Cisco ASA Documentation by Release

This section lists the ASA series documentation by release. This section includes the CLI and GUI documentation for each version.

Note: ASDM 6.0 and later supports many ASA versions. We include the ASDM documentation with the ASA version when that version of ASDM was introduced; for example 8.4/6.4, 8.3/6.3, and so on. The ASDM documentation and online help includes all of the latest features supported by the ASA. If you are running an older version of ASA software, the documentation might include features that are not supported in your version. Similarly, if a feature was added into a maintenance release for an older ASA version, then the ASDM documentation includes the new feature even though that feature might not be available in all later ASA releases. Please refer to the feature history table for each configuration guide chapter to determine when features were added. For the minimum supported version of ASDM for each ASA version, see [Cisco ASA Compatibility](#).

Cisco ISA 3000

The Cisco ISA 3000 is a DIN Rail mounted, ruggedized, industrial security appliance. It is low-power, fan-less, with Gigabit Ethernet and a dedicated management port. This model comes with the ASA FirePOWER module pre-installed. Special features for this model include a customized transparent mode default configuration, as well as a hardware bypass function to allow traffic to continue flowing through the appliance when there is a loss of power.

The **Cisco ISA 3000** documentation is available at:

<http://www.cisco.com/c/en/us/support/security/industrial-security-appliance-3000/model.html>

Cisco Firepower Threat Defense

The Firepower Threat Defense device supplies next-generation firewall services, including stateful firewalling, routing, Next-Generation Intrusion Prevention System (NGIPS), Application Visibility and Control (AVC), URL filtering, and Advanced Malware Protection (AMP). You can run the Firepower Threat Defense software instead of the ASA software on the following ASA hardware models, as well as Firepower models:

- ASA 5506-X
- ASA 5506W-X
- ASA 5506H-X
- ASA 5508-X
- ASA 5512-X

- ASA 5515-X
- ASA 5516-X
- ASA 5525-X
- ASA 5545-X
- ASA 5555-X
- Firepower 4100
- Firepower 9300

See the following documents for the Firepower Threat Defense device:

Cisco Active Directory Agent

The Cisco Active Directory Agent runs as a separate application from the ASA. The Cisco Active Directory Agent is used as part of the Identity Firewall feature, which was released in the ASA 8.4 release.

The Identity Firewall feature provides more granular access control based on user identities. You can configure access control and security policies based on user names and groups rather than through source IP addresses. The ASA applies the security policies based on an association of IP addresses to Windows Active Directory login information and reports events based on the mapped user names instead of network IP addresses.

The Identity Firewall integrates with Window Active Directory in conjunction with an external Active Directory (AD) Agent that provides the actual identity mapping. The ASA uses Windows Active Directory as the source to retrieve the current user identity information for specific IP addresses.

Cisco ASA FirePOWER Module

The ASA FirePOWER module runs a separate application from the ASA. It is, however, integrated into the ASA traffic flow. To configure the ASA FirePOWER module, you need to configure both the ASA and the ASA FirePOWER module separately.

- **Hardware Documentation**—See the “[Hardware](#)” section on page 3.
- **ASA FirePOWER Quick Start Guide**—To get started configuring the module for use with the ASA 5500, including sending traffic to the ASA FirePOWER module, see the ASA FirePOWER quick start guide in the “[Quick Start](#)” section on page 2.
- **ASA Configuration Guide**—For additional information about using the ASA FirePOWER module with the ASA 5500, see the ASDM or CLI configuration guide for your ASA version in the “[Cisco ASA Documentation by Release](#)” section on page 8.
- **ASA FirePOWER Documentation**—To configure ASA FirePOWER features on the ASA FirePOWER module operating system, use the either ASDM or the FireSIGHT Management Center (5.4 and earlier) or Firepower Management Center (6.0 and later). You can find documentation for the Management Center from the following page:
<http://www.cisco.com/c/en/us/support/security/defense-center/tsd-products-support-series-home.html>

Cisco ASA CSC Module

The ASA CSC SSM runs a separate application from the ASA. It is, however, integrated into the ASA traffic flow. To configure the ASA CSC SSM, you need to configure both the ASA and the ASA CSC SSM separately.

- **Hardware Documentation**—See the “[Hardware](#)” section on page 3.
- **ASA Configuration Guide**—To get started configuring the SSM for use with the ASA 5500, including sending traffic to the ASA CSC SSM, see the ASDM or CLI configuration guide for your ASA version in the “[Cisco ASA Documentation by Release](#)” section on page 8.

Cisco ASA IPS Module

The ASA IPS module runs a separate application from the ASA. It is, however, integrated into the ASA traffic flow. To configure the ASA IPS module, you need to configure both the ASA and the ASA IPS module separately.

- Hardware Documentation—See the “[Hardware](#)” section on page 3.
- ASA IPS Quick Start Guide—To get started configuring the module for use with the ASA 5500, including sending traffic to the ASA IPS module, see the ASA IPS quick start guide in the “[Quick Start](#)” section on page 2.
- ASA Configuration Guide—For additional information about using the ASA IPS module with the ASA 5500, see the ASDM or CLI configuration guide for your ASA version in the “[Cisco ASA Documentation by Release](#)” section on page 8.
- ASA IPS Documentation—To configure ASA IPS features on the ASA IPS module operating system, see the following ASA IPS documentation roadmaps:
