Cisco ASA 5510, ASA 5520, ASA 5540, and ASA 5550 Hardware Installation Guide
About This Guide

This preface includes the following sections:

- Document Objectives, page 1
- Audience, page 1
- Document Organization, page 1
- Document Conventions, page 2
- Installation Warnings, page 2
- Obtaining Documentation and Submitting a Service Request, page 6

Document Objectives

This guide describes how to perform installation and maintenance procedures on the Cisco ASA 5500 Series Adaptive Security Appliances. The information in this guide applies to the following Cisco ASA 5500 Series Adaptive Security Appliance models: Cisco ASA 5510, Cisco ASA 5520, Cisco ASA 5540, and Cisco ASA 5550. In this guide, references to "Cisco ASA 5500 Series Adaptive Security Appliance" and "adaptive security appliance" apply to all models unless specifically noted otherwise.

Audience

This guide is for network administrators who perform any of the following tasks:

- Managing network security
- Installing and configuring firewalls
- Managing default and static routes, and TCP and UDP services

Document Organization

This guide includes the following chapters and appendices:

- Chapter 1, “Overview” describes the product and the memory requirements.
- Chapter 1, “Preparing for Installation,” describes the steps to follow before installing new hardware or performing hardware upgrades.
• **Chapter 1, “Installing the Adaptive Security Appliance,”** describes how to install the chassis on the wall or rack and how to connect the interface cables on the adaptive security appliance.

• **Chapter 1, “Maintenance and Upgrade Procedures,”** describes how to remove and replace the chassis cover, the lithium battery in the SSM, the power supply, the CompactFlash, and the SSMs.

• **Appendix 1, “Cable Pinouts,”** describes the cable pinouts.

**Document Conventions**

Command descriptions use these conventions:

- Braces ({ }) indicate a required choice.
- Square brackets ([ ]) indicate optional elements.
- Vertical bars (|) separate alternative, mutually exclusive elements.
- **Boldface** indicates commands and keywords that are entered literally as shown.
- **Italics** indicate arguments for which you supply values.

Examples use these conventions:

- Examples depict screen displays and the command line in **screen** font.
- Information you need to enter in examples is shown in **boldface screen** font.
- Variables for which you must supply a value are shown in **italic screen** font.

Graphical user interface examples uses these conventions:

- **Boldface** indicates buttons and menu items.
- Selecting a menu item (or pane) is indicated by the following convention:
  
  Choose **Start > Settings > Control Panel**.

**Note**

Means reader take note. Notes contain helpful suggestions or references to material not covered in the manual.

**Installation Warnings**

Be sure to read the **Regulatory Compliance and Safety Information for the Cisco ASA 5500 Series** document that accompanied this device before installing the chassis. This document contains important safety information. This section includes the following warnings:

- **Power Supply Disconnection Warning**, page 3
- **Jewelry Removal Warning**, page 3
- **Wrist Strap Warning**, page 3
- **Work During Lightning Activity Warning**, page 3
- **Installation Instructions Warning**, page 3
- **Chassis Warning for Rack-Mounting and Servicing**, page 4
- **Short-Circuit Protection Warning**, page 4
- **SELV Circuit Warning**, page 4
• Ground Conductor Warning, page 4
• Blank Faceplates and Cover Panels Warning, page 4
• Product Disposal Warning, page 4
• Short-Circuit Protection Warning, page 5
• Compliance with Local and National Electrical Codes Warning, page 5
• DC Power Connection Warning, page 5
• AC Power Disconnection Warning, page 5
• TN Power Warning, page 5
• 48 VDC Power System, page 5
• Multiple Power Cord, page 5
• Circuit Breaker (15A) Warning, page 5
• Grounded Equipment Warning, page 6
• Safety Cover Requirement, page 6
• Faceplates and Cover Panel Requirement, page 6

Power Supply Disconnection Warning

⚠️ **Warning**

Before working on a chassis or working near power supplies, unplug the power cord on AC units; disconnect the power at the circuit breaker on DC units. Statement 12

Jewelry Removal Warning

⚠️ **Warning**

Before working on equipment that is connected to power lines, remove jewelry (including rings, necklaces, and watches). Metal objects will heat up when connected to power and ground and can cause serious burns or weld the metal object to the terminals. Statement 43

Wrist Strap Warning

⚠️ **Warning**

During this procedure, wear grounding wrist straps to avoid ESD damage to the card. Do not directly touch the backplane with your hand or any metal tool, or you could shock yourself. Statement 94

Work During Lightning Activity Warning

⚠️ **Warning**

Do not work on the system or connect or disconnect cables during periods of lightning activity. Statement 1001

Installation Instructions Warning

⚠️ **Warning**

Read the installation instructions before connecting the system to the power source. Statement 1004
Chassis Warning for Rack-Mounting and Servicing

Warning To prevent bodily injury when mounting or servicing this unit in a rack, you must take special precautions to ensure that the system remains stable. The following guidelines are provided to ensure your safety: This unit should be mounted at the bottom of the rack if it is the only unit in the rack. When mounting this unit in a partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack. If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack. Statement 1006

Short-Circuit Protection Warning

Warning This product requires short-circuit (overcurrent) protection, to be provided as part of the building installation. Install only in accordance with national and local wiring regulations. Statement 1045

SELV Circuit Warning

Warning To avoid electric shock, do not connect safety extra-low voltage (SELV) circuits to telephone-network voltage (TNV) circuits. LAN ports contain SELV circuits, and WAN ports contain TNV circuits. Some LAN and WAN ports both use RJ-45 connectors. Use caution when connecting cables. Statement 1021

Ground Conductor Warning

Warning This equipment must be grounded. Never defeat the ground conductor or operate the equipment in the absence of a suitably installed ground conductor. Contact the appropriate electrical inspection authority or an electrician if you are uncertain that suitable grounding is available. Statement 1024

Blank Faceplates and Cover Panels Warning

Warning Blank faceplates and cover panels serve three important functions: they prevent exposure to hazardous voltages and currents inside the chassis; they contain electromagnetic interference (EMI) that might disrupt other equipment; and they direct the flow of cooling air through the chassis. Do not operate the system unless all cards, faceplates, front covers, and rear covers are in place. Statement 1029

Product Disposal Warning

Warning Ultimate disposal of this product should be handled according to all national laws and regulations. Statement 1040
Short-Circuit Protection Warning

Warning This product requires short-circuit (overcurrent) protection, to be provided as part of the building installation. Install only in accordance with national and local wiring regulations. Statement 1045

Compliance with Local and National Electrical Codes Warning

Warning Installation of the equipment must comply with local and national electrical codes. Statement 1074

DC Power Connection Warning

Warning After wiring the DC power supply, remove the tape from the circuit breaker switch handle and reinstate power by moving the handle of the circuit breaker to the ON position. Statement 8

AC Power Disconnection Warning

Warning Before working on a chassis or working near power supplies, unplug the power cord on AC units. Statement 246

TN Power Warning

Warning The device is designed to work with TN power systems. Statement 19

48 VDC Power System

Warning The customer 48 volt power system must provide reinforced insulation between the primary AC power and the 48 VDC output. Statement 128

Multiple Power Cord

Warning This unit has more than one power cord. To reduce the risk of electric shock when servicing a unit, disconnect the power cord of the power strip that the unit is plugged into. Statement 137

Circuit Breaker (15A) Warning

Warning This product relies on the building’s installation for short-circuit (overcurrent) protection. Ensure that a fuse or circuit breaker no larger than 120 VAC, 15A U.S. (240 VAC, 10A international) is used on the phase conductors (all current-carrying conductors). Statement 13
Grounded Equipment Warning

Warning  This equipment is intended to be grounded. Ensure that the host is connected to earth ground during normal use. Statement 39

Safety Cover Requirement

Warning  The safety cover is an integral part of the product. Do not operate the unit without the safety cover installed. Operating the unit without the cover in place will invalidate the safety approvals and pose a risk of fire and electrical hazards. Statement 117

Faceplates and Cover Panel Requirement

Warning  Blank faceplates and cover panels serve three important functions: they prevent exposure to hazardous voltages and currents inside the chassis; they contain electromagnetic interference (EMI) that might disrupt other equipment; and they direct the flow of cooling air through the chassis. Do not operate the system unless all cards, faceplates, front covers, and rear covers are in place. Statement 142

Where to Find Safety and Warning Information

For safety and warning information, see the Regulatory Compliance and Safety Information for the Cisco ASA 5500 Series document that accompanied the product. This document describes the international agency compliance and safety information for the Cisco ASA 5500 Series Adaptive Security Appliance. It also includes translations of the safety warnings.

Obtaining Documentation and Submitting a Service Request

For information on obtaining documentation, using the Cisco Bug Search Tool (BST), submitting a service request, and gathering additional information, see What’s New in Cisco Product Documentation. To receive new and revised Cisco technical content directly to your desktop, you can subscribe to the What’s New in Cisco Product Documentation RSS feed. The RSS feeds are a free service.
Overview

Read through the entire guide before beginning any of the procedures in this book.

⚠️ **Warning** Only trained and qualified personnel should install, replace, or service this equipment. Statement 49

⚠️ **Caution** Read the safety warnings in the *Regulatory Compliance and Safety Information for the Cisco ASA 5500 Series* and follow proper safety procedures when performing these steps.

This chapter describes the product and the memory requirements, and includes the following topics:

- Product Overview, page 1-2
- Memory Requirements, page 1-5
- Memory Kits, page 1-6
- Memory Requirements for Software Version 8.3 and Later, page 1-6

⚠️ **Note** The illustrations in this chapter show the Cisco ASA 5540 adaptive security appliance. The Cisco ASA 5510 and Cisco ASA 5520 adaptive security appliance look identical, containing the same back panel features and indicators. The Cisco ASA 5550 has a fixed configuration with an embedded 4GE slot as shown in Figure 1-3.
Product Overview

This section describes the front and rear panels. Figure 1-1 shows the front panel LEDs.

**Figure 1-1  Front Panel LEDs**

Note  The Cisco ASA 5510 adaptive security appliance supports only 10/100BaseTX. The Cisco ASA 5520 and the Cisco ASA 5540 support 1000BaseT.
Memory Requirements

Table 1-3 lists the standard and recommended flash memory and DRAM. Note that the shipping DRAM increased after February 2010; the DRAM requirements for 8.3 and higher match the newer default shipping sizes. See Memory Kits, page 1-6 for the information to order an upgrade kit. The newer default shipping DRAM is the current maximum DRAM you can install in your unit.

<table>
<thead>

</tbody>
</table>

1. For the ASA 5510 through 5550, you might need to upgrade the internal flash memory to 512 MB or add external flash memory if you load multiple images of the AnyConnect client along with one or more images of the ASA software, ASDM, client/server plugins, or Cisco Secure Desktop. In particular, you might need to upgrade for multiple AnyConnect 3.0 and higher clients with optional modules. The ASA 5505 does not have a flash memory upgrade available.

2. The default internal flash memory for some models was 64 MB in the past; if you have one of these early units, we recommend upgrading your flash memory to at least the new shipping default.

In a failover configuration, the two units must have the same hardware configuration. They must be the same model, have the same number and types of interfaces, and the same amount of RAM.

**Note**

The two units do not have to have the same amount of flash memory. If using units with different flash memory sizes in your failover configuration, make sure the unit with the smaller flash memory has enough space to accommodate the software image files and the configuration files. If it does not, configuration synchronization from the unit with the larger flash memory to the unit with the smaller flash memory will fail.

For more information, see the Cisco Security Appliance Command Line Configuration Guide.
Memory Kits

Table 1-4 lists the available DRAM (DIMM) kits.

<table>
<thead>

Memory Requirements for Software Version 8.3 and Later

For information on memory requirements for the adaptive security appliance for software Version 8.3 or later, go to: http://www.cisco.com/en/US/prod/collateral/vpndevc/ps6032/ps6094/ps6120/product_bulletin_c25-586414.html
Preparing for Installation

The information in this guide applies to the following Cisco ASA 5500 series Adaptive Security Appliance models: Cisco ASA 5510, Cisco ASA 5520, Cisco ASA 5540, and Cisco ASA 5550. In this guide, references to “Cisco ASA 5500 series Adaptive Security Appliance” and “adaptive security appliance” apply to all models unless specifically noted otherwise.

This chapter describes the steps to follow before installing new hardware or performing hardware upgrades, and includes the following sections:

- Overview, page 1-1
- Installation Overview, page 1-1
- Safety Recommendations, page 1-2
- General Site Requirements, page 1-4

Overview

The adaptive security appliance delivers unprecedented levels of defense against threats to the network with deeper web inspection and flow-specific analysis, improved secure connectivity via end-point security posture validation, and voice and video over VPN support. It also provides enhanced support for intelligent information networks through improved network integration, resiliency, and scalability.

The adaptive security appliance software combines firewall, VPN concentrator, and intrusion prevention software functionality into one software image. Previously, these functions were available in three separate devices, each with its own software and hardware. Combining the functionality into just one software image provides significant improvements in the available features.

Additionally, the Cisco ASA 5500 series Adaptive Security Appliance software supports Adaptive Security Device Manager. ASDM is a browser-based, Java applet used to configure and monitor the software on the adaptive security appliances. ASDM is loaded from the adaptive adaptive security appliance, then used to configure, monitor, and manage the device.

Installation Overview

To prepare for the installation of the chassis, perform the following steps:

Step 1
Review the safety precautions outlined in the Regulatory Compliance and Safety Information for the Cisco ASA 5500 Series document.
Safety Recommendations

Use the following guidelines and the information in the following sections to help ensure your safety and protect the adaptive security appliance. The list of guidelines may not address all potentially hazardous situations in your working environment, so be alert and exercise good judgement at all times.

Note

If you need to remove the chassis cover to install a hardware component, such as additional memory or an interface card, doing so does not affect your Cisco warranty. Upgrading the adaptive security appliance does not require any special tools and does not create any radio frequency leaks.

The safety guidelines are as follows:

- Keep the chassis area clear and dust-free before, during and after installation.
- Keep tools away from walk areas where you and others could fall over them.
- Do not wear loose clothing or jewelry, such as earrings, bracelets, or chains, that could get caught in the chassis.
- Wear safety glasses if you are working under any conditions that might be hazardous to your eyes.
- Do not perform any action that creates a potential hazard to people or makes the equipment unsafe.
- Never attempt to lift an object that is too heavy for one person to handle.

This section includes the following topics:

- Maintaining Safety with Electricity, page 1-2
- Preventing Electrostatic Discharge Damage, page 1-3

Maintaining Safety with Electricity

Warning

Before working on a chassis or working near power supplies, unplug the power cord on AC units; disconnect the power at the circuit breaker on DC units. Statement 12

Follow these guidelines when working on equipment powered by electricity:

- Before beginning procedures that require access to the interior of the chassis, locate the emergency power-off switch for the room in which you are working. Then, if an electrical accident occurs, you can act quickly to turn off the power.
- Do not work alone if potentially hazardous conditions exist anywhere in your work space.
- Never assume that power is disconnected from a circuit; always check the circuit.
Safety Recommendations

- Look carefully for possible hazards in your work area, such as moist floors, ungrounded power extension cables, frayed power cords, and missing safety grounds.

- If an electrical accident occurs, proceed as follows:
  - Use caution; do not become a victim yourself.
  - Disconnect power from the system.
  - If possible, send another person to get medical aid. Otherwise, assess the condition of the victim and then call for help.
  - Determine if the person needs rescue breathing or external cardiac compressions; then take appropriate action.

- Use the adaptive security appliance chassis within its marked electrical ratings and product usage instructions.

- Install the adaptive security appliance in compliance with local and national electrical codes as listed in the Regulatory Compliance and Safety Information for the Cisco ASA 5500 Series document.

- The adaptive security appliance models equipped with AC-input power supplies are shipped with a 3-wire electrical cord with a grounding-type plug that fits only a grounding-type power outlet. Do not circumvent this safety feature. Equipment grounding should comply with local and national electrical codes.

- The adaptive security appliance models equipped with DC-input power supplies must be terminated with the DC input wiring on a DC source capable of supplying at least 15 amps. A 15-amp circuit breaker is required at the 48 VDC facility power source. An easily accessible disconnect device should be incorporated into the facility wiring. Be sure to connect the grounding wire conduit to a solid earth ground. We recommend that you use a closed loop ring to terminate the ground conductor at the ground stud. The DC return connection to this system is to remain isolated from the system frame and chassis.

  Other DC power guidelines are listed in the Regulatory Compliance and Safety Information for the Cisco ASA 5500 Series document.

Preventing Electrostatic Discharge Damage

Electrostatic discharge (ESD) can damage equipment and impair electrical circuitry. ESD damage occurs when electronic components are improperly handled and can result in complete or intermittent failures.

- Always follow ESD-prevention procedures when removing and replacing components. Ensure that the chassis is electrically connected to earth ground. Wear an ESD-preventive wrist strap, ensuring that it makes good skin contact. Connect the grounding clip to an unpainted surface of the chassis frame to safely ground ESD voltages. To properly guard against ESD damage and shocks, the wrist strap and cord must operate effectively. If no wrist strap is available, ground yourself by touching the metal part of the chassis.

- For safety, periodically check the resistance value of the antistatic strap, which should be between 1 and 10 megohms (Mohms).
General Site Requirements

The topics in this section describe the requirements your site must meet for safe installation and operation of your system. Ensure that your site is properly prepared before beginning installation.

This section includes the following topics:

- Site Environment, page 1-4
- Preventive Site Configuration, page 1-4
- Power Supply Considerations, page 1-4
- Configuring Equipment Racks, page 1-7

Site Environment

Place the chassis on a desktop or mount it on a rack. The location of the chassis and the layout of the equipment rack or wiring room are extremely important for proper system operation. Equipment placed too close together, inadequate ventilation, and inaccessible panels can cause system malfunctions and shutdowns, and can make the chassis maintenance difficult.

For information on physical specifications, see table 7 at the following url:

When planning the site layout and equipment locations, keep in mind the precautions described in the next section “Preventive Site Configuration, page 1-4,” to help avoid equipment failures and reduce the possibility of environmentally caused shutdowns. If you are currently experiencing shutdowns or unusually high error rates with your existing equipment, these precautions may help you isolate the cause of failures and prevent future problems.

Preventive Site Configuration

The following precautions will help plan an acceptable operating environment for the chassis and avoid environmentally caused equipment failures:

- Electrical equipment generates heat. Ambient air temperature might not be adequate to cool equipment to acceptable operating temperatures without adequate circulation. Ensure that the room in which you operate your system has adequate air circulation.
- Always follow the ESD-prevention procedures described previously to avoid damage to equipment. Damage from static discharge can cause immediate or intermittent equipment failure.
- Ensure that the chassis top panel is secure. The chassis is designed to allow cooling air to flow effectively within it. An open chassis allows air leaks, which may interrupt and redirect the flow of cooling air from the internal components.

Power Supply Considerations

For information on power supply considerations including environmental operating ranges and power requirements, see table 7 at the following url:
The following chassis models can have either an AC or DC power supply: Cisco ASA 5510, Cisco ASA 5520, Cisco ASA 5540, and Cisco ASA 5550.

Observe the following considerations:

- Check the power at the site before installing the chassis to ensure that the power is “clean” (free of spikes and noise). Install a power conditioner if necessary, to ensure proper voltages and power levels in the source voltage.
- Install proper grounding for the site to avoid damage from lightning and power surges.
- In a chassis equipped with an AC-input power supply, use the following guidelines:
  - The chassis does not have a user-selectable operating range. Refer to the label on the chassis for the correct AC-input power requirement.
  - Several styles of AC-input power supply cords are available; make sure you have the correct style for your site.
  - Install an uninterruptible power source for your site, if possible.
  - Install proper site grounding facilities to guard against damage from lightning or power surges.
- In a chassis equipped with a DC-input power supply, use the following guidelines:
  - Each DC-input power supply requires dedicated 3-5 amp service.
  - For DC power cables, we recommend a minimum of 14 AWG wire cable.
  - The DC return connection to this system is to remain isolated from the system frame and chassis.

You will also need to provide power to the switch with the appropriate AC power cord for your location. Table 1-1 lists the power cords that are used with the AC power supply.

</tbody>
</table>
Configuring Equipment Racks

For information on physical specifications, see table 7 at the following url:

The following tips help you plan an acceptable equipment rack configuration:

- Enclosed racks must have adequate ventilation. Ensure that the rack is not overly congested, because each chassis generates heat. An enclosed rack should have louvered sides and a fan to provide cooling air.

- When mounting a chassis in an open rack, ensure that the rack frame does not block the intake or exhaust ports. If the chassis is installed on slides, check the position of the chassis when it is seated all the way into the rack.

- In an enclosed rack with a ventilation fan in the top, excessive heat generated by equipment near the bottom of the rack can be drawn upward and into the intake ports of the equipment above it in the rack. Ensure that you provide adequate ventilation for equipment at the bottom of the rack.

- Baffles can help to isolate exhaust air from intake air, which also helps to draw cooling air through the chassis. The best placement of the baffles depends on the airflow patterns in the rack. Experiment with different arrangements to position the baffles effectively.
Installing the Adaptive Security Appliance

Installing the Adaptive Security Appliance

This section describes how to rack-mount and install the adaptive security appliance. You can mount the adaptive security appliance in a 19-inch rack (with a 17.5- or 17.75-inch opening).

⚠️ **Warning**

To prevent bodily injury when mounting or servicing this unit in a rack, you must take special precautions to ensure that the system remains stable. The following guidelines are provided to ensure your safety: This unit should be mounted at the bottom of the rack if it is the only unit in the rack. When mounting this unit in a partially filled rack, load the rack from the bottom to the top with the heaviest component at the bottom of the rack. If the rack is provided with stabilizing devices, install the stabilizers before mounting or servicing the unit in the rack. Statement 1006

The following information can help plan equipment rack installation:

- Allow clearance around the rack for maintenance.
- If the rack contains stabilizing devices, install the stabilizers prior to mounting or servicing the unit in the rack.
- When mounting a device in an enclosed rack, ensure adequate ventilation. Do not overcrowd an enclosed rack. Make sure that the rack is not congested, because each unit generates heat.
- When mounting a device in an open rack, make sure that the rack frame does not block the intake or exhaust ports.
- If the rack contains only one unit, mount the unit at the bottom of the rack.
- If the rack is partially filled, load the rack from the bottom to the top, with the heaviest component at the bottom of the rack.

This section contains the following topics:

- Rack-Mounting the Chassis, page 1-2
- Setting the Chassis on a Desktop, page 1-3
- Connecting the Interface Cables, page 1-4
Rack-Mounting the Chassis

Use the mounting brackets to mount the chassis to the front or the back of the rack, with the front panel or the rear panel of the chassis facing outward. The part number for ordering a rack-mount kit for the Cisco ASA 5510, Cisco ASA 5520, Cisco ASA 5540, and Cisco ASA 5550 is ASA5500-HW=. To rack-mount the chassis, perform the following steps:

**Step 1**  
Attach the rack-mount brackets to the chassis using the supplied screws. Attach the brackets to the holes as shown in *Figure 1-1*. After the brackets are secured to the chassis, you can rack-mount it.

**Note**  
*Figure 1-1* shows the rack mounting brackets attached to the rear of the chassis while *Figure 1-2* shows the rack mounting brackets attached to the front of the chassis. You can attach the mounting brackets to the front or the rear of the chassis so that you can have the front panel or the rear panel of the chassis facing outward. *Figure 1-1* shows the brackets attached to the rear so you can see how that configuration appears while *Figure 1-2* shows the brackets attached to the front so that you can see how that configuration appears. In **Step 1** and **Step 2**, you will choose to have either the brackets rear mounted or front mounted but not both.

**Step 2**  
Attach the chassis to the rack using the supplied screws, as shown in *Figure 1-2*. 
To remove the chassis from the rack, remove the screws that attach the chassis to the rack, and then remove the chassis.

---

**Setting the Chassis on a Desktop**

To set the chassis on a desktop, perform the following steps:

**Step 1** Locate the rubber feet on the black adhesive strip that shipped with the chassis.

**Step 2** Place the chassis upside down, on a smooth, flat surface.

**Step 3** Peel off the rubber feet from the black adhesive strip and press them adhesive-side down onto the bottom four corners of the chassis, see Figure 1-4.
Connecting the Interface Cables

This section describes how to connect the cables to the Console, Management, 4GE SSM, and SSM ports. In this document, SSM refers to an intelligent SSM, the AIP SSM or CSC SSM.

**Note**
You can use any unused Ethernet interface on the device as the failover link. The failover link interface is not configured as a normal networking interface; it should only be used for the failover link. You can connect the LAN-based failover link by using a dedicated switch with no hosts or routers on the link or by using a crossover Ethernet cable to link the units directly. For more information, see the *Cisco Security Appliance Command Line Configuration Guide*.

**Warning**
Only trained and qualified personnel should install, replace, or service this equipment. Statement 49

**Caution**
Read the safety warnings in the Regulatory Compliance and Safety Information for the Cisco ASA 5505 Adaptive Security Appliance and follow proper safety procedures when performing these steps.
The RJ-45 Auxiliary port (labeled AUX on the chassis) is reserved for internal use at Cisco. The port is not functional in shipping versions of the chassis; therefore, customers cannot connect to this port to run the adaptive security appliance CLI.

To connect cables to the ports perform the following steps:

**Step 1** Place the chassis on a flat, stable surface, or in a rack (if you are rack-mounting it.)

**Step 2** Before connecting a computer or terminal to the ports, check to determine the baud rate of the serial port. The baud rate must match the default baud rate (9600 baud) of the Console port of the adaptive security appliance. Set up the terminal as follows: 9600 baud (default), 8 data bits, no parity, 1 stop bits, and Flow Control (FC) = Hardware.

**Step 3** Connect the cables to the ports.

**a. Management port**

The adaptive security appliance has a dedicated management interface referred to as the Management0/0 port. The Management0/0 port is a Fast Ethernet interface with a dedicated port used only for traffic management.

**Note** You can configure any interface to be a management-only interface using the `management-only` command. You can also disable management-only mode on the management interface. For more information about this command, see the `management-only` command in the *Cisco Security Appliance Command Reference*.

- Connect one RJ-45 connector to the Management0/0 port, as shown in Figure 1-5.
- Connect the other end of the Ethernet cable to the management port on your computer or network device.

*Figure 1-5  Connecting to the Management Port*

<table>
<thead>
<tr>
<th>1</th>
<th>Management port</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>RJ-45 to RJ-45 Ethernet cable</td>
</tr>
</tbody>
</table>
b. Console port
   - Connect the serial console cable as shown in Figure 1-6. The console cable has a DB-9 connector on one end for the serial port on your computer, and the other end is an RJ-45 connector.
   - Connect the RJ-45 connector to the Console port on the adaptive security appliance.
   - Connect the other end of the cable, the DB-9 connector, to the console port on your computer.

Figure 1-6 Connecting to the Console Cable

|   | RJ-45 Console port |   | RJ-45 to DB-9 console cable |
c. 4GE SSM
   - Ethernet port
     - Connect one RJ-45 connector to the Ethernet port of the 4GE SSM.
     - Connect the other end of the Ethernet cable to your network device, such as a router, switch or hub.

   **Note**  The 4GE SSM is optional, this connection is necessary only if you have installed the 4GE SSM on the adaptive security appliance.

**Figure 1-7 Connecting to the RJ-45 port**

1 Ethernet ports  2 RJ-45 connector

   **Note**  When using the 4GE SSM you can use the same numbered copper ports (RJ-45) and the SFP ports at the same time. Use the `media-type` command in interface configuration mode to set the media type to copper or fiber Gigabit Ethernet. For a complete description of the command syntax, see the *Cisco ASA 5500 Series Command Reference*.

   - SFP modules
     - Insert and slide the SFP module into the SFP port until you hear a click. The click indicates that the SFP module is locked into the port.
     - Remove the optical port plugs from the installed SFP as shown in **Figure 1-8**.
Chapter 1  Installing the Adaptive Security Appliance

Figure 1-8  Removing the Optical Port Plug

1. Optical port plug
2. SFP module

- Connect the LC connector to the SFP module as shown in Figure 1-9.

Figure 1-9  Connecting the LC Connector

1. LC connector
2. SFP module

- Connect the other end to your network devices, such as routers, switches, or hubs.
d. SSM

- Connect one RJ-45 connector to the management port on the SSM, as shown in Figure 1-10.
- Connect the other end of the RJ-45 cable to your network devices.

**Note**
SSMs are optional, this connection is necessary only if you have installed an SSM on the adaptive security appliance.

*Figure 1-10 Connecting to the Management Port*

![Diagram of SSM connection](image)

1. SSM management port
2. RJ-45 to RJ-45 cable
e. Ethernet ports
   - Connect the RJ-45 connector to the Ethernet port.
   - Connect the other end of the Ethernet cable to your network device, such as a router, switch or hub.

</tr>
</tbody>
</table>

**Step 4** Connect the power cord to the adaptive security appliance and plug the other end to the power source. For information on powering on a DC model, see the “Installing the DC Model” section on page 1-7.

**Step 5** Power on the chassis.
Maintenance and Upgrade Procedures

This chapter describes how to remove and replace the chassis cover, the power supply, and the CompactFlash. This chapter includes the following sections:

- Removing and Replacing the Chassis Cover, page 1-1
- Working in an ESD Environment, page 1-3
- Removing and Replacing a Lithium Battery in the SSM, page 1-4
- Removing and Replacing the Power Supply, page 1-4
- Installing the DC Model, page 1-7
- Removing and Replacing the CompactFlash, page 1-10
- Installing and Replacing the 4GE SSM, page 1-14
- Installing and Replacing the Intelligent SSM, page 1-20
- Replacing Memory in the Adaptive Security Appliance, page 1-23

Removing and Replacing the Chassis Cover

This section describes how to remove and replace the chassis cover. This section includes the following topics:

- Removing the Chassis Cover, page 1-1
- Replacing the Chassis Cover, page 1-2s

Removing the Chassis Cover

To remove the chassis cover, perform the following steps:

Note

Removing the chassis cover does not affect Cisco warranty. Upgrading the adaptive security appliance does not require any special tools and does not create any radio frequency leaks.

Step 1

Read the Regulatory Compliance and Safety Information for the Cisco ASA 5500 Series document.

Step 2

Power off the adaptive security appliance. Once the upgrade is complete, you can safely power on the chassis.
Warning  Before working on a system that has an On/Off switch, turn OFF the power and unplug the power cord.

Statement 1

Step 3  Remove the screws from the top of the chassis (Figure 1-1).

Figure 1-1 Removing the Top Panel Screws

Step 4  Pull the top panel up as shown in Figure 1-2. Put the panel in a safe place.

Figure 1-2 Removing the Chassis Cover

Replacing the Chassis Cover

Caution  Do not operate the adaptive security appliance without the chassis cover installed. The chassis cover protects the internal components, prevents electrical shorts, and provides proper air-flow for cooling the electronic components.

To replace the chassis cover, perform the following steps:

Step 1  Place the chassis on a secure surface with the front panel facing you.
Step 2  Hold the top panel so the tabs at the rear of the top panel are aligned with the chassis bottom.

Step 3  Lower the front of the top panel onto the chassis as shown in Figure 1-3.

![Figure 1-3 Replacing the Chassis Cover](image)

Step 4  Fasten the top panel with the screws you set aside earlier as shown in Figure 1-4.

![Figure 1-4 Replacing the Screws](image)

Step 5  Reinstall the chassis on a rack.

Step 6  Reinstall the network interface cables.

---

**Working in an ESD Environment**

Electrostatic discharge (ESD) can damage equipment and impair electrical circuitry. ESD damage occurs when electronic components are improperly handled and can result in complete or intermittent failures. Always follow ESD-prevention procedures when you remove and replace components. Ensure that the chassis is electrically connected to earth ground. Wear an ESD-preventive wrist strap, ensuring that it makes good skin contact. Connect the grounding clip to an unpainted surface of the chassis frame to safely ground unwanted ESD voltages. To guard against ESD damage and shocks, the wrist strap and cord must operate properly. If no wrist strap is available, ground yourself by touching the metal part of the chassis.
Removing and Replacing a Lithium Battery in the SSM

To remove and replace the battery in the SSM, perform the following steps:

**Step 1** Remove the two screws at the left rear end of the chassis, and remove the slot cover as described in “Installing and Replacing the Intelligent SSM” section on page 1-20.

**Step 2** Slide the metal clip back and pull the battery out.

**Step 3** Place the used battery aside.

**Step 4** Replace the battery with a compatible Lithium CR-2032 battery (which is available at your local electronics or drug store), by sliding the metal clip back and sliding the battery into place.

**Step 5** Replace the chassis cover as described in the “Installing and Replacing the Intelligent SSM” section on page 1-20.

Removing and Replacing the Power Supply

For information on power supply considerations including environmental operating ranges and power requirements, see the following document:

For information on AC-input power cord options, see Table 1-1 in the “Power Supply Considerations” section on page 1-4

This section describes how to remove and replace the power supply, and includes the following topics:

- Removing the AC Power Supply, page 1-4
- Replacing the AC Power Supply, page 1-6

Removing the AC Power Supply

To remove the AC power supply, perform the following steps:

**Step 1** Power off the adaptive security appliance.

**Step 2** Remove the power cord and all other cables from the chassis.

**Step 3** Remove the chassis from the rack if it is rack-mounted.

**Step 4** Remove the chassis cover. See the “Installing and Replacing the Intelligent SSM” section on page 1-20 for more information.

**Step 5** Place the chassis in an ESD-controlled environment. See the “Working in an ESD Environment” section on page 1-3 for more information.
Step 6  Lift the rear of the chassis from the surface and unscrew both the screws that secures the power supply to the chassis, as shown in Figure 1-5.

Figure 1-5  Removing the Power Supply Screws

Step 7  Locate the power connector on the system board.

Step 8  Unlatch the plug, then grasp the sides of the power connector and pull upward while rocking the connector from side to side. Disconnect the power connector from the system board as shown in Figure 1-6.

Figure 1-6  Disconnecting the Power Connector

1 Chassis bottom

1 AC power supply  2 Power connector
**Step 9**  Remove the power supply brace by pulling it up and then out as shown in Figure 1-7.

*Figure 1-7  Removing the Power Supply*

<tr>
<td>3</td>
<td>Power supply brace</td>
</tr>
<tr>
<td>4</td>
<td>Front panel</td>
</tr>
</tbody>
</table>

**Step 10**  From the back of the chassis, push the power supply forward, and then lift it up and out.

---

**Replacing the AC Power Supply**

To replace the AC power supply, perform the following steps:

**Step 1**  Insert the new power supply into place and slide it towards the back of the adaptive security appliance.

**Step 2**  Lift the rear of the adaptive security appliance from the surface and reinstall both screws.
Step 3  Insert the power supply brace and press down until it fits into place, as shown in Figure 1-8.

Figure 1-8  Replacing the Power Supply Brace and the AC Power Supply

Step 4  Connect the power connector to the system board.
Step 5  Replace the adaptive adaptive security appliance cover. See “Replacing the Chassis Cover” for more information.
Step 6  Reinstall the network interface cables.

Installing the DC Model

Warning  Before performing any of the following procedures, ensure that power is removed from the DC circuit. To ensure that all power is OFF, locate the circuit breaker on the panel board that services the DC circuit, switch the circuit breaker to the OFF position, and tape the switch handle of the circuit breaker in the OFF position. Statement 7

Note  The DC return connection should remain isolated from the system frame and chassis (DC-I). This equipment is suitable for connection to intra-building wiring only.

To install the DC power model, perform the following steps:
Step 1  Read the *Regulatory Compliance and Safety Information for the Cisco ASA 5500 Series* document.

Step 2  Terminate the DC input wiring on a DC source capable of supplying at least 15 amps. A 15-amp circuit breaker is required at the 48 VDC facility power source. An easily accessible disconnect device should be incorporated into the facility wiring.

Step 3  Locate the DC-input terminal box, see Figure 1-9.

![DC-Input Terminal Box](image)

<p>| | |</p>
<table>
<thead>
<tr>
<th></th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Negative</td>
</tr>
<tr>
<td>2</td>
<td>Positive</td>
</tr>
<tr>
<td>3</td>
<td>Ground</td>
</tr>
<tr>
<td>4</td>
<td>On/Off switch</td>
</tr>
</tbody>
</table>

Step 4  Power off the adaptive security appliance. Ensure that power is removed from the DC circuit. To ensure that all power is OFF, locate the circuit breaker on the panel board that services the DC circuit, switch the circuit breaker to the OFF position, and tape the switch handle of the circuit breaker in the OFF position.

Step 5  Remove the DC power supply plastic shield.

Step 6  The adaptive security appliance is equipped with two grounding holes at the side of the chassis, which you can use to connect a two-hole grounding lug to the adaptive security appliance. Use 8-32 screws to connect a copper standard barrel grounding lug to the holes. The adaptive security appliance requires a lug where the distance between the center of each hole is 0.56 inches. A lug is not supplied with the adaptive security appliance.

Step 7  Strip the ends of the wires for insertion into the power connect lugs on the adaptive security appliance.
Step 8  Insert the ground wire into the connector for the earth ground and tighten the screw on the connector. See Figure 1-10, and using the same method as for the ground wire, connect the negative wire and then the positive wire.

**Note**  The DC return connection to this system is to remain isolated from the system frame and chassis.

*Figure 1-10  DC-Input Power Supply Connections*

<table>
<thead>
<tr>
<th>1</th>
<th>Negative</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>Positive</td>
</tr>
<tr>
<td>3</td>
<td>Ground</td>
</tr>
</tbody>
</table>

Step 9  After wiring the DC power supply, remove the tape from the circuit breaker switch handle and reinstate power by moving the handle of the circuit breaker to the ON position.

Step 10 Install any remaining interface boards as described in “Installing the DC Model” section on page 1-7.

Step 11 Replace the DC power supply plastic shield.

Step 12 Power on the adaptive security appliance from the switch at the rear of the chassis.

**Note**  If you need to power cycle the DC adaptive security appliance, wait at least 5 seconds between powering off the adaptive security appliance and powering it back on.
Removing and Replacing the CompactFlash

The adaptive security appliance has two types of CompactFlash: the system CompactFlash (internal) and the user CompactFlash (external). This section includes the following topics:

- Removing and Installing the System CompactFlash, page 1-10
- Removing and Installing the User CompactFlash, page 1-12

Removing and Installing the System CompactFlash

To remove and install the system CompactFlash, perform the following steps:

<table>
<thead>
<tr>
<th>Step</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Step 1</td>
<td>Power off the adaptive security appliance.</td>
</tr>
<tr>
<td>Step 2</td>
<td>Remove the power cord and other cables from the adaptive security appliance.</td>
</tr>
<tr>
<td>Step 3</td>
<td>Remove the adaptive security appliance from the rack if it is rack-mounted.</td>
</tr>
<tr>
<td>Step 4</td>
<td>Place the adaptive security appliance in an ESD-controlled environment.</td>
</tr>
<tr>
<td>Step 5</td>
<td>Remove the adaptive security appliance cover.</td>
</tr>
<tr>
<td>Step 6</td>
<td>Carefully slide the CompactFlash out of its connector as shown in Figure 1-11. The CompactFlash has a lip on its lower edge, which you can use to grip the CompactFlash. Otherwise, use sliding pressure with your thumb or finger to slide the CompactFlash out of its connector.</td>
</tr>
</tbody>
</table>

![Figure 1-11 Removing the System CompactFlash](image-url)
**Step 7** To install the system CompactFlash, align the new system CompactFlash with the connector on the riser card.

**Step 8** Push the system CompactFlash inward until it is fully seated in the connector, see *Figure 1-12*.

*Figure 1-12  Replacing the System CompactFlash*

**Step 9** Replace the adaptive security appliance cover.

**Step 10** Reinstall the network interface cables.
Removing and Installing the User CompactFlash

To remove and install the user CompactFlash, perform the following steps:

Note

There are two types of CompactFlash release buttons. The release buttons function differently. In this document we refer to them as Type A and Type B.

Step 1

Locate the user CompactFlash in its slot in the rear panel of the chassis. See Figure 1-13.

Figure 1-13 User CompactFlash and Release Button Location—Type A and B

Step 2

Press the release button, the release button in Type A will pop out towards you. See Figure 1-14.

In Type B pressing the release button once will eject the CompactFlash, the release button will be slightly extended. See Figure 1-15. If this is the case, skip Step 3 and go to Step 4.
Step 3
Press the release button again, the CompactFlash will eject and the release button will be extended. See Figure 1-16.

Step 4
Carefully pull the user CompactFlash out of the slot.

Note When the User CompactFlash slot is empty, the release button on Type A, see Figure 1-16 will be extended and in Type B, see Figure 1-15 the release button will be slightly extended.

Step 5
Place the removed user CompactFlash on an antistatic surface or in a static shielding bag.

Step 6
To install a new CompactFlash, hold the new CompactFlash with the label facing up, insert the connector end of the user CompactFlash into the slot until the card is seated in the connector. The user CompactFlash is keyed so it cannot be inserted the wrong way.

The release button will remain extended when you insert the CompactFlash see Figure 1-13.
Installing and Replacing the 4GE SSM

The 4GE SSM has four 10/100/1000 Mbps, copper, RJ-45 ports and four optional 1000 Mbps, Small-Form-Factor Pluggable (SFP) fiber ports.

When using the 4GE SSM you can use the same numbered copper ports (RJ-45) and the SFP ports at the same time. Use the media-type command in interface configuration mode to set the media type to copper or fiber Gigabit Ethernet. For a complete description of the command syntax, see the Cisco ASA 5500 Series Command Reference.

This section describes how to install and replace the 4GE SSM in the adaptive security appliance, and includes the following topics:

- Overview, page 1-14
- Installing the 4GE SSM, page 1-15
- Replacing the 4GE SSM, page 1-16
- Installing and Removing the SFP Modules, page 1-16

Overview

Figure 1-17 lists the 4GE SSM ports and LEDs.

**Figure 1-17 4GE SSM Ports and LEDs**

**Note**

Figure 1-17 shows SFP modules installed in the ports slots. You must order and install the SFP modules if you want to use this feature. For more information on SFP ports and modules, see the “Installing and Removing the SFP Modules” section on page 1-16.

Table 1-1 describes the 4GE SSM LEDs.
Installing and Replacing the 4GE SSM

To install a new 4GE SSM for the first time, perform the following steps:

**Step 1** Power off the adaptive security appliance.

**Step 2** Locate the grounding strap from the accessory kit and fasten it to your wrist so that it contacts your bare skin. Attach the other end to the chassis.

**Step 3** Remove the two screws (as shown in Figure 1-18) at the left rear end of the chassis, and remove the slot cover.

**Figure 1-18 Removing the Screws from the Slot Cover**

**Step 4** Insert the 4GE SSM through the slot opening as shown in Figure 1-19.

**Figure 1-19 Inserting the 4GE SSM into the Slot**

Step 5  Attach the screws to secure the 4GE SSM to the chassis.
Step 6  Power on the adaptive security appliance.
Step 7  Check the LEDs. If the 4GE SSM is installed properly the STATUS LED flashes during boot up and is solid when operational.
Step 8  Connect one end of the RJ-45 cable to the port and the other end of the cable to your network devices.

Replacing the 4GE SSM

To replace an existing 4GE SSM, perform the following steps:

Step 1  Power off the adaptive security appliance.
Step 2  Locate the grounding strap from the accessory kit and fasten it to your wrist, so that it contacts your bare skin. Attach the other end to the chassis.
Step 3  Remove the two screws at the left rear end of the chassis.
Step 4  Remove the 4GE SSM. Place it in a static bag and set it aside.
Step 5  Replace the existing card by inserting the new 4GE SSM through the slot opening.
Step 6  Attach the screws to secure the 4GE SSM to the chassis.
Step 7  Power on the adaptive security appliance.
Step 8  Check the LEDs. If the 4GE SSM is installed properly, the POWER LED is solid green and the STATUS LED is flashing during boot up.
Step 9  Connect the RJ-45 cable to the port and the other end of the cable to your network devices.

Installing and Removing the SFP Modules

The SFP is a hot-swappable input/output device that plugs into the SFP ports. The following SFP module types are supported:

- Long wavelength/long haul 1000BASE-LX/LH (GLC-LH-SM=)
- Short wavelength 1000BASE-SX (GLC-SX-MM=)

This section describes how to install and remove the SFP modules in the adaptive security appliance to provide optical Gigabit Ethernet connectivity. It contains the following topics:

- SFP Module, page 1-16
- Installing the SFP Module, page 1-18
- Removing the SFP Module, page 1-19

**SFP Module**

The adaptive security appliance uses a field-replaceable SFP module to establish Gigabit connections. Table 1-2 lists the SFP modules that are supported by the adaptive security appliance.
The 1000BASE-LX/LH and 1000BASE-SX SFP modules are used to establish fiber-optic connections. Use fiber-optic cables with LC connectors to connect to an SFP module. The SFP modules support 850 to 1550 nm nominal wavelengths. The cables must not exceed the required cable length for reliable communications. Table 1-3 lists the cable length requirements.

### Table 1-2 Supported SFP Modules

<table>
<thead>
<tr>
<th>SFP Module</th>
<th>Type of Connection</th>
<th>Cisco Part Number</th>
</tr>
</thead>
<tbody>
<tr>
<td>1000BASE-LX/LH</td>
<td>Fiber-optic</td>
<td>GLC-LH-MM=</td>
</tr>
<tr>
<td>1000BASE-SX</td>
<td>Fiber-optic</td>
<td>GLC-SX-MM=</td>
</tr>
</tbody>
</table>

Use only Cisco certified SFP modules on the adaptive security appliance. Each SFP module has an internal serial EEPROM that is encoded with security information. This encoding provides a way for Cisco to identify and validate that the SFP module meets the requirements for the adaptive security appliance.

---

**Note**

Only SFP modules certified by Cisco are supported on the adaptive security appliance.

---

**Caution**

Protect your SFP modules by inserting clean dust plugs into the SFPs after the cables are extracted from them. Be sure to clean the optic surfaces of the fiber cables before you plug them back into the optical bores of another SFP module. Avoid getting dust and other contaminants into the optical bores of your SFP modules. The optics do not work correctly when obstructed with dust.

---

**Warning**

Because invisible laser radiation may be emitted from the aperture of the port when no cable is connected, avoid exposure to laser radiation and do not stare into open apertures. Statement 70
Installing the SFP Module

To install the SFP module in the 4GE SSM, perform the following steps:

**Step 1**  
Line up the SFP module with the port and slide the SFP module into the port slot until it locks into position as shown in Figure 1-20.

![Figure 1-20 Installing an SFP Module](image)

<table>
<thead>
<tr>
<th>1</th>
<th>Optical port plug</th>
</tr>
</thead>
<tbody>
<tr>
<td>2</td>
<td>SFP port slot</td>
</tr>
<tr>
<td>3</td>
<td>SFP module</td>
</tr>
</tbody>
</table>

**Caution**  
Do not remove the optical port plugs from the SFP until you are ready to connect cabling.

**Step 2**  
Remove the Optical port plug; then connect the network cable to the SFP module.

**Step 3**  
Connect the other end of the cable to your network.

**Caution**  
The latching mechanism used on many SFPs locks them into place when cables are connected. Do not pull on the cabling in an attempt to remove the SFP.
Removing the SFP Module

The SFP modules have different types of latching devices used to detach the SFP module from a port. The following are the different types of modules:

- Mylar Tab Module
- Actuator/Button SFP Module
- Bale-Clasp SFP Module
- Plastic Collar Module

To remove the SFP module, perform the following steps:

**Step 1**
Disconnect all cables from the SFP.

**Warning**
Because invisible laser radiation may be emitted from the aperture of the port when no cable is connected, avoid exposure to laser radiation and do not stare into open apertures. Statement 70

**Caution**
The latching mechanism used on many SFPs locks the SFP into place when cables are connected. Do not pull on the cabling in an attempt to remove the SFP.

**Step 2**
Disconnect the SFP latch as shown in Figure 1-21.

**Note**
SFP modules use various latch designs to secure the module in the SFP port. Latch designs are not linked to SFP model or technology type. For information on the SFP technology type and model, see the label on the side of the SFP.

**Figure 1-21**
Disconnecting SFP Latch Mechanisms

<td></td>
<td></td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

**Step 3**
Grasp the SFP on both sides and remove it from the port.
Installing and Replacing the Intelligent SSM

The Cisco ASA 5510, Cisco ASA 5520, Cisco ASA 5540 support the AIP SSM and the CSC SSM, also referred to as the intelligent SSM in this document. The AIP SSM runs advanced IPS software that provides security inspection. There are three types of AIP SSM: the AIP SSM 10, AIP SSM 20 and the AIP SSM 40. The AIP SSM 10 and the AIP SSM 20 look identical, but the AIP SSM 20 has a faster processor and more memory than the AIP SSM 10. The AIP SSM 40 has a faster processor and more memory than both the AIP SSM 10 and the AIP SSM 20. Only one module (the AIP SSM 10, AIP SSM 20, or the AIP SSM 40) can populate the slot at a time.

Table 1-4 lists the memory specifications for the AIP SSM 10, AIP SSM 20, and the AIP SSM 40.

**Table 1-4 AIP/CSC SSM Memory Specifications**

<table>
<thead>
<tr>

<td>2.0 GB</td>
</tr>
<tr>
<td>AIP SSM 40</td>
<td>2.0 GHz Xeon LV</td>
<td>4.0 GB</td>
</tr>
</tbody>
</table>

For more information on the AIP SSM 10/20/40, see the “Managing the AIP SSM” section in the *Cisco Security Appliance Command Line Configuration Guide*.

The CSC SSM runs Content Security and Control software. The CSC SSM provides protection against viruses, spyware, spam, and other unwanted traffic. There are two types of CSC SSM: the CSC SSM 10, and the CSC SSM 20. For more information on the CSC SSM 10/20, see the “Managing the CSC SSM” section in the Cisco Security Appliance Command Line Configuration Guide.

Table 1-5 shows the AIP/CSC SSMs supported by each platform:

**Table 1-5 SSM Support**

## Installing and Replacing the AIP/CSC SSM

This section describes how to install and replace the AIP/CSC SSM in the adaptive security appliance. The section includes the following topics:

- Installing the AIP/CSC SSM, page 1-22
- Replacing the AIP/CSC SSM, page 1-23

### Installing the AIP/CSC SSM

To install a new AIP/CSC SSM for the first time, perform the following steps:

1. **Step 1** Enter the `hw-mod mod 1 shut` command in privileged EXEC mode. Verify that the module is down by making sure that the LEDs are all off.
2. **Step 2** Locate the grounding strap from the accessory kit and fasten it to your wrist so that it contacts your bare skin. Attach the other end to the chassis.
3. **Step 3** Remove the two screws at the left rear end of the chassis, and remove the slot cover as shown in Figure 1-24.

![Figure 1-24 Removing the Screws from the Slot Cover](image)
Step 4 Insert the AIP/CSC SSM into the slot opening as shown in Figure 1-25.

Figure 1-25 Inserting the AIP/CSC SSM into the Slot

Step 5 Attach the screws to secure the AIP/CSC SSM to the chassis.

Step 6 Enter the `hw-mod mod 1 reset` command in privileged EXEC mode to reset the AIP/CSC SSM.

Step 7 Check the LEDs. If the AIP/CSC SSM is installed properly, the POWER LED is solid green and the STATUS LED flashes green.

Replacing the AIP/CSC SSM

To replace an existing AIP/CSC SSM, perform the following steps:

Step 1 Enter the `hw-mod mod 1 shut` command in privileged EXEC mode. Verify that the module is down by making sure that the LEDs are all off.

Step 2 Locate the grounding strap from the accessory kit and fasten it to your wrist, so that it contacts your bare skin. Attach the other end to the chassis.

Step 3 Remove the two screws at the left rear end of the chassis.

Step 4 Remove the AIP/CSC SSM. Place it in a static bag and set it aside.

Step 5 Replace the existing card by inserting the new AIP/CSC SSM through the slot opening.

Step 6 Attach the screws to secure the AIP/CSC SSM to the chassis.

Step 7 Enter the `hw-mod mod 1 reset` command in privileged EXEC mode to reset the AIP/CSC SSM.

Step 8 Check the LEDs. If the AIP/CSC SSM is installed properly, the POWER LED is solid green and the STATUS LED flashes green.

Replacing Memory in the Adaptive Security Appliance

This section describes how to change DRAM (also referred to as DIMM) in the adaptive security appliance. The section includes the following topics:

- Overview, page 1-24
- Removing and Installing the DIMM, page 1-25
Overview

Cisco ASA 5510

The memory kit, ASA5510-MEM-512=, lets you change or add to the memory in your Cisco ASA 5510. To determine how much memory your adaptive security appliance has, use the `show version` command; the example below is for the Cisco ASA 5510 chassis:

```
hostname# show version

Cisco Adaptive Security Appliance Software Version 8.0(4)
Device Manager Version 6.1(5)

Compiled on Thu 07-Aug-08 20:53 by builders
System image file is "disk0:/asa804-k8.bin"
Config file at boot was "startup-config"

ciscoasa up 2 days 10 hours
failover cluster up 2 days 11 hours

Hardware:   ASA5510, 256 MB RAM, CPU Pentium 4 Celeron 1600 MHz
            BIOS Flash AT49LW080 @ 0xffe00000, 1024KB

Table 1-8 lists the memory for the Cisco ASA 5510.

<table>
<thead>
<tr>
<th>Model</th>
<th>Current Memory</th>
<th>Change to</th>
</tr>
</thead>
<tbody>
<tr>
<td>Cisco ASA 5510</td>
<td>256 MB</td>
<td>512 MB</td>
</tr>
</tbody>
</table>

Cisco ASA 5520/5540/5550

All ASA-5520s and ASA-5540s manufactured before August 2011 have 4 DIMM sockets; all ASA-5520s and ASA-5540s manufactured after this date have 2 DIMM sockets. However, all ASA-5520s and ASA-5540s support only two installed DIMMs.

The ASA-5550 has 4 DIMM sockets, all of which are supported.

The memory kit, ASA5550-MEM-2GB=, lets you change the memory installed in a Cisco ASA 5520. The memory kit, ASA5540-MEM-2GB=, lets you change the memory installed in a Cisco ASA 5540. Two of the ASA5540-MEM-2GB= memory kits also can be used to change the memory in a Cisco ASA 5550.

To determine how much memory your adaptive security appliance currently has, use the `show version` command; the example below is for the Cisco ASA 5520 chassis:

```
hostname# show version

Cisco Adaptive Security Appliance Software Version 8.0(0)
Device Manager Version 6.0(0)

Compiled on Mon 16-April-07 03:29 by root
System image file is "disk0:/cdisk.bin"
Config file at boot was "disk0:/main_backup.cfg"

hostname up 2 days 10 hours
failover cluster up 2 days 11 hours

Hardware:   ASA5520, 512 MB RAM, CPU Pentium 4 Celeron 2000 MHz
            BIOS Flash M50FW016 @ 0xffe00000, 2048KB
```
Table 1-8 lists the memory for the Cisco ASA 5520, Cisco ASA 5540 and Cisco ASA 5550.

### Table 9 Memory Changes

<table>
<thead>
<tr>
<th>Model</th>

### Removing and Installing the DIMM

This section describes how to remove and install dual in-line memory modules (DIMMs) on the adaptive security appliance. This section includes the following topics:

- Removing the DIMM, page 1-25
- Installing the DIMM, page 1-28

### Removing the DIMM

To remove a memory module, perform the following steps:

**Step 1** Turn off power to the adaptive security appliance.

**Step 2** Remove the power cord and other cables from the adaptive security appliance.

**Step 3** Remove the adaptive security appliance from the rack if it is rack-mounted.

**Step 4** Place the adaptive security appliance in an ESD-controlled environment. See the “Working in an ESD Environment” section on page 1-3 for more information.

**Step 5** Remove the adaptive security appliance cover. See the “Removing and Replacing the Chassis Cover” section on page 1-1 for the procedure.

**Step 6** Determine the location of the memory sockets. See Figure 1-26 for the Cisco ASA 5510 and Figure 1-27 for the Cisco ASA 5520, Cisco ASA 5540, or Cisco ASA 5550.

**Note** Some Cisco ASA 5510 have only a single memory socket, see Figure 1-26, while others have four memory sockets. In both cases, remove the existing DIMM, and replace it with the new one. For memory upgrade in the Cisco ASA 5510 with four memory sockets, use slot 1 - P13 and note that only one slot must be populated at all times.
Figure 1-26  System Memory Location in the Cisco ASA 5510

1. DIMM
2. Memory Controller Hub (MCH)
3. CompactFlash socket
Step 7  Locate the wrist grounding strap and connect one end to the adaptive security appliance, and securely attach the other end to your wrist so it contacts your bare skin. See, “Working in an ESD Environment” section on page 1-3 for more information.

Note  Handle the edges of the DIMM only; avoid touching the memory modules, pins, or traces (the metal fingers along the connector edge of the DIMM), along the connector edge.

To prevent ESD damage, handle DIMMs as shown in Figure 1-28.
Replacing Memory in the Adaptive Security Appliance

Chapter 1      Maintenance and Upgrade Procedures

Figure 1-28 Handling a DIMM

Step 8 Pull the latches away from the DIMM at both ends and release the DIMM from the socket. See Figure 1-29.

Step 9 When both ends of the DIMM are released from the socket, grasp the ends of the DIMM with your thumb and forefinger and pull the DIMM completely out of the socket.

Step 10 Place the DIMM in an antistatic container to protect it from ESD damage.

Figure 1-29 Releasing the DIMM Latches

Installing the DIMM

To install a memory module, perform the following steps:

Step 1 Make sure that both latches on the DIMM connector are open.

Step 2 Remove a new DIMM from the antistatic container.

The DIMM is designed in such a way that the connector will fit only one way.

Step 3 Hold the DIMM component side up, with the connector edge away from you. Line up the notch in the connector traces with the notch in the socket on the board.

Step 4 Carefully insert the connector edge into the socket and firmly press the DIMM into the socket until both latches rotate to the close position against the DIMM.

Note For memory upgrade in the Cisco ASA 5510 with four memory sockets, use slot 1 - P13 and note that only one slot must be populated at all times.
Chapter 1      Maintenance and Upgrade Procedures

Replacing Memory in the Adaptive Security Appliance

Figure 1-30    Inserting the DIMM

Caution
When inserting DIMMs, use pressure, but not excessive pressure as this can cause damage to the socket.

Step 5 When you finish installing the DIMM, replace the adaptive security appliance cover. See the “Removing and Replacing the Chassis Cover” section on page 1-1 for the procedure.

Step 6 Reinstall the network interface cables.

Verifying the Memory Upgrade

You can verify that the memory upgrade has been completed successfully by entering the **show version** command. Here is an example from a Cisco ASA 5510 chassis:

```
hostname# show version
Cisco Adaptive Security Appliance Software Version 8.0(4)
Device Manager Version 6.1(5)
Compiled on Thu 07-Aug-08 20:53 by builders
System image file is "disk0:/asa804-k8.bin"
Config file at boot was "startup-config"
ciscoasa up 2 days 10 hours
failover cluster up 2 days 11 hours
```

**Hardware:** ASA5510, 1 GB RAM, CPU Pentium 4 Celeron 1600 MHz
BIOS Flash AT49LW080 @ 0xffe00000, 1024KB

Here is an example from a Cisco ASA 5520 chassis:

```
hostname# show version
Cisco Adaptive Security Appliance Software Version 8.0(0)
Device Manager Version 6.0(0)
Compiled on Mon 16-April-07 03:29 by root
System image file is "disk0:/cdisk.bin"
Config file at boot was "disk0:/main_backup.cfg"
hostname up 2 days 10 hours
failover cluster up 2 days 11 hours
```

**Hardware:** ASA5520, 2 GB RAM, CPU Pentium 4 Celeron 2000 MHz
BIOS Flash M50FW016 @ 0xffe00000, 2048KB

---

Verifying the Memory Upgrade

You can verify that the memory upgrade has been completed successfully by entering the **show version** command. Here is an example from a Cisco ASA 5510 chassis:

```
hostname# show version
Cisco Adaptive Security Appliance Software Version 8.0(4)
Device Manager Version 6.1(5)
Compiled on Thu 07-Aug-08 20:53 by builders
System image file is "disk0:/asa804-k8.bin"
Config file at boot was "startup-config"
ciscoasa up 2 days 10 hours
failover cluster up 2 days 11 hours
```

**Hardware:** ASA5510, 1 GB RAM, CPU Pentium 4 Celeron 1600 MHz
BIOS Flash AT49LW080 @ 0xffe00000, 1024KB

Here is an example from a Cisco ASA 5520 chassis:

```
hostname# show version
Cisco Adaptive Security Appliance Software Version 8.0(0)
Device Manager Version 6.0(0)
Compiled on Mon 16-April-07 03:29 by root
System image file is "disk0:/cdisk.bin"
Config file at boot was "disk0:/main_backup.cfg"
hostname up 2 days 10 hours
failover cluster up 2 days 11 hours
```

**Hardware:** ASA5520, 2 GB RAM, CPU Pentium 4 Celeron 2000 MHz
BIOS Flash M50FW016 @ 0xffe00000, 2048KB

---
Cable Pinouts

This appendix describes pinout information, and includes the following sections:

- 10/100/1000BaseT Ports, page 1-1
- Console Port (RJ-45), page 1-2
- Console RJ-45 to DB-9 Adapter, page 1-4
- MGMT 10/100 Fast Ethernet Port, page 1-4
- SFP Fiber Ports, page 1-5

10/100/1000BaseT Ports

The adaptive security appliance supports 10/100/1000BaseT ports. You must use at least a Category 5 cable for 100/1000baseT operations, but a Category 3 cable can be used for 10BaseT operations.

The 10/100/1000BaseT ports use standard RJ-45 connectors and supports MDI and MDI-X connectors. Ethernet ports normally use MDI connectors and Ethernet ports on a hub normally use an MDI-X connector.

Use an Ethernet straight-through cable to connect an MDI to an MDI-X port. Use a cross-over cable to connect an MDI to an MDI port, or an MDI-X to an MDI-X port.

Figure 1-1 shows the 10BaseT and the 100BaseTX connector (RJ-45).

Figure 1-2 shows the 10BaseT, 100BaseTX, and 1000BASE-T connector (RJ-45).

![10/100/1000 Port Pinouts](image)

**Console Port (RJ-45)**

Cisco products use the following types of RJ-45 cables:

- Straight-through
- Crossover

---

**Note**

Cisco does not provide these cables; they are widely available from other sources.

Figure 1-3 shows the RJ 45 cable.

![RJ-45 Cable](image)
To identify the RJ-45 cable type, hold the two ends of the cable next to each other so that you can see the colored wires inside the ends, as shown in Figure 1-4.

*Figure 1-4  RJ-45 Cable Identification*

Examine the sequence of colored wires to determine the type of RJ-45 cable, as follows:

- **Straight-through**—The colored wires are in the same sequence at both ends of the cable.
- **Crossover**—The first (far left) colored wire at one end of the cable is the third colored wire at the other end of the cable.

Table 1-1 lists the rolled (console) cable pinouts for RJ-45.

*Table 1-1  RJ-45 Rolled (Console) Cable Pinouts*

MGMT 10/100 Fast Ethernet Port

The MGMT 10/100 Fast Ethernet port has an RJ-45 connector. You can use a modular, RJ-45, straight-through UTP cable to connect the management port to an external hub, switch, or router. Table 1-3 lists the cable pinouts for 10/100BASE-T Management Port Cable Pinouts (MDI).
