate all tunnels to the specified IPv4 address:

```
RP/0/0/CPU0:ios#mpls traffic-eng pce redelegate peer ipv4 192.168.0.2
```

The following example shows how to manually redelegate all tunnels to the specified node-id:

```
RP/0/0/CPU0:ios#mpls traffic-eng pce redelegate peer node-id pcel
```

mpls traffic-eng pce reoptimize

To trigger reoptimization manually either for all or a specific PCE-based tunnel, use the **mpls traffic-eng pce reoptimize** command in EXEC mode. To disable this feature, use the **no** form of this command.

```
mpls traffic-eng pce reoptimize [tunnel ID] [force]  
no mpls traffic-eng pce reoptimize [tunnel ID] [force]
```

Syntax Description

tunnel ID (Optional) Tunnel ID to be reoptimized. Range is from 0 to 65535.

force (Optional) Forces the router to start using the newly calculated route even if the used path has a better metric.

Command Default

Reoptimizes all the PCE tunnels.

Command Modes

EXEC

Command History

Release	Modification
Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If you do not run the **mpls traffic-eng pce reoptimize** command, the system tries to reoptimize at an interval of 3600 seconds.

Task ID

Task ID	Operations
mpls-te	read, write, execute

Examples

The following example shows how to trigger reoptimization for all PCE-based tunnels:

```
RP/0/RP0/CPU0:router# mpls traffic-eng pce reoptimize
```

Related Commands

Command	Description
mpls traffic-eng pce activate-pcep, on page 147	Forces idle peers to be re-established without waiting for a timer.

mpls traffic-eng reoptimize (EXEC)

To trigger the reoptimization interval of all TE tunnels, use the **mpls traffic-eng reoptimize** command in EXEC mode.

mpls traffic-eng reoptimize [*tunnel-id*] [*tunnel-name*] [**all**] [**p2mp** {*alltunnel-id*}] [**p2p**{*all tunnel-id*}]

Syntax Description

<i>tunnel-id</i>	(Optional) MPLS-TE tunnel identification expressed as a number. Range is from 0 to 65535.
<i>tunnel-name</i>	(Optional) TE tunnel identification expressed as a name.
all	(Optional) Forces an immediate reoptimization for all P2MP tunnels.
p2mp	(Optional) Forces an immediate reoptimization of all P2MP TE tunnels.
<i>tunnel-id</i>	P2MP TE tunnel identification to be reoptimized. Range is from 0 to 65535.
p2p	(Optional) Forces an immediate reoptimization of all P2P TE tunnels.
all	(Optional) Forces an immediate reoptimization for all P2P tunnels.
<i>tunnel-id</i>	P2P TE tunnel identification to be reoptimized. Range is from 0 to 65535.

Command Default

No default behavior or values

Command Modes

EXEC

Command History

Release	Modification
Release 2.0	This command was introduced.
Release 3.9.0	The following keywords and arguments were added to support the P2MP TE feature and P2P feature: <ul style="list-style-type: none"> • all keyword • p2mp keyword, all keyword, and <i>tunnel-id</i> argument • p2p keyword, all keyword, and <i>tunnel-id</i> argument

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
mpls-te	execute

Examples

The following example shows how to immediately reoptimize all TE tunnels:

```
RP/0/RP0/CPU0:router# mpls traffic-eng reoptimize
```

The following example shows how to immediately reoptimize TE tunnel-te90:

```
RP/0/RP0/CPU0:router# mpls traffic-eng reoptimize tunnel-te90
```

The following example shows how to immediately reoptimize all P2MP TE tunnels that originated from this TE LSR:

```
RP/0/RP0/CPU0:router# mpls traffic-eng reoptimize p2mp all
```

The following example shows how to immediately reoptimize all P2P TE tunnels:

```
RP/0/RP0/CPU0:router# mpls traffic-eng reoptimize p2p all
```

mpls traffic-eng resetup (EXEC)

To trigger the re-setup of TE tunnels, clearing the LSP states, use the **mpls traffic-eng resetup** command in EXEC mode.

mpls traffic-eng resetup {P2MP|P2P|name}

Syntax Description		
P2MP	<i>tunnel-id</i>	Re-setup a specific P2MP tunnel by tunnel-id. The P2MP tunnel ID range is from 0 to 65535.
P2P	<i>tunnel-id</i>	Re-setup a specific P2P tunnel by tunnel-id. The P2MP tunnel ID range is from 0 to 65535.
name	<i>name</i>	Re-setup a specific tunnel by the given name.

Command Default No default behavior or values

Command Modes EXEC mode

Command History	Release	Modification
	Release 5.1.1	This command was introduced.

Usage Guidelines No specific guidelines impact the use of this command.

Task ID	Task ID	Operations
	mpls-te	execute

Examples

The following example shows how to re-setup a specific tunnel by the given name (tunnel-te1):

```
RP/0/RP0/CPU0:router#mpls traffic-eng resetup name tunnel-te1
```

The following example shows how to re-setup a specific P2P tunnel based on the specified tunnel-id (tunnel-id 1):

```
RP/0/RP0/CPU0:router#mpls traffic-eng resetup P2P tunnel-id 1
```

The following example shows how to re-setup a P2MP tunnel based on the specified tunnel-id (tunnel-id 2):

```
RP/0/RP0/CPU0:router#mpls traffic-eng resetup P2MP tunnel-id 2
```

mpls traffic-eng reoptimize events link-up

To turn on automatic reoptimization of Multiprotocol Label Switching (MPLS) traffic engineering when certain events occur, such as, when an interface becomes operational, use the **mpls traffic-eng reoptimize events link-up** command in global configuration mode. To disable automatic reoptimization when link-up event occurs, use the **no** form of this command.

mpls traffic-eng reoptimize events link-up

no mpls traffic-eng reoptimize events link-up

Syntax Description This command has no arguments or keywords.

Command Modes Global configuration (config)

Command History	Release	Modification
	Release 5.2.2	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to turn on automatic reoptimization when an interface becomes operational:

```
RP/0/RP0/CPU0:router# mpls traffic-eng reoptimize events link-up
```

Related Commands	Command	Description
	mpls traffic-eng reoptimize timers delay	Delays removal of old LSPs or installation of new LSPs after tunnel reoptimization.

mpls traffic-eng router-id (MPLS-TE router)

To specify that the TE router identifier for the node is the IP address associated with a given interface, use the **mpls traffic-eng router-id** command in the appropriate mode. To return to the default behavior, use the **no** form of this command.

mpls traffic-eng router-id *type interface-path-id*
no mpls traffic-eng router-id *type interface-path-id*

Syntax Description

type Interface type. For more information, use the question mark (?) online help function.

interface-path-id Physical interface or virtual interface.

Note Use the **show interfaces** command to see a list of all interfaces currently configured on the router.

For more information about the syntax for the router, use the question mark (?) online help function.

Command Default

No default behavior or values

Command Modes

OSPF configuration
 IS-IS address family configuration

Command History

Release	Modification
Release 2.0	This command was introduced.
Release 3.9.1	The Usage Guidelines was updated

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

A routers identifier acts as a stable IP address for the TE configuration. This IP address is flooded to all nodes. You must set the destination on the destination node TE router identifier for all affected tunnels. This router ID is the address that the TE topology database at the tunnel head uses for its path calculation.

Note When the **mpls traffic-eng router-id** command is not configured, global router ID is used by MPLS-TE if there is one configured.

We suggest that you configure the **mpls traffic-eng router-id** command explicitly under the IGP; otherwise, TE uses the default algorithm to pick up the TE router-id, which can be the highest IP address of the loopback interfaces or physical interfaces. When TE uses the algorithm to select a TE router-id dynamically, it can be different from what is configured for the static RPF check on the P2MP tunnel tail . If the static RPF check mismatch happens, the P2MP tail does not pass the incoming P2MP traffic to the egress of P2MP tail router.

A TE router-id configuration is highly recommended to ensure that the tunnel head-end picks up the correct source address, and the configured static RPF address at the tail-end matches the tunnel source which avoids unexpected traffic drops.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following examples show how to specify the TE router identifier as the IP address associated with loopback interface:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# router ospf CORE_AS
RP/0/RP0/CPU0:router(config-ospf)# mpls traffic-eng router-id 7.7.7.7

RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# router isis 811
RP/0/RP0/CPU0:router(config-isis)# address-family ipv4 unicast
RP/0/RP0/CPU0:router(config-isis-af)# mpls traffic-eng router-id 8.8.8.8
```

Related Commands

Command	Description
mpls traffic-eng level, on page 142	Configures a router running OSPF MPLS so that it floods TE for the indicated IS-IS level.

mpls traffic-eng reoptimize mesh group

To reoptimize all tunnels of a mesh group, use the **mpls traffic-eng reoptimize mesh group** command in EXEC mode.

```
mpls traffic-eng reoptimize auto-tunnel mesh group group_id
```

Syntax Description	<i>group_id</i> Defines auto-tunnel mesh group ID that is to be reoptimized. Range is 0 to 4294967295.
---------------------------	--

Command Default	None
------------------------	------

Command Modes	MPLS Transport profile configuration
----------------------	--------------------------------------

Command History	Release	Modification
	Release 4.1.1	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task ID	Operations
	mpls-te	execute

Examples	This is sample out from the mpls traffic-eng reoptimize mesh group command:
-----------------	--

```
RP/0/RP0/CPU0:router mpls traffic-eng reoptimize mesh group 10
```

named-tunnels tunnel-te

To name the TE (Traffic Engineering) tunnels in the network with unique tunnel IDs (STRING names), use the **named-tunnels tunnel-te** command in MPLS-TE configuration mode. To delete the named tunnels, use the **no** form of this command.

```
named-tunnels tunnel-te tunnel-name
no named-tunnels
```

Syntax Description	<i>tunnel-name</i>	Configures the given name to the TE tunnel.
		Note If the tunnel name contains more than one word, use hyphens to separate the words.
Command Default	None	
Command Modes	MPLS-TE configuration	
Command History	Release	Modification
	Release 6.1.2	This command was introduced.
Usage Guidelines	No specific guidelines impact the use of this command.	
Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to name a TE tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#named-tunnels
RP/0/RP0/CPU0:router(config-mpls-te-named-tunnels)#tunnel-te FROM-NY-TO-LA
```

nhop-only (auto-tunnel backup)

To configure only a next-hop automatic backup tunnel with only link protection, use the **nhop-only** command in MPLS-TE auto-tunnel backup interface configuration mode. To return to the default configuration setting for automatic backup tunnels, use the **no** form of this command.

nhop-only
no nhop-only

Syntax Description This command has no arguments or keywords.

Command Default Both NHOP and NNHOP protection are enabled.

Command Modes Auto-tunnel backup configuration

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If you configure the **nhop-only** command, you destroy any next-next-hop (NNHOP) tunnel created to provide node protection for tunnels running over the specified interface.

If you unconfigure the **nhop-only** command, you trigger a backup assignment on primary tunnels running over that link. The automatic backup tunnel feature attempts to create NNHOP backup tunnels to provide node protection for the specified tunnels.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

In the following example, NNHOP automatic backup tunnels are destroyed and only NHOP tunnels with link protection is configured:

```
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface pos 0/1/0/1
RP/0/RP0/CPU0:router(config-mpls-te-if)# auto-tunnel backup
RP/0/RP0/CPU0:router(config-mpls-te-if-auto-backup)# nhop-only
```

Related Commands

Command	Description
auto-tunnel backup (MPLS-TE), on page 37	Builds automatic NHOP and NNHOP backup tunnels.

overflow threshold (MPLS-TE)

To configure the tunnel overflow detection, use the **overflow threshold** command in MPLS-TE automatic bandwidth interface configuration mode. To disable the overflow detection feature, use the **no** form of this command.

overflow threshold *percentage* [**min** *bandwidth*] **limit** *limit*
no overflow threshold

Syntax Description	
<i>percentage</i>	Bandwidth change percent to trigger an overflow. The range is from 1 to 100.
min <i>bandwidth</i>	(Optional) Configures the bandwidth change value, in kbps, to trigger an overflow. The range is from 10 to 4294967295. The default is 10.
limit <i>limit</i>	Configures the number of consecutive collection intervals that exceeds the threshold. The bandwidth overflow triggers an early tunnel bandwidth update. The range is from 1 to 10. The default is none.

Command Default The default value is disabled.

Command Modes MPLS-TE automatic bandwidth interface configuration

Command History	Release	Modification
	Release 3.8.0	This command was introduced.
	Release 3.9.0	The Usage Guidelines was updated to describe overflow detection.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If you modify the **limit** keyword, the consecutive overflows counter for the tunnel is also reset.

If you enable or modify the minimum value, the current consecutive overflows counter for the tunnel is also reset, which effectively restarts the overflow detection from scratch.

Several number of consecutive bandwidth samples are greater than the overflow threshold (bandwidth percentage) and the minimum bandwidth configured, then a bandwidth application is updated immediately instead of waiting for the end of the application period.

Overflow detection applies only to bandwidth increase. For example, an overflow can not be triggered even if bandwidth decreases by more than the configured overflow threshold.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure the tunnel overflow detection for tunnel-te 1:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# auto-bw
RP/0/RP0/CPU0:router(config-if-tunte-autobw)# overflow threshold 50 limit 3
```

Related Commands

Command	Description
adjustment-threshold (MPLS-TE), on page 6	Configures the tunnel bandwidth change threshold to trigger an adjustment.
application (MPLS-TE), on page 17	Configures the application frequency in minutes for the applicable tunnel.
auto-bw (MPLS-TE), on page 27	Configures automatic bandwidth on a tunnel interface and enters MPLS-TE automatic bandwidth interface configuration mode.
bw-limit (MPLS-TE), on page 44	Configures the minimum and maximum automatic bandwidth to set on a tunnel.
collect-bw-only (MPLS-TE), on page 62	Enables only the bandwidth collection without adjusting the automatic bandwidth.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

passive (GMPLS)

To configure a passive GMPLS tunnel, use the **passive** command in interface tunnel-gte configuration mode. To return to the default behavior, use the **no** form of this command.

passive
no passive

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes Interface tunnel-gte configuration

Command History	Release	Modification
	Release 3.3.0	This command was introduced.
	Release 3.8.0	GMPLS interfaces were supported under the tunnel-gte interface type.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

GMPLS interfaces are used under the tunnel-gte interface type.

Note The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID	Task Operations ID
	mpls-te read, write

Examples The following example shows how to configure a passive GMPLS virtual interface tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# interface tunnel-gte 99
RP/0/RP0/CPU0:router (config-if)# passive
```

Related Commands	Command	Description
	destination (MPLS-TE), on page 65	Configures bidirectional optical tunnels.
	interface tunnel-gte, on page 100	Configures an MPLS-TE tunnel interface for GMPLS interfaces.

Command	Description
lmp hello (GMPLS), on page 122	Configures LMP IPCC management hello settings.
match (GMPLS), on page 134	Configures or matches active and passive tunnels.
remote (GMPLS), on page 206	Configures remote TE links.
switching (GMPLS), on page 351	Configures TE-link switching attributes.

path-option (MPLS-TE)

To configure a path option for an MPLS-TE tunnel, use the **path-option** command in tunnel-te interface configuration mode. To return to the default behavior, use the **no** form of this command.

```
path-option preference-priority [protecting number] {dynamic [pce [address ipv4 address]]|explicit
{name path-name|identifier path-number}[protected-by path-option-level]} [attribute-set name] [isis
instance-name level level] [lockdown] [ospf instance-name area {value address}] [verbatim]
no path-option preference-priority {dynamic [pce [address ipv4 address]]|explicit {name
path-name|identifier path-number}[protected-by path-option-level]} [isis instance-name level level]
[lockdown] [ospf instance-name area {value address}] [verbatim]
```

Syntax Description		
<i>preference-priority</i>		Path option number. Range is from 1 to 1000.
protecting <i>number</i>		Specifies a path setup option to protect a path. The range is from 1 to 1000.
dynamic		Specifies that label switched paths (LSP) are dynamically calculated.
pce		(Optional) Specifies that the LSP is computed by a Path Computation Element (PCE).
address		(Optional) Configures the address for the PCE.
ipv4 <i>address</i>		Configures the IPv4 address for the PCE.
explicit		Specifies that LSP paths are IP explicit paths.
name <i>path-name</i>		Specifies the path name of the IP explicit path.
identifier <i>path-number</i>		Specifies a path number of the IP explicit path.
protected-by <i>path-option-level</i>		(Optional) Configures path protection for an explicit path that is protected by another explicit path.
isis <i>instance-name</i>		(Optional) Limits CSPF to a single IS-IS instance and area.
attribute-set <i>name</i>		(Optional) Specifies the attribute set for the LSP.
level <i>level</i>		Configures the level for IS-IS. The range is from 1 to 2.
lockdown		(Optional) Specifies that the LSP cannot be reoptimized.
ospf <i>instance-name</i>		(Optional) Limits CSPF to a single OSPF instance and area.
area		Configures the area for OSPF.
<i>value</i>		Decimal value for the OSPF area ID.
<i>address</i>		IP address for the OSPF area ID.
verbatim		(Optional) Bypasses the Topology/CSPF check for explicit paths.

Command Default No default behavior or values

Command Modes Tunnel-te interface configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.3.2	The protecting keyword was added to support GMPLS protection and restoration.
	Release 3.4.1	Both the verbatim and lockdown keywords can be used together.
	Release 3.7.0	An IGP-area was specified with the path-option command. Both the isis and the ospf keywords were added.
	Release 3.8.0	The pce , address , and ipv4 keywords were added. The <i>address</i> argument was added.
	Release 4.2.0	The attribute-set keyword was added.
	Release 4.2.3	The protected-by keyword was added.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You can configure several path options for a single tunnel. For example, there can be several explicit path options and a dynamic option for one tunnel. The path setup preference is for lower (not higher) numbers, so option 1 is preferred.

When the lower number path option fails, the next path option is used to set up a tunnel automatically (unless using the lockdown option).

The **protecting** keyword specifies that you can configure path-protection for the primary LSP. The **protecting** keyword is available only for tunnel-gte interfaces.

You specify the backup path for the **path-option** command in case of the primary path failure.

CSPF areas are configured on a per-path-option basis.

Any primary explicit path on a path protection enabled tunnel can be configured to be protected by an explicit path option level using **protected-by** keyword. Only one explicit protecting path is supported per path option.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure the tunnel to use a named IPv4 explicit path as verbatim and lockdown options for the tunnel. This tunnel cannot reoptimize when the FRR event goes away, unless you manually reoptimize it:

```
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
```

```
RP/0/RP0/CPU0:router(config-if)# path-option 1 explicit name test verbatim lockdown
```

The following example shows how to enable path protection on a tunnel to configure an explicit path:

```
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# path-option 1 explicit name po4
RP/0/RP0/CPU0:router(config-if)# path-option protecting 1 explicit name po6
```

The following example shows how to limit CSPF to a single OSPF instance and area:

```
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# path-option 1 explicit name router1 ospf 3 area 7 verbatim
```

The following example shows how to limit CSPF to a single IS-IS instance and area:

```
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# path-option 1 dynamic isis mtbf level 1 lockdown
```

Related Commands

Command	Description
mpls traffic-eng path-protection switchover gmpls, on page 145	Specifies a switchover for path protection.
show explicit-paths, on page 215	Displays the configured IP explicit paths.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

path-option (Named Tunnels)

To configure one or more path options - each identified by a unique name - for a given MPLS-TE named tunnel, use the **path-option** command in MPLS-TE named-tunnels configuration mode. To delete the path option, use the **no** form of this command.

```
path-option path-name {preference preference-priority | computation {dynamic | explicit
explicit-path-name}}
no path-option path-name {preference preference-priority | computation {dynamic | explicit
explicit-path-name}}
```

Syntax Description	<i>path-name</i>	Configures the given name to the path. Note If the path-option name contains more than one word, use hyphens to separate the words.
	preference <i>preference-priority</i>	Specifies the path option preference. The range is from 1 to 4294967295. Lower values have a higher preference.
	computation	Specifies the computation method for the path.
	dynamic	Specifies that the path is dynamically calculated.
	explicit	Specifies that an explicit path is used.
	<i>explicit-path-name</i>	Configures the given name to the explicit path.
	Command Default	None
Command Modes	MPLS-TE named tunnels configuration	
Command History	Release	Modification
	Release 6.1.2	The <i>path-name</i> argument, and the preference and computation keywords were added to support the named tunnels and named path option configurations.
Usage Guidelines	No specific guidelines impact the use of this command.	

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to configure one or more path options for a given MPLS-TE named tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)#mpls traffic-eng
RP/0/RP0/CPU0:router (config-mpls-te)#named-tunnels
RP/0/RP0/CPU0:router (config-mpls-te-named-tunnels)#tunnel-te FROM-NY-TO-SJ
RP/0/RP0/CPU0:router (config-mpls-te-tunnel-name)#destination 192.168.0.1
RP/0/RP0/CPU0:router (config-mpls-te-tunnel-name)#path-option VIA-SF
RP/0/RP0/CPU0:router (config-path-option-name)#preference 10
RP/0/RP0/CPU0:router (config-path-option-name)#computation explicit MyExplicitPath
RP/0/RP0/CPU0:router (config-path-option-name)#exit
RP/0/RP0/CPU0:router (config-mpls-te-tunnel-name)#path-option SHORTEST
RP/0/RP0/CPU0:router (config-path-option-name)#preference 20
RP/0/RP0/CPU0:router (config-path-option-name)#computation dynamic
RP/0/RP0/CPU0:router (config-path-option-name)#exit
```

path-option (P2MP TE)

To configure the primary or fallback path setup option for a Point-to-Multipoint (P2MP) TE tunnel, use the **path-option** command in P2MP destination interface configuration mode. To return to the default behavior, use the **no** form of this command.

```
path-option preference-priority {dynamic|explicit {name path-name|identifier path-number} }
[verbatim] [lockdown]
no path-option preference-priority {dynamic|explicit {name path-name|identifier path-number} }
[verbatim] [lockdown]
```

Syntax Description		
<i>preference-priority</i>		Path option number. Range is from 1 to 1000.
dynamic		Specifies that label switched paths (LSP) are dynamically calculated.
explicit		Specifies that LSP paths are IP explicit paths.
name <i>path-name</i>		Specifies the path name of the IP explicit path.
identifier <i>path-number</i>		Specifies a path number of the IP explicit path.
verbatim		(Optional) Bypasses the Topology/CSPF check for explicit paths.
lockdown		(Optional) Specifies that the LSP cannot be reoptimized.

Command Default None

Command Modes P2MP destination interface configuration

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You can configure several path options for each destination of a P2MP tunnel. For example, for one tunnel, there can be several explicit path options and a dynamic option. The path preference is for lower (not higher) numbers, so option 1 is preferred over higher options.

When the lower number path option fails, the next path option under the destination is attempted.

Several path-options can be configured for each destination under a tunnel.

When configuring multiple path-options under each destination of a P2MP tunnel, the PCALC on the TE tunnel source attempts to generate the P2MP tree starting from the preferred path-options (lower numbers) for each destination. If some destinations use explicit paths that cause remerges with the dynamic generated paths for other destinations in the P2MP tree, the PCALC source modifies the dynamic paths (for example, optimal path); therefore, it follows the explicit path to correct the remerge problem.

The **path-option** command is common for both Point-to-Point (P2P) and P2MP tunnels.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

This example shows how to configure a P2MP tunnel with two destinations and several path-options per destination:

```
RP/0/RP0/CPU0:router(config)# interface tunnel-mte 100
RP/0/RP0/CPU0:router(config-if)# destination 1.1.1.1
RP/0/RP0/CPU0:router(config-if-p2mp-dest)# path-option 1 explicit name po_dest1
RP/0/RP0/CPU0:router(config-if-p2mp-dest)# path-option 2 dynamic
```

This example shows that the fallback path option is dynamic:

```
RP/0/RP0/CPU0:router(config)# interface tunnel-mte 100
RP/0/RP0/CPU0:router(config-if)# destination 2.2.2.2
RP/0/RP0/CPU0:router(config-if-p2mp-dest)# path-option 1 explicit name po_dest2
RP/0/RP0/CPU0:router(config-if-p2mp-dest)# path-option 2 dynamic
```

Related Commands

Command	Description
destination (MPLS-TE), on page 65	Configures the destination address of a TE tunnel.
mpls traffic-eng path-protection switchover gmpls	Specifies a switchover for path protection.
show explicit-paths, on page 215	Displays the configured IP explicit paths.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.
show mrrib mpls traffic-eng fast-reroute	Displays information about Multicast Routing Information Base (MRIB) MPLS traffic engineering fast reroute.

path-selection cost-limit

To set the upper limit on the path aggregate admin-weight when computing paths for MPLS-TE LSPs, use the **path-selection cost-limit** command in an appropriate configuration mode. To remove the upper limit, use the **no** form of this command.

path-selection cost-limit *cost-limit-value*

Syntax Description	<i>cost-limit-value</i> Configures the path-selection cost-limit value. The range is from 1 to 4294967295.
---------------------------	--

Command Default	The cost-limit is ignored.
------------------------	----------------------------

Command Modes	Global configuration Interface tunnel TE configuration MPLS TE path-option attribute set configuration
----------------------	--

Command History	Release	Modification
	Release 5.1.2	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Path-selection cost-limit configuration works only on MPLS TE tunnels. The cost-limit configured under path-option attribute-set configuration mode takes priority and will be in effect if the cost-limit is configured under global configuration, interface tunnel TE, and path-option attribute-set configuration modes. The cost-limit is ignored by default.

A LSP is created only if its path aggregate admin-weight is less than the specified path cost limit.

Task ID	Task ID	Operation
	mpls-te	read, write

This example shows how to set the path-selection cost-limit for under MPLS TE path-option attribute-set *PO3AttrSet*.

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#attribute-set path-option PO3AttrSet
RP/0/RP0/CPU0:router(config-te-attribute-set)#path-selection cost-limit 50000
```

path-selection ignore overload (MPLS-TE)

To ignore the Intermediate System-to-Intermediate System (IS-IS) overload bit setting for MPLS-TE, use the **path-selection ignore overload** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
path-selection ignore overload {head | mid | tail}
no path-selection ignore overload {head | mid | tail}
```

Syntax Description	head	The tunnel stays up if set-overload-bit is set by ISIS on the head router. Ignores overload node during CSPF for the head node.
	mid	The tunnel stays up if set-overload-bit is set by ISIS on the mid router. Ignores overload node during CSPF for the mid node.
	tail	The tunnel stays up if set-overload-bit is set by ISIS on the tail router. Ignores overload node during CSPF for the tail node.

Command Default None

Command Modes MPLS-TE configuration

Command History	Release	Modification
	Release 3.4.0	This command was introduced.
	Release 4.1.0	The head , mid , and tail keywords were added.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **path-selection ignore overload** command to ensure that label switched paths (LSPs) are not broken because of routers that have IS-IS overload bit as enabled.

When the IS-IS overload bit avoidance (OLA) feature is activated, all nodes with the overload bit set, which includes head nodes, mid nodes, and tail nodes, are ignored. This means that they are still available for use with label switched paths (LSPs). This feature allows you to include an overloaded node in constraint-based shortest path first (CSPF).

Task ID	Task ID	Operations
	mpls-te	read, write

Examples This example shows how to use the **path-selection ignore overload head** command:

```
RP/0/RP0/CPU0:router# configure  
RP/0/RP0/CPU0:router(config)# mpls traffic-eng  
RP/0/RP0/CPU0:router(config-mpls-te)# path-selection ignore overload  
RP/0/RP0/CPU0:router(config-mpls-te)# path-selection ignore overload head
```

path-selection invalidation

To configure the path invalidation timer such that when the timer expires, the path is either removed or the data is dropped, use the **path-selection invalidation** command in MPLS-TE configuration mode. To remove the path invalidation timer, use the **no** form of this command.

path-selection invalidation *path-invalidation-timer-value*{**drop** | **tear**}

Syntax Description	<i>path-invalidation-timer-value</i>	Configures the path invalidation timer value in milliseconds. The range is from 0 to 60000.
	drop	The data is dropped after the path invalidation timer expires.
	tear	The path is torn down after the path invalidation timer expires.

Command Default None

Command Modes MPLS-TE configuration

Command History	Release	Modification
	Release 6.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	mpls-te	read, write

This example shows how to set the **path-selection invalidation** timer in MPLS TE configuration mode.

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#path-selection invalidation 1 drop
```

path-selection loose-expansion affinity (MPLS-TE)

To specify the affinity value to be used to expand a path to the next loose hop for a tunnel on an area border router, use the **path-selection loose-expansion affinity** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
path-selection loose-expansion affinity affinity-value mask affinity-mask [class-type type]
no path-selection loose-expansion affinity affinity-value mask affinity-mask [class-type type]
```

Syntax Description

<i>affinity-value</i>	Attribute values required for links carrying this tunnel. A 32-bit decimal number. Range is 0x0 to 0xFFFFFFFF, representing 32 attributes (bits), where the value of an attribute is 0 or 1.
mask <i>affinity-mask</i>	Checks the link attribute, a 32-bit decimal number. Range is 0x0 to 0xFFFFFFFF, representing 32 attributes (bits), where the value of an attribute mask is 0 or 1.
class-type <i>type</i>	(Optional) Requests the class-type of the tunnel bandwidth. Range is 0 to 1.

Command Default

```
affinity-value : 0X00000000
mask-value : 0xFFFFFFFF
```

Command Modes

MPLS-TE configuration

Command History

Release	Modification
Release 3.4.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note The new affinity scheme (based on names) is not supported for loose-hop expansion. New configuration does not affect the already up tunnels.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to configure affinity 0x55 with mask 0xFFFFFFFF:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
```

path-selection loose-expansion affinity (MPLS-TE)

```
RP/0/RP0/CPU0:router(config-mpls-te)# path-selection loose-expansion affinity 55 mask  
FFFFFFFF
```

Examples

The following example shows how to set the path-selection metric to use the IGP metric overwriting default:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# path-selection metric igp
```

Related Commands

Command	Description
show mpls traffic-eng topology, on page 284	Displays the tunnel path used.

pce address (MPLS-TE)

To configure the IPv4 self address for Path Computation Element (PCE), use the **pce address** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
pce address ipv4 address
no pce address ipv4 address
```

Syntax Description	ipv4 address Configures the IPv4 address for PCE.
---------------------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.5.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The IP address is used in the TCP communication with the other PCEs or PCCs. In addition, this address is advertised using IGP.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure the IPv4 self address for PCE:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# pce address ipv4 10.10.10.10
```

Related Commands

Command	Description
pce keepalive (MPLS-TE), on page 187	Configures a PCEP keepalive interval.
path-option (MPLS-TE), on page 164	Configures a path option for an MPLS-TE tunnel.
pce peer (MPLS-TE), on page 189	Configures an IPv4 self address for a PCE peer.
pce reoptimize (MPLS-TE), on page 191	Configures a periodic reoptimization timer.

Command	Description
pce request-timeout (MPLS-TE), on page 193	Configures a PCE request-timeout.
pce tolerance keepalive (MPLS-TE), on page 196	Configures a PCE tolerance keepalive (which is the minimum acceptable peer proposed keepalive).

pce deadtimer (MPLS-TE)

To configure a path computation element (PCE) deadtimer, use the **pce deadtimer** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
pce deadtimer value
no pce deadtimer value
```

Syntax Description	<i>value</i> Keepalive dead interval, in seconds. The range is 0 to 255.
---------------------------	--

Command Default	<i>value</i> : 120
------------------------	--------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When the dead interval is 0, the LSR does not time out a PCEP session to a remote peer.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure a PCE deadtimer:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# pce deadtimer 50
```

Related Commands

Command	Description
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
path-option (MPLS-TE), on page 164	Configures a path option for an MPLS-TE tunnel.
pce address (MPLS-TE), on page 183	Configures the IPv4 self address for a PCE.
pce keepalive (MPLS-TE), on page 187	Configures a PCEP keepalive interval.

Command	Description
pce peer (MPLS-TE), on page 189	Configures an IPv4 self address for a PCE peer.
pce reoptimize (MPLS-TE), on page 191	Configures a periodic reoptimization timer.
pce request-timeout (MPLS-TE), on page 193	Configures a PCE request-timeout.
pce tolerance keepalive (MPLS-TE), on page 196	Configures a PCE tolerance keepalive (which is the minimum acceptable peer proposed keepalive).

pce keepalive (MPLS-TE)

To configure a path computation element protocol (PCEP) keepalive interval, use the **pce keepalive** command in MPLS-TE configuration mode. To disable this command, use the **no** form of this command.

```
pce keepalive interval
no pce keepalive interval
```

Syntax Description	<i>interval</i> Keepalive interval, in seconds. The range is 0 to 255.
---------------------------	--

Command Default	<i>interval: 30</i>
------------------------	---------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

When the keepalive interval is 0, the LSR does not send keepalive messages.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to configure PCEP keepalive interval for 10 seconds:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router#(config-mpls-te) pce keepalive 10
```

Related Commands	Command	Description
	mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
	path-option (MPLS-TE), on page 164	Configures a path option for an MPLS-TE tunnel.
	pce address (MPLS-TE), on page 183	Configures the IPv4 self address for a PCE.
	pce deadtimer (MPLS-TE), on page 185	Configures a PCE deadtimer.

Command	Description
pce peer (MPLS-TE), on page 189	Configures an IPv4 self address for a PCE peer.
pce reoptimize (MPLS-TE), on page 191	Configures a periodic reoptimization timer.
pce request-timeout (MPLS-TE), on page 193	Configures a PCE request-timeout.
pce tolerance keepalive (MPLS-TE), on page 196	Configures a PCE tolerance keepalive (which is the minimum acceptable peer proposed keepalive).

pce peer (MPLS-TE)

To configure an IPv4 self address for a path computation element (PCE) peer, use the **pce peer** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
pce peer ipv4 address
no pce peer ipv4 address
```

Syntax Description	ipv4 address Configures the IPv4 address for PCE.
---------------------------	--

Command Default	TE metric
------------------------	-----------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.5.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task	Operations
		mpls-te read, write

Examples	The following example shows how to configure an IPv4 self address for a PCE peer:
-----------------	---

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# pce peer ipv4 11.11.11.11
```

Related Commands	Command	Description
	mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
	path-option (MPLS-TE), on page 164	Configures a path option for an MPLS-TE tunnel.
	pce address (MPLS-TE), on page 183	Configures the IPv4 self address for a PCE.
	pce deadtimer (MPLS-TE), on page 185	Configures a PCE deadtimer.
	pce keepalive (MPLS-TE), on page 187	Configures a PCEP keepalive interval.

Command	Description
pce reoptimize (MPLS-TE), on page 191	Configures a periodic reoptimization timer.
pce request-timeout (MPLS-TE), on page 193	Configures a PCE request-timeout.
pce tolerance keepalive (MPLS-TE), on page 196	Configures a PCE tolerance keepalive (which is the minimum acceptable peer proposed keepalive).

pce reoptimize (MPLS-TE)

To configure a periodic reoptimization timer, use the **pce reoptimize** command in MPLS-TE configuration mode. To disable this feature, use the **no** form of this command.

pce reoptimize *value*
no pce reoptimize *value*

Syntax Description	<i>value</i> Periodic reoptimization timer value, in seconds. The range is 60 to 604800.
---------------------------	--

Command Default	<i>value</i> : 3600
------------------------	---------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

When the dead interval is 0, the LSR does not time out a path computation element protocol (PCEP) session to a remote peer.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to configure a periodic reoptimization timer for 200 seconds:
-----------------	---

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# pce reoptimize 200
```

Related Commands	Command	Description
	mpls traffic-eng , on page 138	Enters MPLS-TE configuration mode.
	path-option (MPLS-TE) , on page 164	Configures a path option for an MPLS-TE tunnel.
	pce address (MPLS-TE) , on page 183	Configures the IPv4 self address for a PCE.
	pce deadtimer (MPLS-TE) , on page 185	Configures a PCE deadtimer.

Command	Description
pce keepalive (MPLS-TE), on page 187	Configures a PCEP keepalive interval.
pce peer (MPLS-TE), on page 189	Configures an IPv4 self address for a PCE peer.
pce request-timeout (MPLS-TE), on page 193	Configures a PCE request-timeout.
pce tolerance keepalive (MPLS-TE), on page 196	Configures a PCE tolerance keepalive (which is the minimum acceptable peer proposed keepalive).

pce request-timeout (MPLS-TE)

To configure a path computation element (PCE) request-timeout, use the **pce request-timeout** command in MPLS-TE configuration mode. To disable this feature, use the **no** form of this command.

pce request-timeout *value*
no pce request-timeout *value*

Syntax Description	<i>value</i> PCE request-timeout, in seconds. The range is 5 to 100.
---------------------------	--

Command Default	<i>value</i> : 10
------------------------	-------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

PCC or PCE keeps a pending path request only for the request-timeout period.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to configure a PCE request-timeout for 10 seconds:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# pce request-timeout 10
```

Related Commands	Command	Description
	mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
	path-option (MPLS-TE), on page 164	Configures a path option for an MPLS-TE tunnel.
	pce address (MPLS-TE), on page 183	Configures the IPv4 self address for a PCE.
	pce deadtimer (MPLS-TE), on page 185	Configures a PCE deadtimer.

Command	Description
pce keepalive (MPLS-TE), on page 187	Configures a PCEP keepalive interval.
pce peer (MPLS-TE), on page 189	Configures an IPv4 self address for a PCE peer
pce reoptimize (MPLS-TE), on page 191	Configures a periodic reoptimization timer.
pce tolerance keepalive (MPLS-TE), on page 196	Configures a PCE tolerance keepalive (which is the minimum acceptable peer proposed keepalive).

pce stateful-client

To enter the stateful PCE client configuration mode and enable stateful PCE capabilities, use the **pce stateful-client** command in MPLS-TE configuration mode. To disable stateful PCE capabilities, use the **no** form of this command.

pce stateful-client
no pce stateful-client

This command has no keywords or arguments.

Command Default Stateful PCE is disabled.

Command Modes MPLS-TE configuration

Command History	Release	Modification
	Release 5.1.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When the stateful-client configuration is added to the TE-node, it will close all existing PCEP peer connections, and add the stateful capabilities TLV to the OPEN object it exchanges during the PCEP session establishment.

When the stateful-client configuration is removed from the TE-node, it will delete all PCE instantiated tunnels, close all existing PCEP connections, and no longer add the stateful capabilities TLV to the OPEN object it exchanges during the PCEP session establishment.

Task ID	Task ID	Operation
	mpls-te	read, write

This example shows how to configure stateful PCE mode:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#pce stateful-client
RP/0/RP0/CPU0:router(config-mpls-te-pce-stateful)#
```

pce tolerance keepalive (MPLS-TE)

To configure a path computation element (PCE) tolerance keepalive (which is the minimum acceptable peer proposed keepalive), use the **pce tolerance keepalive** command in MPLS-TE configuration mode. To disable this feature, use the **no** form of this command.

pce tolerance keepalive *value*
no pce tolerance keepalive *value*

Syntax Description	<i>value</i> PCE tolerance keepalive value, in seconds. The range is 0 to 255.
---------------------------	--

Command Default	<i>value</i> : 10
------------------------	-------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to configure a PCE tolerance keepalive for 10 seconds:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# pce tolerance keepalive 10
```

Related Commands	Command	Description
	mpls traffic-eng , on page 138	Enters MPLS-TE configuration mode.
	path-option (MPLS-TE) , on page 164	Configures a path option for an MPLS-TE tunnel.
	pce address (MPLS-TE) , on page 183	Configures the IPv4 self-address for a PCE.
	pce deadtimer (MPLS-TE) , on page 185	Configures a PCE deadtimer.
	pce keepalive (MPLS-TE) , on page 187	Configures a PCEP keepalive interval.

Command	Description
pce peer (MPLS-TE), on page 189	Configures an IPv4 self address for a PCE peer
pce reoptimize (MPLS-TE), on page 191	Configures a periodic reoptimization timer.
pce request-timeout (MPLS-TE), on page 193	Configures a PCE request-timeout.

peer source ipv4

To configure PCEP session outgoing interface, use the **peer source ipv4** command in MPLS-TE pce configuration mode.

peer source ipv4 *ip-address*

Syntax Description	<i>ip-address</i> Specifies IP version 4 address of the source in A.B.C.D format.
---------------------------	---

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	MPLS-TE pce configuration
----------------------	---------------------------

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines	No specific guidelines impact the use of this command.
-------------------------	--

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to configure PCEP session outgoing interface:

```
RP/0/0/CPU0:ios#configure
RP/0/0/CPU0:ios(config)#mpls traffic-eng pce
RP/0/0/CPU0:ios(config-mpls-te-pce)#peer source ipv4 1.1.1.1
```

policy-class

To configure policy-based tunnel selection (PBTS) to direct traffic into specific TE tunnels, use the **policy-class** command in interface configuration mode. To disable this feature, use the **no** form of this command.

Multiple EXP values can be specified as part of a policy-class, separated by spaces. The EXP values configured to a TE tunnel effectively form a monolithic policy-class, which should not overlap with other policy-classes. Once an EXP value is used in a policy-class configuration, it can only be reused if the subsequent policy-class configurations containing that EXP value are identical. For example, if the configuration **policy-class 1 2 3** is applied to one or more tunnels, configurations such as **policy-class 1**, **policy-class 2 3**, or **policy-class 3 4 5** become invalid.

```
policy-class {1 - 7|default}
no policy-class
```

Syntax Description

1 - 7 Policy-class attribute to map the correct traffic class to this policy. Multiple EXP values can be specified, separated by spaces.

default Default tunnel policy class.

Command Modes

Interface configuration

Command History

Release	Modification
Release 3.6.0	This command was introduced.
Release 4.3.1	<ul style="list-style-type: none"> The support for specifying multiple traffic class to policy-class attribute added. The new keyword default added to the command for defining the default tunnel on the router.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **policy-class** command to enable policy-based tunnel selection (PBTS). See *Cisco IOS XR MPLS Configuration Guide for the Cisco CRS-1 Router* for more information on PBTS.

To display the configured PBTS policy-class value, use the **show mpls traffic-eng tunnels** command.

To display information about PBTS configuration, use the **show cef** and **show cef hardware** commands in *Cisco IOS XR IP Addresses and Services Command Reference for the Cisco CRS-1 Router*.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to configure a policy class:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# policy-class 7
```

The following example shows how to configure a policy-class that maps to multiple traffic classes:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# policy-class 1 2 3
```

The following example shows how to configure a default policy-class tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# policy-class default
RP/0/RP0/CPU0:router(config-if)# commit
```

Related Commands

Command	Description
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.
show cef	Displays the IPv4 or IPv6 Cisco Express Forwarding table.
show cef hardware	Displays Cisco Express Forwarding IPv4 or IPv6 hardware status and configuration information.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

precedence

To configure stateful path computation elements (PCEs) for delegating label switched paths (LSPs), use the **precedence** command in MPLS-TE pce configuration mode. To remove the configuration, use the **no** form of this command.

```
precedence N
no precedence N
```

Syntax Description	<i>N</i> Precedence value. The range is from 0 to 255.
---------------------------	--

Command Default	<i>N</i> : 255
------------------------	----------------

Command Modes	MPLS-TE pce configuration
----------------------	---------------------------

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines	The path computation client (PCC) uses the configured precedence value to select stateful PCEs for delegating LSPs. Low precedence value corresponds to high priority.
-------------------------	--

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to configure precedence for a PCE IPv4 peer:

```
RP/0/0/CPU0:ios#configure
RP/0/0/CPU0:ios(config)#mpls traffic-eng pce
RP/0/0/CPU0:ios(config-mpls-te-pce)#peer ipv4 10.1.1.1
RP/0/0/CPU0:ios(config-mpls-te-pce-peer)#precedence 255
```

priority (MPLS-TE)

To configure the setup and reservation priority for an MPLS-TE tunnel, use the **priority** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

priority *setup-priority hold-priority*
no priority *setup-priority hold-priority*

Syntax Description

setup-priority Priority used when signaling a label switched path (LSP) for this tunnel to determine which existing tunnels can be preempted. Range is 0 to 7 (in which a lower number indicates a higher priority). Therefore, an LSP with a setup priority of 0 can preempt any LSP with a non-0 priority.

hold-priority Priority associated with an LSP for this tunnel to determine if it should be preempted by other LSPs that are being signaled. Range is 0 to 7 (in which a lower number indicates a higher priority).

Command Default

setup-priority: 7
hold-priority: 7

Command Modes

Interface configuration

Command History

Release	Modification
Release 2.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When an LSP is signaled and an interface does not currently have enough bandwidth available for that LSP, the call admission software (if necessary) preempts lower-priority LSPs to admit the new LSP. Accordingly, the new LSP priority is the setup priority and the existing LSP priority is the hold priority. The two priorities make it possible to signal an LSP with a low setup priority (so that the LSP does not preempt other LSPs on setup) and a high hold priority (so that the LSP is not preempted after it is established). Setup priority and hold priority are typically configured to be equal, and setup priority cannot be numerically smaller than the hold priority.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to configure a tunnel with a setup and hold priority of 1:

```
RP/0/RP0/CPU0:router# configure  
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1  
RP/0/RP0/CPU0:router(config-if)# priority 1 1
```

Related Commands

Command	Description
interface tunnel-te, on page 104	Configures an MPLS-TE tunnel interface.

record-route

To record the route used by a tunnel, use the **record-route** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

record-route
no record-route

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes Interface configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note You must configure record-route on TE tunnels that are protected by multiple backup tunnels merging at a single node.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to enable record-route on the TE tunnel:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# record-route
```

Related Commands	Command	Description
	show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

relegation-timeout

To configure the time (in seconds) that a path computation client (PCC) must wait before re-delegating LSPs after a PCEP session with the active stateful PCE is disconnected, use the **relegation-timeout** command in MPLS-TE pce configuration mode.

relegation-timeout *seconds*

Syntax Description	<i>seconds</i> Specifies redelegation timeout for LSPs after session failure in seconds. The range is from 0 to 3600.				
Command Default	<i>seconds</i> : 180				
Command Modes	MPLS-TE pce configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 5.3.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 5.3.0	This command was introduced.
Release	Modification				
Release 5.3.0	This command was introduced.				
Usage Guidelines	No specific guidelines impact the use of this command.				
Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operation</th> </tr> </thead> <tbody> <tr> <td>mpls-te</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operation	mpls-te	read, write
Task ID	Operation				
mpls-te	read, write				

Example

The following example shows how to configure the time (in seconds) that a PCC must wait before re-delegating LSPs:

```
RP/0/0/CPU0:ios#configure
RP/0/0/CPU0:ios(config)#mpls traffic-eng pce
RP/0/0/CPU0:ios(config-mpls-te-pce)#stateful-client timers redelegation-timeout 30
```

remote (GMPLS)

To configure Link Management Protocol (LMP) Neighbor remote Traffic Engineering (TE) links, use the **remote** command in MPLS-TE interface LMP data link adjacency configuration mode. To return to the default behavior, use the **no** form of this command.

```
remote {interface-id unnum identifier | switching capability |{fsc | lsc | psc1}| te-link-id|{ipv4 address|unnum identifier}}
no remote {interface-id unnum identifier | switching capability |{fsc | lsc | psc1}| te-link-id|{ipv4 address|unnum identifier}}
```

Syntax Description	Parameter	Description
	interface-id	Configures the LMP neighbor remote interface identifier.
	unnum identifier	Configures the unnumbered interface identifier. Range is 1 to 4294967295.
	switching-capability	Configures the remote LMP MPLS-TE interface switching capability.
	fsc lsc psc1	Configures the capability types: Fiber-Switch Capable, Lambda-Switch Capable, and Packet-Switch Capable.
	te-link-id	Configures the remote LMP MPLS-TE link ID address.
	ipv4 address	Configures the IPv4 address.
	unnum identifier	Configures the unnumbered interface and identifier.

Command Default No default behavior or values

Command Modes MPLS-TE interface LMP data link adjacency configuration

Command History	Release	Modification
	Release 3.3.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure LMP Neighbor remote TE links for unnumber interface-id 1066:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface POS 0/1/0/0
RP/0/RP0/CPU0:router(config-mpls-te-if)# lmp data-link adjacency
RP/0/RP0/CPU0:router(config-mpls-te-if-adj)# remote interface-id unnum 1066
```

Related Commands

Command	Description
destination (MPLS-TE), on page 65	Configures bidirectional optical tunnels.
lmp hello (GMPLS), on page 122	Configures LMP IPCC management hello settings.
match (GMPLS), on page 134	Configures or matches active and passive tunnels.
passive (GMPLS), on page 162	Configures passive GMPLS tunnels.
switching (GMPLS), on page 351	Configures TE-link switching attributes.

reoptimize (MPLS-TE)

To force the reoptimization interval for all TE tunnels, use the **reoptimize** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
reoptimize frequency
no reoptimize frequency
```

Syntax Description	<p><i>frequency</i> Timer frequency range, in seconds. Range is from 0 to 604800.</p> <p>Note:</p> <ul style="list-style-type: none"> • A value of 0 disables periodic reoptimization. • Any value in the range from 1 to 60 results in periodic reoptimization that occurs every 60 seconds.
---------------------------	---

Command Default	<i>frequency</i> : 3600
------------------------	-------------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 2.0	This command was introduced.
Release	Modification				
Release 2.0	This command was introduced.				

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>mpls-te</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	mpls-te	read, write
Task ID	Operations				
mpls-te	read, write				

Examples The following example shows how to force the reoptimization interval to 60 seconds:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# reoptimize 60
```

Related Commands	<table border="1"> <thead> <tr> <th>Command</th> <th>Description</th> </tr> </thead> <tbody> <tr> <td>mpls traffic-eng reoptimize (EXEC), on page 150</td> <td>Triggers the reoptimization interval of all TE tunnels.</td> </tr> </tbody> </table>	Command	Description	mpls traffic-eng reoptimize (EXEC), on page 150	Triggers the reoptimization interval of all TE tunnels.
Command	Description				
mpls traffic-eng reoptimize (EXEC), on page 150	Triggers the reoptimization interval of all TE tunnels.				

reoptimize timers delay (MPLS-TE)

To delay removal or relabeling of the old label switched paths (LSPs) (reoptimized LSP from the forwarding plane) after tunnel reoptimization, use the **reoptimize timers delay** command in MPLS-TE configuration mode. To restore the default value, use the **no** form of this command.

```
reoptimize timers delay {after-frr seconds|cleanup delay-time|installation delay-time|path-protection seconds}
```

```
no reoptimize timers delay {after-frr seconds|cleanup delay-time|installation delay-time|path-protection seconds}
```

Syntax Description		
after-frr		Delays the LSP reoptimization in the event of the FRR.
<i>seconds</i>		Reoptimization initiation delay time of the tunnel, in seconds, after an FRR event. Range is from 0 to 120.
cleanup		Delays removal of the old LSPs after tunnel reoptimization.
<i>delay-time</i>		Reoptimization delay time, in seconds. A value of 0 disables delay. The valid range is from 0 to 300 for cleanup time.
installation		Delays installation of a new label after tunnel reoptimization.
<i>delay-time</i>		Reoptimization delay time, in seconds. A value of 0 disables delay. The valid range is 0 to 3600 for installation time.
path-protection		Delays the time between path protection switchover event and tunnel reoptimization.
<i>seconds</i>		Time, in seconds, between path protection switchover event and tunnel reoptimization. A value of 0 disables delay. Range is from 0 to 604800.

Command Default	
after-frr <i>delay</i> : 0	
cleanup <i>delay</i> : 20	
<i>delay-time</i> : 20	
installation <i>delay</i> : 20	

path-protection: 180

Command Modes MPLS-TE configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.9.0	The after-frr and path-protection keywords were added.

Usage Guidelines

A device with Multiprotocol Label Switching traffic engineering (MPLS-TE) tunnels periodically examines tunnels with established LSPs to discover whether more efficient LSPs (paths) are available. If a better LSP is available, the device signals the more efficient LSP; if the signaling is successful, the device replaces the older LSP with the new, more efficient LSP.

Sometimes the slower router-point nodes may not yet utilize the new label's forwarding plane. In this case, if the headend node replaces the labels quickly, it can result in brief packet loss. By delaying the cleanup of the old LSP using the **reoptimize timers delay cleanup** command, packet loss is avoided.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to set the reoptimization cleanup delay time to 1 minute:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# mpls traffic-eng
RP/0/RP0/CPU0:router (config-mpls-te)# reoptimize timers delay cleanup 60
```

The following example shows how to set the reoptimization installation delay time to 40 seconds:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# mpls traffic-eng
RP/0/RP0/CPU0:router (config-mpls-te)# reoptimize timers delay installation 40
```

The following example shows how to set the reoptimization delay time after the event of the FRR to 50 seconds:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# mpls traffic-eng
RP/0/RP0/CPU0:router (config-mpls-te)# reoptimize timers delay after-frr 50
```

The following example shows how to set the reoptimization delay time between path protection switchover event and tunnel reoptimization to 80:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router (config)# mpls traffic-eng
```

```
RP/0/RP0/CPU0:router(config-mpls-te)# reoptimize timers delay path-protection 80
```

Related Commands

Command	Description
mpls traffic-eng reoptimize (EXEC), on page 150	Reoptimizes all traffic engineering tunnels immediately.

route-priority

To enable users to adjust the route-priority given to TE labels into the data plane, compared to labels and route updates from other protocols, use the **route-priority** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
route-priority role {middle|head {primary|backup}} queue queue
no route-priority role {middle|head {primary|backup}}
```

Syntax Description	role	Defines the role of the tunnel to which the label belongs.
	middle	A tunnel mid-point.
	head backup	A tunnel head which is assigned as a FRR backup to an interface.
	head primary	All other tunnel heads.
	<i>queue</i>	Defines the queue number. Range is from 0 to 12 inclusive; lower values represent higher priority queues.

Command Default

head backup: 9
 head primary: 10
 middle: 10

Command Modes MPLS-TE configuration

Command History	Release	Modification
	Release 4.2.4	This command was introduced.

Usage Guidelines Use this command to change the priority given to TE labels when updates to the forwarding plane are made from the control plane.

The priority values used by other applications are:

- 0 - Unused
- 1 - Unused
- 2 - RIB/LDP (Critical)
- 3 - Unused
- 4 - Unused
- 5 - RIB/LDP (High)
- 6 - Unused

- 7 - Unused
- 8 - RIB/LDP (Medium)
- 9 - TE backup tunnel head
- 10 - Other TE tunnels
- 11 - Unused (future TE use)
- 12 - Unused (future TE use)

**Caution**

The default prioritization of label updates from the control plane to the forwarding plane has been carefully chosen to avoid traffic loss under both normal operation and high system load, and to balance the needs of the various features that employ label switching. Changing these defaults may cause unpredictable behavior including traffic loss, especially when the router is experiencing high load. Use of this command is not recommended without proper understanding of its effects and possible side-effects.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following example shows how to enable route-priority:

```
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# route-priority role middle queue 7
```

router-id secondary (MPLS-TE)

To configure a secondary TE router identifier in MPLS-TE to be used locally (not advertised through IGP), use the **router-id secondary** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

router-id secondary *IP address*
no router-id secondary *IP address*

Syntax Description	<i>IP address</i> IPv4 address to be used as secondary TE router ID.
---------------------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.4.1	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **router-id secondary** command on tail end nodes to terminate verbatim tunnels to secondary TE RIDs as destinations.

You can configure up to 32 IPv4 addresses as TE secondary router IDs.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure a secondary TE router identifier in MPLS-TE:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# router-id secondary 1.1.1.1
RP/0/RP0/CPU0:router(config-mpls-te)# router-id secondary 2.2.2.2
```

Related Commands

Command	Description
mpls traffic-eng router-id (MPLS-TE router), on page 154	Specifies that the TE router identifier for the node is the IP address associated with a given interface.

show explicit-paths

To display the configured IP explicit paths, use the **show explicit-paths** command in EXEC mode.

```
show explicit-paths [{name path-name|identifier number}]
```

Syntax Description

name *path-name* (Optional) Displays the name of the explicit path.

identifier *number* (Optional) Displays the number of the explicit path. Range is 1 to 65535.

Command Default

No default behavior or values

Command Modes

EXEC

Command History

Release	Modification
Release 2.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

An IP explicit path is a list of IP addresses that represent a node or link in the explicit path.

Task ID

Task ID	Operations
mpls-te	read

Examples

The following shows a sample output from the **show explicit-paths** command:

```
RP/0/RP0/CPU0:router# show explicit-paths
```

```
Path ToR2    status enabled
             0x1: next-address 192.168.1.2
             0x2: next-address 10.20.20.20
Path ToR3    status enabled
             0x1: next-address 192.168.1.2
             0x2: next-address 192.168.2.2
             0x3: next-address 10.30.30.30
Path 100     status enabled
             0x1: next-address 192.168.1.2
             0x2: next-address 10.20.20.20
Path 200     status enabled
             0x1: next-address 192.168.1.2
             0x2: next-address 192.168.2.2
             0x3: next-address 10.30.30.30
```

This table describes the significant fields shown in the display.

Table 1: show explicit-paths Command Field Descriptions

Field	Description
Path	Pathname or number, followed by the path status.
1: next-address	First IP address in the path.
2: next-address	Second IP address in the path.

The following shows a sample output from the **show explicit-paths** command using a specific path name:

```
RP/0/RP0/CPU0:router# show explicit-paths name ToR3

  Path ToR3      status enabled
    0x1:  next-address 192.168.1.2
    0x2:  next-address 192.168.2.2
    0x3:  next-address 10.30.30.30
```

The following shows a sample output from the **show explicit-paths** command using a specific path number:

```
RP/0/RP0/CPU0:router# show explicit-paths identifier 200

  Path 200      status enabled
    0x1:  next-address 192.168.1.2
    0x2:  next-address 192.168.2.2
    0x3:  next-address 10.30.30.30
```

Related Commands

Command	Description
index exclude-address, on page 91	Specifies the next IP address to exclude from the explicit path.
index next-address, on page 94	Specifies path entries at a specific index.

show interfaces tunnel-te accounting

To display IPv4 and IPv6 statistics for MPLS traffic engineering (TE) tunnels, use the **show interfaces tunnel-te accounting** command in EXEC mode.

```
show interfaces tunnel-te tunnel-number accounting [{location location-id |rates}]
```

Syntax Description		
<i>tunnel-number</i>		Specifies TE tunnel number. Range is from 0 to 6553.
location <i>location-id</i>		Specifies fully qualified location of the TE tunnel.
rates		Displays interface accounting rates.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 5.1.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task	Operation
	mpls-te	read

This example displays accounting information from tunnel-te interface *I*:

```
RP/0/RP0/CPU0:router#show interface tunnel-te 1 accounting
```

```
tunnel-te1
  Protocol          Pkts In      Chars In      Pkts Out      Chars Out
  IPv4_UNICAST      0             0              5             520
  IPv6_UNICAST      0             0             15            1560
```

show mpls traffic-eng affinity-map

To display the color name-to-value mappings configured on the router, use the **show mpls traffic-eng affinity-map** command in EXEC mode.

show mpls traffic-eng affinity-map

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 3.4.0	This command was introduced.
	Release 3.9.0	The Bit Position field was added to the sample output.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If the affinity value of an affinity associated with an affinity constraint is unknown, the **show mpls traffic-eng affinity-map** command output displays: "(refers to undefined affinity name)"

Task ID	Task ID	Operations
	mpls-te	read

Examples

The following shows a sample output from the **show mpls traffic-eng affinity-map** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng affinity-map
```

Affinity Name	Bit-position	Affinity Value
bcdefghabcdefghabcdefghabcdefgha	0	1

Table 2: show mpls traffic-eng affinity-map Field Descriptions, on page 219 describes the significant fields shown in the display.

Table 2: show mpls traffic-eng affinity-map Field Descriptions

Field	Description
Affinity Name	Affinity name associated with the tunnel affinity constraints.
Bit-position	Bit position set in the 32-bit affinity value
Affinity Value	Affinity value associated with the affinity name.

Related Commands

Command	Description
affinity, on page 10	Configures an affinity (the properties the tunnel requires in its links) for an MPLS-TE tunnel.
affinity-map, on page 15	Assigns a numerical value to each affinity name.

show mpls traffic-eng attribute-set

To display the attribute set for MPLS-TE, use the **show mpls traffic-eng attribute-set** command in EXEC mode.

```
show mpls traffic-eng attribute-set [{auto-backup|auto-mesh|path-option|xro}[attribute-set-name]]
```

Syntax Description		
	auto-backup	Displays information for the auto-backup attribute type.
	auto-mesh	Displays information for the auto-mesh attribute type.
	path-option	Displays information for the path-option attribute type.
	xro	Displays information for the XRO attribute type.
	<i>attribute-set-name</i>	Specifies the name of the attribute set to be displayed.

Command Default Displays information about all types of attribute sets.

Command Modes EXEC mode

Command History	Release	Modification
	Release 4.2.0	This command was introduced.
	Release 4.3.0	The xro keyword was added.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

To use this command, first enable the MPLS-TE application.

Task ID	Task ID	Operation
	mpls-te	read
	ouni	read

Example

The following command shows the attribute set for auto-backup attribute type.

```
RP/0/RP0/CPU0:router# show mpls traffic-eng attribute-set auto-backup auto1
```

```
Attribute Set Name: autol (Type: auto-backup)
  Affinity: 0x0/0xffff (Default)
  Priority: 7 7 (Default)
  Record-route: Enabled
  Policy-class: 0 (Not configured)
  Logging: None
  List of protected interfaces (count 0)
  List of tunnel IDs (count 0)
```

The following command shows the attribute set for auto-mesh attribute type.

```
RP/0/RP0/CPU0:router# show mpls traffic-eng attribute-set auto-mesh mesh1
```

```
Attribute Set Name: mesh1 (Type: auto-mesh)
  Bandwidth: 0 kbps (CT0) (Default)
  Affinity: 0x0/0xffff (Default)
  Priority: 7 7 (Default)
  Interface Bandwidth: 0 kbps (Default)
  AutoRoute Announce: Disabled
  Auto-bw: Disabled
  Soft Preemption: Disabled
  Fast Reroute: Disabled, Protection Desired: None
  Record-route: Disabled
  Policy-class: 0 (Not configured)
  Logging: None
  List of Mesh Groups (count 0)
```

The following command shows the attribute set for path-option attribute type.

```
RP/0/RP0/CPU0:router# show mpls traffic-eng attribute-set path-option path1
```

```
Attribute Set Name: path1 (Type: path option)
  Bandwidth: 0 kbps (CT0) (Default)
  Affinity: 0x0/0xffff (Default)
  List of tunnel IDs (count 0)
```

The following command shows the attribute set for xro.

```
RP/0/RP0/CPU0:router# show mpls traffic-eng attribute-set xro
```

```
Attribute Set Name: foo (Type: XRO)
Number of XRO constraints : 2
  LSP, best-effort, LSP-id used
    Specified by FEC: tunnel-id 55, LSP-id 88, ext. id 10.10.10.10
                      source 10.10.10.10, destination 20.20.20.20
  LSP, strict, LSP-id ignored
    Specified by FEC: tunnel-id 3, LSP-id 0, ext. id 1.1.1.1
                      source 1.1.1.1, destination 2.2.2.2
```

show mpls traffic-eng autoroute

To display tunnels that are announced to the Interior Gateway Protocol (IGP), including information about next hop and destinations, use the **show mpls traffic-eng autoroute** command in EXEC mode.

show mpls traffic-eng autoroute [**name** *tunnel-name*][*IP-address*]

Syntax Description	<i>IP-address</i> (Optional) Tunnel leading to this address.						
	name <i>tunnel-name</i> (Optional) Specifies a tunnel by name.						
Command Default	None						
Command Modes	EXEC						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 5.1.1</td> <td> <ul style="list-style-type: none"> Support was added to include name <i>tunnel-name</i> keyword and argument and to display <i>signalled-name</i> in the command output. Support was added to display MPLS TE IPv6 autoroute announce information for IS-IS IGP. </td> </tr> </tbody> </table>	Release	Modification	Release 2.0	This command was introduced.	Release 5.1.1	<ul style="list-style-type: none"> Support was added to include name <i>tunnel-name</i> keyword and argument and to display <i>signalled-name</i> in the command output. Support was added to display MPLS TE IPv6 autoroute announce information for IS-IS IGP.
Release	Modification						
Release 2.0	This command was introduced.						
Release 5.1.1	<ul style="list-style-type: none"> Support was added to include name <i>tunnel-name</i> keyword and argument and to display <i>signalled-name</i> in the command output. Support was added to display MPLS TE IPv6 autoroute announce information for IS-IS IGP. 						

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The traffic-engineering tunnels are taken into account for the enhanced shortest path first (SPF) calculation of the IGP. The **show mpls traffic-eng autoroute** command displays those tunnels that IGP is currently using in its enhanced SPF calculation (that is, those tunnels that are up and have autoroute configured).

Tunnels are organized by destination. All tunnels to a destination carry a share of the traffic tunneled to that destination.

Task ID	Task ID	Operations
	mpls-te	read

Examples

The following shows a sample output from the **show mpls traffic-eng autoroute** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng autoroute

Destination 103.0.0.3 has 2 tunnels in OSPF 0 area 0
tunnel-te1 (traffic share 1, nexthop 103.0.0.3)
tunnel-te2 (traffic share 1, nexthop 103.0.0.3)
```

This table describes the significant fields shown in the display.

Table 3: show mpls traffic-eng autoroute Command Field Descriptions

Field	Description
Destination	Multiprotocol Label Switching (MPLS) TE tail-end router ID.
traffic share	A factor, based on bandwidth, indicating how much traffic this tunnel should carry, relative to other tunnels, to the same destination. If two tunnels go to a single destination, one with a traffic share of 200 and the other with a traffic share of 100, the first tunnel carries two-thirds of the traffic.
Nexthop	Next-hop router ID of the MPLS-TE tunnel.
absolute metric	Metric with mode absolute for the MPLS-TE tunnel.
relative metric	Metric with mode relative for the MPLS-TE tunnel.

This sample output displays *Signalled-Name* information:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng autoroute
Destination 192.168.0.4 has 1 tunnels in OSPF ring area 0
  tunnel-tel (traffic share 0, nexthop 192.168.0.4)
  Signalled-Name: rtrA_t1
```

This sample output displays IS-IS autoroute information:

```
RP/0/RP0/CPU0:router#show mpls traffic-eng autoroute
Destination 192.168.0.1 has 1 tunnels in IS-IS ring level 1
  tunnel-tel (traffic share 0, nexthop 192.168.0.1)
    (IS-IS ring level-1, IPV4 Unicast)
    (IS-IS ring level-1, IPV6 Unicast)
```

Related Commands

Command	Description
autoroute metric, on page 34	Specifies the MPLS-TE tunnel metric that the IGP-enhanced SPF calculation uses.
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.
topology holddown sigerr (MPLS-TE), on page 361	Specifies the time that a router should ignore a link in its TE topology database in tunnel path CSPF computations following a TE tunnel signalling error on the link.

show mpls traffic-eng auto-tunnel backup

To display information about automatically build MPLS-TE backup tunnels, use the **show mpls traffic-eng auto-tunnel backup** command in EXEC mode.

```
show mpls traffic-eng auto-tunnel {backup [{private|summary|unused}]}
```

Syntax Description	backup	Displays information about auto-tunnel backup.
	private	(Optional) Displays private information about the automatically build MPLS-TE backup tunnels.
	summary	(Optional) Displays the automatically build MPLS-TE backup tunnels summary information.
	unused	(Optional) Displays only unused MPLS-TE backup tunnels.

show mpls traffic-eng auto-tunnel mesh

To display information about automatically built MPLS-TE mesh tunnels, use the **show mpls traffic-eng auto-tunnel mesh** command in EXEC mode.

```
show mpls traffic-eng auto-tunnel mesh {mesh-value|unused|summary|attribute-set name|destination address|destination-list name|down| up|tunnel {created|not-created} |onehop}
```

Syntax Description		
mesh <i>mesh-value</i>		Displays the tunnels that belong to the specified auto-tunnel mesh group. The range of mesh group ID is from 0 to 4294967295.
attribute-set <i>name</i>		Displays mesh-groups configured with a specific attribute set.
destination <i>address</i>		Displays only the destinations with a specified address.
destination-list <i>name</i>		Displays mesh-groups configured with a specified prefix-list.
down		Displays only those tunnels that are down.
up		Displays only those tunnels that are up.
summary		Displays auto-tunnel mesh summary information.
unused		Displays only the down tunnels with no destination in the topology.
tunnel created not-created		Specifies either created destinations with tunnels, or not-created destinations without tunnels.
onehop		Displays onehop enabled mesh groups.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 4.1.1	This command was introduced.
	Release 5.1.2	The onehop keyword was added to display onehop enabled mesh groups.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	MPLS-TE	read

This is sample output from the **show mpls traffic-eng auto-tunnel mesh** command:

```
RP/0/RP0/CPU0:router show mpls traffic-eng auto-tunnel mesh
```

```
Auto-tunnel Mesh Global Configuration:
  Unused removal timeout: 1h 0m 0s
  Configured tunnel number range: 1000-1200
```

```
Auto-tunnel Mesh Groups Summary:
  Mesh Groups count: 1
  Mesh Groups Destinations count: 3
  Mesh Groups Tunnels count:
    3 created, 0 up, 3 down, 0 FRR enabled
```

```
Mesh Group: 65 (3 Destinations)
  Status: Enabled
  Attribute-set: am-65
  Destination-list: dl-65 (Not a prefix-list)
  Recreate timer: Not running
```

Destination	Tunnel ID	State	Unused timer
192.168.0.2	1000	up	Not running
192.168.0.3	1001	up	Not running
192.168.0.4	1002	up	Not running

```
Displayed 3 tunnels, 0 up, 3 down, 0 FRR enabled
```

```
Auto-mesh Cumulative Counters:
  Last cleared: Wed Nov 9 12:56:37 2011 (02:39:07 ago)
  Total
  Created: 3
  Connected: 0
  Removed (unused): 0
  Removed (in use): 0
  Range exceeded: 0
```

This shows how to configure the **auto-tunnel mesh** command with **destination-list** and **attribute-set** keywords:

```
RP/0/RP0/CPU0:router (config)# mpls traffic-eng
RP/0/RP0/CPU0:router (config-mpls-te)# auto-tunnel mesh
RP/0/RP0/CPU0:router (config-te-auto-mesh)# group 65
RP/0/RP0/CPU0:router (config-te-mesh-group)# disable
RP/0/RP0/CPU0:router (config-te-mesh-group)# destination-list dl-65
RP/0/RP0/CPU0:router (config-te-mesh-group)# attribute-set am-65
```

Note This **attribute-set** is an optional configuration. Without this configuration, all tunnels use default tunnel attribute values. If you configure a non-existent attribute-set, this mesh group does not create any tunnel.

Note This **destination-list** configuration is mandatory. If there is no IPv4 prefix-list by this name on router, this mesh group create tunnels with all routers in the network.

This sample output displays information about one-hop tunnels:

```
RP/0/RP0/CPU0:router#show mpls traffic-eng auto-tunnel mesh onehop
```

```
Auto-tunnel Mesh Onehop Groups Summary:

show mpls traffic-eng collaborator-timers

To display the current status of the MPLS-TE collaborator timers, use the **show mpls traffic-eng collaborator-timers** command in EXEC mode.

show mpls traffic-eng collaborator-timers

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 3.9.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The MPLS-TE process maintains the timers for all of the collaborators such as RSVP, LSD, and so forth. The **show mpls traffic-eng collaborator-timers** command shows the status of these timers.

Task ID	Task ID	Operations
	mpls-te	read

Examples

The following sample output shows the current status of the collaborator timers:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng collaborator-timers

Collaborator Timers
-----
Timer Name: [LMRIB Restart] Index:[0]
  Duration: [60] Is running: NO
  Last start time: 02/09/2009 11:57:59
  Last stop time: 02/09/2009 11:58:00
  Last expiry time: Never expired
Timer Name: [LMRIB Recovery] Index:[1]
  Duration: [60] Is running: YES
  Last start time: 02/09/2009 11:58:00

Last stop time: Never Stopped
Last expiry time: 19/08/2009 17:53:44
Timer Name: [Clearing in progress BW for the whole topology] Index:[6]
Duration: [60] Is running: YES
Last start time: 02/09/2009 11:57:50
Last stop time: Never Stopped
Last expiry time: 02/09/2009 11:57:50

```

This table describes the significant fields shown in the display.

Table 4: show mpls traffic-eng collaborator-timers Command Field Descriptions

Field	Description
Timer Name	Timer name that is associated to a collaborator.
Index	Identification number of the timer.
Duration	Expiry delay of the timer, in seconds. For example, the duration indicates the timer interval.
Is running	Timer is running low or not.
Last start time	Last time that the collaborator process for MPLS LSD was restarted.
Last stop time	Time TE was able to reconnect to the MPLS LSD process.
Last expiry time	Time that timer expired.

show mpls traffic-eng counters signaling

To display tunnel signaling statistics, use the **show mpls traffic-eng counters signaling** command in EXEC mode.

```
show mpls traffic-eng counters {signaling|soft-preemption} {tunnel-number|all} [{heads | mids | tails}]
name tunnel-name| summary}
```

Syntax Description

signaling	Displays signaling counters.
soft-preemption	Displays the statistics for the soft-preemption.
<i>tunnel-number</i>	Statistics for the input tunnel number. The range is from 0 to 65535.
all	Displays statistics for all tunnels.
heads	(Optional) Displays statistics for all tunnel heads.
mids	(Optional) Displays statistics for all tunnel midpoints.
tails	(Optional) Displays statistics for all tunnel tails.
name	Displays statistics for a specified tunnel.
<i>tunnel-name</i>	Name of the specified tunnel.
summary	Displays a summary of signaling statistics.

Command Default

None

Command Modes

EXEC

Command History

Release	Modification
Release 2.0	This command was introduced.
Release 3.5.0	Support was added for the middles keyword.
Release 3.8.0	The <i>tunnel-name</i> argument was added and the middles keyword was replaced with the mids keyword.
Release 3.9.0	The sample output for the all keyword was modified to display the tunnel signaling statistics for all tunnels that includes the tunnel-mte interface.

Release	Modification
Release 4.2.0	The soft-preemption keyword was added.
Release 5.1.1	Support was added to include signame keyword and to display <i>signalled-name</i> in the command output.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Task Operations
mpls-te	read

Examples

This is a sample output from the **show mpls traffic-eng counters signaling** command, using the **all** keyword, which displays tunnel signaling statistics for all tunnels:

Table 5: show mpls traffic-eng counters signaling Command Field Descriptions

Field	Description
Tunnel Head	Tunnel head identifier.
Match Resv Create	Number of RSVP Reservation create messages received.
Sender Create	Number of Sender Create messages sent by TE to RSVP.
Path Error	Number of RSVP Path Error messages received.
Match Resv Change	Number of RSVP Reservation change messages received.
Sender Modify	Number of Sender Modify messages sent by TE to RSVP.
Path Change	Number of RSVP Path Change messages received.
Match Resv Delete	Number of RSVP Reservation delete messages received.
Sender Delete	Number of Sender Delete messages sent by TE to RSVP.
Path Delete	Number of RSVP Path Delete messages received.
Total	Total signaling messages received from RSVP.
Unknown	Unknown messages include fast reroute events and internal messages related to process restart.

This is sample output from the **show mpls traffic-eng counters soft-preemption** command, which displays statistics for the soft preempted LSPs:

Related Commands

Command	Description
clear mpls traffic-eng counters signaling, on page 56	Clears the counters for MPLS-TE tunnels.
clear mpls traffic-eng fast-reroute log, on page 59	Clears the counters for MPLS-TE tunnels.
soft-preemption	Enables soft-preemption on a head-end for the MPLS TE tunnel.

show mpls traffic-eng ds-te te-class

To display the Diff-Serv TE-class map in use, use the **show mpls traffic-eng ds-te te-class** command in EXEC mode.

show show mpls traffic-eng ds-te te-class

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 3.3.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note TE-class is used only in IETF DS-TE mode.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following shows a sample output from the **show mpls traffic-eng ds-te te-class** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng ds-te te-class

te-class 0: class-type 0 priority 7 status default
te-class 1: class-type 1 priority 7 status default
te-class 2: unused
te-class 3: unused
te-class 4: class-type 0 priority 0 status default
te-class 5: class-type 1 priority 0 status default
te-class 6: unused
te-class 7: unused
```

This table describes the significant fields shown in the display.

Table 6: show mpls traffic-eng ds-te te-class Command Field Descriptions

Field	Description
te-class	TE-class map, pair of class-type, and priority.
class-type	class-type of the tunnel.
status	Source of the TE-class map, either default or user configured.

show mpls traffic-eng forwarding

To display forwarding information on tunnels that were admitted locally, use the **show mpls traffic-eng forwarding** command in EXEC mode.

show mpls traffic-eng forwarding [**backup-name** *tunnel-name*] [**signalled-name** *tunnel-name*] [**source** *source-address*][**tunnel-id** *tunnel-id*] [**interface** {**in** | **inout** | **out**} *type interface-path-id*][**p2mp** | **p2p**]
[**detail**]

Syntax Description		
backup-name <i>tunnel-name</i>		(Optional) Restricts tunnels with this backup tunnel name.
signalled-name <i>tunnel-name</i>		(Optional) Restricts tunnels with this signalled tunnel name.
source <i>source-address</i>		(Optional) Restricts tunnels for this specified tunnel source IPv4 address.
tunnel-id <i>tunnel-id</i>		(Optional) Restricts tunnels for this tunnel identifier. Range for the <i>tunnel-id</i> argument is from 0 to 65535.
interface		(Optional) Displays information on the specified interface.
<i>type</i>		(Optional) Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>		Physical interface or a virtual interface. Note Use the show interfaces command to see a list of all possible interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.
in		Displays information for the input interface.
inout		Displays information for either the input or output interface.
out		Displays information for the output interface.
p2mp		(Optional) Displays only Point-to-Multipoint (P2MP) information.
p2p		(Optional) Displays only Point-to-Point (P2P) information.

detail	(Optional) Displays detailed forwarding information.
---------------	--

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	EXEC
----------------------	------

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.2	This command was supported.
	Release 3.8.0	The following keywords were added:

- **detail**
- **p2p**

	Release 3.9.0	The following keywords and arguments were added:
--	---------------	--

- **backup-name** keyword and *tunnel-name* argument.
- **signalled-name** keyword and *tunnel-name* argument.
- **source** keyword and *source-address* argument.
- **tunnel-id** keyword and *tunnel-id* argument.
- **in** keyword.
- **inout** keyword.
- **out** keyword.

The following modifications were made to support the P2MP TE feature:

- The sample output was updated to show local label sharing and output label rewrites.
 - The **p2mp** keyword was added.
-

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task ID	Operations
	mpls-te	read

Examples

The following shows a sample output from the **show mpls traffic-eng forwarding** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng forwarding

rewrites

```

This table describes the significant fields shown in the display.

Table 7: show mpls traffic-eng forwarding Field Descriptions

Field	Description
TUNNEL ID	Tunnel identification.
Ingress IF	Ingress interface of the tunnel.
Egress IF	Egress interface of the tunnel.
In lbl	Incoming label associated with the tunnel.
Out lbl	Outgoing label associated with the tunnel.
Backup tunnel	Fast Reroute backup tunnel
P2MP Tunnel rewrites	Table of rewrites that correspond to P2MP tunnels.
P2MP tunnels	Table of point-to-multipoint tunnels.
Label	Label for this rewrite.
IF Handle	Interface handle.
LSP ID	LSP identifier for the tunnel to which this rewrite corresponds.
C Type	RSVP Class Type for the tunnel to which this rewrite corresponds.

show mpls traffic-eng forwarding-adjacency

To display forwarding-adjacency information for an IPv4 address, use the **show mpls traffic-eng forwarding-adjacency** command in EXEC mode.

```
show mpls traffic-eng forwarding-adjacency [IP-address]
```

Syntax Description	<i>IP-address</i> (Optional) Destination IPv4 address for forwarding adjacency.						
Command Default	No default behavior or values						
Command Modes	EXEC						
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 3.4.0</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 5.1.1</td> <td>Support was added to display information on IPv6 autoroute forwarding adjacency information for IS-IS IGP.</td> </tr> </tbody> </table>	Release	Modification	Release 3.4.0	This command was introduced. Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>mpls-te</td> <td>read</td> </tr> </tbody> </table>	Task ID	Operations	mpls-te	read		
Task ID	Operations						
mpls-te	read						

Examples

This is a sample output from the **show mpls traffic-eng forwarding-adjacency** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng forwarding-adjacency

destination 3.3.3.3 has 1 tunnels
 tunnel-te1      (traffic share 0, next-hop 3.3.3.3)
 (Adjacency Announced: yes, holdtime 0)
```

This sample output displays information on IPv6 autoroute forwarding adjacency information for IS-IS IGP:

```
RP/0/RP0/CPU0:router#show mpls traffic-eng forwarding-adjacency

destination 3.3.3.3 has 1 tunnels

          tunnel-te10      (traffic share 0, next-hop 3.3.3.3)
                          (Adjacency Announced: yes, holdtime 0)
                          (IS-IS 100, IPv4 unicast)
                          (IS-IS 100, IPv6 unicast)
```

```
show mpls traffic-eng forwarding-adjacency
```

Related Commands

Command	Description
forwarding-adjacency, on page 89	Configures an MPLS-TE forwarding adjacency.

show mpls traffic-eng igp-areas

To display MPLS-TE internal area storage, use the **show mpls traffic-eng igp-areas** command in EXEC mode.

show mpls traffic-eng igp-areas [detail]

Syntax Description	detail (Optional) Displays detailed information about the configured MPLS-TE igp-areas and communication statistics with IGP.								
Command Default	No default behavior or values								
Command Modes	EXEC

This table describes the significant fields shown in the display.

Table 8: show mpls traffic-eng igp-areas Command Field Descriptions

Field	Description
Global router-id	Global router ID on this node.
IGP ID	IGP System ID.
area	IGP area.
TE index	Internal index in the IGP area table.
IGP config for TE	Whether the IGP configuration is complete or missing.

show mpls traffic-eng link-management admission-control

To display which tunnels were admitted locally and their parameters, use the **show mpls traffic-eng link-management admission-control** command in EXEC mode.

show mpls traffic-eng link-management admission-control [*interface type interface-path-id*]

Syntax Description	interface	(Optional) Displays information on the specified interface.
	<i>type</i>	(Optional) Interface type. For more information, use the question mark (?) online help function.
	<i>interface-path-id</i>	Physical interface or virtual interface.
	Note	Use the show interfaces command to see a list of all possible interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.4.0	Support was added for the Name-Based Affinity Constraint scheme.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task Operations ID
	mpls-te read

Examples The following shows a sample output from the **show mpls traffic-eng link-management admission-control** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng link-management admission-control

S System Information:
  Tunnels Count      : 2
  Tunnels Selected   : 2
Bandwidth descriptor legend:
  B0 = bw from pool 0, B1 = bw from pool 1, R = bw locked, H = bw held
```

show mpls traffic-eng link-management admission-control

```

TUNNEL ID          UP IF    DOWN IF    PRI STATE          BW (kbits/sec)

```

This table describes the significant fields shown in the display.

Table 9: show mpls traffic-eng link-management admission-control Command Field Descriptions

Field	Description
Tunnels Count	Total number of tunnels admitted.
Tunnels Selected	Number of tunnels displayed.
Bandwidth descriptor legend	BW pool type and status displayed with the tunnel entry. Shown as RG (Locked BW in global pool) in the preceding sample output.
TUNNEL ID	Tunnel identification.
UP IF	Upstream interface used by the tunnel.
DOWN IF	Downstream interface used by the tunnel.
PRI	Tunnel setup priority and hold priority.
STATE	Tunnel admission status.
BW (kbps)	Tunnel bandwidth in kilobits per second. If an R follows the bandwidth number, the bandwidth is reserved. If an H follows the bandwidth number, the bandwidth is temporarily being held for a Path message. If a G follows the bandwidth number, the bandwidth is from the global pool. If an S follows the bandwidth number the bandwidth is from the sub-pool.

The following shows a sample output from the **show mpls traffic-eng link-management interface** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng link-management interface pos 0/2/0/1
```

```

System Information::
  Links Count          : 1

Link ID:: POS0/2/0/1 (35.0.0.5)

```

This table describes the significant fields shown in the display.

Table 10: show mpls traffic-eng link-management interface Command Field Descriptions

Field	Description
Links Count	Number of links configured for MPLS-TE.
Link ID	Index of the link described.
Local Intf ID	Local interface ID.
Link Label Type	Label type of the link, for instance: PSC ¹ , TDM ² , FSC ³ .
Physical BW	Link bandwidth capacity (in kilobits per second).
BCID	Bandwidth constraint model ID (RDM or MAM).
Max Reservable BW	Maximum reservable bandwidth on this link.
BC0 (Res. Global BW)	Bandwidth constraint value for class-type 0.
BC1 (Res. Sub BW)	Bandwidth constraint value for class-type 1.
MPLS-TE Link State	Status of the link MPLS-TE-related functions.
Inbound Admission	Link admission policy for incoming tunnels.
Outbound Admission	Link admission policy for outgoing tunnels.
IGP Neighbor Count	IGP neighbors directly reachable over this link.
Max Res BW (RDM)	Maximum reservable bandwidth on this link for RDM.
BC0 (RDM)	Bandwidth constraint value for RDM.
BC1 (RDM)	Bandwidth constraint value for RDM.
Admin Weight	Administrative weight associated with this link.
Attributes	Interface attributes referring to one or more affinity names.
IGP Area[1]	IGP type and area and level used for TE flooding.

¹ PSC = Packet switch capable.

show mpls traffic-eng link-management admission-control

² TDM = Time-division multiplexing.

³ FSC = Fiber switch capable.

show mpls traffic-eng link-management advertisements

To display local link information that MPLS-TE link management is currently flooding into the global TE topology, use the **show mpls traffic-eng link-management advertisements** command in EXEC mode.

show mpls traffic-eng link-management advertisements

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.8.0	This command was modified to include information specific to MPLS Shared Risk Link Groups (SRLG).
	Release 3.9.0	Sample output was modified to display the Attribute Names field.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show mpls traffic-eng link-management advertisements** command has two output formats depending on the Diff-Serv TE Mode: one for prestandard mode and one for IETF mode.

The SRLG values are advertised for the link.

Task ID	Task Operations ID
	mpls-te read

Examples The following shows a sample output from the **show mpls traffic-eng link-management advertisements** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng link-management advertisements
```

```

This table describes the significant fields shown in the display.

Table 11: show mpls traffic-eng link-management advertisements Command Field Descriptions

Field	Description
Link ID	Index of the link described.
Link IP Address	Local IP address of the link.
TE Metric	Metric value for the TE link configured under MPLS-TE.
IGP Metric	Metric value for the TE link configured under IGP.
Physical BW	Link bandwidth capacity (in kilobits per second).

Field	Description
BCID	Bandwidth constraint model ID (RDM or MAM).
Max Reservable BW	Maximum reservable bandwidth on this link.
Res Global BW	Maximum reservable of global pool/BC0 bandwidth on this link.
Res Sub BW	Reservable sub-bandwidth for sub-pool /BC1 bandwidth on this link.
SRLGs ⁴	Links that share a common fiber or a common physical attribute. If one link fails, other links in the group may also fail. Links in the group have a shared risk.
Downstream	Direction of the LSP path message.
Reservable BW[x]	Bandwidth available for reservations in the global TE topology and subpools.
Attribute Flags	Link attribute flags being flooded.
Attribute Names	Name of the affinity attribute of a link.
BC0	Bandwidth constraint value for class-type 0
BC1	Bandwidth constraint value for class-type 1
TE-class [index]	TE-class configured on this router at given index (mapping of class-type and priority), shows available bandwidth in that class.

⁴ SRLGs = Shared Risk Link Groups.

show mpls traffic-eng link-management bandwidth-allocation

To display current local link information, use the **show mpls traffic-eng link-management bandwidth-allocation** command in EXEC mode.

show mpls traffic-eng link-management bandwidth-allocation [*interface type interface-path-id*]

Syntax Description	interface	(Optional) Displays information on the specified interface.
	<i>type</i>	(Optional) Interface type. For more information, use the question mark (?) online help function.
	<i>interface-path-id</i>	Physical interface or a virtual interface.
	Note	Use the show interfaces command to see a list of all possible interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Advertised and current information may differ depending on how flooding is configured.

Task ID	Task ID	Operations
	mpls-te	read

Examples

The following shows a sample output from the **show mpls traffic-eng link-management bandwidth-allocation** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng link bandwidth-allocation interface POS 0/2/0/1
```

```
System Information::
  Links Count          : 4
  Bandwidth Hold time : 15 seconds
```

```

Link ID:: POS0/2/0/1 (7.2.2.1)
Local Intf ID: 4
Link Status:
Link Label Type      : PSC
Physical BW          : 155520 kbits/sec
BCID                 : MAM
Max Reservable BW    : 1000 kbits/sec (reserved: 0% in, 0% out)
BC0                  : 600 kbits/sec (reserved: 2% in, 2% out)
BC1                  : 400 kbits/sec (reserved: 0% in, 0% out)
MPLS-TE Link State   : MPLS-TE on, RSVP on, admin-up, flooded

3		0	0	0	0
4		0	0	0	0
5		0	0	0	0
6		0	0	0	0

This table describes the significant fields shown in the display.

Table 12: show mpls traffic-eng link-management bandwidth-allocation Command Field Descriptions

Field	Description
Links Count	Number of links configured for MPLS-TE.
Bandwidth Hold Time	Time, in seconds, that bandwidth can be held.
Link ID	Interface name and IP address of the link.

Field	Description
Link Label type	Label type of the link, for example: <ul style="list-style-type: none"> • PSC⁵ • TDM⁶ • FSC⁷
Physical BW	Link bandwidth capacity (in bits per second).
BCID	Bandwidth constraint model ID (RDM or MAM).
Max Reservable BW	Maximum reservable bandwidth on this link.
BC0	Maximum RSVP bandwidth in BC0.
BC1	Maximum RSVP bandwidth in BC1.
BW Descriptors	Number of bandwidth allocations on this link.
MPLS-TE Link State	Status of the link MPLS-TE-related functions.
Inbound Admission	Link admission policy for incoming tunnels.
Outbound Admission	Link admission policy for outgoing tunnels.
IGP Neighbor Count	IGP neighbors directly reachable over this link.
BW Descriptors	Internal bandwidth descriptors created when tunnels are admitted.
Admin Weight	Administrative weight associated with this link.
Up Thresholds	Threshold values used to determine link advertisement when available bandwidth increases.
Down Thresholds	Threshold values used to determine link advertisement when available bandwidth decreases.

⁵ PSC = Packet switch capable.

⁶ TDM = Time-division multiplexing.

⁷ FSC = Fiber switch capable.

show mpls traffic-eng link-management bfd-neighbors

To display TE-enabled Bidirectional Forwarding Detection (BFD) neighbors, use the **show mpls traffic-eng link-management bfd-neighbors** command in EXEC mode.

```
show mpls traffic-eng link-management bfd-neighbors [interface type interface-path-id]
```

Syntax Description	interface	(Optional) Displays information about the specified interface.
	<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
	<i>interface-path-id</i>	Physical interface or virtual interface.
	Note	Use the show interfaces command to see a list of all possible interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 3.2	This command was introduced.
	Release 3.8.0	The interface keyword was added.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task Operations ID
	mpls-te read

Examples The following shows a sample output from the **show mpls traffic-eng link-management bfd-neighbors** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng link-management bfd-neighbors
```

```
Link ID:: POS0/6/0/0
BFD Neighbor Address: 7.3.3.1, State: Up
Link ID:: POS0/6/0/1
No BFD Neighbor
Link ID:: POS0/6/0/2
BFD Neighbor Address: 7.4.4.1, State: Down
```

This table describes the significant fields shown in the display.

Table 13: show mpls traffic-eng link-management bfd Command Field Descriptions

Field	Description
Link ID	Link by which the neighbor is reached.
BFD Neighbor Address	Neighbor address and Up/Down state.

Related Commands

Command	Description
bfd fast-detect (MPLS-TE)	Enables BFD for communication failure detection.
bfd minimum-interval (MPLS-TE)	Sets the BFD interval.
bfd multiplier (MPLS-TE)	Sets the BFD multiplier.

show mpls traffic-eng link-management igp-neighbors

To display Interior Gateway Protocol (IGP) neighbors, use the **show mpls traffic-eng link-management igp-neighbors** command in EXEC mode.

```
show mpls traffic-eng link-management igp-neighbors [igp-id {isis isis-address|ospf ospf-id} [{interface
type interface-path-id IP-address}]]
```

Syntax Description	igp-id	(Optional) Displays the IGP neighbors that are using a specified IGP identification.
	isis <i>isis-address</i>	Displays the specified Intermediate System-to-Intermediate System (IS-IS) neighbor system ID when neighbors are displayed by IGP ID.
	ospf <i>ospf-id</i>	Displays the specified Open Shortest Path first (OSPF) neighbor OSPF router ID when neighbors are displayed by IGP ID.
	interface	(Optional) Displays information on the specified interface.
	<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
	<i>interface-path-id</i>	Physical interface or a virtual interface.
	Note	Use the show interfaces command to see a list of all possible interfaces currently configured on the router.
		For more information about the syntax for the router, use the question mark (?) online help function.
	<i>IP-address</i>	(Optional) IGP neighbors that are using a specified IGP IP address.

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operations
	mpls-te	read

Examples The following shows a sample output from the **show mpls traffic-eng link-management igp-neighbors** command:

show mpls traffic-eng link-management igp-neighbors

```
RP/0/RP0/CPU0:router# show mpls traffic-eng link igp-neighbors

Link ID: POS0/7/0/0
No Neighbors

Link ID: POS0/7/0/1
Neighbor ID: 10.90.90.90 (area: ospf area 0, IP: 10.15.12.2)
```

This table describes the significant fields shown in the display.

Table 14: show mpls traffic-eng link-management igp-neighbors Command Field Descriptions

Field	Description
Link ID	Link by which the neighbor is reached.
Neighbor ID	IGP identification information for the neighbor.

show mpls traffic-eng link-management interfaces

To display interface resources, or a summary of link management information, use the **show mpls traffic-eng link-management interfaces** command in EXEC mode.

show mpls traffic-eng link-management interfaces [*type interface-path-id*]

Syntax Description	<p><i>type</i> (Optional) Interface type. ```

This table describes the significant fields shown in the display.

Table 15: show mpls traffic-eng link-management interfaces Command Field Descriptions

Field	Description
Links Count	Number of links configured for MPLS-TE. Maximum number of links supported is 100.
Link ID	Link identification index.
Link Label Type	Label type assigned to the link.
Physical Bandwidth	Link bandwidth capacity (in kilobits per second).
BCID	Bandwidth constraint model ID (RDM or MAM).
Max Reservable BW	Maximum reservable bandwidth on this link.
BC0	Reservable bandwidth (in kbps) on this link in BC0.

Field	Description
BC1	Reservable bandwidth (in kbps) on this link in BC1.
Attributes	TE link attribute in hexadecimal.
Attribute Names	Name of the affinity attribute of a link.
SRLGs ⁸ .	Links that share a common fiber or a common physical attribute. If one link fails, other links in the group may also fail. Links in the group have a shared risk.
MPLS-TE Link State	Status of the MPLS link.
Inbound Admission	Link admission policy for inbound tunnels.
Outbound Admission	Link admission policy for outbound tunnels.
IGP Neighbor Count	IGP ⁹ neighbors directly reachable over this link.
Admin. Weight	Administrative weight associated with this link.
Flooding Status	Status for each configured area or Flooding status for the configured area.
IGP Area	IGP type and area and level used for TE flooding.

⁸ SRLGs = Shared Risk Link Groups.

⁹ IGP = Interior Gateway Protocol .

show mpls traffic-eng link-management statistics

To display interface resources or a summary of link management information, use the **show mpls traffic-eng link-management statistics** command in EXEC mode.

show mpls traffic-eng link-management statistics [{summary | interface *type interface-path-id*}

Syntax Description

summary	(Optional) Displays the statistics summary.
interface	(Optional) Displays the interface for which information is requested.
<i>type</i>	(Optional) Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or virtual interface.
Note	Use the show interfaces command to see a list of all possible interfaces currently configured on the router.
	For more information about the syntax for the router, use the question mark (?) online help function.

Command Default

No default behavior or values

Command Modes

EXEC

Command History

Release	Modification
Release 2.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **show mpls traffic-eng link-management statistics** command displays resource and configuration information for all configured interfaces.

Task ID

Task ID	Operations
mpls-te read	

Examples

The following shows a sample output from the **show mpls traffic-eng link-management statistics** command using the **summary** keyword:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng link-management statistics summary

LSP Admission Statistics:
```

	Setup Requests	Setup Admits	Setup Rejects	Setup Errors	Tear Requests	Tear Preempts	Tear Errors
Path	13	12	1	0	10	0	0
Resv	8	8	0	0	5	0	0

Table 16: show mpls traffic-eng link-management statistics summary Command Field Descriptions, on page 265 describes the significant fields shown in the display.

Table 16: show mpls traffic-eng link-management statistics summary Command Field Descriptions

Field	Description
Path	Path information.
Resv	Reservation information.
Setup Requests	Number of requests for a setup.
Setup Admits	Number of admitted setups.
Setup Rejects	Number of rejected setups.
Setup Errors	Number of setup errors.
Tear Requests	Number of tear requests.
Tear Preempts	Number of paths torn down due to preemption.
Tear Errors	Number of tear errors.

show mpls traffic-eng link-management summary

To display a summary of link management information, use the **show mpls traffic-eng link-management summary** command in EXEC mode.

show mpls traffic-eng link-management summary

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.4.1	No more than 100 links can be configured for MPLS-TE fast reroute (FRR).
	Release 3.9.0	No more than 250 links can be configured under MPLS-TE.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

You cannot configure more than 250 links for MPLS-TE/FRR.

Task ID	Task ID	Operations
	mpls-te	read

Examples

The following sample output is from the **show mpls traffic-eng link-management summary** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng link-management summary

System Information::
  Links Count           : 6 (Maximum Links Supported 100)
  Flooding System      : enabled
  IGP Areas Count      : 2

IGP Areas
-----

IGP Area[1]:: isis level-2
  Flooding Protocol    : ISIS

IGP Neighbors      : 8

```

This table describes the significant fields shown in the display.

Table 17: show mpls traffic-eng link-management summary Command Field Descriptions

Field	Description
Links Count	Number of links configured for MPLS-TE. Maximum number of links supported is 100.
Flooding System	Enable status of the MPLS-TE flooding system.
IGP Areas Count	Number of IGP ¹⁰ areas described.
IGP Area	IGP type and area and level used for TE flooding.
Flooding Protocol	IGP flooding information for this area.
Flooding Status	Status of flooding for this area.
Periodic Flooding	Status of periodic flooding for this area.
Flooded Links	Links that were flooded.
IGP System ID	IGP for the node associated with this area.
MPLS-TE Router ID	MPLS-TE router ID for this node.
IGP Neighbors	Number of reachable IGP neighbors associated with this area.

¹⁰ IGP = Interior Gateway Protocol.

show mpls traffic-eng lmp

To display operation details about the status of the Link Management Protocol (LMP) instance and neighbor, IPCC, and MPLS-TE links, use the **show mpls traffic-eng lmp** command in EXEC mode.

show mpls traffic-eng lmp [{**interface** *type interface-path-id*| **ipcc**| **neighbor** [*name*]| **statistics**}]

Syntax Description

interface	(Optional) Displays information on the specified interface.
<i>type</i>	Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or virtual interface.
Note	Use the show interfaces command to see a list of all interfaces currently configured on the router.
	For more information about the syntax for the router, use the question mark (?) online help function.
ipcc	(Optional) Displays information for LMP Internet Protocol Control Channel (IPCC).
neighbor [<i>name</i>]	(Optional) Displays information for the LMP neighbor.
statistics	(Optional) Displays information for the statistics.

Command Default

No default behavior or values

Command Modes

EXEC

Command History

Release	Modification
Release 3.8.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note

The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID

Task ID	Operations
mpls-te	read

Examples

The following sample output shows summary information for the local LMP protocol. One remote LMP neighbor named gmpls4 with the node ID 44.44.44.44. The neighbor has one MPLS-TE link (GigabitEthernet0/5/0/1) that has a local MPLS-TE link ID of 10.5.1.4, and data link ID of 21. The data link LMP state is “Up Allocated”, which means that the LMP state is up and is being used by the GMPLS protocol as part of an optical tunnel.

```
RP/0/RP0/CPU0:router# show mpls traffic-eng lmp

MPLS TE LMP Node ID: 11.11.11.11

LMP Neighbor
Name: gmpls4, IP: 44.44.44.44, Owner: MPLS TE
LMP: Enabled
LMP Hellos: Enabled by configuration
IPCC ID: 1, State Up
LMP UDP port: 701
  Known via      : Configuration
  Type           : Routed
  Destination IP  : 44.44.44.44
  Source IP      : 11.11.11.11

  Data Link I/F | Lcl Data Link ID | Lcl TE Link ID | Data Link LMP state
  -----+-----+-----+-----
GigabitEthernet0/5/0/1 | 21 | 10.5.1.4 | Up Allocated
```

The following sample output shows that one routed IPCC to LMP neighbor, gmpls4, is in the up state and has ID of 1:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng lmp ipcc

IPCC                               | Neighbor
ID | Type | IP | Status | Name
-----+-----+-----+-----+-----
  1 | Routed | 44.44.44.44 | Up | gmpls4
```

The following sample output shows the IPCC and MPLS-TE link information for all the configured LMP neighbors:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng lmp neighbor

LMP Neighbor
Name: gmpls4, IP: 44.44.44.44, Owner: MPLS TE
LMP: Enabled
LMP Hellos: Enabled by configuration
IPCC ID: 1, State Up
LMP UDP port: 701
  Known via      : Configuration
  Type           : Routed
  Destination IP  : 44.44.44.44
  Source IP      : 11.11.11.11

  Data Link I/F | Lcl Data Link ID | Lcl TE Link ID | Data Link LMP state
  -----+-----+-----+-----
GigabitEthernet0/5/0/1 | 21 | 10.5.1.4 | Up Allocated
```

The following sample output shows IPCC and MPLS-TE link information for a specified LMP neighbor, gmpls4:

show mpls traffic-eng lmp

```
RP/0/RP0/CPU0:router# show mpls traffic-eng lmp neighbor gmpls4
```

```
LMP Neighbor
Name: gmpls4, IP: 44.44.44.44, Owner: MPLS TE
LMP: Enabled
LMP Hellos: Enabled by configuration
IPCC ID: 1, State Up
LMP UDP port: 701
Known via      : Configuration
Type           : Routed
Destination IP : 44.44.44.44
Source IP      : 11.11.11.11

Data Link I/F      | Lcl Data Link ID | Lcl TE Link ID | Data Link LMP state
-----+-----+-----+-----
GigabitEthernet0/5/0/1 | 21              | 10.5.1.4       | Up Allocated
```

The following sample output shows detailed information for MPLS-TE, data link, and IPCC properties for a specified local interface that is configured as an LMP MPLS-TE link:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng lmp interface gigabitEthernet 0/5/0/1
```

```
Interface: GigabitEthernet0/5/0/1
Owner: MPLS TE
LMP for TE Link: Enabled
LMP Link Summary Last Error(s): None
Local data link ID type: Unnumbered
Local data link ID: Dec = 21, Hex = 0x15
Local TE link ID type: IPv4
Local TE link ID: 10.5.1.4
Local TE link switching capability: Packet-Switch Capable-1 (PSC-1)
Remote neighbor name: gmpls4
Remote neighbor node ID: 44.44.44.44
Remote TE link ID type: IPv4
Remote TE link ID: 10.5.1.1
Remote data link ID type: Unnumbered
Remote data link ID: Dec = 13, Hex = 0xd
Remote TE link switching capability: Packet-Switch Capable-1 (PSC-1)
Data link I/F state: Up
Data link LMP state: Up/Allocated
TE link LMP state: Up
Data link allocation status: Allocated
IPCC ID: 1
IPCC type: Routed
IPCC destination IP address: 44.44.44.44
Local Min Reservable Bandwidth: 125000000 bytes/sec
Local Max Reservable Bandwidth: 125000000 bytes/sec
Nbr Min Reservable Bandwidth: 125000000 bytes/sec
Nbr Max Reservable Bandwidth: 125000000 bytes/sec
Local Link Encoding Type: Ethernet
Nbr Link Encoding Type: Ethernet
VRF ID: Default [0x60000000] (Supported)
```

The following sample output shows detailed LMP protocol signaling statistics per neighbor and for all MPLS-TE links if LMP is running in nonstatic mode:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng lmp statistics
```

```
LMP Neighbor
```

show mpls traffic-eng maximum tunnels

To display the maximum number of MPLS-TE tunnels that you can configure, use the **show mpls traffic-eng maximum tunnels** command in EXEC mode.

show mpls traffic-eng maximum tunnels

Syntax Description This command has no keywords or arguments.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.8.0	Sample output was modified.
	Release 3.9.0	Sample output was modified to support the Point-to-Multipoint (P2MP) feature.
	Release 4.0.0	Sample output was modified to support the maximum number of allowed automatic backup tunnels.
	Release 4.1.1	Sample output was modified to support the maximum number of allowed automatic mesh tunnels.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task Operations ID
	mpls-te read

Examples This is sample output from the **show mpls traffic-eng maximum tunnels** command:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng maximum tunnels

Maximum Global Tunnel Count:

Maximum           Current Count
-----           -
4096                2

Maximum P2MP Tunnel Count:

Maximum           Current Count
-----           -
500
```

Maximum Global Destination Count:

Maximum	Current Count
-----	-----
4096	2

Maximum AutoTunnel Backup Count:

Maximum	Current Count
-----	-----
200	122

This is sample output of the automatic mesh tunnels from the **show mpls traffic-eng maximum tunnels** command:

RP/0/RP0/CPU0:router# **show mpls traffic-eng maximum tunnels**

Maximum Global Tunnel Count:

Maximum	Current Count
-----	-----
4096	12

Maximum Static Tunnel Count:

Maximum	Current Count
-----	-----
4096	8

Maximum Auto-tunnel Mesh Count:

Maximum	Current Count
-----	-----
201	3

Maximum P2MP Tunnel Count:

Maximum	Current Count
-----	-----
500	1

Maximum Global Destination Count:

Maximum	Current Count
-----	-----
4096	13

Maximum GMPLS-UNI Tunnel Count:

Maximum	Current Count
-----	-----
500	39

Table 18: [show mpls traffic-eng maximum tunnels Command Field Descriptions, on page 274](#) describes the significant fields shown in the display.

Table 18: show mpls traffic-eng maximum tunnels Command Field Descriptions

Field	Description
Maximum Global Tunnel Count	Maximum number of tunnel interfaces (all TE tunnel types, tunnel-te, tunnel-mte, and tunnel-gte) that can be configured.
Maximum P2MP Tunnel Count	Maximum number of P2MP tunnels that can be configured.
Maximum Global Destination Count	Maximum number of tunnel destinations that can be configured.
Maximum	Table heading for the maximum number in each category.
Current Count	Table heading for the current count in each category.
Maximum AutoTunnel Backup Count	Maximum number of automatic backup tunnels that can be configured.
Maximum GMPLS UNI Tunnel Count	Maximum number of Generalized Multiprotocol Label Switching (GMPLS) User-Network Interface (UNI) tunnels that can be configured and the current tunnel count.
Maximum AutoTunnel Mesh Count	Maximum number of automatic mesh tunnels that can be configured.

Related Commands

Command	Description
maxabs (MPLS-TE), on page 136	Specifies the maximum number of tunnel TE interfaces that can be configured.
tunnel-id (auto-tunnel backup), on page 363	Configures the range of tunnel interface numbers used for automatic backup tunnels.

show mpls traffic-eng pce lsp-database

To display information about all LSPs and their attributes, use the **show mpls traffic-eng pce lsp-database** command in EXEC mode.

show mpls traffic-eng pce lsp-database [{**brief** | **delegated** | **instantiated** | **session-internal-lsp-id** | **standby** | **static** | **symbolic-name**}]

Syntax Description	Parameter	Description
	brief	(Optional) Uses brief output format.
	delegated	(Optional) Displays requesting delegation tunnels.
	instantiated	(Optional) Displays PCE instantiated tunnels.
	session-internal-lsp-id	(Optional) Displays tunnels with session internal lsp id.
	standby	(Optional) Displays standby node specific information.
	static	(Optional) Displays configured tunnels.
	symbolic-name	(Optional) Displays tunnels with symbolic names.

Command Default No default behavior or values

Command Modes EXEC mode

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines No specific guidelines impact the use of this command.

Task ID	Task ID	Operation
	mpls-te	read

Example

The following shows a sample output for the **show mpls traffic-eng pce lsp-database** command:

```
RP/0/0/CPU0:ios#show mpls traffic-eng pce lsp-database
Symbolic name: pcc_t0
Session internal LSP ID: 1
Stateful Request Parameters ID: 0
Path Setup Type: 0 - (RSVP)
Request queue size: 0
Create: FALSE
Created by: Not set
```

show mpls traffic-eng pce lsp-database

```
Delegatable: TRUE
Delegation status: Delegated
Delegated to: Speaker-entity-id: pcel ip: 192.168.0.2

```

show mpls traffic-eng pce peer

To display the status of the path computation element (PCE) peer address and state, use the **show mpls traffic-eng pce peer** command in EXEC mode.

```
show mpls traffic-eng pce peer {all|ipv4 address|node-id node-id|stateless|stateful}
```

Syntax Description		
	<i>address</i>	(Optional) IPv4 peer address for the PCE.
	all	(Optional) Displays all the peers for the PCE.
	ipv4 <i>address</i>	Displays PCE peer address.
	node-id <i>node-id</i>	Specifies PCE peer node identifier.
	stateless	Displays stateless PCE peers.
	stateful	Displays Show stateful PCE peers.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 3.8.0	This command was introduced.
	Release 5.1.1	The stateful keyword was added. Command output was updated to display stateful PCE information.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task Operations ID
	mpls-te read

Examples

The following sample output shows the status of both the PCE peer and state:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng pce peer
```

```
PCE Address 202.202.88.8
State Up
PCEP has been up for: 04:18:31
Learned through:
  OSPF 1
Sending KA every 30 s
```

show mpls traffic-eng pce peer

```

Time out peer if no KA received for 120 s
Tolerance: Minimum KA 10 s
KA messages rxed 518 txed 517
PCEReq messages rxed 0, txed 0
PCERep messages rxed 0, txed 0
PCEErr messages rxed 0, txed 0
  Last error received: None
  Last error sent: None
PCE OPEN messages: rxed 1, txed 2
PCEP session ID: local 0, remote 0

Average reply time from peer: 0 ms
Minimum reply time from peer: 0 ms
Maximum reply time from peer: 0 ms
0 requests timed out with this peer
Transmit TCP buffer: Current 0, Maximum 12
Receive TCP buffer: Current 0, Maximum 12

```

This table describes the significant fields shown in the display.

Table 19: show mpls traffic-eng pce peer Field Descriptions

Field	Description
KA	PCEP keepalive.
Learned through	Learned through is how the peer was learned which is either through a static configuration or an IGP.
Average reply time from peer	Average reply time for the peer to respond to PCEReq request messages with PCERep response messages.
Minimum reply time from peer	Minimum reply time for the peer to respond to PCEReq request messages with PCERep response messages.
Maximum reply time from peer	Maximum reply for the peer to respond to PCEReq request messages with PCERep response messages.
Transmit TCP buffer Receive TCP Buffer	Number of messages that are in the TCP buffer with the peer waiting to be sent or processed locally.
0 requests timed out with this peer	Number of PCEReq messages that timed out waiting for a response from this peer.

Command output with stateful information:

```

RP/0/RP0/CPU0:router#show mpls traffic-eng pce peer all

PCE Address 2.2.2.2
Node-ID: aaa
State Up
  PCEP has been up for: 00:03:52
Learned through:
  Static Config
Sending KA every 30 s
Time out peer if no KA received for 120 s
LSP cleanup timer: 60 s
Tolerance: Minimum KA 10 s

```

Stateful**Update capability**

```

KA messages rxed 8 txed 8
PCEReq messages rxed 0, txed 0

Command	Description
pce address (MPLS-TE), on page 183	Configures the IPv4 self address for a PCE.

show mpls traffic-eng preemption log

To display the log of preemption events, use the **show mpls traffic-eng preemption log** command in EXEC mode.

show mpls traffic-eng preemption log

Syntax Description	log Displays a log of preemption events.
---------------------------	---

Command Default	None
------------------------	------

Command Modes	EXEC
----------------------	------

Command History	Release	Modification
	Release 4.2.0	This command was introduced.
	Release 5.1.2	The command output was modified to display the log of soft-preemption over FRR backup tunnels events.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task ID	Operation
	mpls-te	read

This is sample output from the **show mpls traffic-eng preemption log** command displaying the log of preemption events:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng preemption log
Bandwidth Change on GigabitEthernet0/0/0/0
  Old BW (BC0/BC1): 200000/100000, New BW (BC0/BC1): 1000/500 kbps
  BW Overshoot (BC0/BC1): 1000/0 kbps
  Preempted BW (BC0/BC1): 35000/0 kbps; Soft 30000/0 kbps; Hard 5000/0 kbps;
  Preempted 2 tunnels; Soft 1 tunnel; Hard 1 tunnel
-----
TunID LSP ID          Source      Destination Preempt  Pri  Bandwidth  BW Type
                    Type      S/H      (in kbps)
-----
   1  10002      192.168.0.1      1.0.0.0    Hard  7/7      5000      BC0
   1     2      192.168.0.1      192.168.0.4  Soft  7/7      30000     BC0
```

This sample output displays the log of soft-preemption over FRR backup tunnels events:

```
RP/0/RP0/CPU0:router#show mpls traffic-eng preemption log
```

show mpls traffic-eng topology

To display the current MPLS-TE network topology for the node, use the **show mpls traffic-eng topology** command in EXEC mode.

```
show mpls traffic-eng topology [IP-address] [affinity] [brief] [link-only] [{bandwidth
number|exclude-srlg exclude-srlg-interface-address|explicit-path{identifier explicit-path-id-number|name
explicit-path-name}|priority level}] [{isis nsap-address|ospf ospf-address|path {destination
IP-address|tunnel P2P-tunnel-number }|p2mp P2MP tunnel-number}]|{router|network}]} [model-type
{rdm | mam}]
```

Syntax Description		
	<i>IP-address</i>	(Optional) Node IP address (router identifier to interface address).
	destination <i>IP-address</i>	Displays the LSP destination IPv4 address.
	exclude-srlg	Specifies an IP address to get SRLG values from for exclusion.
	explicit-path	Displays the explicit LSP path.
	tunnel	Displays the topology path that is based on the Point-to-Point (P2P) tunnel number.
	<i>P2P -tunnel-number</i>	P2P tunnel number. Range is 0 to 65535.
	affinity	(Optional) Displays the attribute values that are required for links carrying this tunnel. A 32-bit decimal number. Range is 0x0 to 0xFFFFFFFF, representing 32 attributes (bits), where the value of an attribute is 0 or 1.
	bandwidth <i>number</i>	(Optional) Displays the bandwidth value that is required by this label switched path (LSP).
	priority <i>level</i>	(Optional) Displays the priority used when signaling a LSP for this tunnel, to determine which existing tunnels can be preempted.
	isis <i>nsap-address</i>	(Optional) Displays the node router identification, if Intermediate System-to-Intermediate System (IS-IS) is enabled.

ospf <i>ospf-address</i>	(Optional) Displays the node router identifier, if Open Shortest Path First (OSPF) is enabled.
path	(Optional) Displays the path to a destination from this router.
router	Displays the given OSPF address type of the router node.
network	Displays the given OSPF address type of the network node.
brief	(Optional) Displays the brief form of the output that provides a less detailed version of the topology.
link-only	(Optional) Displays the MPLS-TE topology that is filtered by the given neighbor address.
model-type { rdm mam }	(Optional) Displays the bandwidth constraints model type, RDM or MAM.

Command History

Release	Modification
Release 2.0	This command was introduced.
Release 3.8.0	This command was modified to include information specific to MPLS Shared Risk Link Groups (SRLG).
Release 3.9.0	These enhancements are listed: <ul style="list-style-type: none"> • The tunnel keyword and <i>P2P tunnel-number</i> argument were added. • The p2mp keyword and <i>P2MP tunnel-number</i> argument were added. • The destination keyword and <i>IP-address</i> argument were added. • The link-only keyword was added. • The affinity keyword was modified. • Sample output was modified to display the Attribute Names field.
Release 4.0.0	These enhancements are listed: <ul style="list-style-type: none"> • The exclude-srlg keyword and <i>exclude-srlg-interface-address</i> argument were added. • explicit-path keyword and <i>explicit-path-id-number</i> argument were added. • Sample output was added to support the additional keywords and arguments. • Sample output was added to show the SRLG interfaces.

Release	Modification
Release 5.1.1	Support was added to include signame keyword and to display <i>signalled-name</i> in the command output.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

The following shows a sample output from the **show mpls traffic-eng topology** command specifying the tunnel number in brief form:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng topology path tunnel 160

Tunnel160 Path Setup to 10.10.10.10: FULL_PATH
bw 100 (CT0), min_bw 0, metric: 10
setup_pri 7, hold_pri 7
affinity_bits 0x0, affinity_mask 0xffff
Hop0:10.2.2.1
Hop1:10.10.10.10
```

The following shows a sample output from the **show mpls traffic-eng topology** command specifying the topology path for the P2MP tunnel number:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng topology path tunnel p2mp 4 destination 5.5.5.5

Tue Sep 15 14:55:19.556 UTC
Tunnel4 Path Setup to 5.5.5.5:
bw 0 (CT0), min_bw 1, metric: 1
setup_pri 7, hold_pri 7
affinity_bits 0x0, affinity_mask 0xffff
Hop0:56.0.0.5
Hop1:5.5.5.5
```

The following shows a sample output from the **show mpls traffic-eng topology** command specifying the destination IP address:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng topology path destination 10.10.10.10

Path Setup to 10.10.10.10:
bw 0 (CT0), min_bw 999900, metric: 10
setup_pri 7, hold_pri 7
affinity_bits 0x0, affinity_mask 0xffffffff
Hop0:10.2.2.1
Hop1:10.10.10.10
```

The following sample output shows the MPLS-TE network topology with the name of the affinity attribute of the link:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng topology
```

```

This table describes the significant fields shown in the display.

Table 21: show mpls traffic-eng topology Field Descriptions

Field	Description
My_System_id	IGP ¹¹ system or IGP router ID.
Signalling error holddown	Link hold-down timer configured to handle path error events to exclude link from topology.
IGP Id	Identification of the advertising router.
Link	MPLS-TE link.
Frag Id	GP LSA ¹² fragment identifier.
Nbr Intf Address	Neighbor Interface address of this link.
TE Metric	TE cost of link.
SRLGs	SRLG ¹³ values that are flooded by IGP to TE.

Field	Description
Switching Capability	Switching capability: packet, optical, lambda.
Physical BW	Physical line rate.
BC Model ID	Bandwidth constraint model ID (RDM or MAM).
Max Reservable BW	Maximum bandwidth (in kilobits per second) that you can reserve on a link.
Max Reservable BW Global	Maximum bandwidth (in kilobits per second) that you can reserve on a link in global-pool (prestandard and RDM).
Max Reservable BW Sub	Maximum bandwidth (in kilobits per second) that you can reserve on a link in subpool (prestandard and RDM).
BC0	Maximum bandwidth (in kilobits per second) that you can reserve on a link in BC0.
BC1	Maximum bandwidth (in kilobits per second) that you can reserve on a link in BC1.
TE-class[index]	Available bandwidth in TE-class (map of class-type and priority) at given index.
Total Allocated BW	Bandwidth (in Kbps) allocated at that priority.
Global Pool Reservable BW	Available bandwidth (in kbps) reservable at that priority in global pool (prestandard RDM).
Sub Pool Reservable BW	Available bandwidth (in kbps) reservable at that priority in sub-pool (prestandard RDM).
Attribute Names	Brief topology and the associated affinity attributes. The names of the affinity attribute of the link are displayed.

¹¹ IGP = Interior Gateway Protocol.

¹² LSA = link-state advertisement.

¹³ SRLG = shared-risk link group.

Related Commands

Command	Description
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.
interface (SRLG), on page 98	Enables SRLG on an interface and enters SRLG interface configuration mode.
srlg, on page 348	Configures an MPLS traffic engineering SRLG values for a link on an interface.
show srlg, on page 337	Displays the SRLG interface and configuration information.

show mpls traffic-eng tunnels

To display information about MPLS-TE tunnels, use the **show mpls traffic-eng tunnels** command in EXEC mode .

```
show mpls traffic-eng tunnels [tunnel-number] [affinity] [all] [auto-bw] [attribute-set {auto-backup
|auto-mesh} {all tunnel-name}] [auto-tunnel] [backup [{tunnel-number |auto-tunnel [mesh] mesh-value|
name tunnel-name}] promotion-timer promotion-timer] protected-interface type interface-path-id
[static|auto}] [brief] [destination destination-address] [detail] [down] [gmpls] [interface {in |
out | inout} type interface-path-id] [name tunnel-name] [p2mp [concise]] [p2p] [property {
backup-tunnel | fast-reroute}] [protection [unused]] [reoptimized within-last interval][role {all
|head | tail | middle}] [soft-preemption {desired|triggered}][source source-address] [suboptimal
constraints {current | max | none}] [summary] [tabular] [unused][up] [class-type ct] [igp {isis |
ospf}] [within-last interval]
```

Syntax Description		
tunnel-number	(Optional) Number of the tunnel. Range is from 0 to 65535.	
attribute-set	(Optional) Restricts the display of tunnels with an attribute set.	
auto-backup	Restricts the display of specific or all tunnels that are using auto-backup type of attribute-set.	
auto-mesh	Restricts the display of specific or all tunnels that are using auto-mesh type of attribute-set.	
affinity	(Optional) Displays the affinity attributes for all outgoing links. The links, which are used by the tunnel, display color information.	
all	(Optional) Displays all MPLS-TE tunnels.	
auto-bw	(Optional) Restricts the display to tunnels when the automatic bandwidth is enabled.	
auto-tunnel	(Optional) Restricts the display of automatically created tunnels.	
mesh mesh-value	Displays the tunnels that belong to the specified auto-tunnel mesh group.	
backup	(Optional) Displays FRR ¹⁴ backup tunnels information. The information includes the physical interface protected by the tunnel, the number of TE LSPs ¹⁵ protected, and the bandwidth protected. (Optional) Displays backup information for automatic tunnels and FRR tunnels.	
name tunnel-name	(Optional) Displays the tunnel with given name.	

promotion-timer <i>promotion-timer</i>	(Optional) Displays the configured FRR backup tunnel promotion timer value, in seconds.
protected-interface	(Optional) Displays FRR protected interfaces.
static	(Optional) Displays static backup tunnels.
auto-tunnel	(Optional) Displays protected automatic backup tunnels.
brief	(Optional) Displays the brief form of this command.
destination <i>destination-address</i>	(Optional) Restricts the display to tunnels destined for the specified IP address.
detail	(Optional) Displays detail information about headend tunnels.
down	(Optional) Displays tunnels that are down.
gmpls	(Optional) Restricts the display to GMPLS tunnels.
interface in	(Optional) Displays tunnels that use the specified input interface.
interface out	(Optional) Displays tunnels that use the specified output interface.
interface inout	(Optional) Displays tunnels that use the specified interface as an input or output interface.
<i>type</i>	(Optional) Interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or a virtual interface. Note Use the show interfaces command to see a list of all possible interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.
p2mp	(Optional) Displays only the P2MP tunnels and the subLSPs.
concise	(Optional) Displays a summary of the P2MP tunnels and the subLSPs. This option is available only for P2MP tunnels.
p2p	(Optional) Displays only P2P tunnels.

property backup-tunnel	(Optional) Displays tunnels with property of backup tunnel. Selects MPLS-TE tunnels used to protect physical interfaces on this router. A tunnel configured to protect a link against failure is a backup tunnel and has the backup tunnel property.
property fast-reroute	(Optional) Displays tunnels with property of fast-reroute configured. Selects FRR-protected MPLS-TE tunnels originating on (head), transmitting (router), or terminating (tail) on this router.
protection	(Optional) Displays all protected tunnels (configured as fast-reroutable). Displays information about the protection provided to each tunnel selected by other options specified with this command. The information includes whether protection is configured for the tunnel, the protection (if any) provided to the tunnel by this router, and the tunnel bandwidth protected.
reoptimized within-last <i>interval</i>	(Optional) Displays tunnels reoptimized within the last given time interval.
role all	(Optional) Displays all tunnels.
role head	(Optional) Displays tunnels with their heads at this router.
role middle	(Optional) Displays tunnels at the middle of this router.
role tail	(Optional) Displays tunnels with their tails at this router.
soft-preemption	Displays tunnels on which the soft-preemption feature is enabled.
source <i>source-address</i>	(Optional) Restricts the display to tunnels with a matching source IP address.
suboptimal constraints current	(Optional) Displays tunnels whose path metric is greater than the current shortest path constrained by the tunnel's configured options.
suboptimal constraints max	(Optional) Displays tunnels whose path metric is greater than the current shortest path, constrained by the configured options for the tunnel, and taking into consideration only the network capacity.
suboptimal constraints none	(Optional) Displays tunnels whose path metric is greater than the shortest unconstrained path.

summary	(Optional) Displays summary of configured tunnels.
tabular	(Optional) Displays a table showing TE LSPs, with one entry per line.
unused	(Optional) Displays only unused backup tunnels.
up	(Optional) Displays tunnels when the tunnel interface is up.
class-type <i>ct</i>	(Optional) Displays tunnels using the given class-type value configuration.
igp <i>isis</i>	(Optional) Displays tunnels with the path calculated as the IS-IS type for IGP.
igp <i>ospf</i>	(Optional) Displays tunnels with the path calculated as the OSPF type for IGP.
within-last <i>interval</i>	(Optional) Displays tunnels that has come up within the last given time interval.
auto-tunnel <i>pcc</i>	Displays stateful PCE client (PCC) auto-tunnel information.

¹⁴ FRR = Fast Reroute.

¹⁵ LSPs = Label Switched Paths.

Command Default None

Command Modes EXEC

Command History	Release	Modification
	Release 2.0	This command was introduced.
	Release 3.3.0	The tabular keyword was added.
	Release 3.5.0	The command output was updated to support unequal load-balancing parameters.
	Release 3.7.0	If specified, sample output was modified to display the area on its own line after the existing path-option information.

Release	Modification
Release 3.8.0	<p>These items were added:</p> <ul style="list-style-type: none"> To support the Automatic Bandwidth feature: <ul style="list-style-type: none"> The auto-bw keyword was added. Sample output and automatic bandwidth fields were added. The <i>tunnel-number</i> argument, gmpls keyword, and p2p keyword were added.
Release 3.9.0	<p>These items were added to support the P2MP feature:</p> <ul style="list-style-type: none"> The p2mp and concise keywords were added. Sample output was added to display the label and rewrite information concisely. Sample output was modified to show the various P2MP tunnel types for the protection keyword. Sample output was modified to support the reoptimization install timer and clean up timer values for the <i>tunnel-number</i> argument and detail keyword.
Release 4.0.0	<p>These items were added to support the MPLS-TE automatic backup tunnel feature:</p> <ul style="list-style-type: none"> The auto-tunnel keyword was added. The unused keyword was added.
Release 4.1.1	The mesh keyword was added.
Release 4.2.0	The soft-preemption and attribute-set keywords were added. Sample output was modified to display only tunnels on which the soft-preemption feature is enabled.
Release 4.2.1	The auto-backup and auto-mesh keywords were added. Sample output was modified to display tunnels that are using auto-backup or auto-mesh type of attribute-set.
Release 4.2.3	Sample output was modified to display P2MP-TE inter-area related configuration details.
Release 5.1.1	<ul style="list-style-type: none"> The command output was modified to display information on stateful PCE client (PCC) auto-tunnels. Support was added to include signame keyword and to display <i>signalled-name</i> in the command output.

Release	Modification
Release 5.1.2	<p>These changes were made to support the path-selection cost-limit feature:</p> <ul style="list-style-type: none"> • The command output was modified to show the configured cost-limit. • The shown PCALC error was modified to show cost-limit failure: applies for new paths and verification of existing paths. • The 'Reopt Reason' field in the show output was modified to show the cost-limit. • The path-protection switchover reason in the show output was modified to show the cost-limit. <p>The command output was modified to display the 'Traffic switched to FRR backup tunnel-te' message as part of Soft-preemption over FRR backup tunnels feature implementation.</p>

Usage Guidelines

You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **brief** form of the **show mpls traffic-eng tunnels** command to display information specific to a tunnel interface. Use the command without the **brief** keyword to display information that includes the destination address, source ID, role, name, suboptimal constraints, and interface.

The **affinity** keyword is available for only the source router.

Selected tunnels would have a shorter path if they were reoptimized immediately.

Task ID

Task ID	Operations
mpls-te	read, write

Examples

This sample output is not changed when no area is specified for the active path-option. If the area is specified, it is added on a line of its own after the existing path-option information.

This table describes the significant fields shown in the display.

Table 22: show mpls traffic-eng tunnels Command Field Descriptions

Field	Description
LSP Tunnels Process	Status of the LSP ¹⁶ tunnels process.
RSVP Process	Status of the RSVP process.
Forwarding	Status of forwarding (enabled or disabled).
Periodic reoptimization	Time, in seconds, until the next periodic reoptimization.
Periodic FRR Promotion	Time, in seconds, till the next periodic FRR ¹⁷ promotion.
Periodic auto-bw collection	Time, in seconds, till the next periodic auto-bw collection.
Name	Interface configured at the tunnel head.
Destination	Tail-end router identifier.

Field	Description
Admin/STATUS	Configured up or down.
Oper/STATE	Operationally up or down.
Signalling	Signaling connected or down or proceeding.
Config Parameters	Configuration parameters provided by tunnel mode MPLS traffic-eng, including those specific to unequal load-balancing functionality (bandwidth, load-share, backup FRR EXP demotion, class-attributes, and bandwidth-policer).
History: Current LSP: Uptime	Time LSP has been up.
Path Info	Hop list of current LSP.

¹⁶ LSP = Link-State Packet.

¹⁷ FRR = Fast Reroute.

This sample output shows the link attributes of links that are traversed by the tunnel (color information):

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels 11 affinity
```

```

This section shows a sample output that results when automatic backup tunnels are created:

```

RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels brief

```

show mpls traffic-eng tunnels

```

.
.
.
TUNNEL NAME          DESTINATION      STATUS  STATE
      tunnel-te0          200.0.0.3      up    up
      tunnel-te1          200.0.0.3      up    up
      tunnel-te2          200.0.0.3      up    up
      *tunnel-te50        200.0.0.3      up    up
      *tunnel-te60        200.0.0.3      up    up
      *tunnel-te70        200.0.0.3      up    up
      *tunnel-te80        200.0.0.3      up    up

```

* = automatically created backup tunnel

This is sample output that shows a summary of configured tunnels by using the **summary** keyword:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels summary
```

```

LSP Tunnels Process: not running, disabled
                    RSVP Process: running
                    Forwarding: enabled
                    Periodic reoptimization: every 3600 seconds, next in 2706 seconds
                    Periodic FRR Promotion: every 300 seconds, next in 81 seconds
                    Periodic auto-bw collection: disabled

```

Signalling Summary:

```

Head: 1 interfaces, 1 active signalling attempts, 1 established
      0 explicit, 1 dynamic
      1 activations, 0 deactivations
      0 recovering, 0 recovered
Mids: 0
Tails: 0

```

Fast ReRoute Summary:

```

Head:    0 FRR tunnels, 0 protected, 0 rerouted
Mid:     0 FRR tunnels, 0 protected, 0 rerouted
Summary: 0 protected, 0 link protected, 0 node protected, 0 bw protected

```

P2MP Summary:

```

Tunnel Head:      1 total, 1 connected
Destination Head: 2 total, 2 connected
S2L Head: 2 established, 0 proceeding
S2L Mid: 0 established, 0 proceeding
S2L Tail: 1 established

```

P2MP Fast ReRoute Summary:

```

Tunnel Head: 0 FRR enabled
S2L Head: 0 FRR, 0 protected, 0 rerouted
S2L Mid: 0 FRR, 0 protected, 0 rerouted
Summary: 0 protected, 0 link protected, 0 node protected, 0 bw protected

```

AutoTunnel Backup Summary:

```

AutoTunnel Backups:
    50 created, 50 up, 0 down, 8 unused
    25 NHOP, 25 NNHOP, 10 SRLG strict, 10 SRLG pref
Protected LSPs:

```

```

    10 NHOP, 20 NHOP+SRLG
    15 NNHOP, 5 NNHOP+SRLG
Protected S2L Sharing Families:
    10 NHOP, 20 NHOP+SRLG
    15 NNHOP, 5 NNHOP+SRLG
Protected S2Ls:          10 NHOP, 20 NHOP+SRLG
    15 NNHOP, 5 NNHOP+SRLG

```

This sample output shows the various P2MP tunnels by using the **protection** keyword:

```

RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels protection

haa-2_t20 Tunnel Id: 20
  LSP Head, Admin: up, Oper: up
  Src: 2.2.2.2, Dest: 3.3.3.3, Instance: 2
  Fast Reroute Protection: None

haa-2_t20 Tunnel Id: 20
  LSP Head, Admin: up, Oper: up
  Src: 2.2.2.2, Dest: 3.3.3.3, Instance: 3
  Fast Reroute Protection: None

haa-2_t21 Tunnel Id: 21
  LSP Head, Admin: up, Oper: up
  Src: 2.2.2.2, Dest: 3.3.3.3, Instance: 2
  Fast Reroute Protection: Requested
  Outbound: FRR Ready
  Backup tunnel-te200 to LSP nhop
  tunnel-te200: out I/f: GigabitEthernet0/2/0/3
  LSP signalling info:
    Original: out I/f: POS0/3/0/3, label: 3, nhop: 23.9.1.3
    With FRR: out I/f: tunnel-te200, label: 3
  LSP bw: 0 kbps, Backup level: any-class unlimited, type: CT0

haa-2_t200 Tunnel Id: 200
  LSP Head, Admin: up, Oper: up
  Src: 2.2.2.2, Dest: 3.3.3.3, Instance: 3
  Fast Reroute Protection: None

```

This table describes the significant fields shown in the display.

Table 23: show mpls traffic-eng tunnels protection Command Field Descriptions

Field	Description
Tunnel#	Number of the MPLS-TE backup tunnel.
LSP Head/router	Node is either head or router for this LSP ¹⁸ .
Instance	LSP ID.
Backup tunnel	Backup tunnel protection for NHOP/NNHOP.
out if	Backup tunnel's outgoing interface
Original	Outgoing interface, label, and next-hop of the LSP when not using backup.
With FRR	Outgoing interface and label when using backup tunnel.

Field	Description
LSP BW	Signaled bandwidth of the LSP.
Backup level	Type of bandwidth protection provided—pool type and limited/unlimited bandwidth.
LSP Tunnels Process	Status of the TE process 19 .

¹⁸ LSP = Link-State Packet.

¹⁹ LSP = Label Switched Path

This sample output shows information about sharing label and rewrite information concisely for P2MP tunnels:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels p2mp concise

Tunnel: 100 P2MP 100 LSP 1 Src 60.60.60.60 Role Head
  Subgroup 1 Dst 2.2.2.2 State connected FRR Inact (--unknown--)
  InIF none OutIF GigabitEthernet0_2_0_1 Local Label 16000 Out Label 16000
Tunnel: 300 P2MP 300 LSP 1 Src 2.2.2.2 Role Tail
  Subgroup 1 Dst 60.60.60.60 State connected FRR Inact (--unknown--)
  InIF GigabitEthernet0_2_0_1 OutIF none Local Label 16001 Out Label 0
```

This is sample output from the **show mpls traffic-eng tunnels** command using the **backup** keyword. This command selects every MPLS-TE tunnel known to the router, and displays information about the FRR protection that each selected tunnel provides for interfaces on this route. The command does not generate output for tunnels that do not provide FRR protection of interfaces on this router:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels backup

tunnel160
Admin: up, Oper: up
Src: 10.20.20.20, Dest: 10.10.10.10, Instance: 28
Fast Reroute Backup Provided:
Protected I/fs: POS0/7/0/0
Protected lsp: 0
Backup BW: any-class unlimited, Inuse: 0 kbps
```

This table describes the significant fields shown in the display.

Table 24: show mpls traffic-eng tunnels backup Command Field Descriptions

Field	Description
Tunnel#	MPLS-TE backup tunnel number.
Dest	IP address of backup tunnel destination.
State	State of the backup tunnel. Values are up, down, or admin-down.
Instance	LSP ID of the tunnel.
Protected I/fs	List of interfaces protected by the backup tunnel.
Protected lsp	Number of LSPs currently protected by the backup tunnel.

Field	Description
Backup BW	Configured backup bandwidth type and amount. Pool from which bandwidth is acquired. Values are any-class, CT0, and CT1. Amount is either unlimited or a configured limit in kbps.
Inuse	Backup bandwidth currently in use on the backup tunnel.

This shows a sample output from the **show mpls traffic-eng tunnels** command using the **backup** and **protected-interface** keywords:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels backup protected-interface
```

```
Interface: POS0/5/0/1
  Tunnel100  UNUSED : out I/f:                               Admin: down Oper: down

Interface: POS0/7/0/0
  Tunnel160  NHOP  : out I/f: POS0/6/0/0  Admin:   up Oper:   up
```

This table describes the significant fields shown in the display.

Table 25: show mpls traffic-eng tunnels backup protected-interface Command Field Descriptions

Field	Description
Interface	MPLS-TE-enabled FRR protected interface.
Tunnel#	FRR protected tunnel on the interface.
NHOP/NNHOP/UNUSED	State of Protected tunnel. Values are unused, next hop, next-next hop.
out I/f	Outgoing interface of the backup tunnel providing the protection.

This shows a sample output from the **show mpls traffic-eng tunnels up** command using the **igp ospf** keywords:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels up igp ospf
```

```
Signalling Summary:

This sample output shows a tabular table indicating automatic backup tunnels when using the **tabular** keyword:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels tabular
```

Tunnel Name	LSP ID	Destination Address	Source Address	State	FRR State	LSP Role	Path Prot
tunnel-te0	549	200.0.0.3	200.0.0.1	up	Inact	Head	InAct
tunnel-te1	546	200.0.0.3	200.0.0.1	up	Inact	Head	InAct
tunnel-te2	6	200.0.0.3	200.0.0.1	up	Inact	Head	InAct
*tunnel-te50	6	200.0.0.3	200.0.0.1	up	Active	Head	InAct
*tunnel-te60	4	200.0.0.3	200.0.0.1	up	Active	Head	InAct
*tunnel-te70	4	200.0.0.3	200.0.0.1	up	Active	Head	InAct
*tunnel-te80	3	200.0.0.3	200.0.0.1	up	Active	Head	InAct

* = automatically created backup tunnel

This table describes the significant fields shown in the display.

Table 26: show mpls traffic-eng tunnels tabular Command Field Descriptions

Field	Description
Tunnel Name	MPLS-TE tunnel name.
LSP ID	LSP ID of the tunnel.
Destination Address	Destination address of the TE tunnel (identified in Tunnel Name).
Source Address	Source address for the filtered tunnels.
Tunnel State	State of the tunnel. Values are up, down, or admin-down.
FRR State	FRR state identifier.
LSP Role	Role identifier. Values are All, Head, or Tail.

This sample output shows the MPLS-TE tunnel information only for tunnels in which the automatic bandwidth is enabled using the **auto-bw** keyword:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels auto-bw
```

```
Signalling Summary:
  LSP Tunnels Process: running
  RSVP Process: running
  Forwarding: enabled
  Periodic reoptimization: every 3600 seconds, next in 636 seconds
  Periodic FRR Promotion: every 300 seconds, next in 276 seconds
  Auto-bw enabled tunnels: 1
```

```
Name: tunnel-te1 Destination: 0.0.0.0
Status:

  Fast Reroute: Disabled, Protection Desired: None

Reason for the tunnel being down: No destination is configured
History:
Displayed 1 (of 1) heads, 0 (of 0) midpoints, 0 (of 0) tails
Displayed 0 up, 1 down, 0 recovering, 0 recovered heads

```

This table describes the significant fields shown in the display.

Table 27: show mpls traffic-eng tunnels auto-bw Command Field Descriptions

Field	Description
collect bw only	Field is displayed only if the bandwidth collection is configured in the tunnel automatic bandwidth configuration.
Last BW Applied	Last bandwidth change that is requested by the automatic bandwidth for the tunnel. In addition, this field indicates which pool is used for the bandwidth.
BW Applications	Total number of bandwidth applications that is requested by the automatic bandwidth, which includes the applications triggered by an overflow condition.
Last Application Trigger	These last application options are displayed: <ul style="list-style-type: none"> • Periodic Application • Overflow Detected • Manual Application
Bandwidth Min/Max	Bandwidth configured is either minimum or maximum.
Application Frequency	Configured application frequency. The Time Left field indicates the time left before the next application executes.
Collection Frequency	Globally configured collection frequency, which is the same value for all the tunnels.
Samples Collected	Number of samples that are collected during the current application period. This field is replaced by the Collection Disabled field if Collection Frequency is not currently configured.
Highest BW	Highest bandwidth that is collected for the application period.

Field	Description
Next	Time left before the next collection event.
Overflow Threshold	Overflow threshold that is configured. The Overflow field appears only if the overflow detection is configured in the tunnel automatic bandwidth configuration.
Limit	Consecutive overflow detected or configured limit.
Early BW Applications	Number of early bandwidth applications that are triggered by an overflow condition.

This is sample output from the **show mpls traffic-eng tunnels** command after the NNHOP SRLG preferred automatic backup tunnel is configured:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels 1
```

This table describes the significant fields shown in the display.

Table 28: show mpls traffic-eng tunnels Command Field Descriptions

Field	Description
Auto Backup	Auto backup section header.
Creation Time	Time when the tunnel was created and for what period was the tunnel created.
Protected LSPs	Number of ready and active LSPs protected by this backup.
Protected S2L Sharing Families	Number of ready and active sharing families protected by this backup.
Protected S2Ls	Number of ready and active primary tunnels protected by this backup.
Protected i/f Protected node	Interface and NNHOP node protected by this backup.
Protection: NNHOP+SRLG	Type of protection provided by this backup. Note Protection can be different when a preferred SRLG is configured and an SRLG path is not found.
Example when backup is in use: Unused removal timeout: not running Example when backup is unused: Unused removal timeout: 1h26m	Amount of time left before the unused removal timeout expires. This timer only runs when the backup is in the unused state. After the timer expires, the automatic backup tunnel is removed.

This is sample output from the **show mpls traffic-eng tunnels** command using the **detail** keyword:

This table describes the significant fields shown in the display.

Table 29: show mpls traffic-eng tunnels auto-tunnel backup Command Field Descriptions

Field	Description
AutoTunnel Backup Configuration	Header for the automatic tunnel backup configuration.
Interfaces count	Number of interfaces that have automatic tunnel backup enabled.
Unused removal timeout	Configured value and time left before expiration of the unused removal timeout attribute.
Configured tunnel number range	Configured tunnel number range.
AutoTunnel Backup Summary	Header for the automatic tunnel backup summary information.
50 created	Number of automatic backup tunnels created.
50 up	Number of automatic backup tunnels in the up state.
0 down	Number of automatic backup tunnels in the down state.
8 unused	Number of automatic backup tunnels in the unused state.
25 NHOP	Number of automatic backup tunnels created for NHOP protection.
25 NNHOP	Number of automatic backup tunnels created for NNHOP protection.
10 SRLG strict	Number of automatic backup tunnels created with the SRLG preferred attribute.
10 SRLG pref	Number of automatic backup tunnels created with the SRLG preferred attribute.

Field	Description
Protected LSPs Protected S2L Sharing Families Protected S2Ls	Headings for summary information showing current status of LSPs, S2L Sharing Families, and S2Ls that are protected by the automatic tunnel backups. Numbers include primary tunnels in FRR ready and active state.
10 NHOP	Number of automatic backup tunnels that are link protected.
20 NHOP+SRLG	Number of automatic backup tunnels that are link protected and using an SRLG diverse backup path.
15 NNHOP	Number of automatic backup tunnels that are node protected.
20 NNHOP+SRLG	Number of automatic backup tunnels that are node protected and use an SRLG diverse backup path.
Cumulative Counters (last cleared 1h ago):	Cumulative counters for automatic backup tunnels.
Headers: Total, NHOP, NNHOP	Total number of counters and breakdown of NHOP and NNHOP counters.
Created:	Cumulative number of created automatic backup tunnels since the last counter was cleared.
Connected:	Cumulative number of the connected automatic backup tunnels since the last counter was cleared. Note Counter increments only the first time that a tunnel connects.
Removed (down/unused/in use)	Number of automatic backup tunnels that are removed based on state.
Range exceeded	Number of automatic backup tunnels attempted and later rejected when the total number exceeds the configured range.

```

```
Time left before hard preemption: 96 seconds
```

```
.  
.
.
```

Related Commands

Command	Description
auto-tunnel backup (MPLS-TE)	Builds automatic NHOP and NNHOP backup tunnels.
backup-bw	Specifies the bandwidth type that LSPs can use for a backup tunnel, whether the backup tunnel should provide bandwidth protection, and if yes, how much and in which bandwidth pool.
srlg	Configures an SRLG membership for a link on a given interface.
soft-preemption	Enables soft-preemption on a head-end for the MPLS TE tunnel.

show mpls traffic-eng tunnels auto-bw brief

To display the list of automatic bandwidth enabled tunnels, and to indicate if the current signaled bandwidth of the tunnel is identical to the bandwidth that is applied by the automatic bandwidth, use the **show mpls traffic-eng tunnels auto-bw brief** command in EXEC mode.

show mpls traffic-eng tunnels auto-bw brief

Syntax Description This command has no arguments or keywords.

Command Default No default behavior or values

Command Modes EXEC

Command History

Release	Modification
Release 3.8.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **show mpls traffic-eng tunnels auto-bw brief** command to determine if the automatic bandwidth application has been applied on a specified tunnel. If a single tunnel is specified, only the information for that tunnel is displayed.

Task ID

Task ID	Operations
mpls-te	read

Examples

The following sample output shows the list of automatic bandwidth enabled tunnels:

```
RP/0/RP0/CPU0:router# show mpls traffic-eng tunnels auto-bw brief
```

Tunnel Name	LSP ID	Last appl BW (kbps)	Requested BW (kbps)	Signalled BW (kbps)	Highest BW (kbps)	Application Time Left
tunnel-te0	1	10	10	10	50	2h 5m
tunnel-te1	5	500	500	300	420	1h 10m

This table describes the significant fields shown in the display.

Table 30: show mpls traffic-eng tunnels auto-bw brief Field Descriptions

Field	Description
Tunnel Name	Name for the tunnel.
LSP ID	ID of the Label Switched Path that is used by the tunnel.

Field	Description
Last appl BW (kbps)	Last bandwidth applied (for example, requested) by the automatic-bandwidth feature for the tunnel.
Requested BW (kbps)	Bandwidth that is requested for the tunnel.
Signalled BW (kbps)	Bandwidth that is actually signalled for the tunnel.
Highest BW (kbps)	Highest bandwidth measured since the last start of the application interval.
Application Time Left	Time left until the application period ends for this tunnel.

Related Commands

Command	Description
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

show mpls traffic-eng tunnels bidirectional-associated

To display information about bidirectional associated LSP for an MPLS-TE tunnel, use the **show mpls traffic-eng tunnels bidirectional-associated** command in the MPLS tunnel-te interface.

```
show mpls traffic-eng tunnels bidirectional-associated [{affinity}][associated-lsp][{association id
value}|source-address IP address|global-id
value};][bfd-down][brief][class-type][co-routed][concise][destination][detail][down][hold-priority][interface][non-associated-lsp][non-co-routed]
[path-option][property][reoptimized][role][setup-priority][signame][soft-preemption][source][standby][static][suboptimal][sync-pending][tabular][up];]
```

Syntax Description

affinity	(Optional) Display the attribute values that are required for links carrying this tunnel. A 32-bit decimal number. Range is 0x0 to 0xFFFFFFFF, representing 32 attributes (bits), where the value of an attribute is 0 or 1.
associated-lsp	(Optional) Show tunnels with associated reverse LSPs.
association id <i>value</i> source-address <i>IP address</i> global-id <i>value</i>	(Optional) Show tunnels with the specified association information.
bfd-down	(Optional) Show tunnels with BFD session down.
brief	(Optional) Display a brief form of the output of the tunnel status and configuration.
class-type	(Optional) Display tunnels that are signaled in this class type.
co-routed	(Optional) Show co-routed tunnels.
concise	(Optional) Show concise information.
destination	(Optional) Restrict display to tunnels with this destination.
detail	(Optional) Include extra detail of the tunnel status and configuration.
down	(Optional) Restrict display to tunnels in down state.
hold-priority	(Optional) Display tunnels that are signaled using this hold-priority.
interface	(Optional) Restrict display to tunnels using a specified interface.
non-associated-lsp	(Optional) Show tunnels with no associated reverse LSPs.
non-co-routed	(Optional) Show non-co-routed tunnels.
path-option	(Optional) Restrict display to tunnels with specified path-option.
property	(Optional) Restrict display to tunnels with specified property.
reoptimized	(Optional) Restrict display to tunnels that have been re-optimized.
role	(Optional) Restrict display to tunnels with specified role.

setup-priority	(Optional) Tunnels that are signaled using this setup priority.
signame	(Optional) Tabular summary of tunnel status and configuration showing signaled name.
soft-preemption	(Optional) Show tunnels with soft-preemption enabled.
source	(Optional) Restrict display to tunnels with this source.
standby	(Optional) Standby node specific information.
static	(Optional) Show only static (not auto) head-end tunnels.
suboptimal	(Optional) Restrict display to tunnels using a sub-optimal path.
sync-pending	(Optional) Display tunnels that are in sync-pending state.
tabular	(Optional) Display tabular summary of tunnel status and configuration
up	(Optional) Restrict display to tunnels whose status is UP.

54	12	4.4.4.40	1.1.1.10	4/4	300	BC1	90

show srlg

To show the SRLG interface and configuration information, use the **show srlg** command in EXEC mode.

```
show srlg [interface type interface-path-id] [location {node-id|all|mgmt-nodes}] [value value-number]
[trace{file filename original|hexdump|last entries|reverse|stats|tailf|unique|verbose|wrapping}]
```

Syntax Description	
interface <i>type</i>	(Optional) Displays information on the specific interface type. For more information, use the question mark (?) online help function.
<i>interface-path-id</i>	Physical interface or virtual interface. Note Use the show interfaces command to see a list of all interfaces currently configured on the router. For more information about the syntax for the router, use the question mark (?) online help function.
location	(Optional) Specifies a node.
<i>node-id</i>	Node ID. The <i>node-id</i> argument is entered in the <i>rack/slot/module</i> notation.
all	Specifies all locations.
mgmt-nodes	Specifies all management nodes.
value <i>value-number</i>	(Optional) Displays SRLG value numbers.
trace	(Optional) Displays trace information for SRLG.
file <i>filename</i>	(Optional) Displays trace information for a specific file name.
original	Displays the original location of the file.
hexdump	(Optional) Displays traces in hexadecimal format.
last	(Optional) Displays trace information for a specific number of entries.
<i>entries</i>	Number of entries. Replace entries with the number of entries you want to display. For example, if you enter 5, the display shows the last 5 entries in the trace data. Range is 1 to 4294967295.
reverse	(Optional) Displays the latest traces first.
stats	(Optional) Displays the statistics in the command output.

tailf	(Optional) Displays the new traces as they are added in the command output.
unique	(Optional) Displays the unique entries with counts in the command output.
verbose	(Optional) Displays the information for internal debugging in the command output.
wrapping	(Optional) Displays the wrapping entries in the command output.

Command Default No default behavior or values

Command Modes EXEC

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	ip-services	read

Example

The following sample output is from the **show srlg value** command.

```

System Information::
Interface Count   : 2 (Maximum Interfaces Supported 250)

Interface   : POS0/1/0/0, Value Count : 2
SRLG Values : 10,20

Interface   : POS0/1/0/1, Value Count : 2
SRLG Values : 10,30

Interface   : POS0/1/0/2, Value Count : 2
SRLG Values : 10,40

Interface   : POS0/2/0/0, Value Count : 1
SRLG Values : 100

```

Related Commands

Command	Description
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

signalled-bandwidth

To configure the bandwidth required for an MPLS-TE tunnel, use the **signalled-bandwidth** command in interface configuration mode. To disable the behavior, use the **no** form of this command.

```
signalled-bandwidth {bandwidth [class-type ct]|sub-pool bandwidth}
no signalled-bandwidth {bandwidth [class-type ct]|sub-pool bandwidth}
```

Syntax Description		
<i>bandwidth</i>		Bandwidth required for an MPLS-TE tunnel. Bandwidth is specified in kilobits per second. By default, bandwidth is reserved in the global pool. Range is from 0 to 4294967295.
class-type <i>ct</i>		(Optional) Configures the class type of the tunnel bandwidth request. Range is from 0 to 1. Class-type 0 is strictly equivalent to global-pool. Class-type 1 is strictly equivalent to subpool.
sub-pool <i>bandwidth</i>		Reserves the bandwidth in the subpool instead of the global pool. Range is 1 to 4294967295. A subpool bandwidth value of 0 is not allowed.

Command Default The default is 0 in class-type 0.

Command Modes Interface configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **signalled-bandwidth** command supports two bandwidth pools (class-types) for the Diff-Serv Aware TE (DS-TE) feature. This command is also used as the bandwidth startup value to bring up the auto bandwidth enabled tunnels.

Note The Cisco Diff-Serve Aware TE feature is compliant to IETF standard and will interoperate with third party vendor DS-TE. Both Russian Doll Model and Maximum Allocation Model for bandwidth allocation are supported. We recommended that IETF terminology be used in DS-TE bandwidth configurations, namely, Class-type (CT) and Bandwidth Constraints (BC).

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

This example shows how to set the bandwidth required for an MPLS-TE tunnel to 1000 in the global pool (class-type 0):

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# signalled-bandwidth 1000

RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# signalled-bandwidth 1000 class-type 0
```

This example shows how to set the bandwidth required for an MPLS-TE tunnel to 1000 in the sub-pool (class-type 1):

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# signalled-bandwidth sub-pool 1000

RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# signalled-bandwidth 1000 class-type 1
```

Related Commands

Command	Description
show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

signalled-name

To configure the name of the tunnel required for an MPLS-TE tunnel, use the **signalled-name** command in interface configuration mode. To return to the default behavior, use the **no** form of this command.

signalled-name *name*
no signalled-bandwidth *name*

Syntax Description	<i>name</i> Name used to signal the tunnel.
---------------------------	---

Command Default	Default name is the hostname_tID, where ID is the tunnel interface number.
------------------------	--

Command Modes	Interface configuration
----------------------	-------------------------

Command History	Release	Modification
	Release 3.3.0	This command was introduced.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to set the tunnel name:
-----------------	---

```
RP/0/RP0/CPU0:router(config)# interface tunnel-te 1
RP/0/RP0/CPU0:router(config-if)# signalled-name tunnel-from-NY-to-NJ
```

Related Commands	Command	Description
	show mpls traffic-eng tunnels, on page 294	Displays information about MPLS-TE tunnels.

signalling advertise explicit-null (MPLS-TE)

To specify that tunnels terminating on a router use explicit-null labels, use the **signalling advertise explicit-null** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

signalling advertise explicit-null
no signalling advertise explicit-null

Syntax Description This command has no arguments or keywords.

Command Default Implicit-null labels are advertised.

Command Modes MPLS-TE configuration

Command History	Release	Modification
	Release 2.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Use the **signalling advertise explicit-null** command to specify that tunnels terminating on this router use explicit-null labels. This command applies to tunnel labels advertised to next to last (penultimate) hop.

The explicit label is used to carry quality-of-service (QoS) information up to the terminating-end router of the label switched path (LSP).

Task ID	Task ID	Operations
	mpls-te	read, write

Examples The following example shows how to configure explicit null tunnel labels:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# signalling advertise explicit-null
```

Related Commands	Command	Description
	mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
	path-selection loose-expansion metric (MPLS-TE), on page 177	Configures a metric type to be used to expand a path to the next loose hop for a tunnel on an area border router.

snmp traps mpls traffic-eng

To enable the router to send Multiprotocol Label Switching traffic engineering (MPLS-TE) Simple Network Management Protocol (SNMP) notifications or informs, use the **snmp traps mpls traffic-eng** command in global configuration mode. To disable this behavior, use the **no** form of this command.

snmp traps mpls traffic-eng [*notification-option*] **preempt**

no snmp traps mpls traffic-eng [*notification-option*]

Syntax Description	<p><i>notification-option</i> (Optional) Notification option to enable the sending of notifications to indicate changes in the status of MPLS-TE tunnels. Use one of these values:</p> <ul style="list-style-type: none"> • up • down • reoptimize • reroute • p2mp • cisco-ext 								
	<p>preempt Enables MPLS-TE tunnel preempt trap.</p>								
Command Default	None								
Command Modes	Global configuration								
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> <tr> <td>Release 3.9.0</td> <td>The p2mp notification option was added to support the P2MP TE feature.</td> </tr> <tr> <td>Release 4.2.0</td> <td>The preempt keyword was added.</td> </tr> </tbody> </table>	Release	Modification	Release 2.0	This command was introduced.	Release 3.9.0	The p2mp notification option was added to support the P2MP TE feature.	Release 4.2.0	The preempt keyword was added.
Release	Modification								
Release 2.0	This command was introduced.								
Release 3.9.0	The p2mp notification option was added to support the P2MP TE feature.								
Release 4.2.0	The preempt keyword was added.								

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If the command is entered without the *notification-option* argument, all MPLS-TE notification types are enabled.

SNMP notifications can be sent as either traps or inform requests.

The **snmp-server enable traps mpls traffic-eng** command enables both traps and inform requests for the specified notification types. To specify whether the notifications should be sent as traps or informs, use the **snmp-server host** command and specify the keyword **trap** or **informs**.

If you do not enter the **snmp traps mpls traffic-eng** command, no MPLS-TE notifications controlled by this command are sent. To configure the router to send these MPLS-TE SNMP notifications, you must enter at least one **snmp enable traps mpls traffic-eng** command. If you enter the command with no keywords, all MPLS-TE notification types are enabled. If you enter the command with a keyword, only the notification

type related to that keyword is enabled. To enable multiple types of MPLS-TE notifications, you must issue a separate **snmp traps mpls traffic-eng** command for each notification type and notification option.

The **snmp traps mpls traffic-eng** command is used in conjunction with the **snmp host** command. Use the **snmp host** command to specify which host or hosts receive MPLS-TE SNMP notifications. To send notifications, you must configure at least one **snmp host** command.

For a host to receive an MPLS-TE notification controlled by this command, both the **snmp traps mpls traffic-eng** command and the **snmp host** command for that host must be enabled.

Task ID	Task ID	Operations
	mpls-te	read/write

Examples

This example shows how to configure a router to send MPLS-TE tunnel up SNMP notifications when a configured MPLS-TE tunnel leaves the down state and enters the up state:

```
RP/0/RP0/CPU0:router(config)# snmp traps mpls traffic-eng up
```

Related Commands

Command	Description
snmp-server host	Specifies the recipient of a SNMP notification operation.
soft-preemption	Enables soft-preemption on a head-end for the MPLS TE tunnel.

soft-preemption

To enable soft-preemption with default timeout on a head-end for the MPLS TE tunnel, use the **soft-preemption** command in MPLS TE mode. To disable this feature, use the **no** form of this command.

soft-preemption timeout *seconds*

no soft-preemption

timeout <i>seconds</i>	Defines the timeout for soft-preempted LSP, in seconds. The default timeout is 60. Range is from 30 to 300.
-------------------------------	---

Command Default The default *timeout seconds* is 60 seconds.

Command Modes MPLS TE configuration
Tunnel Interface configuration

Command History	Release	Modification
	Release 4.2.0	This command was introduced.

Usage Guidelines You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Task ID	Task ID	Operation
	MPLS-TE	write

This example shows how to enable soft-preemption on a specific tunnel:

```
RP/0/RP0/CPU0:router(config)#interface tunnel-te 50
RP/0/RP0/CPU0:router(config-if)#soft-preemption
```

This example shows how to enable soft-preemption on a node :

```
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#soft-preemption
RP/0/RP0/CPU0:router(config-soft-preemption)#
```

soft-preemption frr-rewrite

To enable LSP traffic over backup tunnel, when LSP is soft-preempted, use the **soft-preemption frr-rewrite** command in MPLS TE configuration mode. To disable the LSP traffic over backup tunnel, use the **no** form of this command.

soft-preemption frr-rewrite
no soft-preemption frr-rewrite

Syntax Description	This command has no keywords or arguments.	
Command Default	FRR LSP traffic over backup tunnel is disabled.	
Command Modes	MPLS TE configuration	
Command History	Release	Modification
	Release 5.1.2	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The fast re-route backup tunnel must be available and ready for the traffic of the preempted LSP to be moved onto the FRR backup. The traffic will not be moved to the backup tunnel, if an LSP is already soft-preempted.

Task ID	Task ID	Operation
	mpls-te	read, write

This example shows how to enable FRR LSP traffic over backup tunnels, when the LSP is soft-preempted.

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#soft-preemption frr-rewrite
```

srlg

To configure an MPLS traffic engineering shared-risk link group (SRLG) value for a link on a given interface, use the **srlg** command in global configuration mode. To disable this configuration, use the **no** form of this command.

srlg *value*
no srlg *value*

Syntax Description	<i>value</i> Value number that identifies the SRLG. Range is 0 to 4294967295.
---------------------------	---

Command Default	Shared Risk Link Group memberships are not configured.
------------------------	--

Command Modes	Global configuration
----------------------	----------------------

Command History	Release	Modification
	Release 3.8.0	This command was introduced.
	Release 4.0.0	The value argument was added. Command mode was changed to the global configuration mode.

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

You can enter up to 30 SRLG entries on the ingress and egress ports of the interface. SRLG entries configured over 30 are silently dropped.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples	The following example shows how to configure an SRLG with 10 member links:
-----------------	--

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router#(config)# srlg
RP/0/RP0/CPU0:router#(config-srlg)# interface POS 0/3/0/2
RP/0/RP0/CPU0:router#(config-srlg-if)# value 10
```

Related Commands	
-------------------------	--

Command	Description
interface (MPLS-TE), on page 96	Enables MPLS-TE on an interface and enters MPLS-TE interface configuration mode.
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.

stateful-client delegation

To enable stateful path computation element (PCE) delegation on all tunnels, use **stateful-client delegation** in the MPLS-TE pce configuration mode.

stateful-client delegation

This command has no keywords or arguments.

Command Default	No default behavior or values
------------------------	-------------------------------

Command Modes	MPLS-TE pce configuration
----------------------	---------------------------

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines	No specific guidelines impact the use of this command.
-------------------------	--

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to enable stateful PCE delegation on all tunnels:

```
RP/0/0/CPU0:ios#configure
RP/0/0/CPU0:ios(config)#mpls traffic-eng pce
RP/0/0/CPU0:ios(config-mpls-te-pce)#stateful-client delegation
```

state-timeout

To configure the time (in seconds) that a path computation client (PCC) must wait before removing the LSPs associated with a PCEP session that is disconnected and reverting back to the defaults, use the **state-timeout** command in MPLS-TE pce configuration mode.

state-timeout *seconds*

Syntax Description *seconds* Specifies state timeout for LSPs without delegation in seconds. The range is from 0 to 3600.

Command Default *seconds*: 180

Command Modes MPLS-TE pce configuration

Command History	Release	Modification
	Release 5.3.0	This command was introduced.

Usage Guidelines No specific guidelines impact the use of this command.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example shows how to configure the time (in seconds) that a PCC must wait before removing the LSPs:

```
RP/0/0/CPU0:ios#configure
RP/0/0/CPU0:ios(config)#mpls traffic-eng pce
RP/0/0/CPU0:ios(config-mpls-te-pce)#stateful-client timers state-timeout 30
```

Note If the state-timeout is zero seconds, it means immediate removal of the LSPs.

switching (GMPLS)

To configure TE-link switching attributes, use the **switching** command in MPLS-TE interface configuration mode. To return to the default behavior, use the **no** form of this command.

```
switching {key value|link} [{capability switching|encoding encoding type }]
no switching {key value|link} [{capability switching|encoding encoding type }]
```

Syntax Description	key	Configures the Interface Switching Capability Key.
	<i>value</i>	Local interface switching capability key value. Range is 1 to 99.
	link	Enables link switching.
	capability <i>switching</i>	(Optional) Configures switching capability type.
	encoding <i>encoding type</i>	(Optional) Enables local encoding. Range is 1 to 99.

Command Default No default behavior or values

Command Modes MPLS-TE interface configuration

Command History	Release	Modification
	Release 3.3.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

Note The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID	Task ID	Operations
	mpls-te	read, write

Examples

The following example shows how to configure interface switching key on Packet-over-SONET/SDH (POS) interface 0/7/0/1:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# interface POS 0/7/0/1
```

```
RP/0/RP0/CPU0:router(config-mpls-te-if)# switching key 66
```

Related Commands

remote (GMPLS), on page 206	Configures remote TE links.

switching endpoint (GMPLS)

To specify the switching capability and encoding types for all endpoint TE links used to signal the optical tunnel that is mandatory to set up the GMPLS LSP, use the **switching endpoint** command in interface tunnel-gte configuration mode. To disable this feature, use the **no** form of this command.

```
switching endpoint capability switching type [encoding encoding type ]
no switching endpoint capability switching type [encoding encoding type ]
```

Syntax Description	<p><i>capability switching type</i> Capability switching type is the optical LSP switching capability descriptor. The following types are used:</p> <p>psc1 Specifies Packet-Switch Capable-1 that is equivalent to numeric 1.</p> <p>lsc Specifies Lambda-Switch Capable that is equivalent to numeric 150.</p> <p>fsc Specifies Fiber-Switch Capable that is equivalent to numeric 200.</p> <hr/> <p>encoding <i>encoding type</i> (Optional) Specifies the transport capability of the TE link over which the GMPLS LSP is established. For SONET links, the encoding is specified as sonetsdh. For Ethernet links, the encoding is specified as ethernet.</p>						
Command Default	No default behavior or values

 Note	The LMP and GMPLS-NNI features are not supported on x86 RPs.						

Task ID	Task ID	Operations
		mpls-te read, write

Examples

The following example shows how to configure switching capability as pscl and the encoding type as sonetsdh for the **switching endpoint** command:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-gte 1
RP/0/RP0/CPU0:router(config-if)# ipv4 address 99.99.99.2 255.255.255.254
RP/0/RP0/CPU0:router(config-if)# signalled-name tunnel-gte1
RP/0/RP0/CPU0:router(config-if)# switching endpoint pscl encoding sonetsdh
RP/0/RP0/CPU0:router(config-if)# priority 2 2
RP/0/RP0/CPU0:router(config-if)# signalled-bandwidth 2488320
RP/0/RP0/CPU0:router(config-if)# destination 109.109.109.109
RP/0/RP0/CPU0:router(config-if)# path-option 1 explicit name g1-p1-p2
RP/0/RP0/CPU0:router(config-if)# path-option protecting 1 explicit name g2-p1-p2
```

Related Commands

Command	Description
interface tunnel-gte, on page 100	Configures an MPLS-TE tunnel interface for GMPLS interfaces.
switching transit (GMPLS), on page 355	Specifies the switching capability and encoding types for all transit TE links used to signal the optical tunnel.

switching transit (GMPLS)

To specify the switching capability and encoding types for all transit TE links used to signal the optical tunnel to configure an optical LSP, use the **switching transit** command in interface tunnel-gte configuration mode. To disable this feature, use the **no** form of this command.

```
switching transit capability switching type [encoding encoding type ]
no switching transit capability switching type [encoding encoding type ]
```

Syntax Description

capability switching type Capability switching type is the optical LSP switching capability descriptor. The following types are used:

psc1

Specifies Packet-Switch Capable-1 that is equivalent to numeric 1.

lsc

Specifies Lambda-Switch Capable that is equivalent to numeric 150.

fsc

Specifies Fiber-Switch Capable that is equivalent to numeric 200.

encoding *encoding type* (Optional) Specifies the transport capability of the TE link over which the GMPLS LSP is established. For SONET links, the encoding is specified as sonetsdh. For Ethernet links, the encoding is specified as ethernet.

Command Default

No default behavior or values

Command Modes

Interface tunnel-gte configuration

Command History

Release	Modification
Release 3.3.2	This command was introduced.
Release 3.8.0	GMPLS interfaces are used under the tunnel-gte interface type.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

GMPLS interfaces are used under the tunnel-gte interface type.

Use the **switching transit** command to configure the optical LSP.

The switching and encoding types must match with the configured values at the termination point of the LSP.

Note

The LMP and GMPLS-NNI features are not supported on x86 RPs.

Task ID	Task ID	Operations
		mpls-te read, write

Examples

The following example shows how to configure switching capability as lsc and the encoding type as sonetsdh for the **switching transit** command:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# interface tunnel-gtel
RP/0/RP0/CPU0:router(config-if)# ipv4 address 99.99.99.2 255.255.255.254
RP/0/RP0/CPU0:router(config-if)# signalled-name tunnel-gtel
RP/0/RP0/CPU0:router(config-if)# switching transit lsc encoding sonetsdh
RP/0/RP0/CPU0:router(config-if)# priority 2 2
RP/0/RP0/CPU0:router(config-if)# signalled-bandwidth 2488320
RP/0/RP0/CPU0:router(config-if)# destination 109.109.109.109
RP/0/RP0/CPU0:router(config-if)# path-option 1 explicit name g1-p1-p2
RP/0/RP0/CPU0:router(config-if)# path-option protecting 1 explicit name g2-p1-p2
```

Related Commands

Command	Description
interface tunnel-gte, on page 100	Configures an MPLS-TE tunnel interface for GMPLS interfaces.
switching endpoint (GMPLS), on page 353	Specifies the switching capability and encoding types for all endpoint TE links used to signal the optical tunnel.

timers loose-path (MPLS-TE)

To configure the period between the headend retries after path errors, use the **timers loose-path** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

timers loose-path *retry-period* *value*
no timers loose-path *retry-period* *value*

Syntax Description	retry-period <i>value</i> Configures the time, in seconds, between retries upon a path error. Range is 30 to 600.
---------------------------	--

Command Default	<i>value</i> : 120
------------------------	--------------------

Command Modes	MPLS-TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 3.4.0	This command was introduced

Usage Guidelines	To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	---

Task ID	Task	Operations
	mpls-te	read, write

Examples	The following example shows how to the period between retries after path errors to 300 seconds:
-----------------	---

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# timers loose-path retry-period 300
```

Related Commands	Command	Description
	mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
	path-selection loose-expansion affinity (MPLS-TE), on page 175	Specifies the affinity value to be used to expand a path to the next loose hop for a tunnel on an area border router.

timers removal unused (auto-tunnel backup)

To configure the frequency at which a timer scans backup autotunnels and removes tunnels that are not in use, use the **timers removal unused (auto-tunnel backup)** command in auto-tunnel backup configuration mode. To return to the default behavior, use the **no** form of this command.

timers removal unused *frequency*
no timers removal unused *frequency*

Syntax Description

frequency Frequency, in minutes, between backup autotunnel scans to remove tunnels that are not used. Range is 0; 5 to 10080 minutes (7 days). A value of 0 disables the scanning and removal of tunnels.

Command Default

frequency: 60

Command Modes

auto-tunnel backup configuration

Command History

Release	Modification
Release 4.0.0	This command was introduced.

Usage Guidelines

To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

The **unused** auto-tunnel backup tunnel is the tunnel that is not assigned to protect any FRR tunnel.

Task ID

Task ID	Operation
mpls-te	read, write

Example

The following example shows that unused automatic backup tunnels are removed after the 10 minute timer scan is reached.

```
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# auto-tunnel backup
RP/0/RP0/CPU0:router(config-te-auto-bk)# timers removal unused 10
```

Related Commands

Command	Description
show mpls traffic-eng auto-tunnel backup unused	Displays the unused backup tunnels only.

Command	Description
auto-tunnel backup (MPLS-TE), on page 37	Builds automatic next-hop and next-next-hop tunnels, and enters auto-tunnel configuration mode.

timeout (soft-preemption)

To override the soft-preemption default timeout, use the **timeout** command in MPLS TE mode. To remove this configuration, use the **no** form of this command.

soft-preemption timeout *seconds*

no soft-preemption

Syntax Description	timeout <i>seconds</i> Defines the timeout for soft-preempted LSP, in seconds. The default timeout is 60. Range is from 30 to 300.
---------------------------	---

Command Default	The default <i>timeout seconds</i> is 60 seconds.
------------------------	---

Command Modes	MPLS TE configuration
----------------------	-----------------------

Command History	Release	Modification
	Release 4.2.0	This command was introduced.

Usage Guidelines	You must be in a user group associated with a task group that includes the proper task IDs. The command reference guides include the task IDs required for each command. If you suspect user group assignment is preventing you from using a command, contact your AAA administrator for assistance.
-------------------------	--

Task ID	Task ID	Operation
	MPLS-TE	write

This example shows how to override the soft-preemption default timeout:

```
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# soft-preemption
RP/0/RP0/CPU0:router(config-soft-preemption)# timeout 60
```

topology holddown sigerr (MPLS-TE)

To specify the time that a router should ignore a link in its TE topology database in tunnel path constrained shortest path first (CSPF) computations following a TE tunnel signaling error on the link, use the **topology holddown sigerr** command in MPLS-TE configuration mode. To return to the default behavior, use the **no** form of this command.

```
topology holddown sigerr seconds
no topology holddown sigerr seconds
```

Syntax Description	<i>seconds</i> Time that the router ignores a link during tunnel path calculations, following a TE tunnel error on the link, specified in seconds. Range is 0 to 300. Default is 10.				
Command Default	<i>seconds</i> : 10				
Command Modes	MPLS-TE configuration				
Command History	<table border="1"> <thead> <tr> <th>Release</th> <th>Modification</th> </tr> </thead> <tbody> <tr> <td>Release 2.0</td> <td>This command was introduced.</td> </tr> </tbody> </table>	Release	Modification	Release 2.0	This command was introduced.
Release	Modification				
Release 2.0	This command was introduced.				

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

A router at the headend for TE tunnels can receive a Resource Reservation Protocol (RSVP) No Route error message before the router receives a topology update from the IGP routing protocol announcing that the link is down. When this happens, the headend router ignores the link in subsequent tunnel path calculations to avoid generating paths that include the link and are likely to fail when signaled. The link is ignored until the router receives a topology update from its IGP or a link holddown timeout occurs. Use the **topology holddown sigerr** command to change the link holddown time from its 10-second default value.

Task ID	<table border="1"> <thead> <tr> <th>Task ID</th> <th>Operations</th> </tr> </thead> <tbody> <tr> <td>mpls-te</td> <td>read, write</td> </tr> </tbody> </table>	Task ID	Operations	mpls-te	read, write
Task ID	Operations				
mpls-te	read, write				

Examples

The following example shows how to set the link holddown time for signaling errors at 15 seconds:

```
RP/0/RP0/CPU0:router# configure
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# topology holddown sigerr 15
```

Related Commands

Command	Description
mpls traffic-eng, on page 138	Enters MPLS-TE configuration mode.
show mpls traffic-eng topology, on page 284	Displays the current MPLS-TE global topology of this node as well as the signaling error holddown time.

tunnel-id (auto-tunnel backup)

To configure the range of tunnel interface numbers to be used for automatic backup tunnels, use the **tunnel-id** command in auto-tunnel backup configuration mode. To delete the automatic backup tunnels, use the **no** form of this command.

```
tunnel-id
min number
max number
no tunnel-id
```

Syntax Description	
min	(Optional) Minimum number for automatic backup tunnels.
<i>number</i>	Valid values are from 0 to 65535.
max	(Optional) Maximum number for automatic backup tunnels.

Command Default No default behavior or values

Command Modes Auto-tunnel backup configuration

Command History	Release	Modification
	Release 4.0.0	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

If you increase the tunnel ID range, the automatic backup tunnels that failed earlier will get created the next time automatic backup assignments are processed.

Restrictions:

- Command is rejected if the **max** value minus **min** value is $\geq 1K$.
- Command is rejected if **min** value $>$ **max** value.
- Command is rejected if **min** value is greater than the tunnel ID of an existing automatic backup tunnel.
- Command is rejected if **max** value is smaller than the tunnel ID of an existing automatic backup tunnel.
- Command is rejected if a statically configured tunnel ID matches with the configured **min** and **max** range of values.
- Command is rejected if a static backup assignment is already configured to a tunnel with an ID within the **min** value / **max** value range.

Task ID	Task ID	Operation
	mpls-te	read, write

Example

The following example allows 800 automatic backup tunnels to be created:

```
RP/0/RP0/CPU0:router(config)# mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)# auto-tunnel backup
RP/0/RP0/CPU0:router(config-te-auto-bk)# tunnel-id min 1200 max 2000
```

Related Commands

Command	Description
auto-tunnel backup (MPLS-TE), on page 37	Builds automatic next-hop and next-next-hop tunnels, and enters auto-tunnel configuration mode.

tunnel-id (auto-tunnel pcc)

To configure the range of tunnel IDs to be used for stateful PCE instantiation requests, use the **tunnel-id** command in auto-tunnel stateful PCE client configuration mode. To delete the stateful PCE client auto-tunnels, use the **no** form of this command.

```
tunnel-d min number max number
no tunnel-d min number max number
```

Syntax Description	min	Specifies minimum number for stateful PCE client auto-tunnels.
	max	Specifies maximum number for stateful PCE client auto-tunnels
	number	Valid values are from 0 to 65535.

Command Default None

Command Modes Auto-tunnel stateful PCE client configuration

Command History	Release	Modification
	Release 5.1.1	This command was introduced.

Usage Guidelines To use this command, you must be in a user group associated with a task group that includes appropriate task IDs. If the user group assignment is preventing you from using a command, contact your AAA administrator for assistance.

When the tunnel ID range is configured, no action is taken, though subsequent tunnel creation requests from a PCE may succeed. This does not affect the I-bit announced by the PCC, nor does it flap the PCE peer connections.

When the tunnel ID range is unconfigured, PCE instantiated tunnels are deleted by the PCC.

When the tunnel ID range is changed, any PCE instantiated tunnels that fall outside the range will be removed by the PCC. Tunnels whose IDs remain within the new range will be unaffected.

The tunnel ID range cannot conflict with other statically configured tunnels.

Task ID	Task	Operation
	mpls-te	read, write

This example shows how to configure 400 stateful PCE client auto-tunnels to be used for stateful PCE instantiation requests:

```
RP/0/RP0/CPU0:router#configure
RP/0/RP0/CPU0:router(config)#mpls traffic-eng
RP/0/RP0/CPU0:router(config-mpls-te)#auto-tunnel pcc
```

```
RP/0/RP0/CPU0:router(config-te-auto-pcc)#tunnel-id min 65100 max 65500
```
