

## GRE IPv6 Tunnels

---

The GRE IPv6 Tunnels feature enables the delivery of packets from other protocols through an IPv6 network and allows the routing of IPv6 packets between private networks across public networks with globally routed IPv6 addresses. Generic routing encapsulation (GRE) is a unicast protocol that offers the advantages of encapsulating broadcast and multicast traffic (multicast streaming or routing protocols) or other non-IP protocols and of being protected by IPsec.

### Restrictions for GRE IPv6 Tunnels

- GRE tunnel keepalive packets are not supported.
- Multipoint GRE (mGRE) IPv6 tunneling is not supported.

### Information About GRE IPv6 Tunnels

#### Overview of GRE IPv6 Tunnels

The GRE IPv6 Tunnels feature enables the delivery of packets from other protocols through an IPv6 network and allows the routing of IPv6 packets between private networks across public networks with globally routed IPv6 addresses.

For point-to-point GRE tunnels, each tunnel interface requires a tunnel source IPv6 address and a tunnel destination IPv6 address when being configured. All packets are encapsulated with an outer IPv6 header and a GRE header.

## GRE IPv6 Tunnel Protection

GRE IPv6 tunnel protection allows devices to work as security gateways, establish IPsec tunnels between other security gateway devices, and provide crypto IPsec protection for traffic from internal networks when the traffic is sent across the public IPv6 Internet. The GRE IPv6 tunnel protection functionality is similar to the security gateway model that uses GRE IPv4 tunnel protection.

# How to Configure GRE IPv6 Tunnels

## Configure CDP Over GRE IPv6 Tunnels

Perform this task to configure a GRE tunnel on an IPv6 network. GRE tunnels can be configured to run over an IPv6 network layer and transport IPv6 and IPv4 packets through IPv6 tunnels.

**Note** You must enable IPv6 or configure IPv6 MTU size more than 1500 on a tunnel's exit interface to avoid receiving warning messages.

### Before you begin

When GRE IPv6 tunnels are configured, IPv6 addresses are assigned to the tunnel source and the tunnel destination. The tunnel interface can have either IPv4 or IPv6 addresses. The host or device at each end of the configured tunnel must support both IPv4 and IPv6 protocol stacks.

### Procedure

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode.  • Enter your password if prompted.
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>interface tunnel <i>tunnel-number</i></b>  <b>Example:</b> Device(config)# interface tunnel 0	Specifies a tunnel interface and number and enters interface configuration mode.
<b>Step 4</b>	<b>CDP enable</b>  <b>Example:</b> Device(config)# CDP enable	Enables Cisco Discovery Protocol on the interface.

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 5</b>	<b>tunnel source {ipv6-address   interface-type interface-number}</b>  <b>Example:</b> Device(config-if)# tunnel source ethernet 0	Specifies the source IPv6 address or the source interface type and number for the tunnel interface.  • If an interface type and number are specified, the interface must be configured with an IPv6 address.  <b>Note</b> For more information on the tunnel source command, refer to the IPv6 command reference guide.
<b>Step 6</b>	<b>tunnel destination ipv6-address</b>  <b>Example:</b> Device(config-if)# tunnel destination 2001:0DB8:0C18:2::300	Specifies the destination IPv6 address for the tunnel interface.  <b>Note</b> For more information on the tunnel destination command, refer to the IPv6 command reference guide.
<b>Step 7</b>	<b>tunnel mode gre ipv6</b>  <b>Example:</b> Device(config-if)# tunnel mode gre ipv6	Specifies a GRE IPv6 tunnel.  <b>Note</b> The <b>tunnel mode gre ipv6</b> command specifies GRE as the encapsulation protocol for the tunnel interface. Only the syntax used in this context is displayed. For more details, see the <a href="#">IPv6 Command Reference</a> .
<b>Step 8</b>	<b>end</b>  <b>Example:</b> Device(config-if)# end	Exits interface configuration mode and returns to privileged EXEC mode.

## Configuring GRE IPv6 Tunnel Protection

### SUMMARY STEPS

1. **enable**
2. **configure terminal**
3. **interface tunnel tunnel-number**
4. **tunnel source {ipv6-address | interface-type interface-number}**
5. **tunnel destination ipv6-address**
6. **tunnel mode gre ipv6**
7. **tunnel protection ipsec profile profile-name**
8. **end**

## DETAILED STEPS

### Procedure

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	<b>enable</b>  <b>Example:</b> Device> enable	Enables privileged EXEC mode. <ul style="list-style-type: none"> <li>• Enter your password if prompted.</li> </ul>
<b>Step 2</b>	<b>configure terminal</b>  <b>Example:</b> Device# configure terminal	Enters global configuration mode.
<b>Step 3</b>	<b>interface tunnel <i>tunnel-number</i></b>  <b>Example:</b> Device(config)# interface tunnel 0	Specifies a tunnel interface and number and enters interface configuration mode.
<b>Step 4</b>	<b>tunnel source {<i>ipv6-address</i>   <i>interface-type interface-number</i>}</b>  <b>Example:</b> Device(config-if)# tunnel source ethernet 0	Specifies the source IPv6 address or the source interface type and number for the tunnel interface. <ul style="list-style-type: none"> <li>• If an interface type and number are specified, the interface must be configured with an IPv6 address.</li> </ul> <p><b>Note</b> Only the syntax used in this context is displayed. For more details, see the <a href="#">IPv6 Command Reference</a>.</p>
<b>Step 5</b>	<b>tunnel destination <i>ipv6-address</i></b>  <b>Example:</b> Device(config-if)# tunnel destination 2001:0DB8:0C18:2::300	Specifies the destination IPv6 address for the tunnel interface. <p><b>Note</b> Only the syntax used in this context is displayed. For more details, see the <a href="#">IPv6 Command Reference</a>.</p>
<b>Step 6</b>	<b>tunnel mode gre ipv6</b>  <b>Example:</b> Device(config-if)# tunnel mode gre ipv6	Specifies a GRE IPv6 tunnel. <p><b>Note</b> The <b>tunnel mode gre ipv6</b> command specifies GRE as the encapsulation protocol for the tunnel interface. Only the syntax used in this context is displayed. For more details, see the <a href="#">IPv6 Command Reference</a>.</p>
<b>Step 7</b>	<b>tunnel protection ipsec profile <i>profile-name</i></b>  <b>Example:</b> Device(config-if)# tunnel protection ipsec profile ipsec-profile	Associates the tunnel interface with an IPsec profile. <p><b>Note</b> For the <i>profile-name</i> argument, specify the IPsec profile configured in global configuration mode.</p>

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 8</b>	<b>end</b>  <b>Example:</b> Device(config-if)# end	Exits interface configuration mode and returns to privileged EXEC mode.

## Configuration Examples for GRE IPv6 Tunnels

### Example: Configuring CDP Over GRE IPv6 Tunnels

The following example shows how to configure a GRE tunnel over an IPv6 transport. In this example, Ethernet0/0 has an IPv6 address, and this is the source address used by the tunnel interface. The destination IPv6 address of the tunnel is specified directly. In this example, the tunnel carries both IPv4 and IS-IS traffic.

```
interface Tunnel0
  ip address 10.1.1.1 255.255.255.0
  ip router isis
  tunnel source Ethernet0/0
  tunnel destination 2001:DB8:1111:2222::1
  tunnel mode gre ipv6
!
interface Ethernet0/0
  no ip address
  ipv6 address 2001:DB8:1111:1111::1/64
!
router isis
  net 49.0001.0000.0000.000a.00
```

The following example shows how to configure CDP on GRE IPv6 P2P Tunnel Interface.

```
interface Tunnel1
  cdp enable
  ipv6 address 20::1/64
  tunnel source Ethernet0/0
  tunnel mode gre ipv6
  tunnel destination 10::2
end
```

The following example shows how to configure CDP on GRE IPv6 Multipoint Tunnel Interface.

```
interface Tunnel1
  ipv6 address 172::2/64
  ipv6 nhrp map 172::1/64 192::1
  ipv6 nhrp map multicast 192::1
    ipv6 nhrp network-id 1
  ipv6 nhrp nhs 172::1
  l1p nhrp map multicast 192::1
  tunnel source 2000::1
  tunnel mode gre multipoint ipv6
end
```

The following show example displays the CDP neighbor tunnels that are configured in a device.

```
Router#show cdp neighbors
Capability Codes: R - Router, T - Trans Bridge, B - Source Route Bridge
                  S - Switch, H - Host, I - IGMP, r - Repeater, P - Phone,
                  D - Remote, C - CVTA, M - Two-port Mac Relay
```

**Example: Configuring GRE IPv6 Tunnel Protection**

Device ID	Local Intrfce	Holdtme	Capability	Platform	Port ID
Router	Tunnell	179	R	Linux Uni	Tunnell

**Example: Configuring GRE IPv6 Tunnel Protection**

The following example shows how to associate the IPsec profile “ipsec-profile” with a GRE IPv6 tunnel interface. The IPsec profile is configured using the **crypto ipsec profile** command.

```
crypto ipsec profile ipsec-profile
  set transform-set ipsec-profile
!
interface Tunnell
  ip address 192.168.1.1 255.255.255.252
  tunnel source FastEthernet2/0
  tunnel destination 10.13.7.67
  tunnel protection ipsec profile ipsec-profile
```

**Information About EoMPLS over IPv6 GRE Tunnel**

Ethernet over MPLS (EoMPLS) is a tunneling mechanism that allows you to tunnel Layer 2 traffic through a Layer 3 MPLS network. EoMPLS is also known as Layer 2 tunneling.

The EoMPLS over IPv6 GRE Tunnel feature supports tunneling of EoMPLS traffic via an IPv6 network by using GRE tunnels. Effective from Cisco IOS XE Release 3.15s, EoMPLS is supported over IPv6 GRE tunnel.

**Configuring EoMPLS over IPv6 GRE Tunnel**

EoMPLS over IPv6 GRE Tunnel can be configured in the following two methods:

[Using Legacy Commands, on page 6](#)

[Using Protocol-based Commands, on page 9](#)

**Using Legacy Commands**

This section describes how to configure EoMPLS over IPv6 GRE Tunnel using legacy commands. The following are relevant configurations from both Provider Edge 1 Router and Provider Edge 2 Router:

**SUMMARY STEPS**

1. configure terminal
2. ipv6 unicast-routing
3. mpls label protocol ldp
4. mpls ldp router-id Loopback0 [force]
5. interface *type number*
6. ip address *ip-address mask*
7. interface gigabitethernet slot/port
8. encapsulation dot1 *vlan-id*
9. xconnect *peer-ipaddress vc-id* encapsulation mpls
10. interface tunnel *interface number*

11. ip address *ip-address mask*
12. tunnel source {*ip-address* | *interface-type interface-number*}
13. tunnel mode gre ipv6
14. tunnel destination *ipv6-address*
15. mpls ip
16. interface gigabitethernet slot/port
17. ipv6 address { *ipv6-prefix/prefix-length* | *prefix-name sub-bits/prefix-length* }

## DETAILED STEPS

### Procedure

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	configure terminal  <b>Example:</b> Router#configure terminal	Enters global configuration mode.
<b>Step 2</b>	ipv6 unicast-routing  <b>Example:</b> Router(config)#ipv6 unicast-routing	Enables the forwarding of IPv6 unicast datagrams globally on the router.
<b>Step 3</b>	mpls label protocol ldp  <b>Example:</b> Router(config)#mpls label protocol ldp	Enables Label Distribution Protocol (LDP).
<b>Step 4</b>	mpls ldp router-id Loopback0 [force]  <b>Example:</b> Router(config)#mpls ldp router-id Loopback0 [force]	Configures the LDP Router ID.  <b>Note</b> The optional force keyword ensures that the IP address on interface loopback 0, and not the IP address of any other interface, becomes the LDP router ID.
<b>Step 5</b>	interface <i>type number</i>  <b>Example:</b> Router(config)#interface Loopback 0	Enters configuration mode for the loopback interface.
<b>Step 6</b>	ip address <i>ip-address mask</i>  <b>Example:</b> Router(config-if)#ip address 10.1.1.2 255.255.255.255	Sets the IP address and subnet mask for the loopback interface.
<b>Step 7</b>	interface gigabitethernet slot/port  <b>Example:</b> Router(config-if)#interface GigabitEthernet0/0/1.2	Enters the configuration mode for a Gigabit Ethernet interface on the router.
<b>Step 8</b>	encapsulation dot1 <i>vlan-id</i>	Enables 802.1Q trunking on a router.

## Using Legacy Commands

	<b>Command or Action</b>	<b>Purpose</b>
	<b>Example:</b> Router(config-subif)#encapsulation dot1q 200	
<b>Step 9</b>	xconnect <i>peer-ipaddress vc-id</i> encapsulation mpls  <b>Example:</b> Router(config-subif)#xconnect 10.1.1.1 100 encapsulation mpls	Enables the attachment circuit and specifies the IP address of the peer, a VC ID, and the data encapsulation method.
<b>Step 10</b>	interface tunnel <i>interface number</i>  <b>Example:</b> Router(config)#interface tunnel 10	Designates a tunnel interface and enters interface configuration mode.
<b>Step 11</b>	ip address <i>ip-address mask</i>  <b>Example:</b> Router(config-if)#ip address 192.0.2.1 255.255.255.0	Sets the IP address and subnet mask for the loopback interface.
<b>Step 12</b>	tunnel source { <i>ip-address   interface-type interface-number</i> }  <b>Example:</b> Router(config-if)#tunnel source GigabitEthernet 0/0/0	Specifies the source IPv4 address or the source interface type and number for the tunnel interface.
<b>Step 13</b>	tunnel mode gre ipv6  <b>Example:</b> Router (config-if)#tunnel mode gre ipv6	Specifies that the GRE over IPv6 encapsulation protocol is used in the tunnel.
<b>Step 14</b>	tunnel destination <i>ipv6-address</i>  <b>Example:</b> Router(config-if)#tunnel destination 2002::2	Specifies the destination IPv6 address for the tunnel interface.
<b>Step 15</b>	mpls ip  <b>Example:</b> Router(config-if)#mpls ip	Enables mpls processing on the tunnel interface.
<b>Step 16</b>	interface gigabitethernet slot/port  <b>Example:</b> Router(config-if)#interface GigabitEthernet0/0/0	Enters the configuration mode for a Gigabit Ethernet interface on the router.
<b>Step 17</b>	ipv6 address { <i>ipv6-prefix/prefix-length   prefix-name sub-bits/prefix-length</i> }  <b>Example:</b> Router(config-if)#ipv6 address 2002::1/112	Configures an IPv6 address based on an IPv6 general prefix and enables IPv6 processing on an interface.

**Example**

## Using Protocol-based Commands

This section describes how to configure EoMPLS over IPv6 GRE Tunnel using Protocol-based commands.

### SUMMARY STEPS

1. template type pseudowire [*pseudowire-name*]
2. encapsulation mpls
3. end
4. interface pseudowire *number*
5. source template type pseudowire
6. encapsulation mpls
7. neighbor *peer-address vcid-value*
8. end
9. l2vpn xconnect context *context-name*
10. member pseudowire *interface-number*
11. member gigabit ethernet *interface-number*

### DETAILED STEPS

#### Procedure

	<b>Command or Action</b>	<b>Purpose</b>
<b>Step 1</b>	template type pseudowire [ <i>pseudowire-name</i> ]  <b>Example:</b> Router(config)# template type pseudowire eompls	Specifies the name of a Layer 2 pseudowire class and enters pseudowire class configuration mode.
<b>Step 2</b>	encapsulation mpls  <b>Example:</b> Router(config-pw-class)# encapsulation mpls	Specifies the tunneling encapsulation.
<b>Step 3</b>	end  <b>Example:</b> Router(config-pw-class)# end	Exits to privileged EXEC mode.
<b>Step 4</b>	interface pseudowire <i>number</i>  <b>Example:</b> Router(config)# interface pseudowire 100	Specifies the pseudowire interface and enters interface configuration mode.
<b>Step 5</b>	source template type pseudowire  <b>Example:</b>	Configures the source template of type pseudowire named EoMPLS.

## Verifying the EoMPLS over IPv6 GRE Tunnel Configuration

	<b>Command or Action</b>	<b>Purpose</b>
	Router(config-if) # source template type pseudowire eompls	
<b>Step 6</b>	encapsulation mpls  <b>Example:</b> Router(config-pw-class) # encapsulation mpls	Specifies the tunneling encapsulation.
<b>Step 7</b>	neighbor <i>peer-address</i> <i>vcid-value</i>  <b>Example:</b> Router(config-if) # neighbor 154.154.154.154 100	Specifies the peer IP address and virtual circuit (VC) ID value of a Layer 2 VPN (L2VPN) pseudowire.
<b>Step 8</b>	end  <b>Example:</b> Router(config-if) # end	Exits to privileged EXEC mode.
<b>Step 9</b>	l2vpn xconnect context <i>context-name</i>  <b>Example:</b> Router(config) # l2vpn xconnect context eompls_100	Creates a Layer 2 VPN (L2VPN) cross connect context and enters xconnect configuration mode.
<b>Step 10</b>	member pseudowire <i>interface-number</i>  <b>Example:</b> Router(config-xconnect) # member pseudowire 100	Specifies a member pseudowire to form a Layer 2 VPN (L2VPN) cross connect.
<b>Step 11</b>	member gigabit ethernet <i>interface-number</i>  <b>Example:</b> Router(config-xconnect) # member GigabitEthernet0/0/1	Specifies the location of the Gigabit Ethernet member interface.

### Example

## Verifying the EoMPLS over IPv6 GRE Tunnel Configuration

Use the following commands to verify that the EoMPLS over IPv6 GRE Tunnel feature is correctly configured.

### SUMMARY STEPS

1. show inter tunnel [*tunnel-id*]
2. show xconnect all [detail]
3. show mpls l2transport vc id detail

## DETAILED STEPS

### Procedure

	<b>Command or Action</b>	<b>Purpose</b>

## Feature Information for GRE IPv6 Tunnels

The following table provides release information about the feature or features described in this module. This table lists only the software release that introduced support for a given feature in a given software release train. Unless noted otherwise, subsequent releases of that software release train also support that feature.

Use Cisco Feature Navigator to find information about platform support and Cisco software image support. To access Cisco Feature Navigator, go to [www.cisco.com/go/cfn](http://www.cisco.com/go/cfn). An account on Cisco.com is not required.
