VM Image Packaging

VM Image Packaging is a tool for converting qcow2 and img images into a tar.gz format with additional properties and profiles. VM image packaging can be done in two ways:

- VM Image Packaging Utility: This is an enhanced packaging process that allows the VM owner to run the **nfvpt.py** utility as a command with a combination of parameters to package the VM.

- Standard Image Packaging: This is a manual process in which a raw disk image (qcow2, img) is packaged along with the image properties file and bootstrap files (if needed) into a TAR archive file.

VM Image Packaging Utility

A VM image package is a TAR archive file with the root disk image and other descriptor files. This packaging method simplifies the process of a VM image registration and deployment. The attributes specified for the image enable resource requirement specification, creation of VM profiles, and a host of other properties for the VM.

The Cisco Enterprise NFVIS VM image packaging tool, nfvpt.py, helps VM owners package their VMs. The tool takes one or more qcow2 images (raw disk file) as the input file along with VM specific properties, bootstrap configuration files (if any), and generates a compressed TAR file.

Contents

The VM image packaging utility contains the following:

- nfvpt.py—It is a python based packaging tool that bundles the VM raw disk image/s along with VM specific properties.

- image_properties_template.xml—This is the template file for the VM image properties file, and has the parameters with default values. If the user provides new values to these parameters while creating the VM package, the default values get replaced with the user-defined values.

- nfvis_vm_packaging_utility_examples.txt—This file contains examples on how to use the image packaging utility to package a VM image.

Usage

To get the list of parameters that can be included in the command, and to get an explanation of each of the parameters, run the **help** command for the tool.

```
nfvpt.py --help
optional arguments:
  -h, --help            show this help message and exit
  --json JSON           Provide JSON input for bootstrap variables; mutually
                        exclusive with custom and bootstrap configs
  --newjson NEWJSON     Provide JSON input for bootstrap variables; mutually
                        exclusive with custom and bootstrap configs
  --log_dir LOG_DIR     Log Directory to for logfiles
  --multi_use           Add options for use in multiple use-cases
  --console_type_serial {true,false}
                        Attach the console serial to the VM; default is false;
                        --console_type_serial=true/false;
  --root_file_disk_bus {virtio,ide}
                        root disk file type: --root_file_disk_bus=virtio/ide;
                        default is virtio
  --virtual_interface_model {rtl8139}
                        --virtual_interface_model=rtl8139; default is none
  --thick_disk_provisioning {true,false}
                        --thick_disk_provisioning=true; default is false
  --eager_zero {true,false}
                        --eager_zero=true; default is false
  --nocloud {true,false}
                        --nocloud=true/false; default is false
  --bootstrap_cloud_init_bus_type {ide,virtio}
                        --bootstrap_cloud_init_bus_type=virtio; default is ide
  --bootstrap_cloud_init_drive_type {cdrom,disk}
                        --bootstrap_cloud_init_drive_type=disk; default is
                        cdrom
  --bootstrap BOOTSTRAP
                        Every bootstrap file should be a different option Non
                        HA format: --bootstrap
                        <mountpoint>:<file1>,<mountpoint>:<file2>... See
                        usage.txt for more details HA format for SDWAN
                        NetworkHub: --bootstrap mount_point:<value>,file:<file
                        2mount>[,<attrib>:<value>] mount_point:<value> and
                        file:<file2mount> are mandatory followed by one or
                        more attributes in the format <attrib>:<value>
  --interface_hot_add {true,false}
                        VM supports interface add without power off. Default
                        is set to true; --interface_hot_add=true/false
  --interface_hot_delete {true,false}
                        VM supports interface delete without power off.
                        Default is set to false;
                        --interface_hot_delete=true/false
  -v, --verbose         verbose
  -q, --quiet           quiet
  --no_compress         creates tar file without compressing the input files
  --cleanup             deletes all the input and configuration files upon tar
                        file created
  --tablet {true,false}
                        : Add input device of type tablet --tablet=true/false;
  --ha_package          enable HA packaging
  --mgmt_vnic MGMT_VNIC
                        VM management interface identifier
  --pack_dir <DIR> PACK
                        package all files in directory
```

```
Required:
  -o PACKAGE_FILENAME, --package_filename PACKAGE_FILENAME
                        [REQUIRED] file name for the target VNF package name-
                        default is root disk image name with extension .tar.gz
  -i ROOT_DISK_IMAGE, --root_disk_image ROOT_DISK_IMAGE
                        [REQUIRED] List of root disk images to be bundled
                        example: --root_disk_image isrv.qcow2;
                        --root_disk_image isrv1.qcow2,isrv2.qcow2
  --prop_template PROP_TEMPLATE
                        image properties template file name including path
                        default path is the current dir of the tool and name
                        is image_properties_template.xml if the user doesn't
                        input this option example: --prop_template
                        /usr/bin/image_properties_template.xml
  -t VNF_TYPE, --vnf_type VNF_TYPE
                        [REQUIRED] VNF type, e.g. ROUTER, FIREWALL, vWAAS,
                        vWLC, and OTHER
  -n NAME, --vnf_name NAME
                        [REQUIRED] Name of the VNF image
  -r VNF_VERSION, --vnf_version VNF_VERSION
                        [REQUIRED] VNF version, e.g. --vnf_version 1.0 or
                        --vnf_version 0.9
  --app_vendor APP_VENDOR
                        Application Vendor e.g. Cisco, Juniper etc
  --monitored {true,false}
                        [REQUIRED] Monitored VNF: --monitored=true/false;
  --optimize {true,false}
                        [REQUIRED] optimized VM: --optimize=true/false;

HA options:
  --ha_capable
  --ha_vnic HA_VNIC      VM HA vnic
  --ha_vnic_count HA_VNIC_COUNT
                        Number of ha_vnics

Resources:
  Resources: min and max - vCPU, memory and disk

  --min_vcpu VCPU_MIN    min #vCPU : min number of vCPU supported by VM
                        example:--min_vcpu 2
  --max_vcpu VCPU_MAX    max #vCPU : max number if vCPU required for VM
                        example:--max_vcpu 4
  --min_mem MEMORY_MB_MIN
                        min mem : min mem in MB required for VM
                        example:--min_mem 1024
  --max_mem MEMORY_MB_MAX
                        max mem : max mem in MB required for VM
                        example:--max_mem 4196
  --min_disk ROOT_DISK_GB_MIN
                        min disk : min disk in GB required for VM
                        example:--min_disk 8
  --max_disk ROOT_DISK_GB_MAX
                        max disk : max disk in GB required for VM
                        example:--max_disk 8
  --vnic_max VNIC_MAX    max number of Vnics allowed for VM example:--vnic_max
                        8
  --vnic_names VNIC_NAMES
                        list of vnic number to name mapping in format
                        number:name example --vnic_names
                        1:GigabitEthernet2,2:GigabitEthernet4

Profile Options:
  --profile PROFILE     enter the profile name, profile description, no of
                        vCPU required, min memory required in MB, min disk
```

```
                                   space required in MB, example: --profile
                                   profile1,"This is profile 1",2,2048,4096 --profile
                                   profile2,"This is profile 2",4,4096,4096
     --default_profile DEFAULT_PROFILE
                                   default profile

Driver Support Options:
  --sriov {true,false}  Enable/Disable SRIOV support: --sriov=true/false;
                        default is false
  --sriov_list SRIOV_DRIVER_LIST
                        list of SRIOV drivers example: --sriov_list
                        igb,igbvf,i40evf
  --pcie {true,false}   Not supported
  --pcie_list PCIE_DRIVER_LIST
                        Not supported

Privilege/Priority Options:
  --privileged {true,false}
                        Not supported

Custom Properties:
  --custom CUSTOM       custom properties format: --custom ["propattr_"<attr>:
                        <value>],key:<value>,[keyattr_<attr>:<value>],type:<va
                        lue>,val<N>:<value>,[val<N>attr_<attr>:<value>] Allows
                        specification of custom properties: 0 or more
                        propattr_<attr>:<value> pairs - 'propattr' is a
                        keyword and used to specify property attributes
                        key:<value> pairs 0 or more keyattr_<attr>:value pairs
                        - 'keyattr' is a keyword and is used to specify key
                        attributes type:<value> pair - type of value
                        valN:<value> pair - val1:value,val2:value etc 0 or
                        more valNattr_<attr>:<value> pairs - 'val<N>attr' is
                        an attribute for val<N> See usage_examples.txt
```

The table lists the parameters that can be passed to the **nfvpt.py** command.

Parameter	Mandatory/Optional	Description
version	Not applicable	Show program's version number and exit.
help	Not applicable	Show this help message and exit.
package_file_name	Mandatory	File name for the target VNF package. The default is the root disk image name with extension *.tar.gz*.
disk_img_names	Mandatory	List of root disk images to be bundled. Only the qcow2 images are supported.
img_name	Mandatory	Name of the VNF image.
vnf_type	Mandatory	VNF type Supported types are: ROUTER, FIREWALL, vWAAS, vWLC, and OTHER.
vnf_version	Mandatory	VNF version

Parameter	Mandatory/Optional	Description
monitored	Mandatory	VM health monitoring for those VMs that can be bootstrapped Options are: true/false Monitoring timeout period for a monitored VM is 600 seconds by default
optimize	Mandatory	Optimized VM Options are: true/false
virtual_interface_model	Optional	Default is none.
thick_disk_provisioning	Optional	Default is false.
eager_zero	Optional	Default is false.
bootstrap_cloud_init_bus_type	Optional	Default is IDE.
bootstrap_cloud_init_drive_type	Optional	Mounts the day0 configuration file as disk Default is CD-ROM.
bootstrap	Optional	Bootstrap files for VNF. Two parameters are required in the format of dst:src; dst filename including path has to match exactly to what the VM expects; up to 20 bootstrap files are accepted. For example: --bootstrap ovf-env.xml for ISRv and --bootstrap day0-config for ASAv.
min_vcpu	Optional	Minimum number of vCPUs supported by the VM. The default is 1.
max_vcpu	Optional	Maximum number of vCPUs required for the VM. The default is 8.
min_mem	Optional	Minimum memory in MB required for the VM. The default is 4 GB.
max_mem	Optional	Maximum memory in MB required for the VM. Physical memory: 2 GB The default is 8 GB.

Parameter	Mandatory/Optional	Description
min_disk	Optional	Minimum disk in GB required for the VM. The default is 8 GB.
max_disk	Optional	Maximum disk in GB required for the VM. Available disks are SSD and HDD: 15 GB The default is 16 GB
vnic_max	Optional	Maximum number of VNICs allowed for the VM. The default is 8.
profile	Optional	The profile name, profile description, number of vCPUs required, minimum memory required in MB and minimum disk space required in MB.
default_profile	Optional	The default profile.
sriov	Optional	Enable or disable SRIOV support. The default is false.
sriov_list	Optional	List of SRIOV drivers.
pcie	Optional	Not supported.
pcie_list	Optional	Not supported.
privileged	Optional	Not supported.
custom	Optional	Custom properties to be supported and/or passed to the bootstrap configuration with tokenized variables. This is only used for the local portal to display options for the user to choose while deploying.
pack_dir	Optional	package all files in directory

NFVIS Specific Enhancements

Note Use pack_dir option if the *.tar.gz already exists and you want to modify the bootstrap configuration file or image_properties.xml manually.

The following parameters are added as part of the NFVIS specific enhancements:

```
  --pack_dir <DIR> PACK

                        package all files in directory

Resources:

  --vnic_names VNIC_NAMES

                        list of vnic number to name mapping in format

                        number:name example --vnic_names

                        1:GigabitEthernet2,2:GigabitEthernet4
```

Usage

Follow the steps to change a single line in day-0 configuration file or add a single option in image_properties.xml:

1. Get the working VM packaging image - isrv*.tar.gz.

2. Extract the contents - tar -xvf isrv*.tar.gz.

3. Modify the file contents as required.

4. nfvpt.py --pack_dir current-working-dir-with-files -i isrv.qcow2 -o isrv.tar.gz

VM Packaging Utility Usage Examples

Given below are the contents of the file *nfvis_vm_packaging_utility_examples.txt*:

Example 1: Usage for TinyLinux

```
nfvpt.py -o TinyLinux -i TinyLinux.qcow2 -n TinyLinux -t linux -r 1.0 --monitored false
--min_vcpu 1 --max_vcpu 2 --min_mem 1024 --max_mem 1024 --min_disk 1 --max_disk 2
--vnic_max 1 --optimize false
```

Example 2: Usage for ASAv

> ✎
>
> **Note** The bootstrap filename has to be *day0-config*. This cannot be modified as ASAv looks for the exact filename.

```
nfvpt.py -o asav961-201 -i asav961-201.qcow2 -n ASAv -t firewall -r 961-201 --monitored
true --bootstrap day0-config:filename1
--min_vcpu 1 --max_vcpu 4 --min_mem 1024 --max_mem 8192 --min_disk 8 --max_disk 16 --vnic_max
 8 --optimize true
--profile ASAv5,"ASAv5 profile",1,1024,8192 --profile ASAv10,"ASAv10 profile",1,4096,8192
--profile ASAv30,"ASAv30 profile",4,8192,16384
--default_profile ASAv5
```

Example 3: Usage for ISRv

Note The bootstrap filename has to be *ovf-env.xml* . This cannot be modified as ISRv looks for the exact filename.

```
nfvpt.py -o isrv.16.03.01 -i isrv-universalk9.16.03.01.qcow2 -n ISRv.16.03.01 -t ROUTER -r
 16.03.01 --monitored true --privileged true
--bootstrap ovf-env.xml:file1,ios-xe.txt:file2 --min_vcpu 2 --max_vcpu 8 --min_mem 4096
--max_mem 8192 --min_disk 8 --max_disk 8
--vnic_max 8 --optimize true --profile ISRv-small,"ISRv small profile",2,4096,8192 --profile
 ISRv-medium,"ISRv medium profile",4,4096,8192
--default_profile ISRv-small --sriov_list igb,igbvf,i40evf --custom tech_package,ax
```

Example 4: Usage for a third party VM with config drive (ISO) mounted at specific path on the VM:

```
nfvpt.py -o test.1.0 -i test-1.0.qcow2 -n TEST -t OTHER -r 1.0 --monitored true --privileged
 true
--bootstrap /:bootstrap.xml,/license/lic.txt:license.txt --min_vcpu 2 --max_vcpu 8 --min_mem
 4096 --max_mem 8192
--min_disk 8 --max_disk 8 --vnic_max 8 --optimize true --profile small,"small
profile",2,4096,8192
--profile medium,"medium profile",4,4096,8192 --default_profile small
```

In this case, *test.1.0.pkg : bootstrap.xml* gets mounted as *bootstrap.xml* at the root, and the *license.txt* gets mounted as */license/lic.txt*.

Example 5: Usage for Palo Alto Firewall

```
nfvpt.py -o PA_L3_HA -i PA-VM-KVM-8.0.5.qcow2 --json d.json -t firewall -n "PA FIREWALL"
-r 8.0.5 --app_vendor PA --monitor true --ha_package
```

Example 6: Usage for Asav

```
nfvpt.py -i foo.qcow2 -o asav.tar.gz --json pa1.json --app_vendor cisco -t firewall -r 10
--optimize true -n asav --monitored true --ha_package —ha_capable
```

Example 7: Usage for csr

```
nfvpt.py --ha_package --pack_dir /data/intdatastore -i csr1000v-universalk9.16.09.01.qcow2
 -o csr1000v-universalk9.16.09.01-ha.tar.gz
```

Standard VM Image Packaging

The standard VM packaging is based on the Open Virtualization Format (OVF) packaging standard, in which a single file is distributed in open virtualization appliance (OVA) format. The VM image is shared using a TAR archive file with the root disk image and descriptor files.

Note Cisco Enterprise NFVIS supports VM packaging in *.tar.gz* (compressed form of OVA) format. Ensure that all supported third party VM images are available in the supported format.

Generating a VM Package

Package files are provided for Cisco ISRv, Cisco ASAv, and tiny Linux and Windows server 2000. Vendors are responsible for packaging all third party VMs in the supported format.

1. Create a VM qcow2 image.

2. Create an *image_properties.xml* file with the VM properties. Ensure that you add all mandatory fields. Include the profiles supported for the VM in this file, and select one default profile. If you do not want to monitor the VM bootup, make the bootup time as -1.

3. Create *bootstrap-config* or *day0-config*, if any bootstrap configuration is required for the VM. If the bootstrap configuration requires inputs from the user, use the tokens in the xml or text file. These tokens are populated during the VM deployment with the provided data.

Note A VM deployment may fail, if there are tokens in the configuration, and the user does not provide the token values in the deployment payload.

4. Create a *package.mf* file, which lists all the files to be bundled into the *.tar.gz* file along with checksums.

5. Generate the packaging file using "tar -cvzf ova_file_name list_of_files_to_be_bundled".

   For example, *tar -cvzf isrv.tar.gz isrv-universalk9.03.16.02.S.155-3.S1a-ext-serial.qcow2 image_properties.xml isr_ovf_env.xml package.mf*.

Appendix

VM Image Package Files

The table lists the contents of the VM package that are generated using the packaging tool:

Table 1: VM Image Package Files

File	Description	Mandatory/Optional
Package Manifest (package.mf)	Lists the files in the package and the expected checksum for the files.	Mandatory
VM image properties (vmname_properties.xml)	XML file with resources and features supported by the VM	Mandatory
VM image (vmname.qcow2)	Image file of the VM. Multiple images are supported. One root_disk image file is mandatory.	Mandatory

Bootstrap (bootstrap_file)	Optional		Bootstrap files for VNF. Two parameters are required in the format of dst:src; dst filename including path has to match exactly to what the VM expects; up to 20 bootstrap files are accepted. For example: --bootstrap ovf-env.xml for ISRv and --bootstrap day0-config for ASAv.

Package Manifest File

The package manifest XML file provides a list of the files in the package with their names and their expected checksum. SHA1 algorithm (sha1sum) is used to calculate the checksum. This is a mandatory file to be bundled in the VM package. The manifest file must be named as *package.mf*.

Table 2: Package Manifest File Details

Property Name	Description	Property Tag	Mandatory/Optional
File information	XML tree with details of file name, file type, and expected checksum. The root_image and image_properties files are required.	<file_info>	Mandatory
File name	Name of the file	<name>	Mandatory
File type	Describes the file type. Supported types: • root_image • image_properties • bootstrap_config_file • ephemeral_disk1_image • ephemeral_disk2_image	<type>	Mandatory
Expected checksum	The calculated SHA1 checksum to be validated.	<sha1_checksum>	Mandatory

Bootstrap Configuration File

The bootstrap configuration file is an XML or a text file, and contains properties specific to a VM and the environment. Properties can have tokens, which can be populated during deployment time from the deployment payload.

VM Image Properties File

This XML file provides information about the resources supported or required for the VM operation. All mandatory parameters have to be defined. It also supports custom attributes. This is a mandatory file to be bundled in the VM package. The VM package supports up to 10 disks to be bundled into the package.

Table 3: VM Image Properties File Details

Property Name	Description	Property Tag	Possible Values	Mandatory/Optional
VNF Type	VM functionality provided. Router and firewall are predefined types.	<vnf_type>	Router, firewall, Windows, Linux, and custom_type	Mandatory
Name	Name associated with the VM packaging. This name is referenced for VM deployment.	<name>	Any	Mandatory
Version	Version of the package	<version>	Any	Mandatory
Boot-up time	Boot-up time (in seconds) of the VNF before it can be reachable via ping.	<bootup_time>	Any in seconds, (-1) to not monitor boot-up	Mandatory
Root Disk Image Bus	Root image disk bus	<root_file_disk_bus>	virtio, scsi, and ide	Mandatory
Disk-1 bus type	Additional disk1 image disk bus	<disk_1_file_disk_bus>	virtio, scsi, and ide	Optional
Disk-2 bus type	Disk2 image disk bus	<disk_2_file_disk_bus>	virtio, scsi, and ide	Optional
Disk-10 bus type	Disk10 image disk bus	<disk_10_file_disk_bus>	virtio, scsi, and ide	Optional
Root Disk Image format	Root image disk format	<root_image_disk_format>	qcow2 and raw	Mandatory
Disk-1 Image format	Additional disk 1 image format	<disk_1_image_format>	qcow2 and raw	Optional
Disk-2 Image format	Disk 2 image format	<disk_2_image_format>	qcow2 and raw	Optional
Disk-10 Image format	Disk 10 image format	<disk_10_image_format>	qcow2 and raw	Optional

Serial Console	Serial console supported	<console_type_serial>	true, false	Optional
Minimum vCPU	Minimum vCPUs required for a VM operation	<vcpu_min>		Mandatory
Maximum vCPU	Maximum vCPUs supported by a VM	<vcpu_max>		Mandatory
Minimum memory	Minimum memory in MB required for VM operation	<memory_mb_min>		Mandatory
Maximum memory	Maximum memory in MB supported by a VM	<memory_mb_max>		Mandatory
Minimum root disk size	Minimum disk size in GB required for VM operation	<root_disk_gb_min>		Optional
Maximum root disk size	Maximum disk size in GB supported by a VM	<root_disk_gb_max>		Optional
Maximum vNICs	Maximum number of vNICs supported by a VM	<vnic_max>		Mandatory
SRIOV support	SRIOV supported by VM interfaces. This should have a list of supported NIC device drivers.	<sriov_supported>	true, false	Optional
SRIOV driver list	List of drivers to enable SRIOV support	< sriov_driver_list>		Optional
PCI passthru support	PCI passthru support by VM interfaces	<pcie_supported>	true, false	Optional
PCIE driver list	List of VNICS to enable PCI passthru support	< pcie _driver_list>		Optional

bootstrap_cloud_init_drive_type	Mounts day0 config file as disk (default is CD-ROM)	<bootstrap_cloud_init_drive_type>	disk, cdrom	Optional
bootstrap_cloud_init_bus_type	Default is IDE	<bootstrap_cloud_init_bus_type>	virtio, ide	Optional
BOOTSTRAP	Bootstrap files for the VNF. Two parameters are required in the format of dst:src; dst filename including path has to match exactly to what the VM expects; up to 20 bootstrap files are accepted. For example: --bootstrap ovf-env.xml for ISRv and --bootstrap day0-config for ASAv	< bootstrap_file>	File name of the bootstrap file	Optional
Custom properties	List of properties can be defined within the custom_property tree. (Example: For ISRv, the technology packages are listed in this block.) If the Cisco Enterprise NFV portal is used to deploy the VM, the portal prompts you for inputs for custom properties fields, and can pass the values to the bootstrap configuration.	<custom_property>		Optional

Profiles for VM deployment	List of VM deployment profiles. Minimum one profile is required	<profiles>		Optional
Default profile	The default profile is used when no profile is specified during deployment.	<default_profile>		Optional
Monitoring Support	A VM supports monitoring to detect failures.	<monitoring_supported>	true, false	Mandatory
Monitoring Method	A method to monitor a VM. Currently, only ICMP ping is supported.	<monitoring_methods>	ICMPPing	Mandatory if monitoring is true
Low latency	If a VM's low latency (for example, router and firewall) gets dedicated resource (CPU) allocation. Otherwise, shared resources are used.	<low_latency>	true, false	Mandatory
Privileged-VM	Allows special features like promiscuous mode and snooping . By default, it is false.	<privileged_vm>	true, false	Optional
Virtual interface model		<virtual_interface_model>		Optional
Thick disk provisioning	By default, it is false.	<thick_disk_provisioning>	true, false	Optional
Profile for VM deployment	A profile defines the resources required for VM deployment. This profile is referenced during VM deployment.	<profile>		Optional
Name	Profile name	<name>	Any	Mandatory

Description	Description of the profile	<description>	Any	Mandatory
vCPU	vCPU number in a profile	<vcpus>		Mandatory
Memory	Memory - MB in profile	<memory_mb>		Mandatory
Root Disk Size	Disk size - MB in profile .	<root_disk_mb>		Mandatory
VNIC Offload	List of properties that can be set for vnic offload	<vnic_offload>		Optional
Generic Segmentation Offload	Turn generic segmentation offload on or off	<generic_segmentation_offload> (parent: <vnic_offload>)	on, off	Optional
Generic Receive Offload	Turn generic receive offload on or off	<generic_receive_offload> (parent: <vnic_offload>)	on, off	Optional
RX Checksumming	Turn RX checksumming on or off	<rx_checksumming> (parent: <vnic_offload>)	on, off	Optional
TX Checksumming	Turn TX checksumming on or off	<tx_checksumming> (parent: <vnic_offload>)	on, off	Optional
TCP Segmentation Offload	Turn TCP segmentation offload on or off	<tcp_segmentation_offload> (parent: <vnic_offload>)	on, off	Optional

Note A virtual console is supported by default. Specify the root disk size as zero for multiple disks (for example, vWaas deployment) as the system does not support populating multiple disk sizes. Actual disk sizes are calculated from the root_disk files.

Example: Package.mf

```
** sha1sum - for calculating checksum
<PackageContents>
  <File_Info>
    <name>ISRv_serial_3.16.02.qcow2</name>
