

VXLAN-MCLAG Active-Active High Availability Support

The VXLAN-MCLAG Active-Active High Availability Support feature implements dual-home device with pseudo Multichassis Link Aggregation Control Protocol (pMLACP) redundancy mode and layer 2 VxLAN on the Cisco ASR1000 Series Aggregation Services Routers.

- [Restrictions for VXLAN-MCLAG Active-Active High Availability Support, on page 1](#)

Restrictions for VXLAN-MCLAG Active-Active High Availability Support

- The loopback interface configured for this feature cannot be used for another feature.
- The loopback interface of NVE interface must be shut down before configuring pmLACP, VxLAN and routing protocol.
- Bridge domain supports one VXLAN Network Identifier (VNI) Ethernet flow point (EFP) member only.
- Shutting the bridge domain affects status of the NVE interface, not the pseudo mLACP status.

Information About VXLAN-MCLAG Active-Active High Availability Support

Virtual Extensible LAN

Virtual Extensible LAN (VXLAN) is a network virtualization overlay technology that provides Layer 2 connectivity for workloads residing at noncontiguous points in the data center network. VXLAN enables

Multichassis Link Aggregation Group

flexibility by allowing workloads to be placed anywhere, along with the traffic separation required in a multitenant environment. VXLAN is an industry-standard protocol and uses underlay IP networks. It extends Layer 2 segments over a Layer 3 infrastructure to build Layer 2 overlay logical networks. It encapsulates Ethernet frames into IP User Data Protocol (UDP) headers and transports the encapsulated packets through the underlay network to the remote VXLAN tunnel endpoints (VTEPs) using the normal IP routing and forwarding mechanism.

Multichassis Link Aggregation Group

Multichassis Link Aggregation Group (MC-LAG) and Inter-chassis Communication Protocol (ICCP) enable a switch/router to use standard Ethernet Link Aggregation for device dual-homing, with active/standby redundancy. MC-LAG provides a mean to dual home a device (the dual homed device (DHD)) to two different peer devices (the Point of Attachment), allowing to have the benefits of node redundancy. Point of Attachment (PoA) nodes run Inter-chassis Communication Protocol (ICCP) to synchronize state & form a Redundancy Group (RG).

In VXLAN - MCLAG Active-Active High Availability support, both the PoA ports are placed in active/active mode with manual VLAN load balancing. It provides higher bandwidth utilization than Multichassis Link Aggregation Control Protocol (mLACP). It also allows maximum flexibility for the Provider Edge-Customer Edge (PE-CE) inter-operability for dual-homing redundancy and failover recovery. Active and standby PoA nodes are configured on the identical interfaces, that is, the same loopback IP address and interface as VTEP source interface, VLAN and VNI mapping, and so on.

How to Configure VXLAN-MCLAG Active-Active High Availability Support

Configuring Interchassis Redundancy Groups on PoA

To configure interchassis redundancy groups on PoA, perform the steps below.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **redundancy**
4. **interchassis group *group-id***
5. **member ip *peer ip address***
6. **monitor peer [bfd | track]**
7. **mlacp node-id *node id***
8. **backbone interface *backbone if***
9. **end**

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|--------------------------|-------------------------------|
| Step 1 | enable | Enables privileged EXEC mode. |

| | Command or Action | Purpose |
|---------------|---|---|
| | Example: Device> enable | • Enter your password if prompted. |
| Step 2 | configure terminal Example: Device# configure terminal | Enters global configuration mode. |
| Step 3 | redundancy Example: Device(config)# redundancy | Configures the redundancy group. |
| Step 4 | interchassis group group-id Example: Device(config-red)# interchassis group 2 | Configures interchassis group. |
| Step 5 | member ip peer ip address Example: Device(config-r-ic)# member ip 172.168.40.24 | Specifies IP address to be assigned to a remote peer dialing in to the interface. |
| Step 6 | monitor peer [bfd track] Example: Device(config-r-ic)# monitor peer bfd | Specifies the the peer monitoring method. |
| Step 7 | mlacp node-id node id Example: Device(config-r-ic)# mlacp node-id 2 | Configures mLACP node ID. |
| Step 8 | backbone interface backbone if Example: Device(config-r-ic)# backbone interface Gi0/0/2 | Configures a backbone interface for the redundancy group. |
| Step 9 | end Example: Device(config-if)# end | Exits interface configuration mode and returns to privileged EXEC mode. |

Configuring Port Channel on PoA

To configure port channel on PoA, perform the steps below.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **interface Port-channel port channel number**
4. **negotiation**

Configuring Port Channel on PoA

5. **lacp fast-swatchover**
6. **mlacp interchassis group rg id**
7. **mlacp mode active-active**
8. **mlacp load-balance primary vlan vlan-id**
9. **mlacp load-balance secondary vlan vlan-id**
10. **service instance id ethernet**
11. **encapsulation dot1q**
12. **end**

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|--|---|
| Step 1 | enable Example: Device> enable | Enables privileged EXEC mode. • Enter your password if prompted. |
| Step 2 | configure terminal Example: Device# configure terminal | Enters global configuration mode. |
| Step 3 | interface Port-channel port channel number Example: Device(config-if)# interface Port-channel 2 | Configures the interface for port channel. |
| Step 4 | negotiation Example: Device(config-if)# negotiation | Configures auto negotiation mode. |
| Step 5 | lacp fast-swatchover Example: Device(config-if)# lacp fast-swatchover | Specifies LACP Port Channel interface. |
| Step 6 | mlacp interchassis group rg id Example: Device(config-if)# mlacp interchassis group 2 | Configures mLACP peer PoA RG ID. |
| Step 7 | mlacp mode active-active Example: Device(config-if)# mlacp mode active-active | Enables mLACP active-active POA redundancy. |
| Step 8 | mlacp load-balance primary vlan vlan-id Example: Device(config-if)# mlacp load-balance primary vlan 40 | Configures the list of primary VLANs that will be active and inactive on the given PoA. |

| | Command or Action | Purpose |
|----------------|---|---|
| Step 9 | mlacp load-balance secondary vlan <i>vlan-id</i> Example: Device(config-if)# mlacp load-balance secondary vlan 20 | Configures the list of secondary VLANs that will be active and inactive on the given PoA. |
| Step 10 | service instance <i>id</i> ethernet Example: Device(config-if-srv)# service instance 20 ethernet | Configures service instance identifier. |
| Step 11 | encapsulation dot1q Example: Device(config-if-srv)# encapsulation dot1q 20 | Configures ethernet frame match criteria. |
| Step 12 | end Example: Device(config-if)# end | Exits interface configuration mode and returns to privileged EXEC mode. |

Configuring Vxlan Unicast Core Configuration on POA

To configure Vxlan Unicast Core Configuration on POA, perform the steps below.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **bridge-domain *id***
4. **member vni *number***
5. **member Port-channel *number* service-instance *id***
6. **exit**
7. **interface Loopback *number***
8. **ip address**
9. **exit**
10. **interface nve**
11. **member vni *number***
12. **ingress-replication IPV4 *address***
13. **exit**
14. **source-interface Loopback *id***
15. **no shutdown**
16. **end**

DETAILED STEPS

| | Command or Action | Purpose |
|----------------|--|--|
| Step 1 | enable Example: Device> enable | Enables privileged EXEC mode. • Enter your password if prompted. |
| Step 2 | configure terminal Example: Device# configure terminal | Enters global configuration mode. |
| Step 3 | bridge-domain id Example: Device(config)# bridge-domain 20 | Configures the bridge domain ID. |
| Step 4 | member vni number Example: Device(config-bdomain)# member vni 7777 | Configures member virtual network identifier (VNI). |
| Step 5 | member Port-channel number service-instance id Example: Device(config-bdomain)# member Port-channel1 service-instance 20 | Configures port channel and service instance. |
| Step 6 | exit Example: Device(config-bdomain)# exit | Exits bridge domain mode and returns to global configuration mode. |
| Step 7 | interface Loopback number Example: Device(config-if)# interface Loopback10 | Specifies a loopback interface. |
| Step 8 | ip address Example: Device(config-if)# ip address 77.1.1.1 255.255.255.255 | Configures IP address. |
| Step 9 | exit Example: Device(config-if)# exit | Exits interface configuration mode and returns to global configuration mode. |
| Step 10 | interface nve Example: Device(config)# interface nvel | Configures network virtualization endpoint interface. |
| Step 11 | member vni number Example: | Configures VNI information. |

| | Command or Action | Purpose |
|----------------|--|--|
| | Device(config-if)# member vni 7777 | |
| Step 12 | ingress-replication <i>IPV4 address</i> Example: Device(config-if-nve-vni)# ingress-replication 99.1.1.1 | Configures remote Peer IPV4 Address. |
| Step 13 | exit Example: Device(config-if-nve-vni)# exit | Exits network virtualization endpoint interface configuration mode and returns to global configuration mode. |
| Step 14 | source-interface Loopback <i>id</i> Example: Device(config-if)# source-interface Loopback10 | Configures interface loopback. |
| Step 15 | no shutdown Example: Device(config-if)# no shutdown | Restarts the interface. |
| Step 16 | end Example: Device(config-if)# end | Exits interface configuration mode and returns to privileged EXEC mode. |

Configuring Vxlan Multicast Core Configuration on POA

To configure Vxlan Multicast Core Configuration on POA, perform the steps below.

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **bridge-domain *id***
4. **member vni *number***
5. **member Port-channel *number* service-instance *id***
6. **exit**
7. **interface Loopback *number***
8. **ip address**
9. **ip pim sparse-dense-mode**
10. **exit**
11. **interface nve**
12. **member vni *number* mcast-group *address***
13. **source-interface Loopback**
14. **no shutdown**
15. **end**

DETAILED STEPS

| | Command or Action | Purpose |
|----------------|--|--|
| Step 1 | enable Example: Device> enable | Enables privileged EXEC mode. • Enter your password if prompted. |
| Step 2 | configure terminal Example: Device# configure terminal | Enters global configuration mode. |
| Step 3 | bridge-domain id Example: Device(config)# bridge-domain 20 | Configures the bridge domain ID. |
| Step 4 | member vni number Example: Device(config-bdomain)# member vni 7777 | Configures member virtual network identifier (VNI). |
| Step 5 | member Port-channel number service-instance id Example: Device(config-bdomain)# member Port-channel1 service-instance 20 | Configures port channel and service instance. |
| Step 6 | exit Example: Device(config-bdomain)# exit | Exits bridge domain mode and returns to global configuration mode. |
| Step 7 | interface Loopback number Example: Device(config-if)# interface Loopback10 | Specifies a loopback interface. |
| Step 8 | ip address Example: Device(config-if)# ip address 77.1.1.1 255.255.255.255 | Configures IP address. |
| Step 9 | ip pim sparse-dense-mode Example: Device(config-if)# ip pim sparse-dense-mode | Enables PIM to operate in sparse or dense mode. |
| Step 10 | exit Example: Device(config-if)# exit | Exits interface configuration mode and returns to global configuration mode. |
| Step 11 | interface nve Example: | Configures network virtualization endpoint interface. |

| | Command or Action | Purpose |
|----------------|---|---|
| | Device(config)# interface nvel | |
| Step 12 | member vni number mcast-group address Example: Device(config-if)# member vni 7777 mcast-group 232.1.1.1 | Configures VNI information. |
| Step 13 | source-interface Loopback Example: Device(config-if)# source-interface Loopback10 | Configures interface loopback. |
| Step 14 | no shutdown Example: Device(config-if)# no shutdown | Restarts the interface. |
| Step 15 | end Example: Device(config-if)# end | Exits interface configuration mode and returns to privileged EXEC mode. |

Configuring Dual-homed Device

To configure dual-homed device, perform the steps below:

SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **interface Port-channel *number***
4. **switchport *group-id***
5. **switchport trunk encapsulation dot1q**
6. **switchport trunk allowed vlan 20-50**
7. **switchport mode trunk**
8. **exit**
9. **interface GigabitEthernet3/1**
10. **switchport**
11. **switchport trunk encapsulation dot1q**
12. **switchport trunk allowed vlan 20-50**
13. **switchport mode trunk**
14. **channel-group *number* mode**
15. **end**

DETAILED STEPS

| | Command or Action | Purpose |
|---------------|--------------------------|-------------------------------|
| Step 1 | enable | Enables privileged EXEC mode. |

Configuring Dual-homed Device

| | Command or Action | Purpose |
|----------------|---|--|
| | Example: Device> enable | • Enter your password if prompted. |
| Step 2 | configure terminal Example: Device# configure terminal | Enters global configuration mode. |
| Step 3 | interface Port-channel <i>number</i> Example: Device(config)# interface Port-channel1 | Configures ethernet channel of interfaces. |
| Step 4 | switchport <i>group-id</i> Example: Device(config-if)# switchport | Sets the interface as an Ethernet interface. |
| Step 5 | switchport trunk encapsulation dot1q Example: Device(config-r-ic)# switchport trunk encapsulation dot1q | Defines the encapsulation format as IEEE 802.1Q (dot1q) for the specified interface. |
| Step 6 | switchport trunk allowed vlan 20-50 Example: Device(config-r-ic)# switchport trunk allowed vlan 20-50 | Specifies that only certain VLANs are allowed on the specified trunk. |
| Step 7 | switchport mode trunk Example: Device(config-r-ic)# switchport mode trunk | Sets the interface as an Ethernet trunk port. |
| Step 8 | exit Example: Device(config-r-ic)# exit | Exits interface mode and returns to global configuration mode |
| Step 9 | interface GigabitEthernet3/1 Example: Device(config-if)# interface GigabitEthernet3/1 | Enters the interface configuration mode on the Gigabit Ethernet interface. |
| Step 10 | switchport Example: Device(config-if)# switchport | Configures the interface port. |
| Step 11 | switchport trunk encapsulation dot1q Example: Device(config-if)# switchport trunk encapsulation dot1q | Defines the encapsulation format as IEEE 802.1Q (dot1q) for the specified interface. |

| | Command or Action | Purpose |
|----------------|---|---|
| Step 12 | switchport trunk allowed vlan 20-50 Example: Device(config-if)# switchport trunk allowed vlan 20-50 | Specifies that only certain VLANs are allowed on the specified trunk. |
| Step 13 | switchport mode trunk Example: Device(config-if)# switchport mode trunk | Sets the interface as an Ethernet trunk port. |
| Step 14 | channel-group number mode Example: Device(config-if)# channel-group 1 mode active | Configures the port in a channel group and sets the mode. |
| Step 15 | end Example: Device(config-if)# end | Exits interface configuration mode and returns to privileged EXEC mode. |

Verifying VXLAN-MCLAG Active-Active High Availability Support

To verify, perform the steps below.

SUMMARY STEPS

1. **show lacp internal**
2. **show nve interface nve1**
3. **show nve peers**
4. **show platform software ethernet fp ac bridge-domain binding**
5. **show bridge-domain 20**
6. **show lacp multi-chassis load-balance port-channel**
7. **show nve vni 11111 detail**
8. **show lacp multi load group**

DETAILED STEPS

Step 1 **show lacp internal**

Example:

```
Flags: S - Device is requesting Slow LACPDU
      F - Device is requesting Fast LACPDU
      A - Device is in Active mode          P - Device is in Passive mode
```

| Channel group 1 | | | LACP port | Admin | Oper | Port | Port |
|-----------------|-------|-------|-----------|-------|------|--------|-------|
| Port | Flags | State | Priority | Key | Key | Number | State |
| Gi0/0/0 | SA | bndl | 32768 | 0x1 | 0x1 | 0x1 | 0x3D |

Channel group 2

Verifying VXLAN-MCLAG Active-Active High Availability Support

| Port | Flags | State | LACP port Priority | Admin Key | Oper Key | Port Number | Port State |
|---------|-------|-------|--------------------|-----------|----------|-------------|------------|
| Gi0/0/1 | SA | susp | 32768 | 0x2 | 0x2 | 0x2 | 0x7D |

Step 2 show nve interface nve1

Example:

```
Interface: nve1, State: Admin Up, Oper Up Encapsulation: Vxlan
source-interface: Loopback10 (primary:77.1.1.1 vrf:0)
```

Step 3 show nve peers

Example:

| Interface | Peer-IP | VNI | Peer state |
|-----------|----------|------|------------|
| nve1 | 99.1.1.1 | 7777 | |

Step 4 show platform software ethernet fp ac bridge-domain binding

Example:

```
Forwarding Manager Bridge Domain Bindings
```

| BD | Interface | EFP | DPIDB | SHG | STP | AOM id |
|----|---------------------|----------|-------|-----------|-----------|--------|
| 20 | Port-channel1.EFP20 | 16908305 | None | FRWD 182, | (created) | |
| 20 | nve1.VNI7777 | 16908307 | None | FRWD 268, | (created) | |
| 40 | Port-channel1.EFP40 | 16908306 | None | BLCK 258, | (created) | |
| 40 | nve2.VNI8888 | 16908308 | None | FRWD 285, | (created) | |

Step 5 show bridge-domain 20

Example:

```
FBridge-domain 20 (2 ports in all)
State: UP Mac learning: Enabled
Aging-Timer: 300 second(s)
    Port-channel1 service instance 20
        vni 7777
        AED MAC address Policy Tag Age Pseudoport
        0 0000.6177.0003 forward dynamic 300 nve1.VNI7777, VxLAN
                                                src: 77.1.1.1 dst: 99.1.1.1
        0 0000.6177.0009 forward dynamic 300 nve1.VNI7777, VxLAN
                                                src: 77.1.1.1 dst: 99.1.1.1
        0 0000.6177.0000 forward dynamic 300 nve1.VNI7777, VxLAN
                                                src: 77.1.1.1 dst: 99.1.1.1
        0 0000.1577.0009 forward dynamic 300 Port-channel1.EFP20
```

Step 6 show lacp multi-chassis load-balance port-channel

Example:

```
Interface Port-Channel 1
  Local Configuration:
    P-mLACP Enabled: Yes
    Redundancy Group: 1
    Revertive Mode: Revertive
    Primary VLANs: 20
    Secondary VLANs: 40
  Local Interface State:
    Interface ID: 1
    Port State: Up
    Primary VLAN State: Active
    Secondary VLAN State: Standby
  Peer Interface State:
```

```
Interface ID: 1
Primary VLAN State: Active
Secondary VLAN State: Standby
```

Step 7 show nve vni 11111 detail**Example:**

```
Interface VNI Multicast-group VNI state
nve1 11111 N/A Up
VNI Detailed statistics:
Pkts In Bytes In Pkts Out Bytes Out
1682112875 107655224000 1681321674 107604587136
```

Step 8 show lacp multi load group**Example:**

```
Interchassis Redundancy Group 1

RG State: Synchronized
ICCP Version: 0
Backbone Uplink Status: Connected
Local Configuration:
Node-id: 0

Peer Information:
State: Up
Node-id: 1
ICCP Version: 0

States: Active - ACT Standby - SBY
Down - DN AdminDown - ADN
Unknown - UN Reverting - REV

P-mLACP Interfaces
Interface Port State Local VLAN State Peer VLAN State
ID Local Primary/Secondary Primary/Secondary
1 UP ACT/SBY ACT/SBY
```

Configuration Examples for VXLAN-MCLAG Active-Active High Availability Support

Example: Configuring VXLAN HA on Multicast Mode

The following example shows how to configure the VXLAN-MCLAG Active-Active High Availability Support feature on a multicast mode with two points of attachments (POA) connected to branch devices. The following is the configuration on the first POA—POA1.

```
ip multicast-routing distributed
ip pim bidir-enable
ip pim rp-address 4.4.4.4 bidir

redundancy
mode sso
```

Example: Configuring VXLAN HA on Multicast Mode

```

interchassis group 1
  monitor peer bfd
  member ip 9.9.9.9
  backbone interface GigabitEthernet0/1/0

Example: Configuring VXLAN HA on Unicast Mode

The following example shows how to configure the VXLAN-MCLAG Active-Active High Availability Support feature on an unicast mode with two points of attachments (POA) connected to branch devices. The following is the configuration on the first POA—POA1.

```

redundancy
  mode sso
  interchassis group 1
    monitor peer bfd
    member ip 9.9.9.9
    backbone interface GigabitEthernet0/1/0
    mlacp system-priority 200
    mlacp node-id 0

bridge-domain 20
  member vni 7777
  member Port-channel1 service-instance 20
!

bridge-domain 40
  member vni 8888
  member Port-channel1 service-instance 40
!
interface Loopback10
  ip address 77.1.1.1 255.255.255.255
!
interface Loopback11
  ip address 88.1.1.1 255.255.255.255
!
interface Port-channel1
  no ip address
  negotiation auto
  lacp fast-switchover
  mlacp interchassis group 1
  mlacp mode active-active
  mlacp load-balance primary vlan 40
  mlacp load-balance secondary vlan 20
  service instance 20 ethernet
    encapsulation dot1q 20
!
  service instance 40 ethernet
    encapsulation dot1q 40
!
interface nve1
  no ip address
  member vni 7777
```

Example: Configuring VXLAN HA on Unicast Mode

```

    ingress-replication 99.1.1.1
!
source-interface Loopback10
!
interface nve2
no ip address
member vni 8888
    ingress-replication 100.1.1.1
!
source-interface Loopback11
!

router ospf 10
router-id 3.3.3.3
network 0.0.0.0 255.255.255.255 area 10
!
```

The following is the configuration on the second POA—POA2.

```

redundancy
mode sso
interchassis group 1
monitor peer bfd
member ip 3.3.3.3
backbone interface GigabitEthernet0/0/1
mlacp system-priority 200
mlacp node-id 1

bridge-domain 20
member vni 7777
member Port-channell service-instance 20
!

bridge-domain 40
member vni 8888
member Port-channell service-instance 40
!

interface Loopback10
ip address 77.1.1.1 255.255.255.255
!
interface Loopback11
ip address 88.1.1.1 255.255.255.255
!
interface Port-channell
no ip address
negotiation auto
no keepalive
lacp fast-switchover
mlacp interchassis group 1
mlacp mode active-active
mlacp load-balance primary vlan 20
mlacp load-balance secondary vlan 40
service instance 20 ethernet
    encapsulation dot1q 20
!
service instance 40 ethernet
    encapsulation dot1q 40
!
!
interface nvel

Feature Information for VXLAN-MCLAG Active-Active High Availability Support

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to www.cisco.com/go/cfn. An account on Cisco.com is not required.

Table 1: Feature Information for VXLAN-MCLAG Active-Active High Availability Support

| Feature Name | Releases | Feature Information |
|---|--------------------|--|
| VXLAN-MCLAG Active-Active High Availability Support | Cisco IOS XE 3.16S | <p>The VXLAN-MCLAG Active-Active High Availability Support feature implements dual-home device with pseudo Multichassis Link Aggregation Control Protocol (pMLACP) redundancy mode and layer 2 VXLAN on the Cisco ASR 1000 Series Aggregation Services Routers.</p> <p>The following commands were introduced by this feature: show lacp internal, show nve interface nve1, show nve peersshow platform software ethernet fp ac bridge-domain binding, show bridge-domain 20, show lacp multi-chassis load-balance port-channel, show nve vni 11111 detail, show lacp multi load group</p> |
